Questions and Answers

Last Day for Questions 25 June 2026

1) When visiting the identified locations, will the individual trees requiring treatment be marked?

   Answer: *The individual trees for most sites will not be tagged, but they will be GPS'd. We will provide that spatial data with the task order. At least one stand will have trees treated based on diameter.*

2) Will the boundaries of each treatment area be clearly marked on-site?

   Answer: *We will provide georeferenced PDFs for use in Avenza or a similar app. We can also provide GPS files for use in a handheld device to identify boundaries.*

3) Will the Forest Service specify the treatment method for each tree, or should the applicator determine the most appropriate method?

   Answer: *Once we receive pricing from this solicitation, the task order will specify exactly which treatment method to use at each site.*
