J.2.2
OBO Guide Specifications

FY26
October 1, 2025

Overseas Buildings Operations
U.S. DEPARTMENT of STATE

About This Edition

The 2026 Edition of the OBO Project Standard Requirements (OPSR) is organized into the following volumes in order of precedence:

- OPSR 1 – OBO Codes*
- OPSR 2 – OBO Guide Specifications
- OPSR 3 – OBO Project Requirements
- OPSR 4 – OBO Space and Adjacencies
- OPSR 5 – OBO Deliverable Requirements
- OPSR 6 – Reserved
- OPSR 7 – OBO Standard Templates
- OPSR 8 – OBO Standard Questionnaires

*OBO Codes (U) (Full minus OBO Telecommunications Code Volume B)
*OBO Telecommunications Code Volume B (SBU)

OPSR Volumes 1-4 make up the OBO Design Standards and are under the purview of the Office of Design and Engineering (OBO/PDCS/DE). The documents contained herein represent all guidance and technical requirements for these standards.

OPSR Volumes 5-8 make up the OBO Deliverable Resources and are under the purview of the Office of Project Development and Coordination (OBO/PDCS/PDC).

Design Principles

The mission of the Bureau of Overseas Buildings Operations (OBO) is to provide the most effective facilities for conducting United States diplomacy abroad.

OBO/PDCS/DE develops the design standards and criteria for all overseas State Department facilities. OBO adopts industry codes and standards and supplements those with unique State Department requirements.

Design Tenets

Embassy and consulate buildings should present a welcoming architectural form that represents the United States and acknowledges Host Nation culture with mutual respect via architecture, design, engineering, technology, art, and culture.

The State Department expects to use and operate its buildings for many decades. This places a greater emphasis on the total cost of ownership long term. Life-cycle cost-effective energy and water efficiency measures should be incorporated to the extent operable and maintainable by local staff. Passive strategies, such as high insulation levels and thermal bridge reductions, should be prioritized over

mechanical, high-tech, or proprietary systems with greater maintenance requirements. The concept of whole-building performance must be incorporated into the design to optimize the balance of function, security, safety, energy, resiliency, operability, and maintainability.

2025-2026 Changes

The 2026 OBO Design Standards include updates to guidance and technical requirements submitted by diverse OBO subject matter experts. Some highlights include:

- **Adoption of the 2024 International Code Council Family of Codes:**
  - Moved Chapters 9 and 10 requirements from the OBO International Fire Code to the OBO International Building Code.
  - Updated Structural tables in the OBO International Building Code.
  - Added Equipment Rooms and Chemical Storage Rooms to the OBO International Swimming Pool and Spa Code.
  - Updated Harvesting Water requirements in the OBO International Zoning Code.
  - Divided the OBO Telecommunications Code into separate Unclassified (U) and Sensitive But Unclassified (SBU) volumes.
- **New OBO Guide Specification:**
  - 329300 Plants.
- **Reorganization of the OBO Project Requirements (OPR):**
  - Reformatted content so every paragraph can be cited.
  - Reordered OPR documents to match drawing documentation standards in OPSR 05 (*See Crosswalk*).
  - Consolidated OPR 4-022-01 Compound Access Control and OPR 4-201-01 Support Buildings into OPR 02 General (*See Crosswalk*).
  - Renamed OPR 2-300-01 Utility Services to OPR 08 Civil (*See Crosswalk*).
  - Renamed OPR 2-601-01 Site Design to OPR 09 Landscape (*See Crosswalk*).
  - Developed new OPR 15 Water Feature (*See Crosswalk*).
- **Elimination of the 2025 OPSR Volume 6 – OBO Reference Documents:**
  - Deleted or revised outdated drawings.
  - Incorporated revised drawings into the appropriate OPR as attachments (*See Crosswalk*).
- **Updates to the Space Requirements Program Modules (SRP-Ms):**
  - Developed new SRP-M to provide guidance on size, naming, and required components.

- Developed new SRP-Ms for the DT Suite (Diplomatic Technology).
- Created a new FLEX Mission space group that includes all standard SRP-Ms.

Please reference the CCR Change Log and FY26 Crosswalks (OPR and Drawings) for detailed information concerning incorporated changes. For changes related to SRP-Ms and adjacency diagrams, reference the *Summary of Changes* tables in OPSR 4 – OBO Space and Adjacencies.

Contact designstandards@state.gov for general questions or comments about these standards. If you are under contract on a State Department project, you must go through your Contracting Officer's Representative for any contract-related questions.

LIMITED CONTENT - REPRODUCTION AND DISTRIBUTION IS AUTHORIZED BUT RESTRICTED
The content included in this version of OBO Standard Project Requirements may be limited based on project scope and sensitivity of the security-related information. Such information is marked *Sensitive but Unclassified* (SBU) or *Controlled Unclassified Information* (CUI) and will not be included in publicly released versions of these documents. The SBU (and higher) information will be available through the Contracting Officer's Representative after the requestor's need and credentials are authenticated. Unclassified content herein may become SBU/CUI once linked to a specific project, site, or building and must be handled accordingly. **Click here for more information and SBU/CUI handling instructions and cover page.**

CHANGE LOG

2026 OBO Project Standard Requirements (OPSR) Content Changes

Note: Changes listed here are not exhaustive and are provided for user convenience only. Contractors are responsible for compliance with all technical requirements.

Document/ Section	Chapter	Change
General		
All documents	N/A	Revised formatting of published documents to enhance searchability.
OPSR 1 - OBO Codes		
IBC	Table of Contents	Added chapter 35.
IBC	Ch 1 - Scope and Administration	Added section 105.2 and renumbered subsequent sections.
IBC	Ch 1 - Scope and Administration	Revised section 104 to adopt the 2024 ICC code editions.
IBC	Ch 1 - Scope and Administration	Revised section 105.1.1 regarding requiring permits.
IBC	Ch 1 - Scope and Administration	Revised section 107.
IBC	Ch 4 - Special Detailed Requirements based on Use and Occupancy	Deleted section 428.3.5 from Representational Housing Section.
IBC	Ch 4 - Special Detailed Requirements based on Use and Occupancy	Renumbered sections to align with IBC.
IBC	Ch 5 - General Building Heights and Areas	Deleted section 505.
IBC	Ch 7 - Fire and Smoke Protection Features	Added requirement to 703.7 to state rating.
IBC	Ch 9 - Fire Protection and Life Safety Systems	Relocated fire alarm requirements from specifications to code.
IBC	Ch 9 - Fire Protection and Life Safety Systems	Relocated IFC Chapter 9 requirements to IBC Chapter 9.
IBC	Ch 11 - Accessibility	Revised and added sections to Ch. 11.

Document/ Section	Chapter	Change
IBC	Ch 12 - Interior Environment	Revised formatting of section 1208 to match code style guide.
IBC	Ch 12 - Interior Environment	Revised section 1206.5.1.
IBC	Ch 15 - Roof Assemblies and Rooftop Structures	Revised section 1506.4.
IBC	Ch 16 - Structural Design	Revised section 1624.
IBC	Ch 16 - Structural Design	Revised section 1624.2.2.
IBC	Ch 24 - Glass and Glazing	Revised paragraph 2405.6.
IBC	Ch 24 - Glass and Glazing	Revised section 1.2.D.
IBC	Ch 29 - Plumbing	Revised section 2902.1.2.
IBC	Ch 29 - Plumbing	Revised sections 2902.3.3 and 2902.3.3.1.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised requirements for manhole cover locks.
IBC	Ch 34 - Physical and Technical Security Requirements	Added reference to OTC requirements to 3420.5.3.3.
IBC	Ch 34 - Physical and Technical Security Requirements	Deleted language in 3404.9.8.2 regarding specific types of locks.
IBC	Ch 34 - Physical and Technical Security Requirements	Deleted section 3403.11.1 and renumbered remaining sections.
IBC	Ch 34 - Physical and Technical Security Requirements	Renumbered section 3404.8.2.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised and renamed 3404.9.2 regarding egress route and elevator vestibules.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised section 3404.11.3.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised section 3404.5.1.1.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised section 3404.9.2:
IBC	Ch 34 - Physical and Technical Security Requirements	Revised section 3420.4.1.3.
IBC	Ch 34 - Physical and Technical Security Requirements	Revised sections 3404.9.6.3, 3404.9.2.1 & 3404.9.2.2
IBC	Appendix N Replicable Buildings	Deleted the year reference.
IBC	Appendix W	Replaced references to Appendix R with Appendix W.

Document/ Section	Chapter	Change
IEBC	Ch 10 - Change in Occupancy	Revised section 1006 to correct reference to section 304.3.1.
IFC	Ch 5 - Fire Service Features	Revised to address possible locations for fire command center.
IFC	Ch 9 - Fire Protection and Life Safety Systems	Clarified section 907.2.2.2 regarding smoke detection.
IFC	Ch 9 - Fire Protection and Life Safety Systems	Revised section 906.1.2.1.3 item 1.
IFC	Ch 10 - Means of Egress	Added reference to OBO-ICS IBC and clarified where it differed.
IMC	Ch 1 - Scope and Administration	Clarified that HHW is prohibited in PCC.
IMC	Ch 3 - General Requirements	Revised language to address corrosion concerns.
IMC	Ch 3 - General Requirements	Revised section 312.2.
IMC	Ch 3 - General Requirements	Revised section 313.6.1.
IMC	Ch 4 - Ventilation	Clarified section 403.3 regarding circulation spaces.
IMC	Ch 4 - Ventilation	Revised chapter 4 to coordinate with OBO-ICS IBC chapter 34.
IMC	Ch 5 - Exhaust Systems	Revised section 504.3.
IMC	Ch 5 - Exhaust Systems	Revised to prescribe generator exhaust termination locations.
IMC	Ch 11 - Refrigeration	Clarified PCC chillers do not count as one of the offline chillers.
IMC	Ch 12 - Hydronic Piping	Revised materials table. See footnotes.
IMC	Ch 13 - Fuel Oil Piping and Storage	Revised to prevent overflow of fuel in generator room.
IPC	Ch 6 - Water Supply and Distribution	Added meter requirements for irrigation water to IZC.
IRC	Ch 3 - Building Planning	Deleted reference to Design Criteria document.
IRC	Ch 3 - Building Planning	Revised section 310 Residential Group R for consistency.
IRC	Ch 6 - Wall Construction	Clarified section R609.1.1 to prohibit PVC and PVC-clad windows and door frames.

Document/ Section	Chapter	Change
IRC	Table of Contents	Rejected new 2024 IRC Appendices NC, NF, NG, NH, and NJ.
ISPSC	Ch 4 - Public Swimming Pools	Relocated text from section 320 (formerly 319) and incorporated into section 325.
IZC	Ch 6 - Commercial and Commercial/Residential Zones	Added section 604.3.4.
IZC	Ch 6 - Commercial and Commercial/Residential Zones	Revised section 604.10.
IZC	Ch 8 - General Provisions	Added exemption in 812.5.4.3
IZC	Ch 8 - General Provisions	Added fall protection requirement in 812.2.16.2.
IZC	Ch 8 - General Provisions	Added list in 818.2 regarding corrosion resistance.
IZC	Ch 8 - General Provisions	Clarified language 813.3.4.
IZC	Ch 8 - General Provisions	Clarified section 801.4.2.
IZC	Ch 8 - General Provisions	Clarified section 813.3.2.2.
IZC	Ch 8 - General Provisions	Clarified sections 802, 803, and 804 are not adopted.
IZC	Ch 8 - General Provisions	Deleted hydraulic equipment from 813.8.1.
IZC	Ch 8 - General Provisions	Deleted section 801.3.3.
IZC	Ch 8 - General Provisions	Renumbered paragraphs 813.3.3.1 thru 813.3.5.4 with new numbers 813.3.4 thru 813.3.12.4.
IZC	Ch 8 - General Provisions	Revised paragraphs and titles in subsections from 813 to 816.
IZC	Ch 8 - General Provisions	Revised section 811.3.1.1.
IZC	Ch 8 - General Provisions	Revised section 812 for clarity.
IZC	Ch 8 - General Provisions	Revised sections 813.3.12.3 through 816.13.
IZC	Ch 8 - General Provisions	Revised site slope requirements.
NEC	Ch 2 - Wiring and Protection	Revised cable sizes for consistency.
OTC	Ch 1 - Scope and Administration	Added section 101.1.1.
OTC	Ch 1 - Scope and Administration	Deleted language from 101.3.1.
OTC	Ch 2 - Definitions	Added definition "Work Area Outlet (WAO)".

Document/ Section	Chapter	Change
OTC	Ch 2 - Definitions	Revise definition of Distribution Device (DD).
OTC	Ch 3 - General Requirements	Deleted section 306.4
OTC	Ch 3 - General Requirements	Revised section 303.2.1.1.
OTC	Ch 3 - General Requirements	Revised section 304.1.2.
OTC	Ch 3 - General Requirements	Revised section 305.1.6.
OTC	Ch 3 - General Requirements	Revised section 308.1.1.
OTC	Ch 3 - General Requirements	Revised section 308.4.
OTC	Ch 4 - Service Entrance and Site Distribution	Deleted OTC section 404.1 #2.
OTC	Ch 4 - Service Entrance and Site Distribution	Revised section 402.1.
OTC	Ch 4 - Service Entrance and Site Distribution	Revised section 405.1.
OTC	Ch 4 - Service Entrance and Site Distribution	Revised section 405.5.6.
OTC	Ch 5 - Telecommunications Equipment Spaces	Revised section 501.2.
OTC	Ch 5 - Telecommunications Equipment Spaces	Revised section 502.3.
OTC	Ch 5 - Telecommunications Equipment Spaces	Revised section 502.5.
OTC	Ch 5 - Telecommunications Equipment Spaces	Revised section 504.1.1.
OTC	Ch 6 - General Telecommunications Cabling for Buildings	Revised chapter 6.
OTC	Ch 6 - General Telecommunications Cabling for Buildings	Revised section 605.2.
OTC	Ch 11 - Telecommunications for Residential Buildings	Revised chapter 11.
OTC	Ch 15 - General Telecommunications for Office Buildings	Revised chapter 15.
OTC	Ch 15 - General Telecommunications for Office Buildings	Revised section 1112.1.
OTC	Ch 16 - Telecommunications Equipment Spaces in Office Buildings	Revised chapter 16.
OTC	Ch 17 - Telecommunications Cabling for Office Buildings	Revised chapter 17.
OPSR 2 - Guide Specifications		
Division 06	061719 - Cross-Laminated Timber Panels	Added sections 1.4.D, 1.7, and 3.6.
Division 06	061800 - Glued-Laminated Construction	Added section 1.4.F, 1.8, and 3.5.
Division 08	087135 - Non-Security Door Hardware	Revised section 1.2.D - Keying Schedule.
Division 08	087135 - Non-Security Door Hardware	Revised sections 2.6.A, 2.6.B.1 and 2.6.C.4.

Document/ Section	Chapter	Change
Division 08	087155 - Security Door Hardware	Revised specification 087155-B Defense Attache suite hardware.
Division 08	088855 - Security Glazing	Revised specification.
Division 10	104415 - Fire-Protection Specialties	Revised specification.
Division 11	114000 - Food Service Equipment	Revised section 3.9.
Division 11	115700 - Shop Equipment	Revised Basis of Design models.
Division 11	115700 - Shop Equipment	Revised section 2.10.F
Division 11	117000 - Medical Equipment	Revised specification section 2.14 basis of design for surgical light.
Division 11	118126 - Window Washing and Fall Protection Accessories	Renamed specification.
Division 14	142105 - Electric Tractions Elevators	Revised language regarding combustible suspension.
Division 21	211305 - Fire Sprinkler Systems	Revised language in specification.
Division 21	211305 - Fire Sprinkler Systems	Revised reference standard in section 2.4.H.
Division 21	211305 - Fire Sprinkler Systems	Revised referenced codes.
Division 22	223230 - Potable Water Treatment	Revised language in specification.
Division 23	230905 - Instrumentation and Controls for HVAC	Revised language in section 1.2.B.
Division 23	230905 - Instrumentation and Controls for HVAC	Revised section 3.2.
Division 23	230905 - Instrumentation and Controls for HVAC	Revised specification section 1.2.F.
Division 23	230905 - Instrumentation and Controls for HVAC	Revised table 3.13.4 footnote to coordinate terminology.
Division 23	234105 - Air Filtration	Modified number of FCU filters to be provided.
Division 23	236427 - Air-Cooled, Rotary-Screw Water Chillers	Revised reference standards in 2.11.C.
Division 23	236427 - Air-Cooled, Rotary-Screw Water Chillers	Revised specification to require chilled water treatment startup.
Division 23	237315 - Central-Station Air Handling Units	Added designer notes to paragraph 2.2.
Division 23	237315 - Central-Station Air Handling Units	Added designer notes to specification.
Division 23	237315 - Central-Station Air Handling Units	Deleted requirement for davits.
Division 23	237315 - Central-Station Air Handling Units	Revised section 2.2.B.

Document/ Section	Chapter	Change
Division 23	237315 - Central-Station Air Handling Units	Revised specification regarding submittals.
Division 23	237315 - Central-Station Air Handling Units	Revised specification section 1.4.
Division 26	260525 - Grounding and Bonding for Electrical Systems	Clarified section 2.1.G regarding bonding requirements.
Division 26	260815 - Field Testing and Inspection Of Electrical Systems	Added sub-paragraph 3.1.C.
Division 26	262325 - Power Sequence Of Operation	Added paragraph 1.7.
Division 26	262325 - Power Sequence Of Operation	Added sub-paragraph 1.6.B.
Division 26	262725 - Wiring Devices	Revised requirements section 2.2.B.1.
Division 26	263214 - Engine Generators	Deleted section 1.2.A.2 to defer to generator manufacturer.
Division 26	263214 - Engine Generators	Revised reference standards in sections 1.2.A and 2.8.B.
Division 26	263214 - Engine Generators	Revised section 2.8.B ASTM references.
Division 26	263552 - Low-Voltage Automatic Voltage Regulators	Added designers note to clarify use.
Division 27	270508 - Common Work Results for Telecommunications	Revised specification.
Division 27	270526 - Grounding and Bonding for Communications Systems	Revised specification.
Division 27	270528 - Surface-Mounted Raceways for Communication Systems	Revised section 2.2.C.
Division 27	270553 - Identification for Communications Systems	Revised specification.
Division 27	270645 - Schedules for Audiovisual Systems	Revised specification.
Division 27	271113 - Communications Entrance Protection	Revised specification.
Division 27	271116 - Communications Cabinets and Frames	Revised specification.
Division 27	271119 - Communications Termination Blocks and Patch Panels	Revised specification.
Division 27	271123 - Communications Cable Management and Ladder Rack	Revised specification.
Division 27	271305 - Communications Backbone Cabling	Revised specification.
Division 27	271505 - Communications Horizontal Cabling	Revised language in section 2.2-A-2.
Division 27	271505 - Communications Horizontal Cabling	Revised specification.
Division 27	271543 - Communications Faceplates and Connectors	Revised specification.
Division 27	272129 - Data Communication Switches and Power Supplies	Revised specification.
Division 27	274100 - Audiovisual Systems General Requirements	Revised specification.

Document/ Section	Chapter	Change
Division 27	274114 - Architecturally-Integrated Audiovisual Elements	Revised specification.
Division 27	274117 - Projection Screens and Projector Lifts	Revised specification.
Division 27	275105 - Audio Systems for Consular Services	Revised specification.
Division 27	275118 - Sound Masking System	Revised language.
Division 27	275118 - Sound Masking System	Revised specification.
Division 27	275405 - Consular Queue Management System Infrastructure and Displays	Revised specification.
Division 28	284626 - Addressable Fire Alarm Systems	Revised referenced codes.
Division 32	323305 - Site Furnishings	Added new specification.
Division 33	337105 - Underground Ducts and Raceways	Revised section 2.5.
OPSR 3 - OBO Project Requirements		
All OPRs	N/A	Renumbered and renamed OPRs in a logical manner.
N/A	OPR 02 General	Added new specification.
N/A	OPR 02 General	Revised section 1208.6.6 regarding maximum guard both height.
N/A	OPR 02 General	Revised section 2-4.5.1.
N/A	OPR 02 General	Revised to provide 3m clearance.
N/A	OPR 04 Physical Security	Incorporated updated Red Book.
N/A	OPR 04 Physical Security	Incorporated updated Red Book.
N/A	OPR 09 Landscape (Formerly Site Design)	Added new specification.
N/A	OPR 09 Landscape (Formerly Site Design)	Added new specification.
N/A	OPR 09 Landscape (Formerly Site Design)	Added new specification.
N/A	OPR 09 Landscape (Formerly Site Design)	Revised OPR regarding pool deck material.
N/A	OPR 09 Landscape (Formerly Site Design)	Revised OPR.
N/A	OPR 09 Landscape (Formerly Site Design)	Revised section 2-7.2.9.1.
N/A	OPR 10 Architecture	Renamed section 2-1.2.3.

Document/ Section	Chapter	Change
N/A	OPR 10 Architecture	Revised language to include bumper guards in service corridors.
N/A	OPR 10 Architecture	Revised OPR regarding exterior finish materials.
N/A	OPR 10 Architecture	Revised OPR regarding finish flooring installation.
N/A	OPR 10 Architecture	Revised requirements regarding glass railings.
N/A	OPR 10 Architecture	Revised section 2-1.1.1-5 regarding fire pump room access.
N/A	OPR 10 Architecture	Revised section 2-1.2.3.3 regarding roof hatches.
N/A	OPR 10 Architecture	Revised section 3.1.1.1 regarding vision panels.
N/A	OPR 15 Water Feature	Added new OPR.
N/A	OPR 18 Mechanical	Revised OPR regarding equipment replacement.
N/A	OPR 18 Mechanical	Revised section 2.1.
N/A	OPR 18 Mechanical	Revised section 2-1.3 regarding filter trays.
N/A	OPR 18 Mechanical	Revised section 2-1.4.3 regarding area drains.
N/A	OPR 20 Fire Protection	Added sections 2-2 and 2-3.
N/A	OPR 26 Telecommunications and Audio Visual	Revised language in section 3.3.1.1 C.
N/A	OPR 26 Telecommunications and Audio Visual	Revised OPR.
N/A	OPR 31 Specifications Criteria	Added to Attachment D Standard Extra Material (Spare Parts).
N/A	OPR 31 Specifications Criteria	Aligned content with OBO Deliverable Requirements.

01 Organization of Specification Divisions

Microsoft Word versions of the OBO Guide Specifications can be obtained for use on specific projects by contacting the assigned COR. See OPR 31 Specifications Criteria for additional technical requirements.

Division 01 – General Conditions

OBO Division 01 standard specifications sections are produced by the Office of Construction Management (OBO/CFSM/CM) and provided on a project-specific basis. Contract A/E teams can obtain them through their designated COR.

Division 02 – Existing Conditions

No OBO Guide Specification sections in this Division

Division 03 – Concrete

- 033000 Cast-in-Place Concrete 2023-10-01

Division 04 – Masonry

No OBO Guide Specification sections in this Division

Division 05 – Metals

- 055005 Metal Fabrications 2024-10-01
- 057005 Decorative Metal 2023-10-01
- 057305 Decorative Metal Railings 2025-10-01

Division 06 – Wood, Plastics & Composites

- 061719 Cross-Laminated Timber Panels 2025-10-01
- 061800 Glue-Laminated Construction 2025-10-01
- 062025 Interior Finish Carpentry 2023-10-01
- 064023 Interior Architectural Woodwork 2023-10-01

Division 07 – Thermal & Moisture Protection

- 074115 Standing-Seam Metal Roof Panels 2023-10-01
- 074215 Insulated Metal Wall Panels 2023-10-01

- 075558 Fluid-Applied Protected Membrane Roofing 2023-10-01
- 076205 Sheet Metal Flashing and Trim 2023-10-01
- 077234 Forced-Entry/Ballistic-Resistant (BR) Roof Hatches 2023-10-01

Division 08 – Openings

- 080001 Blast Requirements 2023-10-01
- 081115 Hollow Metal Doors and Frames 2023-10-01
- 081415 Flush Wood Doors 2023-10-01
- 083115 Access Doors and Frames 2023-10-01
- 083322 Overhead Forced-Entry (FE) Coiling Doors 2023-10-01
- 083454 FE / BR Door Assemblies 2025-10-01
- 083459 Vault Doors and Accessories 2025-10-01
- 084414 Structurally-Framed Security Curtain Wall System 2024-10-01
- 085651 Aluminum Security Windows 2024-10-01
- 085652 Aluminum Security Teller Windows 2025-10-01
- 087135 Non-Security Door Hardware 2024-10-01
- 087155 Security Door Hardware 2025-10-01
- 088855 Security Glazing 2025-10-01
- 089117 Security Louvers 2023-10-01

Division 09 – Finishes

- 092400 Cement Plastering 2023-10-01
- 092900 Gypsum Board 2023-10-01
- 093013 Ceramic Tiling 2023-10-01
- 095113 Acoustical Panel Ceiling 2023-10-01
- 095423 Linear Metal Ceiling 2023-10-01
- 096340 Stone Flooring 2023-10-01
- 096400 Wood Flooring 2023-10-01
- 096513 Resilient Base and Accessories 2023-10-01
- 096536 Static-Control Resilient Floor Coverings 2023-10-01
- 096623 Resinous Matrix Terrazzo Flooring 2023-10-01
- 096800 Carpeting 2023-10-01
- 097200 Wall Coverings 2023-10-01
- 097513 Stone Wall Facing 2023-10-01

- 098433 Sound-Absorbing Wall Units 2023-10-01
- 099601 High-Performance Coatings for General Usage 2024-10-01
- 099602 High-Performance FE/BR Coatings 2024-10-01

Division 10 – Specialties

- 101100 Visual Display Units 2023-10-01
- 101415 Post and Panel Pylon Exterior Signage 2023-10-01
- 101425 Interior Panel Signage 2023-10-01
- 102113 Toilet Compartments 2023-10-01
- 104415 Fire Protection Specialties 2025-10-01
- 105110 Cell Phone Locker 2024-10-01
- 105613 Metal Storage Shelves 2023-10-01
- 105640 Safety Storage Cabinets 2023-10-01

Division 11 – Equipment

- 111126 Vehicle Washing Equipment 2023-10-01
- 111305 Load Dock Equipment 2023-10-01
- 112173 Commercial Laundry Equipment 2023-10-01
- 113013 Residential Appliances 2024-10-01
- 114000 Foodservice Equipment 2025-10-01
- 115355 Class I Biological Safety Cabinets 2023-10-01
- 115700 Shop Equipment 2025-10-01
- 117000 Medical Equipment 2025-10-01

SECTION 033000 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cast-in-place concrete, including formwork, reinforcement, concrete materials, concrete mixture performance, qualification testing, production testing, placement procedures, and finishes, for the following:

1. Footings and Foundations.
2. Foundation walls.
3. Slabs-on-grade.
4. Suspended slabs.
5. Concrete toppings.
6. Building frame members.
7. Building walls.
8. Equipment pads and bases.
9. Topping slabs.
10. Site perimeter walls, concrete filled bollards, and site structures.

B. Related Sections:

1. Division 31 Section on earth moving for drainage fill under slabs-on-grade.
2. Division 31 Section “Termite Control” for termiticides applied to slabs-on-grade, basement slabs, and foundations.
3. **[Division 31 Section on drilled concrete piers and shafts for drilled pier foundations.]**
4. Division 32 Section on concrete paving for concrete pavement and walks.
5. **[Division 32 Section on decorative cement concrete pavement.]**

1.2 DEFINITIONS

A. Cementitious Materials: Portland cement alone or in combination with one or more of the following: Blended hydraulic cement, fly ash, metakaolin and other pozzolans, slag cement, and silica fume; subject to compliance with requirements.

B. Concrete Class: The performance requirements for structural concrete. Unless otherwise specified by Project Director/COR, the specification requirements shall be defined by the Engineer of Record. All concrete to be placed in the project shall have a Concrete Class designation. Exposure conditions outlined in ACI 318 shall be included in the Concrete Class definition.

C. Independent Quality Assurance Inspector: An independent third-party quality assurance firm retained by Contractor to serve inspection, oversight, and specification compliance tasks for the project including for concrete materials, concrete mixtures, reinforcing steel, and others as applicable.

D. Mass Concrete: A concrete element shall be treated as mass concrete when any of the following is true:

1. Concrete element is indicated to be mass concrete on the project drawings.
2. Minimum dimension of concrete element exceeds 1200 mm.
3. Concrete element is constructed in two or more smaller adjoining concrete placements to avoid treatment as mass concrete, unless a minimum period of 3 days is provided between smaller adjoining placements.

E. Specified Concrete Performance: Specified limiting value of a test result that indicates acceptable material quality or workmanship. Quality acceptance limits are based on design criteria that is provided as not-to-exceed values where values lower than specified indicate acceptable material (i.e., drying shrinkage); or as lower-bound limits where larger values indicate acceptable material (i.e., such as compressive strength).

F. Service Life: Government's stated expectation for number of years that structure will function without needing major concrete rehabilitation. Service life is defined as number of years before major restoration is necessary given minimal maintenance to structure during its life in accordance with OBO Design Code. Major restoration is defined as extensive areas that require extensive repairs using jack hammer or other destructive means to prepare concrete for rehabilitation. Unless otherwise specified, Service life is further defined as summation of corrosion initiation period (Ti) and corrosion propagation period (Tp) for given concrete system.

G. Supplemental Corrosion Protection: Includes (but not limited to) fusion-bonded epoxy-coated reinforcing steel, galvanized reinforcing steel, stainless reinforcing steel, corrosion inhibitors, barrier coatings to concrete surface, and cathodic protection.

H. Supplementary Cementitious Materials (SCM): Cementitious materials other than portland cement or blended cements that include fly ash, and granulated blast-furnace slag, when used in such proportions to replace portland cement that result in considerable improvement to durability and in some cases a reduction in cost.

I. Temperature Difference: Difference in temperature, at any point in time, between hottest portion of concrete placement and any point 50 to 75 mm into concrete on surface of concrete placement.

J. Test Section: Slab or wall separate from main structure and constructed prior to main construction as all-inclusive demonstration of methods and materials. Adequacy of the Test Section must be approved by Contracting Officer prior to construction of the project.

K. Thermal Control Period: Period of time when temperatures and temperature differences within concrete placement are required to be controlled. This period starts at completion of concrete placement and ends when hottest portion of placement cools such that removal of insulation will not cause excessive temperature difference in concrete placement.

L. Thermal Controls: Measures used to control temperatures and temperature differences within mass concrete placement.

M. Thermal Control Plan: Submittal from the Contractor to the OBO Project Director/COR that documents how temperatures and temperature differences will be controlled in mass concrete placement. Thermal control plan shall conform to minimum requirements of this Section.

N. Tolerance: Margin of deviation for each of specified concrete performance. Concrete material or workmanship performance found to be outside of Tolerance will result in Non-Compliance Report.

O. Water/Cementitious Materials Ratio (w/cm): Ratio by weight of water to cementitious materials.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at the Project site in accordance with requirements of Division 01 and the following:

1. Conduct conference at least 35 days prior to submitting concrete design mixtures to review detailed requirements for preparing concrete design mixtures and to determine procedures for satisfactory concrete operations. Review requirements for submittals, status of coordinating work, and availability of materials. Establish preliminary work progress schedule and procedures for materials inspection, testing, and certifications. Coordinate timing of conference with the Project Director/COR to facilitate their attendance.
2. Required Attendees: Require representatives of each entity directly concerned with cast-in-place concrete to attend conference, including, but not limited to, the following:

    a. Contractor's superintendent.
    b. Agency responsible for design concrete mixtures.
    c. Agency responsible for independent testing.
    d. Ready-mix concrete producer.
    e. Primary admixture manufacturer.
    f. Concrete subcontractor.
    g. Formwork subcontractor.
    h. Steel reinforcing installer subcontractor.
    i. Quality Control Manager.
    j. Project Director/COR.
    k. Engineer of Record.
    l. Architect of Record.
    m. Bridging Engineer and Bridging Architect.

3. Agenda:

    a. Special inspection and testing and inspecting agency procedures for field quality control.
    b. Concrete finishes and finishing.
    c. Cold- and hot-weather concreting procedures.
    d. Curing procedures.
    e. Construction contraction and isolation joints, and joint-filler strips.
    f. Semi-rigid joint fillers.

g. Forms and form removal limitations.
h. Shoring and reshoring procedures.
i. Vapor-retarder installation.
j. Anchor rod and anchorage device installation tolerances.
k. Steel reinforcement installation.
l. Floor and slab flatness and levelness measurement.
m. Concrete repair procedures.
n. Concrete protection.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. LEED Submittals:

1. Product Data for Credit MR 4.1 and Credit MR 4.2: For products having recycled content, documentation indicating percentages by weight of post-consumer and pre-consumer recycled content.

a. Include statement indicating costs for each product having recycled content.

2. Design Mixtures for Credit ID 1.1: For each concrete mixture containing fly ash as replacement for portland cement or other portland cement replacements, and for equivalent concrete mixtures that do not contain portland cement replacements.

C. Design Mixtures: Submit for each class of concrete field or laboratory test records used to document that proposed mixture will achieve the required average compressive strength and other specified requirements in Part 2 Articles on REPAIR MATERIALS, CONCRETE MIXTURES GENERAL, CONCRETE MIXTURES BUILDING ELEMENTS, CONCRETE MIXTURES CLASSES, and CONCRETE MIXING. Submit alternate design mixtures when characteristics of materials, Project conditions, weather, test results, or other circumstances warrant adjustments. Use form in Attachment A to this Section.

D. Shop Drawings:

1. Steel Reinforcement Shop Drawings: Placing drawings that detail fabrication, bending, and placement. Include bar sizes, lengths, material, grade, bar schedules, stirrup spacing, bent bar diagrams, bar arrangement, splices and laps, mechanical connections, tie spacing, hoop spacing, and supports for concrete reinforcement.
2. Formwork Shop Drawings: Prepared by or under supervision of qualified professional engineer detailing fabrication, assembly, and support of formwork. Show location and detail construction joints for concrete work. Show form construction including jointing, special form joints and reveals, location and pattern of form ties placement, and other items that affect exposed concrete visually.

a. Shoring and Reshoring: Indicate proposed schedule and sequence of stripping formwork, shoring removal, and reshoring installation and removal.

b. Review by the Project Director/COR is for general applications and features only. Formwork design and shoring sequence for structural stability and efficiency is Contractor's responsibility.

3. Construction Joint Layout Drawings: Indicate proposed construction joints required to construct structure.

a. Location of construction joints is subject to approval of the Project Director/COR.

E. Samples: For waterstops.

F. Concrete Schedule: For each location of each Class of concrete indicated in "Concrete Mixtures" Article, including the following:

1. Concrete Class designation.
2. Location within Project.
3. Exposure Class designation.
4. Formed Surface Finish designation and final finish.
5. Final finish for floors.
6. Curing process.
7. Floor treatment if any.

G. Concrete Placement Plan: Submit written report to the Project Director/COR describing proposed concrete placement program including but not limited to: transportation and placement of concrete, means and methods of consolidation, formwork and reinforcing steel installation, concrete placement sequencing and duration, means and methods to place concrete including personnel, equipment, and onsite testing agency.

1. Placement plan shall include:

a. Labor requirements.
b. Quality control requirements.
c. Placement limits.
d. Total concrete quantity.
e. Rate of concrete delivery and placement.
f. Placement plan shall include provisions for backup batching plant, pumps, vibrators, and other equipment in the event of plant or equipment failure, or unforeseen weather conditions.
g. Placement plan shall provide contingency procedures so that placement can be successfully accomplished in the event of permanent failure of a concrete pump.
h. Technical literature for equipment and methods proposed for vibrating and compacting concrete.

1) Include technical literature describing equipment including vibrator diameter, length, frequency, amplitude, centrifugal force, and manufacturer's description of radius of influence under load.
2) Where flat work is to be cast, provide similar information relative to proposed compacting screed or other method to ensure dense placement.

2. At least 14 days prior to each concrete placement, submit a plan for mixing, placing, finishing and curing concrete including the following:

   a. Methods of conveying concrete. For pumped placements of foundation mat and roof slab, minimum of two concrete pumps shall be active with additional pump present as backup. For pumped placements of foundation walls, minimum of one concrete pump shall be active with additional pump present as backup.
   b. Handling, placing, compaction, and finishing methods and equipment. Minimum of two internal vibrators shall be active for each active concrete pump with at least one backup vibrator available per pump.
   c. Concrete placement. Indicate starting point of placement, concrete delivery and placement rate, lift thicknesses and direction of advancement of concrete placement.
   d. Temperature control and monitoring methods, referencing TCP.
   e. Curing and protection methods.
   f. Target strength, slump, and proposed mixture design.
   g. Sequence and times for concrete pours.
   h. Construction joint locations and methods for preparation of construction joints.
   i. Anticipated timing, sequences, and procedures for formwork and shoring removal.

H. Concrete Qualification Plan:

1. Submit written reports to the Project Director/COR of each qualified concrete mixture demonstrating compliance with the project specifications. Report shall be prepared and sealed by professional engineer for each concrete mixture at least 15 days prior to start of work. Do not begin concrete production until the Project Director/COR has approved qualified concrete mixture materials and proportions.
2. Indicate specific materials to be utilized in each concrete mixture, including aggregates, admixtures and other materials, and amounts of mixing water to be withheld for later addition at the Project site.

I. Concrete Quality Assurance Plan: Submit written report to the Project Director/COR of proposed concrete quality assurance process to be conducted by the Contractor and sub-contractors such as Concrete Contractor, Quality Control Laboratory Testing Firm, Concrete Supplier, or others as applicable. Do not begin concrete production until the Project Director/COR has approved Concrete Assurance Plan. See Attachment E, "Quality Assurance Plan Example."

J. Thermal Control Plan: Thermal Control Plan is required for each element or group of mass concrete placements and shall be based on guidelines of ACI 207.2R. It shall demonstrate that proposed concrete mixture and methods do not result in placed concrete that exceeds specified temperature limitations. Thermal Control Plan shall be submitted to the Project Director/COR at least 14 days prior to concrete placement for review and approval. Submittal shall contain the following information:

1. Approved concrete mixture design.
2. Expected conditions at time of placement and calculated temperature rise of concrete and maximum temperature in concrete placement based on test or other data acceptable to OBO Project Director/COR. Maximum temperature limit shall be 70 deg C and maximum

temperature difference shall be 20 deg C. If maximum temperature difference is exceeded, Performance-Based Temperature Difference Limit may be proposed.

a. If Performance-Based Temperature Difference Limit other than 20 deg C is proposed, submit supporting calculations and all supporting test data for concrete mixture design used to develop temperature difference limit. Alternative temperature difference limit calculations shall clearly describe and demonstrate how alternative temperature difference limit will be implemented and used. Calculations and supplementary test data shall be submitted at a minimum of 14 calendar days for review and comment on this submittal. 20 deg C temperature difference limit shall be used until acceptance of alternative limit is provided.

3. Thermal Control Plan shall define concrete placement conditions and shall indicate anticipated ambient temperature, maximum concrete placement temperature, concrete constituent material mass and temperature, curing method, temperature monitoring and control measures.
4. Thermal Control Plan shall describe placing, monitoring of temperature, curing and thermal control procedures that will be used following concrete placement, so maximum temperature and maximum temperature differential between interior of section and outside surface of section do not exceed specified limits.
5. Proposed construction practices to maintain concrete temperature and temperature differentials within the specified limits.
6. Description of materials and procedures for insulation of mass concrete placements during thermal control.
7. Description of procedures, location, and equipment that will be used to record temperatures and temperature differences.
8. Design of cooling system, if necessary, consisting of non-corrosive piping to be embedded in mass concrete.
9. Description of measures to address and reduce excessive temperatures and temperature differences, if they occur.
10. Description of expected duration of thermal controls, and description of how thermal control period will be determined to be complete.
11. Description of curing procedures, including materials and methods, and curing duration.
12. Description of formwork removal procedures to ensure temperature difference at temporarily exposed surface will not exceed temperature difference limit, and how curing will be maintained.
13. Statement that if concrete design mixture, forms, curing method, or any other items affecting thermal control are changed, thermal control plan will be updated, submitted, and accepted prior to placing concrete.

K. Service Life Report: Service Life Report shall demonstrate that performance of structure will meet Project Requirements. Report shall account for applicable exposure conditions, utilize submitted concrete mixture proportions and materials, use results of laboratory testing, and provide results of service life modeling in tabular or graphical format. Refer to the Service Life reporting requirements in the Part 2 Article on CONCRETE MIXTURES FOR BUILDING ELEMENTS.

1. Include laboratory test reports indicating compliance with project specifications regarding durability as follows:

    a. Resistance to chloride penetration in accordance with project specifications
    b. Resistance to freeze-thawing (if applicable)
    c. Resistance to sulfate-induced deterioration from internal and external sources of sulfates
    d. Other potential durability deterioration mechanisms as indicated in the specification, if applicable.

1.5 INFORMATIONAL SUBMITTALS

A. Corporate and Personnel Qualification Data: For installer, manufacturer, and testing agency.

B. Material Certificates: For each of the following, signed by manufacturers:

1. Cementitious materials.
2. Aggregates.
3. Admixtures.
4. Mixing water – for non-potable sources of water, documented conformance to mandatory requirements of ASTM C1602.
5. Form materials and form-release agents.
6. Steel reinforcement and accessories.
7. Fiber reinforcement.
8. Waterstops.
9. Curing compounds.
10. Floor and slab treatments.
11. Bonding agents.
12. Adhesives.
13. Vapor retarders.
14. Semirigid joint filler.
15. Joint-filler strips.
16. Repair materials.

C. Material Test Reports: For the following, from qualified testing agency, indicating compliance with requirements as required for the structural members in the Part 2 Article on CONCRETE MIXTURES - CLASSES:

1. Alkali silica reactions in accordance with ASTM C1567.
2. Shrinkage in accordance with ASTM C157.
3. Modulus of elasticity in accordance with ASTM C469.
4. Indication of permeability of concrete in accordance with ASTM C1202.
5. Freeze-thaw durability in accordance with ASTM C457 or ASTM C666.
6. Aggregates. Include service record data indicating absence of deleterious expansion of concrete due to alkali aggregate reactivity and comply with either of the following:

a. Expansion Result of Aggregate: Not more than 0.04 percent at one-year when tested in accordance with ASTM C1293 conducted by an ASTM C1077 or ISO 17025 certified laboratory within the last three years.
b. Expansion Results of Aggregate and Cementitious Materials in Combination: Not more than 0.10 percent at an age of 16 days when tested in accordance with ASTM C1260 conducted by ASTM C1077 or ISO 17025 certified laboratory within last twelve months.

D. Welding certificates: Demonstrate personnel compliance with Part 1 Article on QUALITY ASSURANCE.

E. Steel Reinforcement Certified Mill Test Reports: Submit Certified Mill Test Reports for each heat representing all reinforcing steel supplied to the project.

F. Floor surface flatness and levelness measurements indicating compliance with specified tolerances.

G. Preconstruction Test Reports: For each mix design.

H. Concrete Pumping Program Plan: Submit written report indicating means and methods, equipment, and general activities related to transportation of fresh concrete by means of pneumatic pumps. Plan shall describe means and methods to ensure that blockage of pump line is mitigated.

1. Submit technical literature for equipment and methods proposed for use in placing concrete. Include concrete pumping or conveying equipment including type, size and material for pipe, valve characteristics, and the maximum length and height concrete will be pumped. Do not adjust the mixture design to facilitate pumping.

I. Minutes of preinstallation conference.

J. Field quality-control reports.

1.6 REPAIR SUBMITTALS

A. General:

1. Non-Conforming Materials Report (NCR). Refer to the Part 3 Article on CAST-IN-PLACE CONCRETE NON-CONFORMANCE RESOLUTION.
2. Submittal through Engineer of Record: At least 14 days before installation, the Contractor shall submit for approval, to the Engineer of Record, all applicable technical data for repair material; refer to the remaining paragraphs in this Article for potential document types. Refer to Chapter 1 of the OBO Building Code for requirements regarding signing, sealing, and dating submittals. The technical data shall include repair concrete mixture design and test results to verify satisfactory conformance to specification requirements. If proprietary material is used, manufacturer's recommended preparation, use, and installation specifications shall also be submitted.

3. Submittal to Project Director/COR: After the Engineer of Record has indicated approval on the submittal, the Contractor shall submit all applicable technical data to the OBO Project Director/COR prior to the Contractor proceeding with associated repair work.
4. Refer also to the Part 2 Article on REPAIR MATERIALS, and to the set of Part 3 Articles related to repair.

B. Shop Drawings.

C. Product Data Sheets.

D. Calculations.

E. Temporary Work: Submit Shop Drawings, calculations, and detailed design notes for any temporary works, including formwork and falsework.

F. Repair Procedures Plan: Procedures for concrete removal and repair.

G. Installation Procedures: Manufacturer's standard procedures.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Experienced installer who has completed concrete work similar in material, design, and extent to that indicated for this Project, and whose work has resulted in construction with record of successful in-service performance. As an example, installer who employs personnel on Project qualified as ACI-certified Flatwork Technician and Finisher and supervisor who is ACI-certified Concrete Flatwork Technician, or installer certified by ACI International Partner Associations as identified in Attachment D to this Section, is considered qualified.

B. Ready-Mix Concrete Manufacturer Qualifications: Firm experienced in manufacturing ready-mixed concrete products and that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

1. Manufacturer certified according to NRMCA's "Certification of Ready Mixed Concrete Production Facilities" or similar certification program is demonstration of qualification.

C. Concrete Batch Plant Requirements: Site concrete batch plant that complies with ASTM C 94/C 94M requirements for production facilities and equipment.

D. Professional Engineer Qualifications: Professional engineer who is experienced in providing engineering services of kind indicated. Engineering services are defined as those performed for formwork and shoring/ reshoring installations similar to those indicated for this Project in material, design, and extent.

E. Testing Agency Qualifications: Independent agency, acceptable to Project Director/COR, qualified according to ASTM C 1077 or ISO 17025 and ASTM E 329 for testing indicated.

1. Personnel conducting field tests shall be qualified as demonstrated by experience and appropriate certification such as ACI Concrete Field Testing Technician, Grade 1, according to ACI CP-1 or equivalent certification program. Refer to Attachment D to this Section for listing of ACI International Partner Associations for equivalent international certification programs.
2. Personnel performing laboratory tests shall be qualified as demonstrated by experience and appropriate certification such as ACI-certified Concrete Strength Testing Technician and Concrete Laboratory Testing Technician - Grade I or equivalent certification program. Testing Agency laboratory supervisor shall be qualified as demonstrated by experience and appropriate certification such as ACI-certified Concrete Laboratory Testing Technician - Grade II. Refer to Attachment D to this Section for listing of ACI International Partner Associations for equivalent international certification programs.

F. Cementitious Material Source Limitations: Obtain each type or class of cementitious material of same brand from same manufacturer's plant, obtain aggregate from single source, and obtain admixtures from single source from single manufacturer. Substitution of materials during construction shall demonstrate compliance with the project specifications, demonstrate acceptable performance through the Concrete Qualification Program, and be approved by OBO.

G. Reinforcing Steel Mill Qualifications: Reinforcing bars shall be manufactured by OBO prequalified manufacturer listed in Attachment B to this Section, or by manufacturer approved by OBO based upon variance process identified in Section 1903 of the OBO Building Code.

H. Welding Qualifications: Qualify procedures and personnel according to AWS D1.4/D 1.4M, "Structural Welding Code - Reinforcing Steel."

I. Concrete Testing Services: Engage qualified independent testing agency to perform material evaluation tests and to design concrete mixtures. Approved OBO independent testing laboratories are those entities accredited by International Accreditation Services, Inc. (IAS), or inspected by Cement and Concrete Reference Laboratory (CCRL), or laboratories at OBO prequalified reinforcing steel mills, or laboratories at approved State Department of Transportation labs. See Attachment C to this Section.

1.8 CONCRETE QUALITY CONTROL PROGRAM

A. The objective of concrete quality control program is for the Contractor to outline procedures that will be used to obtain design service life for the structures. Develop and submit for approval a concrete quality control program in accordance with guidelines of ACI 121R and as specified herein. Include approved laboratories. Provide direct oversight for the concrete qualification program inclusive of service life modeling, associated sampling and testing.

B. Develop and submit for approval a concrete quality control program in accordance with guidelines of ACI 121R and able to meet defined service life using methodology herein. Maintain copy of ACI SP-15 and CRSI 10MSP at the project site.

C. Quality Control Personnel - Submit for approval an organizational chart defining quality control hierarchy, responsibilities of various positions, including names and qualifications of individuals in those positions. Include ACI certification for the following:

1. Contractor quality control personnel responsible for inspection of concrete operations.

   a. Lead foreman of the concrete placing, finishing, and curing crews.
   b. Field Testing Technicians: ACI Concrete Field Testing Technician, Grade I.
   c. Laboratory Testing Technicians: ACI Concrete Strength Testing Technician and Laboratory Testing Technician, Grade I or II.
   d. Petrographer: Bachelor of Science degree in geology or petrography, trained in petrographic examination of concrete aggregate according to ASTM C294 and ASTM C295/C295M and trained in identification of specific deleterious processes and tests identified in this section. Resume shall detail the education, training and experience related to project-specific test methods and deleterious materials. Submit resume at least 20 days before examinations are to commence.
   e. Concrete Batch Plant Operator: National Ready Mix Concrete Association (NRMCA) Plant Manager Certification at the Plant Manager level.

D. Quality Control Manager Qualifications: Shall hold current license as professional engineer in U.S. state or territory with experience on at least five similar projects. Evidence of proven experience may be considered by the Contracting Officer as sufficient to act as the Quality Manager.

E. Field Testing Technicians and Testing Agencies: Submit qualifications of proposed testing agency and technicians for approval by the Contracting Officer prior to performing testing on concrete.

1. Perform concrete work utilizing an ACI Concrete Field Testing Technician Grade 1 qualified in accordance with ACI SP-2 or equivalent. Equivalent certification programs must include requirements for written and performance examinations as stipulated in ACI SP-2.
2. Testing agencies that perform testing services on reinforcing steel must meet the requirements of ASTM E329.
3. Testing agencies that perform testing services on concrete materials must meet the requirements of ASTM C1077.

F. The Contractor is responsible in the following ways for facilitating role of Contractor's Quality Control Manager in performing the activities defined below:

1. Provide access to Quality Control Manager to test concrete as indicated in the Contract Documents for compliance.
2. Place concrete only after placement of all forms, reinforcement, inserts, sleeves, and other embedments have been inspected and approved by the Contractor and Quality Control Manager and reviewed by Project Director/COR.
3. Place concrete only under supervision of Contractor and Quality Control Manager.
4. Utilize approved Quality Control Program to manage forming, reinforcement, production, delivery, placement, compaction, finishing, curing, protection and patching of all concrete.

Comply with the requirements specified in Division 01 requirements for Quality Control Manager.

5. Provide Quality Control Manager and Project Director/COR with access to site or to concrete plant to facilitate inspection of the reinforcement. Submit schedule, showing beginning and duration of shop fabrication, in sufficient time to allow for proper inspection.
6. Provide Quality Control Manager and Project Director/COR, with access to concrete plant to facilitate inspection of concrete. Notify the Quality Control Manager when production of concrete is to commence in sufficient time to allow for proper inspection.
7. Ensure that inspection and testing is performed by the Quality Control Manager in accordance with requirements of this Section and Division 01 Section "Contractor's Quality Control."
8. Provide free access to the Work and cooperate with appointed Quality Control Manager.
9. Ensure that the Quality Control Manager makes concrete compressive test specimens and perform all tests specified in this Section and Division 01.

    a. Quality Control Manager shall test proposed cement, aggregates and other concrete ingredients to ensure conformance with specified requirements.

10. Recognize authority of Quality Control Manager to reject concrete prior to or during placement for reasons of non-compliance with the Contract Documents.

1.9 TEST SECTION

A. Cast concrete slab-on-grade, walls or **[and formed-surface]**panels to demonstrate typical joints, surface finish, texture, tolerances, floor treatments, and standard of workmanship. Test Sections shall be constructed using candidate, or approved, materials, mixture proportions, and concrete equipment, means and methods and other specific information outlined in the Concrete Submittal, Concrete Placement Plan, and Concrete Pumping Plan. Concrete specimens for laboratory testing for specification compliance shall be molded and tested by the Independent Quality Assurance Inspector.

1. Build panel approximately 18.0 sq. m for slab-on-grade **[and 9.0 sq. m for formed surface]**in location indicated or, if not indicated, as directed by the Project Director/COR.
2. For walls and vertical elements, construct wall panel approximately 5 m, high, 1 m wide, and 10 m long (or any length to include at least one joint) in location indicated or, if not indicated, as directed by the Project Director/COR.
3. Approved test sections may become part of the completed work if undisturbed at time of Substantial Completion.
4. Test Sections that fail to meet specification requirements will result in Non-Conformance Report issued by Independent Quality Inspector documenting the material, workmanship or other aspects demonstrating failure to meet project specifications. The Contractor shall respond to Non-Conformance report in period no longer than five working days to address items requested in Non-Conformance Report.

1.10 PRECONSTRUCTION TESTING

A. Preconstruction Testing Service: Engage qualified testing agency to perform preconstruction testing on each concrete mixture.

1. Include the following information in each test report:

a. Admixture dosage rates.
b. Slump.
c. Air content.
d. Seven-day compressive strength.
e. 28-day compressive strength.
f. Permeability.

1.11 DELIVERY, STORAGE, AND HANDLING

A. Store cement, aggregate, admixture, water, embedded items and reinforcing in manner to prevent deterioration or intrusion of any foreign matter. Do not use damaged or deteriorated materials.

B. Steel Reinforcement: Deliver, store, and handle steel reinforcement to prevent bending and damage. Deliver bars to project with special bundling and tagging in accordance with CRSI Manual of Standard Practice. Tags shall be made of durable and waterproof material, marked in legible manner with waterproof markings, attached by wire, with one tag per bundle. Identification tags shall show grade of steel, mill heat number (special tagging), number of pieces, size, and mark or length of bars. **[Avoid damaging coatings on steel reinforcement. Repair damaged epoxy coatings on steel reinforcement according to ASTM D 3963/D 3963M.]**

C. Waterstops: Store waterstops under cover to protect from moisture, sunlight, dirt, oil, and other contaminants.

PART 2 - PRODUCTS

2.1 CONCRETE, GENERAL

A. Concrete Class: Refer to the Part 1 Article on DEFINITIONS.

B. Specified Concrete Performance: Specified limiting value of test result that indicates acceptable material quality or workmanship. Quality acceptance limits are based on design criteria that is provided as not-to-exceed values where values lower than specified indicate acceptable material (i.e., drying shrinkage); or as lower-bound limits where larger values indicate acceptable material (i.e., such as compressive strength).

C. Service Life: Government's stated expectation for number of years that the structure will function without needing major concrete rehabilitation. Service life is defined as number of years before major restoration is necessary given minimal maintenance to the structure during its life in accordance with the OBO Building Code. Major restoration is defined as extensive areas that

require extensive repairs using jack hammer or other destructive means to prepare concrete for rehabilitation. Unless otherwise specified, Service life is further defined as the summation of corrosion initiation period (Ti) and corrosion propagation period (Tp) for given concrete system.

1. Unless otherwise specified, concrete structures shall be designed for a 100-year service life, as identified in Chapter 19 of the OBO Building Code. Total service life is summation of corrosion initiation period (Ti) and corrosion propagation period (Tp). Modeling for the corrosion initiation period (Ti) shall use full probabilistic approach. Corrosion initiation time shall meet target reliability index of 1.3. Corrosion propagation period can be determined using deterministic approach.
2. Modeling of corrosion initiation time shall be in accordance with one of the following methodologies:

    a. STADIUM® software: Only certified STADIUM® laboratories and users can perform the testing and modeling.
    b. fib Bulletin 34 Model Code for Service Life Design (2006): Model used for corrosion initiation time shall be as per Appendix B2. Choice of each input parameter shall be documented in Durability Modeling Report; it shall be demonstrated how choice of input parameters is reasonable and applicable to the project. The Project Director/COR may request copy of calculations for review. Testing of concrete transport property, chloride migration coefficient, shall be in accordance with the NT Build 492 test method.

3. Deterioration mechanisms other than chloride-induced corrosion shall be considered and mitigated using deemed-to-satisfy or avoidance approach as in the specification documents.

D. ACI Publications: Comply with the following codes and standards unless modified by requirements in the Contract Documents:

1. ACI CT, “ACI Concrete Terminology”
2. ACI 301, "Specifications for Structural Concrete,"
3. ACI 117, "Specifications for Tolerances for Concrete Construction and Materials."
4. ACI 207.1 “Guide to Mass Concrete.”
5. ACI 211.1, “Standard Practice for Selecting Proportions for Normal, Heavyweight, and Mass Concrete.”
6. ACI 303.1, “Standard Specification for Cast-in-Place Architectural Concrete.”
7. ACI 304R, “Guide for Measuring, Mixing, Transporting, and Placing Concrete.”
8. ACI 305.1, “Specification for Hot Weather Concreting.”
9. ACI 306.1, “Standard Specification for Cold Weather Concreting.”
10. ACI 308.1, “Standard Specification for Curing Concrete.”
11. ACI 309R, “Guide for Consolidation of Concrete.”
12. ACI 318M, “Building Code Requirements for Structural Concrete.”
13. ACI 347, “Guide to Formwork for Concrete.”
14. ACI 336.1, “Specification for Construction of Drilled Piers.”
15. ACI 350, “Code Requirements for Environmental Engineering Concrete Structures.”
16. ACI 365, “Service Life Prediction.”

17. ACI 562, "Code Requirements for Assessment, Repair, and Rehabilitation of Existing Concrete Structures."
18. ACI 563, "Specifications for Concrete Repair."

E. CRSI Publication: Comply with Concrete Reinforcing Steel Institute (CRSI) "Manual of Standard Practice, except where more stringent requirements are indicated or specified.

2.2 FORM-FACING MATERIALS

A. Smooth-Formed Finished Concrete: Form-facing panels that will provide continuous, true, and smooth concrete surfaces. Furnish in largest practicable sizes to minimize number of joints.

1. Plywood, metal, or other approved panel materials.
2. Exterior-grade plywood panels, suitable for concrete forms, complying with DOC PS 1, and as follows:

   a. High-density overlay, Class 1 or better.
   b. Medium-density overlay, Class 1 or better; mill-release agent treated and edge sealed.
   c. Structural 1, B-B or better; mill oiled and edge sealed.
   d. B-B (Concrete Form), Class 1 or better; mill oiled and edge sealed.

B. Rough-Formed Finished Concrete: Plywood, lumber, metal, or another approved material. Provide lumber dressed on at least two edges and one side for tight fit.

C. Forms for Cylindrical Columns, Pedestals, and Supports: Metal, glass-fiber-reinforced plastic, paper, or fiber tubes that will produce surfaces with gradual or abrupt irregularities not exceeding specified formwork surface class. Provide units with sufficient wall thickness to resist plastic concrete loads without detrimental deformation.

D. Pan-Type Forms: Glass-fiber-reinforced plastic or formed steel, stiffened to resist plastic concrete loads without detrimental deformation.

E. Void Forms: Biodegradable paper surface, treated for moisture resistance, structurally sufficient to support weight of plastic concrete and other superimposed loads.

F. Chamfer Strips: Wood, metal, PVC, or rubber strips, 20 by 20 mm, minimum.

G. Rustication Strips: Wood, metal, PVC, or rubber strips, kerfed for ease of form removal.

H. Form-Release Agent: Commercially formulated form-release agent that will not bond with, stain, or adversely affect concrete surfaces and will not impair subsequent treatments of concrete surfaces.

1. Formulate form-release agent with rust inhibitor for steel form-facing materials.

I. Form Ties: Factory-fabricated, removable or snap-off metal or glass-fiber-reinforced plastic form ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal.

1. Furnish units that will leave no corrodible metal closer than 25 mm to the plane of exposed concrete surface.
2. Furnish ties that, when removed, will leave holes no larger than 25 mm in diameter in concrete surface.
3. Furnish ties with integral water-barrier plates to walls indicated to receive dampproofing or waterproofing.

2.3 STEEL REINFORCEMENT

A. Reinforcing Bars (General): ASTM A615/A615M, Grade 420 (Grade 60), deformed.

B. Low-Alloy-Steel Reinforcing Bars (Seismic Resisting Reinforcing where indicated on Drawings): ASTM A706/A706M-14, Grade 420 (Grade 60) deformed or ASTM A615/A615M-14 with the following additional requirements:

1. Actual yield strength based on mill tests shall not exceed the specified yield strength by more than 120 MPa.
2. Ratio of actual ultimate tensile strength to actual tensile yield strength shall not be less than 1.25.
3. Minimum elongation in 8 in. shall be at least 14 percent for bar sizes No. 3 through No. 6, at least 12 percent for bar sizes No. 7 through No. 11, and at least 10 percent for bar sizes No. 14 and No. 18.

C. Prequalified Manufacturer: Reinforcing bars shall be manufactured by OBO prequalified manufacturer as indicated in Table 03300-2.2**[or the following subject to compliance with OBO Design Standards, approval of the OBO Project Director/COR, and approval of Project Director/COR; insert manufacturer's name and location]**.

D. Epoxy-Coated Reinforcing Bars: ASTM A775/A775M epoxy coated, with less than 2 percent damaged coating in each 300-mm bar length.

E. Zinc and Epoxy Dual Coated Steel Reinforcing Bars: ASTM A1055/A1055M, Grade 420 (Grade 60), deformed.

F. Stainless Steel Reinforcing Bars: ASTM A955/A955M, Grade 60, deformed.

G. Steel Wire and Welded Wire Reinforcement, Plain and Deformed for Concrete: ASTM A1064/A1064M.

2.4 FABRICATING REINFORCEMENT

A. Fabricate steel reinforcement according to CRSI's "Manual of Standard Practice."

2.5 REINFORCEMENT ACCESSORIES

A. Joint Dowel Bars: ASTM A615/A615M, Grade 420 (Grade 60), plain-steel bars, cut true to length with ends square and free of burrs.

B. Epoxy-Coated Joint Dowel Bars: ASTM A615/A615M, Grade 420 (Grade 60), plain-steel bars, ASTM A775/A775M epoxy coated.

C. Epoxy Repair Coating: Liquid, two-part, epoxy repair coating; compatible with epoxy coating on reinforcement and complying with ASTM A775/A775M.

D. Bar Supports: Bolsters, chairs, spacers, and other devices for spacing, supporting, and fastening reinforcing bars and welded wire reinforcement in place. Manufacture bar supports from steel wire, plastic, or precast concrete according to CRSI's "Manual of Standard Practice," of greater compressive strength than concrete and as follows:

1. For concrete surfaces exposed to view where legs of wire bar supports contact forms, use CRSI Class 1 plastic-protected steel wire or CRSI Class 2 stainless-steel bar supports.
2. For epoxy-coated reinforcement, use epoxy-coated or other dielectric-polymer-coated wire bar supports.

E. Mechanical Splices and Connections: As indicated on Drawings.

1. Mechanical Splice Couplers: ACI 318 (ACI 318M) [**Type 1**] [**Type 2**], same material of reinforcing bar being spliced; [**compression-only type**] [**tension-compression type**] [**dowel-bar type**] [**mechanical-lap type**].

2.6 FIBER REINFORCEMENT

A. Synthetic Micro-Fiber: Monofilament or fibrillated polypropylene micro-fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, 25 to 56 mm long.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following :

a. Monofilament Micro-Fibers:

1) Axim Italcementi Group, Inc.; Fibrasol II P.
2) Euclid Chemical Company (The), an RPM company; Fiberstrand [**100**] [**150**].
3) FORTA Corporation; FORTA Econo-Mono.
4) Grace Construction Products, W. R. Grace & Co.; Grace MicroFiber.
5) Metalcrete Industries; Polystrand 1000.
6) Nycon, Inc.; ProConM.
7) Propex Concrete Systems Corp.; Fibermesh 150.
8) Sika Corporation; Sika Fiber PPM.
9) <**Insert manufacturer's name; product name or designation**>.

b. Fibrillated Micro-Fibers:

1) Axim Italcementi Group, Inc.; Fibrasol F.
2) Euclid Chemical Company (The), an RPM company; Fiberstrand F.
3) FORTA Corporation; FORTA [**Econo-Net**] [**Ultra-Net**].
4) Grace Construction Products, W. R. Grace & Co.; Grace Fibers.
5) Nycon, Inc.; ProConF.
6) Propex Concrete Systems Corp.; Fibermesh 300.
7) Sika Corporation; Sika Fiber PPF.
8) <**Insert manufacturer's name; product name or designation**>.

B. Synthetic Macro-Fiber: Polyolefin macro-fibers engineered and designed for use in concrete, complying with ASTM C 1116/C 1116M, Type III, 25 to 56 mm long.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. 3M; Scotchcast Polyolefin Fibers [**25 mm**] [**50 mm**].
b. Euclid Chemical Company (The), an RPM company; Tuf-Strand SF.
c. FORTA Corporation; FORTA FERRO.
d. Grace Construction Products, W. R. Grace & Co.; Strux 90/40.
e. Nycon, Inc.; XL.
f. Propex Concrete Systems Corp.; Fibermesh 650.
g. Sika Corporation; Sika Fiber [**MS**] [**MS10**].
h. <**Insert manufacturer's name; product name or designation**>.

2.7 CONCRETE MATERIALS

A. Cementitious Material: Use the following cementitious materials, of same type, brand, and source, throughout Project:

1. Portland Cement: ASTM C150, [**Type I**] [**Type II**] [**Type I/II**] [**Type III**] [**Type V**]. **[Supplement with the following:**
2. Blended Hydraulic Cement: ASTM C595, [**Type IS – portland blast-furnace slag**] [**Type IP – portland-pozzolan**] [**Type IL – portland-limestone**] [**Type IT – ternary blended**].
3. Performance Cement: ASTM C1157, [**Type GU – general use**] [**Type MS – moderate sulfate resisting**] [**Type HS – high sulfate resisting**] [**Type MH – moderate head**] [**Type LH – low heat**].

a. Fly Ash: ASTM C618, Class F.
b. Slag Cement: ASTM C989, Grade [100] or [120.]

B. Normal-Weight Aggregates: ASTM C33, uniformly graded, and as follows: [**Class 3S**] [**Class 3M**] [**Class 1N**] <**Insert class**> coarse aggregate or better, graded. Provide aggregates from single source with documented service record data of at least 10 years' satisfactory service in similar applications and service conditions using similar aggregates and cementitious materials.

1. Coarse-Aggregate: Provide coarse aggregate consisting of durable particles of gravel free from frozen material and from injurious amounts of salt, alkali, vegetable matter, or other objectionable material, either free or as an adherent coating. Provide coarse aggregate of uniform quality throughout.

   a. General Use: Unless otherwise specified, 25 mm to 4.75 mm.
   b. Walls, Columns, Beams, and Structural Slabs: Unless otherwise specified, 20 mm to 4.75 mm.
   c. Tight Placement: Unless otherwise specified, 12.5 mm to 4.75 mm.

2. Fine Aggregate: Provide fine aggregate consisting of clean, hard, durable particles of natural or manufactured sand. Provide fine aggregate free from frozen material and from injurious amounts of salt, alkali, vegetable matter, or other objectionable material. Do not use limestone dust of fracture as fine aggregate.
3. Materials that contain particles that will discolor surface shall not be used for any exposed concrete.
4. Provide aggregates from single source for exposed concrete.
5. Do not use aggregates containing chloride ions in excess to requirements of ACI for concrete construction in corrosive environments.

C. Lightweight Aggregate: ASTM C330, 20 mm nominal maximum aggregate size.

D. Water and Water Used to Make Ice: ASTM C1602/C1602M.

1. For non-potable sources of water, submit documentation on acceptability of water used as mixing water in concrete in accordance with mandatory requirements of ASTM C1602/C1602M.
2. For non-potable sources of water provide documentation for these characteristics in accordance with optional limits of ASTM C1602/C1602M: **[Chloride as Cl^- less than 500 ppm] [Chloride as Cl^- less than 1000 ppm] [Sulfate as SO_4 less than 3000 ppm] [Alkalis as (Na_2O + 0.658 K_20) less than 600 ppm] [Total solids by mass less than 50,000 ppm].**

2.8 ADMIXTURES

A. Air-Entraining Admixture: ASTM C260.

B. Certified by manufacturer shall be compatible with other admixtures to maintain water-soluble chloride ions within limits permitted in hardened concrete. Do not use calcium chloride or admixtures containing calcium chloride. Additionally, comply with the following, as appropriate:

1. Water-Reducing Admixture: ASTM C494/C494M, Type A.
2. Retarding Admixture: ASTM C494/C494M, Type B.
3. Water-Reducing and Accelerating Admixture: ASTM C494/C494M, Type C, Type E.
4. Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type D.
5. High-Range, Water-Reducing Admixture: ASTM C494/C494M, Type F.
6. High-Range, Water-Reducing and Retarding Admixture: ASTM C494/C494M, Type G.
7. Plasticizing and Retarding Admixture: ASTM C1017/C1017M, Type II.
8. Corrosion-Inhibiting Admixture: ASTM C1582.

9. Class S – ASTM C494/C494M for specific use. Provide admixture manufacturer documentation for specific use and performance data.
10. Permeability-Reducing Admixture: ASTM C494/C494M, Type S, hydrophilic, permeability-reducing admixture, capable of reducing water penetration of concrete exposed to hydrostatic pressure (PRAH).

    a. Permeability: Reduction of at least 50 percent in penetration shall be obtained in concretes with Permeability-Reducing Admixtures when evaluated in accordance with ACI 212.2R-14.

11. Color Pigment: ASTM C 979, synthetic mineral-oxide pigments or colored water-reducing admixtures; color stable,[**free of carbon black,**] nonfading, and resistant to lime and other alkalis.

    a. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

        1) ChemMasters.
        2) Davis Colors.
        3) Dayton Superior Corporation.
        4) Hoover Color Corporation.
        5) Lambert Corporation.
        6) QC Construction Products.
        7) Rockwood Pigments NA, Inc.
        8) Scofield, L. M. Company.
        9) Solomon Colors, Inc.
        10) <Insert manufacturer's name>.

12. Color: [**As indicated by manufacturer's designation**] [**Match Architect's sample**] [**As selected by Project Director/COR from manufacturer's full range**].

2.9 WATERSTOPS

A. Flexible Rubber Waterstops: CE CRD-C 513,**[with factory-installed metal eyelets,]** for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

    a. Greenstreak.
    b. Williams Products, Inc.
    c. <**Insert manufacturer's name**>.

2. Profile: Flat, dumbbell with center bulb.
3. Dimensions: **150 mm by 10 mm thick**; nontapered.

B. Flexible PVC Waterstops: CE CRD-C 572,[**with factory-installed metal eyelets,**] for embedding in concrete to prevent passage of fluids through joints. Factory fabricate corners, intersections, and directional changes.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. BoMetals, Inc.
b. Greenstreak.
c. Paul Murphy Plastics Company.
d. Vinylex Corp.
e. <**Insert manufacturer's name**>.

2. Profile: Flat, dumbbell with center bulb.
3. Dimensions: **150 mm by 10 mm thick,** nontapered.

C. Self-Expanding Butyl Strip Waterstops: Manufactured rectangular or trapezoidal strip, butyl rubber with sodium bentonite or other hydrophilic polymers, for adhesive bonding to concrete, 20 by 25 mm.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Carlisle Coatings & Waterproofing, Inc.; MiraSTOP.
b. CETCO; Volclay Waterstop-RX.
c. Concrete Sealants Inc.; Conseal CS-231.
d. Greenstreak; Swellstop.
e. Henry Company, Sealants Division; Hydro-Flex.
f. JP Specialties, Inc.; Earth Shield Type 20.
g. <**Insert manufacturer's name; product name or designation**>.

2.10 VAPOR RETARDERS

A. Sheet Vapor Retarder: ASTM E 1745, Class A[**, except with maximum perm rating of** <**Insert rating**>]. Include manufacturer's recommended adhesive or pressure-sensitive tape.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Carlisle Coatings & Waterproofing, Inc.; Blackline 400.
b. Fortifiber Building Systems Group; Moistop Ultra [**15**] [**10**].
c. Grace Construction Products, W. R. Grace & Co.; Florprufe 120.
d. Insulation Solutions, Inc.; Viper VaporCheck [**16**] [**10**]
e. Meadows, W. R., Inc.; Perminator [**15 mil**] [**10 mil**].
f. Raven Industries Inc.; Vapor Block [**15**] [**10**].
g. Reef Industries, Inc.; Griffolyn [**Type-105**] [**Type-65G**] [**15 mil Green**] [**10 mil Green**].

h. Stego Industries, LLC; Stego Wrap [**15 mil Class A**] [**10 mil Class A**].
i. <**Insert manufacturer's name; product name or designation**>.

B. Sheet Vapor Retarder: ASTM E 1745, Class B[**, except with maximum perm rating of** <**Insert rating**>]. Include manufacturer's recommended adhesive or pressure-sensitive tape.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Reef Industries Inc.; Griffolyn Type-85.
b. <**Insert manufacturer's name; product name or designation**>.

C. Sheet Vapor Retarder: ASTM E 1745, Class C[**, except with maximum perm rating of** <**Insert rating**>]. Include manufacturer's recommended adhesive or pressure-sensitive joint tape.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Raven Industries Inc.; Vapor Block 6.
b. Reef Industries, Inc.; Griffolyn Type-65.
c. Stego Industries, LLC; Stego Wrap, 10 mil Class C.
d. <**Insert manufacturer's name; product name or designation**>.

D. Sheet Vapor Retarder: Polyethylene sheet, ASTM D 4397, not less than 0.25 mm (10 mils) thick.

E. Bituminous Vapor Retarder: 2.8 mm (110 mil)- thick, semiflexible, 7-ply sheet membrane consisting of reinforced core and carrier sheet with fortified asphalt layers, protective weathercoating, and removable plastic release liner. Furnish manufacturer's accessories including bonding asphalt, pointing mastics, and self-adhering joint tape.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Meadows, W. R., Inc.; Premoulded Membrane Vapor Seal.

2. Water-Vapor Permeance: 0.00 ng/Pa x s x sq. m (0.00 grains/h x sq. ft. x inches Hg); ASTM E 154.
3. Tensile Strength: 24.5 kN/m (140 lbf/inch); ASTM E 154.
4. Puncture Resistance: 400 N (90 lbf); ASTM E 154.

F. Granular Fill: Clean mixture of crushed stone or crushed or uncrushed gravel; ASTM D 448, Size 57, with 100 percent passing a 38 mm (1-1/2-inch) sieve and 0 to 5 percent passing a 2.36 mm (No. 8) sieve.

G. Fine-Graded Granular Material: Clean mixture of crushed stone, crushed gravel, and manufactured or natural sand; ASTM D 448, Size 10, with 100 percent passing a 10 mm (3/8-inch) sieve, 10 to 30 percent passing a 0.15 mm (No. 100) sieve, and at least 5 percent passing 0.075 mm (No. 200) sieve; complying with deleterious substance limits of ASTM C 33 for fine aggregates.

2.11 FLOOR AND SLAB TREATMENTS

A. Coordinate with Architectural Finish Schedule.

B. Slip-Resistive Emery Aggregate Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive, crushed emery aggregate containing not less than 50 percent aluminum oxide and not less than 20 percent ferric oxide; unaffected by freezing, moisture, and cleaning materials with 100 percent passing [**9.5 mm (3/8-inch)**] [**4.75 mm (No. 4)**] [**2.36 mm (No. 8)**] <**Insert size or gradation**> sieve.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Anti-Hydro International, Inc.; Emery.
b. Dayton Superior Corporation; Emery Tuff Non-Slip.
c. Lambert Corporation; EMAG-20.
d. L&M Construction Chemicals, Inc.; Grip It.
e. Metalcrete Industries; Metco Anti-Skid Aggregate.
f. <**Insert manufacturer's name; product name or designation**>.

C. Slip-Resistive Aluminum Granule Finish: Factory-graded, packaged, rustproof, nonglazing, abrasive aggregate of not less than 95 percent fused aluminum-oxide granules.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Anti-Hydro International, Inc.; A-H Alox.
b. BASF Construction Chemicals - Building Systems; Frictex NS.
c. L&M Construction Chemicals, Inc.; Grip It AO.
d. <**Insert manufacturer's name; product name or designation**>.

D. Emery Dry-Shake Floor Hardener: [**Pigmented**] [**Unpigmented**], factory-packaged, dry combination of portland cement, graded emery aggregate, and plasticizing admixture; with emery aggregate consisting of no less than 60 percent of total aggregate content.

1. Color: [**As indicated by manufacturer's designation**] [**Match Architect's sample**] [**As selected by Project Director/COR from manufacturer's full range**].

E. Metallic Dry-Shake Floor Hardener: [**Pigmented**] [**Unpigmented**], factory-packaged, dry combination of portland cement, graded metallic aggregate, rust inhibitors, and plasticizing admixture; with metallic aggregate consisting of no less than 65 percent of total aggregate content.

1. Color: [**As indicated by manufacturer's designation**] [**Match Architect's sample**] [**As selected by Project Director/COR from manufacturer's full range**].

F. Unpigmented Mineral Dry-Shake Floor Hardener: Factory-packaged dry combination of portland cement, graded quartz aggregate, and plasticizing admixture.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. BASF Construction Chemicals - Building Systems; Maximent.
   b. ChemMasters; ConColor.
   c. Conspec by Dayton Superior; Conshake 500.
   d. Dayton Superior Corporation; Quartz Tuff.
   e. Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 250.
   f. Euclid Chemical Company (The), an RPM company; Surflex.
   g. Kaufman Products, Inc.; Tycron.
   h. Lambert Corporation; Colorhard.
   i. L&M Construction Chemicals, Inc.; Quartzplate FF.
   j. Metalcrete Industries; Floor Quartz.
   k. Scofield, L. M. Company; Lithochrome Color Hardener.
   l. Symons by Dayton Superior; Hard Top.
   m. <**Insert manufacturer's name; product name or designation**>.

G. Pigmented Mineral Dry-Shake Floor Hardener: Factory-packaged, dry combination of portland cement, graded quartz aggregate, color pigments, and plasticizing admixture. Use color pigments that are finely ground, nonfading mineral oxides interground with cement.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

   a. BASF Construction Chemicals - Building Systems; Mastercron.
   b. ChemMasters; ConColor.
   c. Conspec by Dayton Superior; Conshake 600 Colortone.
   d. Dayton Superior Corporation; Quartz Tuff.
   e. Edoco by Dayton Superior; Burke Non Metallic Floor Hardener 200 - 205.
   f. Euclid Chemical Company (The), an RPM company; Surflex.
   g. Kaufman Products, Inc.; Tycron.
   h. Lambert Corporation; Colorhard.
   i. L&M Construction Chemicals, Inc.; Quartz Plate FF.
   j. Metalcrete Industries; Floor Quartz.
   k. Scofield, L. M. Company; Lithochrome Color Hardener.
   l. Symons by Dayton Superior; Color Hardener.
   m. <**Insert manufacturer's name; product name or designation**>.

2. Color: [**As indicated by manufacturer's designation**] [**Match Architect's sample**] [**As selected by Project Director/COR from manufacturer's full range**].

2.12 LIQUID FLOOR TREATMENTS

A. Coordinate with Architectural Finish Schedule.

B. Penetrating Liquid Floor Treatment: Clear, chemically reactive, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, and densifies concrete surfaces.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. ChemMasters; Chemisil Plus.
b. ChemTec Int'l; ChemTec One.
c. Conspec by Dayton Superior; Intraseal.
d. Curecrete Distribution Inc.; Ashford Formula.
e. Dayton Superior Corporation; Day-Chem Sure Hard (J-17).
f. Edoco by Dayton Superior; Titan Hard.
g. Euclid Chemical Company (The), an RPM company; Euco Diamond Hard.
h. Kaufman Products, Inc.; SureHard.
i. L&M Construction Chemicals, Inc.; Seal Hard.
j. Meadows, W. R., Inc.; LIQUI-HARD.
k. Metalcrete Industries; Floorsaver.
l. Nox-Crete Products Group; Duro-Nox.
m. Symons by Dayton Superior; Buff Hard.
n. US SPEC, Division of US Mix Products Company; US SPEC Industraseal.
o. Vexcon Chemicals, Inc.; Vexcon StarSeal PS Clear.
p. <**Insert manufacturer's name; product name or designation**>.

C. Penetrating Liquid Floor Treatments for Polished Concrete Finish: Clear, waterborne solution of inorganic silicate or siliconate materials and proprietary components; odorless; that penetrates, hardens, and is suitable for polished concrete surfaces.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Advanced Floor Products; Retro-Plate 99.
b. L&M Construction Chemicals, Inc.; FGS Hardener Plus.
c. QuestMark, a division of CentiMark Corporation; DiamondQuest Densifying Impregnator Application.
d. <**Insert manufacturer's name; product name or designation**>.

2.13 CURING MATERIALS

A. Evaporation Retarder: Apply waterborne monomolecular evaporation retarder to concrete surfaces, as recommended by ACI 302, ACI 305, ACI 308, and ACI 345 if hot, dry, or windy weather conditions cause moisture loss greater than 0.75 kg/m2/hr as determined using Menzel Evaporation Rate chart. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before final finishing operations. Evaporation rate calculations will be confirmed by the Engineer. Failure to use evaporation retarder will be grounds for rejection of concrete. The Engineer shall approve all evaporation

retarding materials. Evaporation retarders are not required where water fogging equipment is in use.

B. Absorptive Cover: Compliant with AASHTO M 182, Class 2, burlap cloth made from jute or kenaf, weighing approximately 300 g/sq. m (9 oz./sq. yd.) when dry.

C. Liquid Curing Compounds: Compliant with ASTM C309 or ASTM C1315

D. Moisture-Retaining Cover: Compliant with ASTM C 171, polyethylene film or white burlap-polyethylene sheet.

E. Water: Compliant with ASTM C1602 and ASTM D512.

F. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, dissipating.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Anti-Hydro International, Inc.; AH Curing Compound #2 DR WB.
b. BASF Construction Chemicals - Building Systems; Kure 200.
c. ChemMasters; Safe-Cure Clear.
d. Conspec by Dayton Superior; W.B. Resin Cure.
e. Dayton Superior Corporation; Day-Chem Rez Cure (J-11-W).
f. Edoco by Dayton Superior; Res X Cure WB.
g. Euclid Chemical Company (The), an RPM company; Kurez W VOX; TAMMSCURE WB 30C.
h. Kaufman Products, Inc.; Thinfilm 420.
i. Lambert Corporation; AQUA KURE - CLEAR.
j. L&M Construction Chemicals, Inc.; L&M Cure R.
k. Meadows, W. R., Inc.; 1100-CLEAR.
l. Nox-Crete Products Group; Resin Cure E.
m. Right Pointe; Clear Water Resin.
n. SpecChem, LLC; Spec Rez Clear.
o. Symons by Dayton Superior; Resi-Chem Clear.
p. TK Products, Division of Sierra Corporation; TK-2519 DC WB.
q. Vexcon Chemicals, Inc.; Certi-Vex Enviocure 100.
r. <**Insert manufacturer's name; product name or designation**>.

G. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, nondissipating, certified by curing compound manufacturer to not interfere with bonding of floor covering.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. Anti-Hydro International, Inc.; AH Clear Cure WB.
b. BASF Construction Chemicals - Building Systems; Kure-N-Seal WB.
c. ChemMasters; Safe-Cure & Seal 20.

d. Conspec by Dayton Superior; Cure and Seal WB.
e. Cresset Chemical Company; Crete-Trete 309-VOC Cure & Seal.
f. Dayton Superior Corporation; Safe Cure and Seal (J-18).
g. Edoco by Dayton Superior; Spartan Cote WB II.
h. Euclid Chemical Company (The), an RPM company; Aqua Cure VOX; Clearseal WB 150.
i. Kaufman Products, Inc.; Cure & Seal 309 Emulsion.
j. Lambert Corporation; Glazecote Sealer-20.
k. L&M Construction Chemicals, Inc.; Dress & Seal WB.
l. Meadows, W. R., Inc.; Vocomp-20.
m. Metalcrete Industries; Metcure.
n. Nox-Crete Products Group; Cure & Seal 150E.
o. Symons by Dayton Superior; Cure & Seal 18 Percent E.
p. TK Products, Division of Sierra Corporation; TK-2519 WB.
q. Vexcon Chemicals, Inc.; Starseal 309.
r. <**Insert manufacturer's name; product name or designation**>.

H. Clear, Waterborne, Membrane-Forming Curing Compound: ASTM C 309, Type 1, Class B, 18 to 25 percent solids, nondissipating, certified by curing compound manufacturer to not interfere with bonding of floor covering.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems; Kure-N-Seal W.
b. ChemMasters; Safe-Cure Clear.
c. Conspec by Dayton Superior; High Seal.
d. Dayton Superior Corporation; Safe Cure and Seal (J-19).
e. Edoco by Dayton Superior; Spartan Cote WB II 20 Percent.
f. Euclid Chemical Company (The), an RPM company; Diamond Clear VOX; Clearseal WB STD.
g. Kaufman Products, Inc.; SureCure Emulsion.
h. Lambert Corporation; Glazecote Sealer-20.
i. L&M Construction Chemicals, Inc.; Dress & Seal WB.
j. Meadows, W. R., Inc.; Vocomp-20.
k. Metalcrete Industries; Metcure 0800.
l. Nox-Crete Products Group; Cure & Seal 200E.
m. Symons by Dayton Superior; Cure & Seal 18 Percent E.
n. Vexcon Chemicals, Inc.; Starseal 0800.
o. <**Insert manufacturer's name; product name or designation**>.

I. Clear, Solvent-Borne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.

1. Products: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems; Kure-N-Seal 25 LV.

b. ChemMasters; Spray-Cure & Seal Plus.
c. Conspec by Dayton Superior; Sealcure 1315.
d. Dayton Superior Corporation; Day-Chem Cure and Seal (J-22UV).
e. Edoco by Dayton Superior; Cureseal 1315.
f. Euclid Chemical Company (The), an RPM company; Super Diamond Clear; LusterSeal 300.
g. Kaufman Products, Inc.; Sure Cure 25.
h. Lambert Corporation; UV Super Seal.
i. L&M Construction Chemicals, Inc.; Lumiseal Plus.
j. Meadows, W. R., Inc.; CS-309/30.
k. Metalcrete Industries; Seal N Kure 30.
l. Right Pointe; Right Sheen 30.
m. Vexcon Chemicals, Inc.; Certi-Vex AC 1315.
n. <**Insert manufacturer's name; product name or designation**>.

J. Clear, Waterborne, Membrane-Forming Curing and Sealing Compound: ASTM C 1315, Type 1, Class A.

1. Products: Subject to compliance with requirements**,** available products that may be incorporated into the Work include, but are not limited to, the following:

a. BASF Construction Chemicals - Building Systems; Kure 1315.
b. ChemMasters; Polyseal WB.
c. Conspec by Dayton Superior; Sealcure 1315 WB.
d. Edoco by Dayton Superior; Cureseal 1315 WB.
e. Euclid Chemical Company (The), an RPM company; Super Diamond Clear VOX; LusterSeal WB 300.
f. Kaufman Products, Inc.; Sure Cure 25 Emulsion.
g. Lambert Corporation; UV Safe Seal.
h. L&M Construction Chemicals, Inc.; Lumiseal WB Plus.
i. Meadows, W. R., Inc.; Vocomp-30.
j. Metalcrete Industries; Metcure 30.
k. Right Pointe; Right Sheen WB30.
l. Symons by Dayton Superior; Cure & Seal 31 Percent E.
m. Vexcon Chemicals, Inc.; Vexcon Starseal 1315.
n. <**Insert manufacturer's name; product name or designation**>.

2.14 RELATED MATERIALS

A. Expansion- and Isolation-Joint-Filler Strips: [ASTM D 1751, asphalt-saturated cellulosic fiber][or][ASTM D 1752, cork or self-expanding cork].

B. Epoxy Joint Filler: For control and construction joints of slab-on-grade in warehouses, a two component, 100 percent solids, low-range tensile strength semi-rigid epoxy with a minimum shore D hardness 50 (ASTM D676) and elongation of 6 percent (ASTM D 2240). Epoxy joint filler shall be mixed and installed in strict accordance with direction of manufacturer. Joint filler shall not be filled sooner than 90 days after slab placement.

C. Bonding Agent: ASTM C 1059/C 1059M, Type II, non-redispersible, acrylic emulsion or styrene butadiene.

D. Epoxy Bonding Adhesive: ASTM C 881, two-component epoxy resin, capable of humid curing and bonding to damp surfaces, of class suitable for application temperature and of grade to suit requirements, and as follows:

1. **[Types I and II, non-load bearing][Types IV and V, load bearing]**, for bonding hardened or freshly mixed concrete to hardened concrete.

E. Reglets: Fabricate reglets of not less than 0.56 mm (26 gage, 0.022 inch) thick, galvanized-steel sheet. Temporarily fill or cover face opening of reglet to prevent intrusion of concrete or debris.

F. Dovetail Anchor Slots: Hot-dip galvanized-steel sheet, not less than 0.86 mm (22 gage, 0.034 inch) thick, with bent tab anchors. Temporarily fill or cover face opening of slots to prevent intrusion of concrete or debris.

2.15 REPAIR MATERIALS

A. General:

1. Only one brand of proprietary concrete repair material shall be used in any single repair operation unless compatibility between brands can be proven with actual test or performance data.
2. Conventional concrete mix to be used as replacement concrete repair material shall be ready-mix concrete that conforms to all salient features for repair material identified in this Article and shall conform to ASTM C94.
3. The Contractor is responsible for selection and correct application of concrete repair material. Refer to the Part 1 Article on REPAIR SUBMITTALS.
4. Salient Features for Concrete Repair Material: Material shall conform to all of the following:

   a. Shall be a cementitious material that after hardening will remain stable in wet and moist environments and will not dissolve in water.
   b. Have 28-day compressive strength of 30 MPa or greater when tested according to ASTM C39, unless otherwise specified.
   c. Bond strength of repair material shall be tested in accordance with ASTM C882 procedures for type V material and shall have the minimum strength of 7 MPa at 28 days of age unless otherwise specified.
   d. Shall be suitable for application at the minimum temperature of 12 deg C.
   e. Shall not contain chlorides, added gypsum, added lime, or high alumina cements. Shall be noncombustible both before and after cure.
   f. Color shall be concrete gray unless otherwise specified.
   g. Shall not produce a vapor barrier material and shall be thermally compatible with concrete.

h. Shall have a freeze-thaw resistance equal to or greater than the concrete substrate, air-entrained concrete designed for severe exposure conditions according to substrate concrete, unless otherwise specified.
i. Shall have drying shrinkage performance comparable to concrete substrate or maximum length change of 0.40 percent at 28 days of age when tested in accordance with ASTM C157.

B. Repair Underlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 3 mm and that can be feathered at edges to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of underlayment manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 3 to 6 mm or coarse sand as recommended by underlayment manufacturer.
4. Compressive Strength: Not less than 30 MPa at 28 days when tested according to ASTM C 109/C 109M.

C. Repair Overlayment: Cement-based, polymer-modified, self-leveling product that can be applied in thicknesses from 6 mm and that can be filled in over a scarified surface to match adjacent floor elevations.

1. Cement Binder: ASTM C 150, portland cement or hydraulic or blended hydraulic cement as defined in ASTM C 219.
2. Primer: Product of topping manufacturer recommended for substrate, conditions, and application.
3. Aggregate: Well-graded, washed gravel, 3 to 6 mm or coarse sand as recommended by topping manufacturer.
4. Compressive Strength: Not less than 35 MPa at 28 days when tested according to ASTM C 109/C 109M.

D. Epoxy Crack Injection Adhesive: ASTM C 881/C 881M, Type [I,] [IV,] [Grade 1,] [except for gel time,] [solvent free].

2.16 CONCRETE MIXTURES, GENERAL

A. Prepare design mixtures for each class and strength of concrete, proportioned on the basis of laboratory trial mixture or field test data, or both, according to ACI 301.

1. Use qualified independent testing agency acceptable to the Project Director/COR for preparing and reporting proposed mixture designs based on laboratory trial mixtures.
2. Do not use same testing agency for field quality control testing.

B. Cementitious Materials: Unless otherwise approved, of cementitious materials proportions for cast-in-place concrete shall meet one of the following:

1. Fly Ash: Maximum replacement of 40 percent by mass of total cementitious.
2. Combined Fly Ash, metakaolin, and Pozzolan: maximum replacement of 25 percent by mass of total cementitious.
3. Slag Cement: Maximum replacement of 80 percent by mass of total cementitious.
4. Silica Fume: Maximum replacement of 10 percent by mass of total cementitious.
5. Combined Fly Ash, metakaolin or Pozzolans, Slag Cement, and Silica Fume: maximum replacement of 50 percent by mass of total cementitious;

    a. With fly ash, metakaolin or pozzolans: not exceeding 25 percent by mass of total cementitious;
    b. And silica fume not exceeding 10 percent by mass of total cementitious.

6. Alternative cementitious materials combinations that can demonstrate compliance with project specifications can be accepted.
7. Silica Fume: Maximum replacement of 7 percent by mass of total cementitious.
8. Use of silica fume requires demonstration of adequate dispersion in concrete prior to acceptance. Contractor shall demonstrate that trial batch of proposed concrete mixture utilizing silica fume conforms to specified fresh and hardened concrete properties. Additionally, petrographic examination of concrete specimen sampled from trial batch shall be conducted and demonstrate that silica fume has been homogeneously dispersed in concrete.

C. Limit water-soluble, chloride-ion content in hardened concrete to the following limits depending on exposure category assigned to the structural member in the Part 2 Article on CONCRETE MIXTURES – CLASSES. Limits are stated in terms of chloride ions in percent weight of cement.

1. Prestressed and post-tensioned concrete for all exposure categories: [**0.06**].
2. Reinforced concrete in Exposure Category C0: [**1.00**].
3. Reinforced concrete in Exposure Category C1: [**0.30**].
4. Reinforced concrete in Exposure Category C2: [**0.15**].

D. Admixtures: Use admixtures according to manufacturer's written instructions.

E. Specialized materials such as ASTM C494 Type S, carbon dioxide injection, or similar, shall require demonstration of compliance with project specifications prior to its approval and use.

1. Use **[water-reducing] [high-range water-reducing] [or] [plasticizing]** admixture in concrete, as required, for placement and workability.
2. Use **[air-entraining]** admixtures to achieve the necessary air content for freeze-thawing and salt-scaling resistance.
3. Use water-reducing or retarding admixtures when required to ensure adequate transportation, placement, and consolidation of concrete mixtures as specified in Concrete Placement Report.
4. Use corrosion-inhibiting admixture in concrete mixtures where indicated.
5. Concrete mixtures containing corrosion-inhibiting admixtures will require trial batching to demonstrate that they can be transported and placed adequately by mitigating accelerating effect of corrosion-inhibiting admixture. See paragraph on slump retention in the Part 2 Article on CONCRETE MIXING.

F. Color Pigment: Add color pigment to concrete mixture according to manufacturer's written instructions and to result in hardened concrete color consistent with approved mockup.

G. Additional Requirements: Provide documentation in submittal prior to commencement of Work when required for concrete mixtures designed for structural members identified in the Part 2 Article on CONCRETE MIXTURES – CLASSES.

1. Alkali Silica Reactivity:

   a. Submit documentation of aggregate with satisfactory service record for minimum ten-year period used in concrete with similar cementitious materials or with an alkali (Na2O eq.) content in concrete equal or higher than that in the proposed mixture.
   b. Submit ASR test results of all aggregates proposed for use in concrete; aggregates with mortar bar expansion at 14 days in exposure solution, in accordance with ASTM C1260, less than or equal to 0.10 percent or expansion of concrete prisms at 1 year, in accordance with ASTM C1293, less than or equal to 0.04 percent shall be considered non-reactive and do not need additional testing described in the immediately following subparagraph.
   c. In the absence of service record, or when test results of aggregates indicate potential for deleterious expansion by criteria identified in the immediately preceding subparagraph, provide documentation of tests conducted with cementitious materials and aggregates proposed for Work – ASTM C1567 14-day expansion less than or equal to 0.10 percent. Each aggregate type shall be tested separately.

2. Shrinkage: Provide documentation of tests of concrete conducted in accordance with ASTM C157 for specimens cured for **[7 days in water and placed in drying environment for 21 days]** – length change should be less than **[0.05 percent at 28 days]** age.
3. Modulus of Elasticity: Provide documentation of tests of concrete conducted in accordance with ASTM C469 for specimens cured for 28 days for a modulus of elasticity greater than ***<specify Ec required by design>***.
4. Rapid Chloride Permeability: Provide documentation of the tests of concrete conducted in accordance with ASTM C1202 for specimens cured for 7 days at 23 deg C (73 deg F) and 21 days at 38 deg C (100 deg F) to achieve value equal to or less than specified rapid chloride permeability (RCP) for class of concrete for building elements identified in the Part 2 Article on CONCRETE MIXTURES – CLASSES.
5. Freeze-thaw testing: For structural members indicated in the Part 2 Article on CONCRETE MIXTURES – CLASSES, submit documentation of tests of concrete conducted in accordance with ASTM C666 for a minimum durability factor of 60 percent at 300 cycles. Alternatively provide documentation that spacing factor of air void system of concrete specimens is less than 0.25 mm (0.010 inches).

2.17 CONCRETE MIXTURES FOR BUILDING ELEMENTS

A. Concrete Mixture Proportions – At least 60 days prior to concrete placement, submit concrete mixture proportions, ingredient material certificates and test data, and trial batch test data for each concrete mixture proposed. Indicate where each mixture will be used when more than one mixture design is submitted. Obtain approval from the Contracting Officer prior to placement.

B. Concrete Design Requirements.

1. Proportion concrete mixtures to conform to requirements listed in Project Documents in accordance with procedures outlined in ACI 201.2R and ACI 211.1.
2. Develop mixture proportions for concrete to produce required design compressive strength (f'c), drying shrinkage, and constructability for mixtures that have potential to accomplish a structure with design service life.

C. Concrete Mixture Qualifications – Previously Approved Concrete Mixtures.

1. For identical concrete mixtures previously approved for use within the past 18 months, previous mixture qualification submittal may be re-submitted without further trial batch testing if accompanied by:

    a. Copy of prior approvals indicating the project name, project number, and location.
    b. Ingredient material test data conducted within 6 months of submittal date.
    c. Copies of previously approved trial batch test data.
    d. Log containing at least 15 sequential test results with calculated mean and standard deviation of production concrete for air content, compressive strength and concrete transport properties.

2. If changes are made to material type, class, sources, or suppliers; chemical composition; and/or mixture proportions, then submit written opinion of significance of the change(s). Change(s) may require additional testing at discretion of the Project Director/COR in consultation with the Government's Subject Matter Expert in Concrete Materials.

D. Concrete Mixture Qualifications – New Concrete Mixtures.

1. For new concrete mixtures without previous approval or without historic records of performance, new concrete mixture qualification submittal shall include:

    a. Submit complete ingredient material test data, including applicable reference specifications. Submit additional data regarding concrete aggregates if the source of aggregate changes.
    b. Submit copies of test reports by independent test lab conforming to ASTM C1077 or ISO 17025 showing that mixture has been successfully tested to produce concrete with properties specified and that mixture will be suitable for job conditions as described. Submit test reports along with concrete mixture proportions. Obtain approval before concrete placement.
    c. Test a minimum of two trial batches of production concrete to establish specified transport properties. If batching facilities are located such that haul-time will exceed 30 minutes, include simulated haul time in trial batch.
    d. If concrete mixture is proposed to contain corrosion inhibitors then accomplish laboratory testing and test for transport properties with and without the corrosion inhibitor because corrosion inhibitors are known to distort results of service life modeling when compared to mixtures without corrosion inhibitors. Obtain approval from the Project Director/COR for use of corrosion inhibitors.

2. Test and report fresh concrete property tests of each trial batch as follows:

   a. Slump in accordance with ASTM C143/C143M.
   b. If using self-consolidating concrete, slump flow in accordance with ASTM C1611/C1611M.
   c. Air content in accordance with ASTM C231/C231M or ASTM C173/C173M.
   d. Unit weight in accordance with ASTM C138/C138M.
   e. Temperature in accordance with ASTM C1064/C1064M.

3. Cast specimens, test, and report hardened concrete property tests of each trial batch as follows:

   a. Compressive strength at 7, 28, and 56 days of both batches in accordance with ASTM C39/C39M. Use of unbonded caps in accordance with ASTM C1231/C1231M is permitted.
   b. Drying shrinkage in accordance with ASTM C157 shall be determined from at least one batch.
   c. Tensile strength in accordance with ASTM C496 shall be determined using specimens cast from at least one batch.
   d. Freeze-thaw durability factor in accordance with ASTM C666, if required, as the mean of three test specimens cast from at least one batch.
   e. Initial chloride ion content in accordance with ASTM C1218 determined from at least one batch.
   f. Spacing factor determined in accordance with ASTM C457, if required, from at least one batch.
   g. Scaling resistance in accordance with ASTM C672, if required, from at least one batch.

4. Moist cure concrete intended for cast-in-place applications in accordance with standard moist curing conditions described in ASTM C192/C192M unless otherwise specified. Moist cure concrete intended for precast applications in manner proposed for use on the project.

E. Service Life Qualification – Testing

1. If using STADIUM® methodology: Cast twelve 4 by 8 inch cylinders, test and report ion transport properties as follows:

   a. Determine porosity at 28-days and 90-days of standard moist curing. Calculate the mean porosity and standard deviation at each test age.
   b. Determine Doh at 28-days and 90-days of standard moist curing. Calculate the mean Doh and standard deviation at each test age.
   c. Determine MTC at 28-days of standard moist curing.
   d. Calculate aging coefficient as ratio of the mean 90-day, or longer, Doh to the mean 28-day standard moist cure Doh.
   e. Retain unused specimens in storage.

f. These specimens may be tested later to refine actual aging factor. This is required in the event that any production concrete falls short of service life as it will provide evidence to better predict service life.

2. If using fib Bulletin 34 methodology: Cast six 100 by 200 mm (4 by 8 inch) cylinders from same concrete batch, test and report ion transport properties as follows:

   a. Determine the chloride migration coefficient at 28 days as NT Build 492 test procedure.
   b. Determine the acid-soluble chloride content at 28 days per ASTM C1152.

3. Special handling will be necessary for shipments of transport property specimens. These cylinders shall be wrapped completely with slightly damp paper towels with distilled water only. Wrapped cylinders shall be placed in either vacuum package or double layers of sealed plastic bags. Package test cylinders to prevent damage and ship to approved testing laboratory.

F. Service Life Report: The Contractor shall submit Durability Modeling report prepared by the consultant that conducts service life assessment of proposed concrete system for each concrete mixture. Refer additionally to summary requirements for this report in the Part 1 Article on ACTION SUBMITTALS. As a minimum, report shall contain:

1. Concrete mixture proportions.
2. Concrete cover to reinforcing steel. Cover to all reinforcing bars shall be clearly delineated with allowance for placement tolerances per ACI 117.
3. Environmental exposure conditions used for each type of concrete member.
4. Concrete transport properties and materials characteristics that, for specified exposure zones, satisfies minimum required service life of the structural member.
5. Narrative describing modeling process including assumptions and recommendations to accomplish service life using quality concrete and specified cover. In the event that locally available materials cannot be shown to accomplish the service life then the Contractor shall prepare proposal for review by OBO's Subject Matter Expert in Concrete Materials and approval by the Project Director/COR to use alternative sources of materials and/or supplemental corrosion protections
6. A cover letter signed and stamped by registered Professional Engineer certifying compliance with present specification, including required average compressive strength (f'cr), drying shrinkage, transport properties, and constructability, for mixtures that have potential to accomplish a structure with design service life.
7. If using STADIUM® methodology: Letter regarding certificate of completion for STADIUM® training.
8. Accreditation Certification letter for laboratory including all test methods utilized.

G. For concrete mixtures that are proposed to contain corrosion inhibitors, the Contractor shall submit 28-day values for transport properties (Doh for STADIUM® or chloride migration coefficient for fib Bulletin 34) from at least three batches of the mixture with and without admixture making appropriate adjustments to maintain constant water to cementitious ratio. The purpose is to establish a correlation with respect to adjusted value for production tested values.

H. At the option of the Contractor, a revised service life submittal may be provided as a value engineering proposal using refined characteristic properties calculated from production data. Extensions to corrosion propagation period may be reviewed by OBO's Subject Matter Expert in Concrete Materials and approved by the Project Director/COR based on evidence provided by the Contractor on a case-by-case basis.

2.18 CONCRETE MIXTURES – CLASSES

A. Unless otherwise specified, comply with the requirements shown in Table 2.18 "Concrete Classes" and described in this Section.

1. [Specified Chloride Permeability: [2500 coulombs] [2000 coulombs] [1500 coulombs].]

TABLE 2.18 – CONCRETE CLASSES

Concrete Class	Durability Exposure F	S	W	C	Min. Strength, f'c MPa	Specified Age, Days	Max. w/cm ratio	[RCP, coulombs]	Max. Shrinkage Limit	Modulus, MPa	Special Require-ments
Civil Site and Perimeter	2	0	1	1	25	56	0.45		0.04%		Air
Footings and Foundations	0	0	1	0	35	56	0.40				
Foundation Walls	0	0	0	0	35	56	0.40		0.04%		
Exterior Slab-on Grade	2	0	1	2	35	56	0.40		0.04%		Air; Synthetic Fibers
Interior Slab-on-Grade	0	0	0	0	28	56	0.40		0.04%		Synthetic Fibers
Suspended Slabs	0	0	0	0	35	56	0.40		0.04%		
Building Walls and Frame	0	0	0	0	35	56	0.40				
Toppings	0	0	0	0	35	56	0.40				Synthetic Fibers

TABLE 2.18 – CONCRETE CLASSES

Concrete Class	Durability Exposure F	S	W	C	Min. Strength, f'c MPa	Specified Age, Days	Max. w/cm ratio	[RCP, coulombs]	Max. Shrinkage Limit	Modulus, MPa	Special Require-ments
Garage Walls, Suspended Slabs	2	0	1	2	35	56	0.40				
Mass Concrete					35	56	0.45				
Specialized Concrete											

B. **Class Civil/Site and Perimeter Walls**: Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at the age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.
3. Maximum Water-Cementitious Materials Ratio **[0.45]** or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Drying Shrinkage: Drying shrinkage of prism specimens determined in accordance with ASTM C157 shall not be greater than 0.050 percent (75x75 mm cross section) or 0.040 percent (100x100 mm cross section) after 28 days of drying. Specimens shall be moist cured for 7 days prior to initiation of drying and length change shall be calculated using length after moist curing as reference length.
6. Air Content: As indicated in ACI 301 for the corresponding maximum aggregate size.
7. Spacing Factor: Not greater than 0.2 mm when determined in accordance with ASTM C457 Method B.
8. Specific Surface: Not less than 20 mm^2/mm^3 when determined in accordance with ASTM C457 Method B.

C. **Class Footings/Foundations:** Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.

3. Maximum Water-Cementitious Materials Ratio: **[0.40]** or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Foundations in direct contact with soil shall require use of concrete mixture with at least 35 MPa at 28 days and at least 30 percent replacement of portland cement by supplementary cementitious materials. Alternative replacement levels can be acceptable provided that expansion at 6 months is less than 0.05 percent when tested in accordance with ASTM C1012.
6. Concrete cover shall be at least 75 mm for concrete members in direct contact with soil.
7. Air Content: As indicated in ACI 301 for corresponding maximum aggregate size.
8. Spacing Factor: Not greater than 0.2 mm when determined in accordance with ASTM C457 Method B.
9. Specific Surface: Not less than 20 mm^2/mm^3 when determined in accordance with ASTM C457 Method B.

D. **Class Foundation Walls** (Foundation Walls extend a minimum of 1.00 m above adjacent grade): Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.

3. Maximum Water-Cementitious Materials Ratio: **[0.40]** or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Drying Shrinkage: Drying shrinkage of prism specimens determined in accordance with ASTM C157 shall not be greater than 0.050 percent (75 x 75 mm cross section) or 0.040 percent (100x100 mm cross section) after 28 days of drying. Specimens shall be moist cured for 7 days prior to initiation of drying and length change shall be calculated using length after moist curing as reference length.
6. Foundation walls in direct contact with soil require the use of concrete mixture with at least 35 MPa at 28 days and at least 30 percent replacement of portland cement by supplementary cementitious materials. Alternative replacement levels may be acceptable provided that expansion at 6 months is less than 0.05 percent when tested in accordance with ASTM C1012.
7. Air Content: As indicated in ACI 301 for corresponding maximum aggregate size.
8. Spacing Factor: Not greater than 0.2 mm when determined in accordance with ASTM C457 Method B.
9. Specific Surface: Not less than 20 mm^2/mm^3 when determined in accordance with ASTM C457 Method B.

E. **Class Slabs-on-Grade:** Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at the age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.

3. Maximum Water-Cementitious Materials Ratio: **[0.45]** or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Drying Shrinkage: Drying shrinkage of prism specimens determined in accordance with ASTM C157 shall not be greater than 0.050 percent (75x75 mm cross section) or 0.040 percent (100x100 mm cross section) after 28 days of drying. Specimens shall be moist cured for 7 days prior to the initiation of drying and the length change shall be calculated using the length after moist curing as the reference length.
6. Air Content: Do not allow air content of trowel-finished floors to exceed 3 percent.
7. Synthetic-micro-fiber dosage rates in first subparagraph below reflect typical recommendations of manufacturers. Retain first option for minimum dosage of synthetic micro-fiber used for reducing plastic shrinkage cracking. Retain second option or increase dosage for synthetic micro-fiber used for improving hardened concrete properties.
8. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at dosage indicated in concrete mixture submittal. Ensure that dispersion of the fibers has been achieved through laboratory testing.

F. **Class Suspended Slabs:** Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.

3. Maximum Water-Cementitious Materials Ratio: **[0.45]** or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Drying Shrinkage: Drying shrinkage of prism specimens determined in accordance with ASTM C157 shall not be greater than 0.040 percent (75x75 mm cross section) or 0.030 percent (100x100 mm cross section) after 28 days of drying. Specimens shall be moist cured for 7 days prior to the initiation of drying and length change shall be calculated using length after moist curing as reference length.

G. **Class Building Walls and Frame Members:** Proportion normal-weight concrete mixture as follows:

1. Minimum Design Compressive Strength: As indicated in Contract Documents at age of 28 days.
2. Minimum Design Compressive Strength – Mass Concrete: Compressive strength of concrete members designated as mass concrete can be achieved at an age of 56 days.
3. Maximum Water-Cementitious Materials Ratio: [**0.45**] or as indicated in approved Concrete Mixture Submittal.
4. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
5. Drying Shrinkage: Drying shrinkage of prism specimens determined in accordance with ASTM C157 shall not be greater than 0.040 percent (75x75 mm cross section) or 0.030 percent (100x100 mm cross section) after 28 days of drying. Specimens shall be moist cured for 7 days prior to initiation of drying and length change shall be calculated using length after moist curing as reference length.

H. **Class Concrete Toppings:** Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: As indicated in Contract Documents at the age of 28 days.

2. Maximum Water-Cementitious Materials Ratio: **[0.45]** or as indicated in approved Concrete Mixture Submittal.
3. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
4. Slump Limit: As indicated in submittal.
5. Air Content: Do not allow air content of trowel-finished toppings to exceed 3 percent.
6. Synthetic Micro-Fiber: Uniformly disperse in concrete mixture at manufacturer's recommended rate, but not less than 0.90 kg/cu. m (1.5 lb/cu. yd).

I. Class Garage Walls, Suspended Slabs, and Building Frame Members: Proportion normal-weight concrete mixture as follows:

1. Minimum Compressive Strength: As indicated in Contract Documents at the age of 28 days.

2. Maximum Water-Cementitious Materials Ratio: [**0.45**] or as indicated in approved Concrete Mixture Submittal.
3. Water-Cementitious Materials Ratio Tolerance: - 0.03 / + 0.00
4. Air Content: As indicated in ACI 301 for corresponding maximum aggregate size.
5. Spacing Factor: Not greater than 0.2 mm when determined in accordance with ASTM C457 Method B.
6. Specific Surface: Not less than 20 mm^2/mm^3 when determined in accordance with ASTM C457 Method B

J. **Class Specialized Concrete:** Concrete mixtures designated as Specialized Concrete shall include, but not limited to, the following:

1. Self-Consolidating Concrete: Fresh concrete that can flow around reinforcement and consolidate within formwork under its own weight without vibration.
2. Low-Carbon Embodied Concrete: Concrete mixtures utilizing least amount of portland cement and maximum amount of supplementary cementitious materials. Other technologies such as carbon dioxide injection, curing or similar may be acceptable by Project Director/COR.
3. Mass Concrete: Concrete mixtures designed to generate least amount of heat possible during strength development. See Thermal Control.
4. High-Strength Concrete: Concrete that has specified compressive strength for design of 55 MPa or greater.
5. High-Performance Concrete: Concrete meeting special combinations of performance and uniformity requirements that cannot always be achieved routinely using conventional constituents and normal mixing, placing, and curing practices.
6. Shrinkage-Compensating Concrete: Concrete containing expansive components usually based on formation of calcium sulfoaluminate (ettringite) in mixture of calcium aluminate and gypsum.

7. Performance requirements for each Specialized Concrete shall meet the Service Life and other applicable requirements indicated in Contract Documents unless otherwise approved by Project Director/COR.

2.19 CONCRETE MIXING

A. Ready-Mixed Concrete: Measure, batch, mix, and deliver concrete according to ASTM C 94/C 94M**[and ASTM C 1116/C 1116M]** and furnish batch ticket information. Comply with one of the following:

1. Ready-mix concrete producer shall be an NRMCA certified provider, or be subject to an inspection by an NRMCA certified inspector and approved by the OBO Project Director/COR.

   a. Each plant and truck mixer shall be currently certified by NRMCA or have inspection report signed and sealed by licensed Professional Engineer showing concrete measuring, mixing, and delivery equipment meets all requirements of ASTM C94. A new certification or signed and sealed report is required every time a plant is moved. Plants with licensed Professional Engineer's inspection require re-inspection every 2 years. Submit copy of certification or signed and sealed inspection report. Remove equipment or facilities from service until corrected when they fail to meet specification requirements.
   b. Concrete trial batches are required each time a different source of concrete materials constituents (i.e., cement, supplementary cementitious materials, aggregates, or admixtures) is selected for ready-mix concrete production.
   c. A batch ticket is required for each ready-mix concrete truck arriving on-site. Batch ticket shall contain the following:

      1) Date and truck number
      2) Ticket number
      3) Mixture designation of concrete
      4) Cubic yards of concrete
      5) Cement brand, type and weight in pounds
      6) Weight in pounds of fine aggregate (sand)
      7) Weight in pounds of coarse aggregate (stone)
      8) Air entraining agent, brand, and weight in pounds and ounces
      9) Other admixtures, brand, and weight in pounds and ounces
      10) Water, in gallons, stored in attached tank
      11) Water, in gallons, maximum that can be added without exceeding design water/cementitious materials ratio
      12) Water, in liters, actually used (by truck driver)
      13) Time of loading
      14) Time of delivery to job (by truck driver)
      15) Time of discharge

d. Any truck delivering concrete to the job site that is not accompanied by delivery ticket showing the above information will be rejected and such truck shall immediately depart from the job site.

2. Fresh concrete shall be provided at a rate sufficient to ensure that placed concrete does not begin to set prior to integration with fresh concrete. Cold joints are cause for rejection.
3. When air temperature is between 30 and 32 deg C, reduce mixing and delivery time from 1-1/2 hours to 75 minutes; when air temperature is above 32 deg C, reduce mixing and delivery time to 60 minutes. Alternatively, conduct a slump retention evaluation.
4. Slump Retention Evaluation: Conduct slump retention evaluation at ready-mix or mobile concrete batch plant. Slump retention shall consist of batching of qualified concrete mixture using various dosages of retarding, hydration stabilizing, or workability extension admixtures, over period of time not less than 120 minutes. Determine slump, air content, unit weight and temperature of concrete immediately after batching, and in 30-minute intervals until concrete slump is less than 50 mm (2 inches) or after 120 minutes. The initial slump immediately after batching shall not exceed maximum tolerance of slump as indicated in concrete mixture submittal. Submit written report showing concrete mixture, batch ticket, and testing results of slump retention evaluation to the Project Director/COE. The report shall explicitly state maximum delivery time proposed by the Contractor and Concrete Producer to ensure that concrete can be adequately placed and consolidated on the basis of slump retention evaluation

B. Project-Site Mixing: Measure, batch, and mix concrete materials and concrete according to ASTM C 94/C 94M. Mix concrete materials in appropriate drum-type batch machine mixer.

1. For mixer capacity of 0.75 cu. m or smaller, continue mixing at least 1-1/2 minutes, but not more than 5 minutes after ingredients are in mixer, before any part of batch is released.
2. For mixer capacity larger than 0.75 cu. m, increase mixing time by 15 seconds for each additional 0.75 cu. m.
3. Provide batch ticket for each batch discharged and used in the Work, indicating Project identification name and number, date, mixture type, mixture time, quantity, and amount of water added. Record approximate location of final deposit in structure.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions:

1. Before placing concrete, verify that installation of concrete forms, accessories, and reinforcement, and embedded items is complete and that required inspections have been performed.
2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Provide reasonable auxiliary services to accommodate field testing and inspections, acceptable to testing agency, including the following:

1. Daily access to the Work.
2. Incidental labor and facilities necessary to facilitate tests and inspections.
3. Secure space for storage, initial curing, and field curing of test samples, including source of water and continuous electrical power at Project site during site curing period for test samples.
4. Security and protection for test samples and for testing and inspection equipment at Project site.

3.3 FORMWORK PLACEMENT

A. Design, erect, shore, brace, and maintain formwork, according to ACI 301, to support vertical, lateral, static, and dynamic loads, and construction loads that might be applied, until structure can support such loads.

B. Construct formwork so concrete members and structures are of size, shape, alignment, elevation, and position indicated, within tolerance limits of ACI 117.

C. Limit concrete surface irregularities, designated by ACI 347 as abrupt or gradual, as follows:

1. Class A, 3 mm for smooth-formed finished surfaces.
2. Class B, 6 mm for rough-formed finished surfaces and Parking Structures.
3. **[Class C, 12 mm][Class D, 25 mm]** for rough-formed finished surfaces of foundations elements and grade beams.

D. Construct forms tight enough to prevent loss of concrete mortar.

E. Fabricate forms for easy removal without hammering or prying against concrete surfaces. Provide crush or wrecking plates where stripping may damage cast concrete surfaces. Provide top forms for inclined surfaces steeper than 1.5 horizontal to 1 vertical.

1. Install keyways, reglets, recesses, and the like, for easy removal.
2. Do not use rust-stained steel form-facing material.

F. Set edge forms, bulkheads, and intermediate screed strips for slabs to achieve required elevations and slopes in finished concrete surfaces. Provide and secure units to support screed strips; use strike-off templates or compacting-type screeds.

G. Provide temporary openings for cleanouts and inspection ports where interior area of formwork is inaccessible. Close openings with panels tightly fitted to forms and securely braced to prevent loss of concrete mortar. Locate temporary openings in forms at inconspicuous locations.

H. Chamfer exterior corners and edges of permanently exposed concrete.

I. Form openings, chases, offsets, sinkages, keyways, reglets, blocking, screeds, and bulkheads required in the Work. Determine sizes and locations from trades providing such items.

J. Clean forms and adjacent surfaces to receive concrete. Remove chips, wood, sawdust, dirt, and other debris just before placing concrete.

K. Retighten forms and bracing before placing concrete, as required, to prevent mortar leaks and maintain proper alignment.

L. Coat contact surfaces of forms with form-release agent, according to manufacturer's written instructions, before placing reinforcement.

3.4 INSTALL EMBEDDED ITEMS

A. Place and secure anchorage devices and other embedded items required for adjoining work that is attached to or supported by cast-in-place concrete. Use setting drawings, templates, diagrams, instructions, and directions furnished with items to be embedded.

1. Install anchor rods, FE/BR door and window embeds, and blast window embeds, accurately located, to elevations required and complying with tolerances in Section 7.5 of AISC 303 "Code of Standard Practice for Steel Buildings and Bridges."
2. Install reglets to receive waterproofing and to receive through-wall flashings in outer face of concrete frame at exterior walls, where flashing is shown at lintels, shelf angles, and other conditions.
3. Install dovetail anchor slots in concrete structures as indicated.

3.5 REMOVING AND REUSING FORMS

A. General: Formwork for sides of beams, walls, columns, and similar parts of the Work that does not support weight of concrete may be removed after cumulatively curing at not less than 10 deg C for 24 hours after placing concrete. Concrete has to be hard enough to not be damaged by form-removal operations and curing and protection operations need to be maintained.

1. Leave formwork for beam soffits, joists, slabs, and other structural elements that supports weight of concrete in place until concrete has achieved at least 70 percent of its 28-day design compressive strength.
2. Remove forms only if shores have been arranged to permit removal of forms without loosening or disturbing shores.

B. Clean and repair surfaces of forms to be reused in the Work. Split, frayed, delaminated, or otherwise damaged form-facing material will not be acceptable for exposed surfaces. Apply new form-release agent.

C. When forms are reused, clean surfaces, remove fins and laitance, and tighten to close joints. Align and secure joints to avoid offsets. Do not use patched forms for exposed concrete surfaces unless approved by the Project Director/COR.

3.6 SHORES AND RESHORES

A. Comply with ACI 318M and ACI 301 for design, installation, and removal of shoring and reshoring.

1. Do not remove shoring or reshoring until measurement of slab tolerances is complete.

B. In multistory construction, extend shoring or reshoring over a sufficient number of stories to distribute loads in such a manner that no floor or member will be excessively loaded or will induce tensile stress in concrete members without sufficient steel reinforcement.

C. Plan sequence of removal of shores and reshore to avoid damage to concrete. Locate and provide adequate reshoring to support construction without excessive stress or deflection.

3.7 INSTALL VAPOR RETARDERS

A. Sheet Vapor Retarders: Place, protect, and repair sheet vapor retarder according to ASTM E 1643 and manufacturer's written instructions.

1. Lap joints 150 mm and seal with manufacturer's recommended tape.

B. Bituminous Vapor Retarders: Place, protect, and repair bituminous vapor retarder according to manufacturer's written instructions.

C. Granular Course: Cover vapor retarder with granular fill moisten, and compact with mechanical equipment to elevation tolerances of plus 0 mm or minus 20 mm.

3.8 INSTALL STEEL REINFORCEMENT

A. General: Comply with CRSI's "Manual of Standard Practice" for placing reinforcement.

1. Do not cut or puncture vapor retarder. Repair damage and reseal vapor retarder before placing concrete.

B. Clean reinforcement of loose rust and mill scale, earth, ice, and other foreign materials that would reduce bond to concrete.

C. Accurately position, support, and secure reinforcement against displacement. Locate and support reinforcement with bar supports to maintain minimum concrete cover. Do not tack weld crossing reinforcing bars.

D. Set wire ties with ends directed into concrete, not toward exposed concrete surfaces.

E. Install welded wire reinforcement in longest practicable lengths on bar supports spaced to minimize sagging. Lap edges and ends of adjoining sheets at least one mesh spacing. Offset laps of adjoining sheet widths to prevent continuous laps in either direction. Lace overlaps with wire.

F. Epoxy-Coated Reinforcement: Repair cut and damaged epoxy coatings with epoxy repair coating according to ASTM D 3963/D 3963M. Use epoxy-coated steel wire ties to fasten epoxy-coated steel reinforcement.

3.9 JOINTS

A. General: Construct joints true to line with faces perpendicular to surface plane of concrete.

B. Construction Joints: Install so strength and appearance of concrete are not impaired, at locations indicated or as approved by Project Director/COR.

1. Place joints perpendicular to main reinforcement. Continue reinforcement across construction joints unless otherwise indicated. Do not continue reinforcement through sides of strip placements of floors and slabs.
2. Form keyed joints as indicated. Embed keys at least 40 mm into concrete.
3. Locate joints for beams, slabs, joists, and girders in the middle third of spans. Offset joints in girders minimum distance of twice the beam width from a beam-girder intersection.
4. Locate horizontal joints in walls and columns at underside of floors, slabs, beams, and girders and at top of footings or floor slabs.
5. Space vertical joints in walls as indicated. Locate joints beside piers integral with walls, near corners, and in concealed locations where possible.
6. Use bonding agent at locations where fresh concrete is placed against hardened or partially hardened concrete surfaces.

C. Contraction Joints in Slabs-on-Grade: Form weakened-plane contraction joints, sectioning concrete into areas as indicated. Construct contraction joints for depth equal to at least one-fourth of concrete thickness as follows:

1. Grooved Joints: Form contraction joints after initial floating by grooving and finishing each edge of joint to radius of 3 mm. Repeat grooving of contraction joints after applying surface finishes. Eliminate groover tool marks on concrete surfaces.
2. Sawed Joints: Form contraction joints with power saws equipped with shatterproof abrasive or diamond-rimmed blades. Cut 3 mm wide joints into concrete when cutting action will not tear, abrade, or otherwise damage surface and before concrete develops random contraction cracks.

D. Isolation Joints in Slabs-on-Grade: After removing formwork, install joint-filler strips at slab junctions with vertical surfaces, such as column pedestals, foundation walls, grade beams, and other locations, as indicated.

1. Extend joint-filler strips full width and depth of joint, terminating flush with finished concrete surface unless otherwise indicated.
2. Terminate full-width joint-filler strips not less than 12 mm or more than 25 mm below finished concrete surface where joint sealants, specified in Division 07 Section "Joint Sealants," are indicated.
3. Install joint-filler strips in lengths as long as practicable. Where more than one length is required, lace or clip sections together.

E. Doweled Joints: Install dowel bars and support assemblies at joints where indicated. Lubricate or asphalt coat one-half of dowel length to prevent concrete bonding to one side of joint.

3.10 INSTALL WATERSTOPS

A. Flexible Waterstops: Install in construction joints and at other joints indicated to form a continuous diaphragm. Install in longest lengths practicable. Support and protect exposed waterstops during progress of the Work. Install factory fabricated corners, intersections, and directional changes. Field fabricate joints in waterstops according to manufacturer's written instructions.

B. Self-Expanding Strip Waterstops: Install in construction joints and at other locations indicated, according to manufacturer's written instructions, adhesive bonding, mechanically fastening, and firmly pressing into place. Install in longest lengths practicable.

3.11 CONCRETE PLACEMENT, GENERAL

A. Before placing concrete, verify that installation of formwork, reinforcement, and embedded items is complete and that required inspections have been performed.

1. Notify the Project Director/COR and testing and inspection agencies at least 1 week prior to commencement of concrete placement.
2. Unless approved by the Project Director/COR in writing, project-site additions of water to concrete prior to or during placement is prohibited. Batch water withheld can be added on site as long as total water does not exceed the amount indicated on the concrete mixture design. Exceeding the mixture w/cm ratio is cause for rejection.
3. Deposit concrete continuously in one layer or in horizontal layers of such thickness that no new concrete is placed on concrete that has hardened enough to cause cold joints or planes of weakness.

    a. If section cannot be placed continuously, provide construction joints as indicated in Thermal Control Plan or structural drawings, as applicable.
    b. Deposit concrete to avoid segregation.
    c. Deposit concrete in horizontal layers of depth not to exceed formwork design pressures and in a manner to avoid inclined construction joints.
    d. Consolidate placed concrete with mechanical vibrating equipment in accordance with ACI 301.

4. Do not use vibrators to transport concrete inside forms.
5. Insert and withdraw vibrators vertically at uniformly spaced locations to rapidly penetrate placed layer and at least 150 mm into preceding layer.
6. Do not insert vibrators into lower layers of concrete that have begun to lose plasticity.
7. At each insertion, limit duration of vibration to time necessary to consolidate concrete and complete embedment of reinforcement and other embedded items without causing mixture constituents to segregate.

B. Deposit and consolidate concrete for floors and slabs in a continuous operation, within limits of construction joints, until placement of a panel or section is complete.

1. Do not place concrete floors and slabs in a checkerboard sequence.
2. Consolidate concrete during placement operations so concrete is thoroughly worked around reinforcement and other embedded items and into corners. Use immersion-type vibrators with spacing of vibrator insertions not exceeding 1½ times the vibrator's radius of influence within the concrete being consolidated.
3. Maintain reinforcement in position on chairs during concrete placement.
4. Screed slab surfaces with a straightedge and strike off to correct elevations.
5. Level concrete, cut high areas, and fill low areas.
6. Slope surfaces uniformly to drains where required.
7. Begin initial floating using bull floats or darbies to form a uniform and open-textured surface plane, before excess bleed water appears on the surface. Do not further disturb slab surfaces before starting finishing operations.

C. Cold-Weather Placement: Comply with ACI 306.1 and as follows. Protect concrete work from physical damage or reduced strength that could be caused by frost, freezing actions, or low temperatures.

1. When average high and low temperature is expected to fall below 5 deg C for three successive days, maintain delivered concrete mixture temperature within the temperature range required by ACI 301.
2. Do not use frozen materials or materials containing ice or snow. Do not place concrete on frozen subgrade or on subgrade containing frozen materials.
3. Do not use calcium chloride, salt, or other materials containing antifreeze agents or chemical accelerators unless otherwise specified and approved in mixture designs.

D. Hot-Weather Placement: Comply with ACI 301, 305.1, and as follows:

1. Except as otherwise specified, comply with provisions of ACI 301 and ACI 305.1. In addition, when outdoor shade temperature exceeds 38 deg C, do not mix concrete; when outdoor shade temperature exceeds 26 deg C, comply with the following:
2. Handling: Prevent premature stiffening of fresh mix and reduce evaporation. Mix, transport, place, and consolidate concrete as rapidly as possible.
3. Placing: Before and during placing, maintain formwork and reinforcement below 90 deg F using protection, cold water spraying, or other effective means. When placed in forms, temperature of concrete shall not exceed temperatures indicated in Thermal Control Plan.
4. Elapsed Delivery Time: Elapsed time between water addition to mix and discharge of concrete at site must not exceed criteria in the following Table 3.11 "Elapsed Delivery Time" unless hydration stabilizer admixture is used. Longer times may be allowed at discretion of the Project Director/COR, provided that trial batching demonstrates adequate working time and performance as demonstrated by slump retention evaluation, if necessary.

TABLE 3.11 – ELAPSED DELIVERY TIME

Concrete Temperature at Time of Discharge (deg. C)	Maximum Elapsed Time (Hours)
< 23	2.00
23 – 32	1.50
> 32	0.75

5. Temperature Control Methods: Select one or more of the following methods of maintaining the specified temperature of the placed concrete:

   a. Use chilled mixing water.
   b. Spray coarse aggregate using cold water.
   c. Use ice as replacement of batch water. If used, ice shall be batched by mass and indicated in concrete batch ticket.
   d. Use liquid nitrogen to cool aggregates before mixing; or cool fresh concrete using liquid nitrogen before placing.

E. Rapid Drying Conditions:

1. During rapid drying conditions, such as combinations of the following, special measures shall be employed to reduce drying from the surface of concrete:

   a. High temperatures of 25 deg C or higher.
   b. Direct sun exposure.
   c. Ambient humidity lower than 65 percent.
   d. Wind speed greater than 16 km/hr.

2. Special measures shall include at least one of the following:

   a. Fogging of screeded and freshly finished concrete. Fogging shall be accomplished with fine spray tip on high pressure power-washer that is directed upward into air over concrete surfaces. Fogging shall be used only to maintain damp concrete surface. It shall not be used to wet concrete surfaces immediately prior to finishing.
   b. Use of evaporation reducers. Use in strict conformance to manufacturer recommendations.
   c. Concrete placement at favorable hours of day when rapid drying conditions no longer exist.

3. Maintain special measures until final curing measures are applied.
4. Plastic shrinkage cracking and/or settlement cracking is cause for rejection.

3.12 MASS CONCRETE PLACEMENT

A. Place mass concrete in conformance with the approved Thermal Control Plan; refer to the Part 1 Article on ACTION SUBMITTALS.

B. Temperature and Temperature Difference Limits:

1. Maximum Temperature Limit: Maximum temperature of concrete within mass concrete placement shall not exceed 70 deg C at any time during the thermal control period.
2. Temperature Difference Limit: Maximum temperature difference limit within mass concrete placement shall not exceed 20 deg C.
3. An alternative temperature difference other than 20 deg C may be used, if analyses are performed in accordance with ACI 207.2R-95 or CIRIA C660. These analyses shall use measured properties of accepted mass concrete mixture, shall not include effects of creep to increase temperature difference limit, and shall show that mass concrete mixture and placement are not at risk for cracking based on the use of alternative temperature difference. Alternative temperature difference shall be based on in-place strength of concrete.
4. Temperature difference limit shall be enforced during entire thermal control period.
5. Concrete Temperature at Time of Placement: Initial temperature of mass concrete, as deposited, shall be no greater than 32 deg C unless lower initial temperature is required by accepted thermal control plan to prevent exceeding stated maximum temperature limit or stated maximum temperature difference limit. In addition, initial temperature of mass concrete, as deposited, shall be no less than 7 deg C. Do not place concrete that contains frozen materials. Protect concrete from freezing until curing and thermal control period are complete.

3.13 FINISHING FORMED SURFACES

A. Rough-Formed Finish: As-cast concrete texture imparted by form-facing material with tie holes and defects repaired and patched. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces not exposed to public view.

B. Smooth-Formed Finish: As-cast concrete texture imparted by form-facing material, arranged in an orderly and symmetrical manner with a minimum of seams. Repair and patch tie holes and defects. Remove fins and other projections that exceed specified limits on formed-surface irregularities.

1. Apply to concrete surfaces exposed to public view, to receive a rubbed finish, or to be covered with coating or covering material applied directly to concrete.

C. Rubbed Finish: Apply the following to smooth-formed finished as-cast concrete where indicated:

1. Smooth-Rubbed Finish: Not later than one day after form removal, moisten concrete surfaces and rub with carborundum brick or another abrasive until producing uniform color and texture. Do not apply cement grout other than that created by rubbing process.

2. Grout-Cleaned Finish: Wet concrete surfaces and apply grout of consistency of thick paint to coat surfaces and fill small holes. Mix one part portland cement to one and one-half parts fine sand with 1:1 mixture of bonding admixture and water. Add white portland cement in amounts determined by trial patches so color of dry grout will match adjacent surfaces. Scrub grout into voids and remove excess grout. When grout whitens, rub surface with clean burlap and keep surface damp by fog spray for at least 36 hours.

D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with texture matching adjacent formed surfaces. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces unless otherwise indicated.

3.14 FINISHING FLOORS AND SLABS

A. Comply with ACI 302.1R recommendations for screeding, restraightening, and finishing operations for concrete surfaces. Do not wet concrete surfaces.

B. Scratch Finish:

1. While still plastic, texture concrete surface that has been screeded and bull-floated or darbied.
2. Use stiff brushes, brooms, or rakes to produce a profile depth of 1/4 inch (6 mm) in one direction.
3. Apply scratch finish to surfaces [**to receive concrete floor toppings**] [**to receive mortar setting beds for bonded cementitious floor finishes**] <**Insert locations**>.

C. Float Finish:

1. When bleedwater sheen has disappeared and concrete surface has stiffened sufficiently to permit operation of specific float apparatus, consolidate concrete surface with power-driven floats or by hand floating if area is small or inaccessible to power-driven floats.
2. Repeat float passes and restraightening until surface is left with a uniform, smooth, granular texture and complies with ACI 117 (ACI A117M) tolerances for conventional concrete.
3. Apply float finish to surfaces [**to receive trowel finish**] [**and**] [**to be covered with fluid-applied or sheet waterproofing, built-up or membrane roofing, or sand-bed terrazzo**] <**Insert locations**>.

D. Trowel Finish:

1. After applying float finish, apply first troweling and consolidate concrete by hand or power-driven trowel.
2. Continue troweling passes and restraighten until surface is free of trowel marks and uniform in texture and appearance.
3. Grind smooth any surface defects that would telegraph through applied coatings or floor coverings.
4. Do not add water to concrete surface.
5. Do not apply hard-troweled finish to concrete, which has a total air content greater than 3 percent.

6. Apply trowel finish to surfaces [**exposed to view**] [**or**] [**to be covered with resilient flooring, carpet, ceramic or quarry tile set over a cleavage membrane, paint, or another thin-film-finish coating system**] <**Insert locations**>.
7. Finish surfaces to the following tolerances, in accordance with ASTM E1155 (ASTM E1155M), for a randomly trafficked floor surface:

   a. Slabs on Ground:

      1) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 3.05-m- (10-ft,) long straightedge resting on two high spots and placed anywhere on the surface does not exceed **[6 mm (1/4 inch)][4.8 mm (3/16 inch)][3 mm (1/8 inch)][3 mm (1/8 inch) and also no more than 1.6 mm (1/16 inch) in 610 mm (2 feet)]**.
      2) Specified overall values of flatness, F_F 25; and of levelness, F_L 20; with minimum local values of flatness, F_F 17; and of levelness, F_L 15.
      3) Specified overall values of flatness, F_F 35; and of levelness, F_L 25; with minimum local values of flatness, F_F 24; and of levelness, F_L 17.
      4) Specified overall values of flatness, F_F 45; and of levelness, F_L 35; with minimum local values of flatness, F_F 30; and of levelness, F_L 24.
      5) Specified Overall Value (SOV): F_F 50 and F_L 25 with minimum local value (MLV): F_F 40 and F_L 17.
      6) Specified Overall Value (SOV): F_F 25 and F_L 20 with minimum local value (MLV): F_F 17 and F_L 15.

   b. Suspended Slabs:

      1) Finish and measure surface so gap at any point between concrete surface and an unleveled, freestanding, 3.05-m- (10ft.-) long straightedge resting on two high spots and placed anywhere on the surface does not exceed **[6 mm (1/4 inch)][4.8 mm (3/16 inch)][3 mm (1/8 inch)][3 mm (1/8 inch) and also no more than 1.6 mm (1/16 inch) in 610 mm (2 feet)]**.
      2) Specified overall values of flatness, F_F 25; and of levelness, F_L 20; with minimum local values of flatness, F_F 17; and of levelness, F_L 15.
      3) Specified overall values of flatness, F_F 35; and of levelness, F_L 20; with minimum local values of flatness, F_F 24; and of levelness, F_L 15.
      4) Specified overall values of flatness, F_F 45; and of levelness, F_L 35; with minimum local values of flatness, F_F 30; and of levelness, F_L 24.

E. Trowel and Fine-Broom Finish: Apply first trowel finish to surfaces [**indicated on Drawings**][**where ceramic or quarry tile is to be installed by either thickset or thinnest method**]. While concrete is still plastic, slightly scarify surface with fine broom perpendicular to main traffic route.

1. Coordinate required final finish with the Architect of Record through the OBO Design Manager before application.
2. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

F. Broom Finish: Apply a broom finish to exterior concrete platforms, steps, ramps, and locations indicated on Drawings.

1. Immediately after float finishing, slightly roughen trafficked surface by brooming with fiber-bristle broom perpendicular to main traffic route.
2. Coordinate required final finish with the Architect of Record through the OBO Design Manager before application.

G. Slip-Resistive Finish: Before final floating, apply slip-resistive [**aggregate**][**aluminum granule**] finish to concrete stair treads, platforms, ramps as indicated on Drawings.

1. Apply in accordance with manufacturer's written instructions and as follows:

a. Uniformly spread [**12 kg/10 sq. m (25 lb/100 sq. ft.)**] <**Insert rate**> of dampened slip-resistive [**aggregate**][**aluminum granules**] over surface in one or two applications.
b. Tamp aggregate flush with surface, but do not force below surface.
c. After broadcasting and tamping, apply float finish.
d. After curing, lightly work surface with a steel wire brush or an abrasive stone and water to expose slip-resistive [**aggregate**][**aluminum granules**].

H. Dry-Shake Floor Hardener Finish: After initial floating, apply dry-shake floor hardener to surfaces in accordance with manufacturer's written instructions and as follows:

1. Uniformly apply dry-shake floor hardener at a rate of [**49 kg/10 sq. m (100 lb/100 sq. ft.)**] <**Insert rate**> unless greater amount is recommended by manufacturer.
2. Uniformly distribute approximately two-thirds of dry-shake floor hardener over surface by hand or with mechanical spreader and embed by power floating.
3. Follow power floating with second dry-shake floor hardener application, uniformly distributing remainder of material, and embed by power floating.
4. After final floating, apply a trowel finish.
5. Cure concrete with curing compound recommended by dry-shake floor hardener manufacturer and apply immediately after final finishing.

3.15 INSTALL MISCELLANEOUS CONCRETE ITEMS

A. Filling In: Fill in holes and openings left in concrete structures after work of other trades is in place unless otherwise indicated. Mix, place, and cure concrete, as specified, to blend with in-place construction. Provide other miscellaneous concrete filling indicated or required to complete the Work.

B. Curbs: Provide monolithic finish to interior curbs by stripping forms while concrete is still green and by steel-troweling surfaces to a hard, dense finish with corners, intersections, and terminations slightly rounded.

C. Equipment Bases and Foundations: Provide machine and equipment bases and foundations as shown on Drawings. Set anchor bolts for machines and equipment at correct elevations, complying with diagrams or templates from manufacturer furnishing machines and equipment.

D. Steel Pan Stairs: Provide concrete fill for steel pan stair treads, landings, and associated items. Cast-in inserts and accessories as indicated on Drawings. Screed, tamp, and trowel finish concrete surfaces.

3.16 CONCRETE CURING

A. General: Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.

B. Evaporation Retarder: Apply evaporation retarder to unformed concrete surfaces if hot, dry, or windy conditions cause moisture loss approaching 1 kg/sq. m x hour (0.2 lb/sq. ft. x hour) before and during finishing operations. Apply according to manufacturer's written instructions after placing, screeding, and bull floating or darbying concrete, but before float finishing.

C. Formed Surfaces: Cure formed concrete surfaces, including underside of beams, supported slabs, and other similar surfaces. If forms remain during curing period, moist cure after loosening forms. If removing forms before end of curing period, continue curing for the remainder of the curing period.

D. Unformed Surfaces: Begin curing immediately after finishing concrete. Cure unformed surfaces, including floors and slabs, concrete floor toppings, and other surfaces.

E. Cure concrete according to ACI 308.1, by one or combination of the following methods:

1. Moisture Curing: Keep surfaces continuously moist for not less than seven days with the following materials:

   a. Water.
   b. Continuous water-fog spray.
   c. Absorptive cover, water saturated, and kept continuously wet. Cover concrete surfaces and edges with 300 mm lap over adjacent absorptive covers.

2. Moisture-Retaining-Cover Curing: Cover concrete surfaces with moisture-retaining cover for curing concrete, placed in widest practicable width, with sides and ends lapped at least 300 mm, and sealed by waterproof tape or adhesive. Cure for not less than seven days. Immediately repair any holes or tears during curing period using cover material and waterproof tape.

   a. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive floor coverings.
   b. Moisture cure or use moisture-retaining covers to cure concrete surfaces to receive penetrating liquid floor treatments.
   c. Cure concrete surfaces to receive floor coverings with either a moisture-retaining cover or a curing compound that the manufacturer certifies will not interfere with bonding of floor covering used on Project.

3. Curing Compound: Apply uniformly in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Maintain continuity of coating and repair damage during curing period.

   a. Removal: After curing period has elapsed, remove curing compound without damaging concrete surfaces by method recommended by curing compound manufacturer unless manufacturer certifies curing compound will not interfere with bonding of floor covering used on Project.

4. Curing and Sealing Compound: Apply uniformly to floors and slabs indicated in continuous operation by power spray or roller according to manufacturer's written instructions. Recoat areas subjected to heavy rainfall within three hours after initial application. Repeat process 24 hours later and apply a second coat. Maintain continuity of coating and repair damage during curing period.

3.17 TOLERANCES

A. Conform to ACI 117 (ACI 117M).

3.18 APPLICATION OF LIQUID FLOOR TREATMENTS

A. Penetrating Liquid Floor Treatment: Prepare, apply, and finish penetrating liquid floor treatment according to manufacturer's written instructions.

   1. Remove curing compounds, sealers, oil, dirt, laitance, and other contaminants and complete surface repairs.
   2. Do not apply to concrete that is less than [**three**][**seven**][**14**][**28**] days' old.
   3. Apply liquid until surface is saturated, scrubbing into surface until gel forms; rewet; and repeat brooming or scrubbing. Rinse with water; remove excess material until surface is dry. Apply a second coat in similar manner if surface is rough or porous.

B. Polished Concrete Floor Treatment: Apply polished concrete finish system to cured and prepared slabs to match accepted mockup.

   1. Machine grind floor surfaces to receive polished finishes level and smooth and to depth required to reveal aggregate to match approved mockup.
   2. Apply penetrating liquid floor treatment for polished concrete in polishing sequence and according to manufacturer's written instructions, allowing recommended drying time between successive coats.
   3. Continue polishing with progressively finer grit diamond polishing pads to gloss level to match approved mockup.
   4. Control and dispose of waste products produced by grinding and polishing operations.
   5. Neutralize and clean polished floor surfaces.

C. Sealing Coat: Uniformly apply a continuous sealing coat of curing and sealing compound to hardened concrete by power spray or roller according to manufacturer's written instructions.

3.19 JOINT FILLING

A. Prepare, clean, and install joint filler according to manufacturer's written instructions.

1. Defer joint filling until concrete has aged at least one month, except for warehouse six month(s). Do not fill joints until construction traffic has permanently ceased.

B. Remove dirt, debris, saw cuttings, curing compounds, and sealers from joints; leave contact faces of joint clean and dry.

C. Install semirigid joint filler full depth in saw-cut joints and at least 50 mm deep in formed joints. Overfill joint and trim joint filler flush with top of joint after hardening.

3.20 PROTECTION OF LIQUID FLOOR TREATMENTS

A. Protect liquid floor treatment from damage and wear during the remainder of construction period. Use protective methods and materials, including temporary covering, recommended in writing by liquid floor treatments installer.

3.21 FIELD QUALITY CONTROL REQUIREMENTS

A. Independent Quality Assurance Inspector shall perform testing and inspection tasks and submit written reports in accordance with Part 3 Article FIELD QUALITY CONTROL REPORTING to Project Director/COR.

1. Independent Quality Assurance Inspector shall be responsible for providing curing container for concrete specimens on site and verifying that specimens are cured in accordance with ASTM C31.
2. Independent Quality Assurance Inspector shall immediately report to Project Director/COR, Contractor, and Concrete Contractor, and Concrete Supplier any failure of Work to comply with Contract Documents.
3. Independent Quality Assurance Inspector shall report results of tests and inspections, in writing, to Project Director/COR, Contractor, and concrete manufacturer within 48 hours of inspections and tests.

a. Test reports shall include reporting requirements of ASTM C31, C143, C231, C138, C1064, ASTM C39, and ACI 301, including the following as applicable to each test and inspection:

1) Project name.
2) Name of testing agency.
3) Names and certification numbers of field and laboratory technicians performing inspections and testing.
4) Name of concrete manufacturer.
5) Date and time of inspection, sampling, and field testing.
6) Date and time of concrete placement.
7) Location in Work of concrete represented by samples.

8) Date and time sample was obtained.
9) Truck and batch ticket numbers.
10) Specified compressive strength at 28 days.
11) Concrete mixture designation, proportions, and materials.
12) Field test results, slump, plastic air, density and temperature.
13) Information on storage and curing of samples before testing, including curing method and maximum and minimum temperatures during initial curing period.
14) Type of fracture and compressive break strengths at seven days and 28 days.

B. Batch Tickets: For each load delivered, submit copies of batch delivery ticket to testing agency, indicating quantity of batched materials, mixture identification, admixtures dosages, design strength, aggregate size, design air content, design slump at time of batching, and amount of water that can be added at Project site. Material batch weights shall be within tolerance of ASTM C94. Tolerance for water-to-cementitious ratio shall be within -0.03/+0.00. Ready-mix concrete trucks outside of tolerances shall be rejected.

C. Concrete Tests: Sampling of fresh concrete shall be conducted in accordance with ASTM C 172 and be performed in accordance with the following requirements:

1. Testing Frequency: Unless otherwise specified, obtain one sample for each day's pour of each concrete mixture exceeding 4 cubic meters., but less than 20 cubic meters., plus one set for each additional 40 cubic meters or fraction thereof.

   a. When frequency of testing provides fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C143:

   a. One test at point of placement for first truck on each placement day.
   b. Perform additional tests when concrete consistency appears to change or every 20 cubic meters.

3. Slump Flow: ASTM C1161:

   a. One test at point of placement for first truck on each placement day.
   b. Perform additional tests when concrete consistency appears to change or every 20 cubic meters.

4. Density: ASTM C138.

   a. ASTM C138 shall be performed at same frequency as specimen fabrication.

5. Air Content: ASTM C231 pressure method for normal-weight concrete.

   a. ASTM C231 testing shall be performed at same frequency as specimen fabrication.

6. Concrete Temperature: ASTM C1064:

a. One test hourly when air temperature is 5 deg C and below or 26 deg C and above, and one test for each concrete sample.

7. Compression Test Specimens: ASTM C31:

a. Sample concrete in accordance with ASTM C172 from the first truck of concrete and every 40 cubic meters of concrete, subsequently.
b. Cast and laboratory cure twelve 100 by 200 mm cylinder specimens for each concrete sample.
c. Cast, initial cure, and field cure nine 100 by 200 mm cylinder specimens for each concrete sample.

8. Compressive-Strength Tests: ASTM C39.

a. Test one set of three laboratory-cured specimens at 3, 7, 28 and 56 days of age.
b. A compressive-strength test shall be the average compressive strength from a set of three specimens obtained from same composite sample and tested at age indicated.
c. Test one set of three field-cured specimens at 3, 7 and 28 days of age.

9. Strength of each concrete mixture is satisfactory if every average of any three consecutive compressive-strength tests performed on laboratory-cured specimens equals or exceeds specified compressive strength, and no compressive-strength test value falls below specified compressive strength by more than 3 MPa.
10. Compressive strength of field-cure specimens shall only be used to determine a structural member is capable of being put in service, determine adequacy of curing and protection of concrete in the structure, or form or shoring removal time requirements.
11. Record temperature of placements by using temperature monitoring system. The Contractor and Project Director/COR shall be notified immediately if temperature of placement appears to exceed maximum temperature limit.
12. Additional Tests:

a. Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by the Project Director/COR.
b. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C42 or by other methods as directed by the Project Director/COR.

1) Acceptance criteria for concrete strength shall be in accordance with ACI 301, Section 1.6.6.

13. Additional testing and inspecting, at the Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
14. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

3.22 FIELD QUALITY CONTROL REPORTING

A. Daily Inspection Reports: Independent Quality Assurance Inspector shall prepare daily inspection reports for activities, including base preparation, formwork preparation, reinforcement installation, concrete placement, and temperature control activities. Submit sample forms and describe the procedure used to organize, archive, and retrieve inspection records in the Quality Program submittal.

B. Sampling Reports: Maintain concrete placement log as electronic spreadsheet or database identifying each placement date, placement location, volume of concrete, batch ticket numbers, lot identification code, fresh concrete properties, compressive strength results, transport properties, inspection comments, and acceptance status. Submit log to the Project Director/COR weekly. Submit copies of supporting documents for any placement requested by the Project Director/COE immediately upon request.

C. Quality Control Documentation: Prepare, maintain, and report separate quality control charts illustrating slump, temperature, air content, compressive strength test results, and other required testing results for each lot of each concrete mixture used on the project.

D. Testing and Inspecting: Independent Quality Assurance Inspector shall perform tests and inspections, and to submit test and inspection reports.

E. Inspections:

1. Steel reinforcement placement.
2. Steel reinforcement welding.
3. Headed bolts and studs.
4. Verification of use of required design mixture.
5. Concrete placement, including conveying and depositing.
6. Curing procedures and maintenance of curing temperature.
7. Verification of concrete strength before removal of shores and forms from beams and slabs.

F. Concrete Tests: Testing of composite samples of fresh concrete obtained according to ASTM C 172 shall be performed according to the following requirements:

1. Testing Frequency: Obtain at least one composite sample for each 50 cu. m or fraction thereof of each concrete mixture placed each day.

   a. When frequency of testing will provide fewer than five compressive-strength tests for each concrete mixture, testing shall be conducted from at least five randomly selected batches or from each batch if fewer than five are used.

2. Slump: ASTM C 143/C 143M; one test at point of placement for each composite sample, but not less than one test for each day's pour of each concrete mixture. Perform additional tests when concrete consistency appears to change.
3. Air Content: ASTM C 231/C 231M, pressure method, for normal-weight concrete; ASTM C 173/C 173M, volumetric method, for structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.

4. Concrete Temperature: ASTM C 1064/C 1064M; one test hourly when air temperature is 5 deg C and below and when 27 deg C and above, and one test for each composite sample.
5. Unit Weight: ASTM C 567/C 567M, fresh unit weight of structural lightweight concrete; one test for each composite sample, but not less than one test for each day's pour of each concrete mixture.
6. Compression Test Specimens: ASTM C 31/C 31M.

    a. Cast and laboratory cure two sets of two standard cylinder specimens for each composite sample.
    b. Cast and field cure two sets of two standard cylinder specimens for each composite sample.

7. Compressive-Strength Tests: ASTM C 39/C 39M; test one set of two laboratory-cured specimens at 7 days and one set of two specimens at 28 days.

    a. Test one set of three field-cured specimens at 7 days and one set of three specimens at 28 days.
    b. A compressive-strength test shall be the average compressive strength from a set of two specimens obtained from same composite sample and tested at age indicated.

3.23 CAST-IN-PLACE CONCRETE ACCEPTANCE

A. Before the Government accepts the structure and final payment is made, inspect the structure for cracks, damage, and substandard concrete placements that may adversely affect the service life and performance of the structure. Submit report documenting these defects that includes recommendations for repair, removal, and/or remediation, which will be reviewed by OBO's Subject Matter Expert in concrete materials and submitted to the Project Director/COR for approval before any corrective work is allowed.

B. Contractor Qualifications: Unless otherwise approved by Project Director/COR, repair and rehabilitation of concrete shall be conducted by an experienced concrete repair contractor with track record of performance 5 years or more.

C. Concrete Repair Plan:

1. A Concrete Repair Plan shall be developed by Contractor describing the proposed methods, materials, QA/QC measures, and other information required by the Non-Conformance Report, see Part 3 Article NON-CONFORMANCE REPORT RESOLUTION. The Concrete Repair Plan shall include, at a minimum, the following:

    a. A clear description of the location of the repair area.
    b. Identification of personnel involved, including subcontractors.
    c. Drawings of the repair, including reinforcing steel splices – if any.
    d. Proposed materials to be used in repair.
    e. Description of repair procedure, see Part 3 Article REPAIR OF CONCRETE.
    f. Datasheets of repair materials if prebagged products are used.
    g. Quality Assurance/Quality Control plan to be executed during repair.
    h. Measures to verify performance of the repair after execution.

D. The Concrete Repair Plan shall be submitted to the Project Director/COR for approval.

E. Base the acceptance of concrete strengths on averages of results from three consecutive compressive strength tests. When the averages of three consecutive compressive strength test results are between 1.0 and 1.2 times f'cr, and no individual strength test falls below f'cr by more than 3.5 MPa, the strength of the concrete is satisfactory.

F. When any of the average of three consecutive compressive strength test results is less than f'cr or an individual strength test is lower by more than 3.5 MPa, additional testing will be required as follows:

1. Nondestructive Testing: Impact hammer, ultrasonic pulse velocity, or other nondestructive device may be permitted by Project Director/COR but will not be used as sole basis for approval or rejection of concrete.
2. Additional Tests: Testing and inspecting agency shall make additional tests of concrete when test results indicate that slump, air entrainment, compressive strengths, or other requirements have not been met, as directed by Project Director/COR. Testing and inspecting agency may conduct tests to determine adequacy of concrete by cored cylinders complying with ASTM C 42/C 42M or by other methods as directed by Project Director/COR.
3. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
4. Correct deficiencies in the Work that test reports and inspections indicate do not comply with the Contract Documents.

G. Measure floor and slab flatness and levelness according to ASTM E 1155/ E 1155M within 48 hours of finishing.

H. Quality Control Testing of Reinforcing Steel: Test reinforcing steel as required. Approved independent testing labs are those labs accredited by AASHTO or the International Accreditation Services, Inc. (IAS), or labs at prequalified reinforcing steel mills, or labs at approved AASHTO State Department of Transportation labs. See Attachments B and C.

3.24 CAST-IN-PLACE CONCRETE NON-CONFORMANCE RESOLUTION

A. A non-conformance report shall be documented when any of the following observations, but not limited to, of in-place concrete have been made:

1. Compressive strength results at specified age below the design compressive strength (f'c).
2. Compressive strength results at specified age in excess of 30 percent of design compressive strength (f'c) or approved concrete mixture strength (f'cr) based on concrete submittal data.
3. Presence of voids, honeycombing, cold joints, cracking, surface defects including color and texture irregularities, spalls, air bubbles, rock pockets, fins and other projections on surface, and stains and other discolorations that cannot be removed by cleaning or other constructability issues during the first 14 days after placement.
4. Exceedance in specified maximum temperature or maximum temperature difference during the period of thermal control.

5. Concrete delivery records that indicate excessive time between mixing and placement and/or excessive water was added to mixture during delivery and placement.

B. When any of the above are observed, a Non-Conformance Report shall document the following:

1. Identify exact location of non-conforming concrete as placed and immediately notify the Contracting Officer and Project Director/COR. Any indicator alone is sufficient reason for the Project Director/COR to request additional sampling and testing to quantify concrete properties. If justified, extract cores for testing, and investigate cause for non-conformance. The investigation may include statistical analysis of test data collected to date; impact of non-conforming material on the structure strength and/or service life; and recommendations for concrete production process improvements, mitigation, or remediation, as appropriate.

C. Investigations into non-conforming materials shall be conducted at no additional cost to the Government. Make written recommendations to adequately mitigate or remediate non-conforming material. The Project Director/COR and Contracting Officer may accept, accept with reduced payment, require litigation, or require removal and replacement of non-conforming material at no additional cost to the Government.

D. Removal and Replacement: Structural concrete members shall be removed and replaced by the Contractor at Contractor's expense when any of the following conditions apply:

1. Cracking, honeycombing, or surface defects are present in a third of volume of in-place concrete or greater.
2. Cracks with width greater than 1.25 mm have been identified. Cracks with width of 1.25 mm or greater observed in structural members carrying structural loads shall be immediately reshored and reported to Project Director/COR.
3. Crack injection procedures have shown incomplete crack filling. Extract a core over a repaired crack and visually determine if at least 80 percent of the crack volume has been filled.

3.25 REPAIR OF CONCRETE

A. General: Refer also to the Part 1 Article on REPAIR SUBMITTALS, and to the Part 2 Article on REPAIR MATERIALS.

B. Any repair activities deemed necessary by Non-Compliance Reports shall consist of:

1. Removing deteriorated concrete as shown and described on the Concrete Repair Plan, including saw cutting perimeter of repair area.
2. Preparing surface of concrete for repair, including abrasive cleaning, cleaning of existing reinforcement, and applying bonding agent to surface.
3. Supplying materials and mixing and placing of concrete repair mortar or concrete as shown and described on the Drawings including vibrating, finishing, and curing.
4. Supplying, fabricating, constructing, maintaining, and removing temporary works, including falsework and formwork.
5. Environmental protection (when applicable).

6. The quality control (QC) testing of all materials.

C. Types of repairs:

1. Concrete repairs will be classified as follows:

a. Partial Depth Repair – Type A:

1) Partial Depth Repair - Type A repair is defined as removal of unsound concrete to a depth not greater than outermost surface of existing reinforcing steel. The Contractor shall remove all unsound concrete from areas as determined by approved repair submittal until sound concrete substrate is exposed.

b. Partial Depth Repair – Type B:

1) Partial Depth Repair - Type B is defined as removal of unsound concrete to depth a minimum of 25 mm beyond existing outer mat of reinforcing steel. For substructure, wall or mass concrete repairs maximum depth shall be 50 mm beyond existing outer mat of reinforcing steel or as directed by approved repair submittal. For slab repairs maximum depth shall be mid depth of slab.

c. Full Depth Repair:

1) Where unsound concrete extends beyond mid depth of concrete member as determined by Condition Assessment Report, the Contractor shall continue to remove all further concrete within repair area to full depth of the member. All existing reinforcing steel shall be re-tied and chaired as necessary. Repair areas shall be neatly formed to restore original geometry of concrete member. Forms shall not be suspended from existing reinforcing steel. Shoring of other concrete members shall be performed to assure safety and structural integrity of non-repaired members.
2) The Contractor shall supply, and place additional reinforcing steel as directed by approved repair submittal when existing reinforcing steel has been removed. Reinforcing steel shall be of same type and size as existing and spliced with minimum lap length of 30 bar diameters. Exposed reinforcing steel shall be sandblasted clean and maintained to near white condition. The Contractor shall roughen all areas of existing sound concrete substrate to 6 mm amplitude using methods described in approved repair submittal.
3) All resulting material and by-products from demolition operations shall be collected, loaded, hauled, and disposed of by the Contractor at an approved waste disposal facility.

D. References: All reference standards and related specifications shall be current issue or the latest revision at the date application.

1. ACI 117, Standard Tolerances for Concrete Construction and Materials
2. ACI 562, Code for Repair of Concrete Structures
3. ACI 563, Specifications for Concrete Repair

4. ICRI No. 120, Guide and Recommendations for Safety.
5. ICRI No. 210, Guide to Verifying Field Performance of Epoxy-Injection
6. ICRI No. 210.4, Guide to Non-Destructive Methods

E. Surface Preparation:

1. Prior to any concrete repairs, the Contractor shall remove all dust, dirt, water and debris from surface of concrete in a manner that will not result in material being deposited into repair area or other portions of the structure outside of repair.
2. The Contractor shall supply and erect appropriate protection barriers/shrouding or other approved means as required on the structure completely contain all loose or flying debris from surface removal preparations. The means of containment shall be subject to the approval of the Project Director/COR with input from the Project Engineer. No debris shall fall into areas below repair area when work is performed at higher elevations.

F. Concrete Removal:

1. All areas of unsound concrete to be repaired will be approved by Project Director/COR once the Contractor has cleaned existing surface as indicated above. The Contractor shall saw cut outer perimeter of repair areas 25 mm deep or as directed by approved submittal. Feathered edges are not acceptable. The Contractor shall take care to ensure that existing reinforcing steel or prestressing strands (if applicable) are not damaged during saw cutting. Any damage caused by the Contractor to any portion of the structure not intended for repair shall be repaired by the Contractor, at the Contractor's expense, to the satisfaction of the Project Director/COR with input from the Project Engineer.
2. The Contractor shall remove all areas of unsound concrete by chipping, pneumatic or other approved methods. Only chipping hammers of 15 kg class or less shall be used, and operated at an angle of 45 degrees or less from the horizontal. The Contractor shall exercise caution and take care not to damage any existing reinforcing steel intended to remain in place.

G. Crack Repair:

1. Prior to final acceptance, document and repair cracks in excess of 0.5 mm. Submit proposed means, methods, and materials to repair cracks to the Contracting Officer for approval. Address the amount of movement expected in crack due to temperature changes and loading.
2. Cracks with a mean width greater than 1 mm shall be inspected by means of non-destructive testing, extraction of cores or other methods approved by the Project Director/COR. Contractor shall bear cost of the condition assessment and submit written repair procedure for review and approval by the Project Director/COR. The repair report shall include a complete assessment of the severity of the cracking, the length, width and depth of cracks from the concrete surface, the proposed means of repair, and verification of testing. Repair procedure, materials and requirements outlined in ACI 563 shall be applicable.

H. Curing:

1. Curing shall be in accordance with the manufacturer's instructions or as otherwise required in this Section.

I. Field Quality Control of Repairs:

1. Concrete repairs mortar that are not placed, cured or performed in accordance with approved concrete repair submittal may be rejected by the Project Director/COR and their decision shall be considered final. The Project Director/COR reserves the right to require immediate removal of any concrete from rejected batches that may have already been placed in the structure.
2. Quality assurance testing shall be carried out by the Contractor (or their Sub-Contractors), and all associated costs shall be paid for by the Contractor.

J. Acceptance of Repair:

1. For all concrete repairs, the repair will be deemed accepted when companion cylinders have attained minimum compressive strength of 95 percent of specified compressive strength of original concrete, and display no evidence of cracking, honeycombing or other workmanship deficiencies. Non-compliant repairs will require a condition assessment and subsequent repair, following the repair procedures in this Section.

END OF SECTION 033000

CONCRETE DESIGN MIXTURES SUBMITTAL FORM
See Article on SUBMITTALS in this Section

Project: _____
City: _____
General Contractor: _____
Concrete Contractor: _____
Concrete Strength (Class): _____
Use (Describe): _____

Design Mixtures Information (Check One)

Based on Std. Deviation Analysis ☐
Trial Mixture Text Data ☐

Design Characteristics

Density		kg/m^3
Strength		MPa (indicate 28 day or 56 day)
Air		% specified

If trial mixtures are used, the Design Mixtures shall be proportioned to achieve a required average compressive strength f′cr as follows:

- For f'c ≤ 35 MPa use the larger of: f'cr = f'c + 8.3 (MPa)
- For f'c > 35 MPa use the larger of: f'cr = 1.1f'c + 5 (MPa)

MATERIALS	TYPE/ SOURCE	SPECIFIC GRAVITY	MASS (kg)	ABSOLUTE VOL. (m^3)
Cement				
Fly Ash				
Silica Fume				
GGBF Slag				
Other Pozzolans (specify)				
Fine Aggregate				
Course Aggregate				
Water				
Air				
Other				
		Total		m^3

Water/Cementitious Material Ratio (kg water/kg cementitious material) = _____

ADMIXTURES	MANUFACTURER	DOSAGE (metric)
Water Reducer		
Air Entraining Agent		
High Range Water Reducer		
Non-Corrosive Accelerator		
Other		

Slump before HRWR _____ mm
Slump after HRWR _____ mm

Standard Deviation Analysis (from experience records):

# of Test Cylinders Evaluated:	
Standard Deviation:	

Required average compressive strength f'cr, when data is available to establish a standard deviation:

For f'c $\leq$ 35 MPa use the larger of:

- f'cr = f'c + 1.34s (MPa)
- f'cr = f'c + 2.33s-3.5 (MPa)

For f'c > 35 MPa use the larger of:

- f'cr = f'c + 1.34s (MPa)
- f'cr = 0.90f'c + 2.33s (MPa)

Note: Refer to ACI 301 to adjust deviation if total number of tests is less than 30.

Laboratory Test Data

Compressive strength

AGE (DAYS)	MIX #1	MIX #2	MIX #3
7	MPa	MPa	MPa
7	MPa	MPa	MPa
28	MPa	MPa	MPa

APPROVED INDEPENDENT TESTING LABORATORIES
See Article on QUALITY ASSURANCE in this Section

The following are OBO approved independent testing laboratories for evaluation of reinforcing steel for compliance with ASTM A 615/A 615M and ASTM A 706/A 706M. In addition, laboratories at State Departments of Transportation with AASHTO certification for testing reinforcing steel may be used, and laboratories at OBO prequalified reinforcing steel mills (see Attachment B to this Section) may be used.

ATTACHMENT E
QUALITY ASSURANCE PLAN EXAMPLE

The objective of the concrete quality control program is for the Contractor to outline the procedures that will be used to construct a structure that will obtain the design durability, including development of a concrete quality control program. The Contractor must develop and submit for approval the concrete quality control program in accordance with ACI PRC-121 and as specified herein. The plan must include approved laboratories. The Contractor must provide direct oversight for the concrete quality control program. If concrete cylinders tested during production indicate inadequate strength, excessive ion-transport properties, or inadequate mixing, then the Contracting Officer may require the Contractor to extract concrete core samples from the hardened concrete for analysis at the Contractor's expense to assure that the quality of the concrete as placed and cured will satisfy the defined design durability. The concrete quality control plan must define non-conforming materials per paragraph Non-Conforming Materials and document the procedures for handling the non-conformity. Items in paragraph CAST-IN-PLACE CONCRETE NON-CONFORMANCE RESOLUTION must be addressed.

Develop and submit for approval a concrete quality control program in accordance with ACI PRC-121. Maintain a copy of ACI MNL-15 and CRSI 10MSP at the project site.

X.X.1 Quality Control Personnel:

The Contractor must submit for approval an organizational chart defining the quality control hierarchy, the responsibilities of the various positions, including the names and qualifications of the individuals in those positions.

Submit American Concrete Institute certification for the following:

a. Contractor Quality Control (CQC) personnel responsible for inspection of concrete operations.
b. Lead foreman or journeyman of the concrete placing, finishing, and curing crews.
c. Field Testing Technicians: ACI Concrete Field Testing Technician, Grade I.
d. Laboratory Testing Technicians: ACI Concrete Strength Testing Technician and Laboratory Testing Technician, Grade I or II.
e. Petrographer: Bachelor of Science degree in geology or petrography, trained in petrographic examination of concrete aggregate according to ASTM C294 and ASTM C295/C295M and trained in identification of the specific deleterious processes and tests identified in this specification. Resume must detail the education, training and experience related to the project-specific test methods and deleterious materials and must be submitted at least 20 days before petrographic and deleterious materials examination is to commence.

X.X.1.1 Quality Control Manager Qualifications:

The quality manager must hold a current license as a professional engineer in a U.S. state or territory with experience on at least three projects with large water control features, unless approved by the Contracting Officer. Evidence of proven experience may be considered by the Contracting Officer as sufficient to act as the Quality Manager.

X.X.1.2 Field Testing Technician and Testing Agency:

Submit data on qualifications of proposed testing agency and technicians for approval by the Contracting Officer prior to performing testing on concrete.

a. Work on concrete under this contract must be performed by an ACI Concrete Field Testing Technician Grade 1 qualified in accordance with ACI MNL-2 or equivalent. Equivalent certification programs must include requirements for written and performance examinations as stipulated in ACI MNL-2.
b. Testing agencies that perform testing services on reinforcing steel must meet the requirements of ASTM E329.
c. Testing agencies that perform testing services on concrete materials must meet the requirements of ASTM C1077, CCRL or ISO 17025.

X.X.2 Laboratory Qualifications for Concrete Qualification Testing:

The concrete testing laboratory must have the necessary equipment and experience to accomplish required testing. The laboratory must meet the requirements of ASTM C1077 and be Cement and Concrete Reference Laboratory (CCRL) inspected. Unless otherwise specified herein, the laboratory must be equipped and experienced in the performance of ASTM C1556 and ASTM C1202.

X.X.3 Laboratory Accreditation:

Laboratory and testing facility services must be provided by and at the expense of the Contractor. The laboratories and testing facilities performing the tests must be accredited in accordance with ASTM C1077, including ASTM C78/C78M and ASTM C1260. The accreditation must be current and must include the required test methods, as specified.

a. Aggregate Testing and Mix Proportioning: Perform by an accredited laboratory and under the direction of a currently licensed civil engineer in a U.S. state or territory, who must sign and seal all reports and designs.
b. Acceptance Testing: Furnish materials, labor, and facilities required for molding, curing, testing, and protecting test specimens at the site and in the laboratory. Furnish and maintain boxes or other facilities suitable for storing and curing the specimens at the site while in the mold within the temperature range stipulated by ASTM C31/C31M.
c. Contractor Quality Control: Sampling and testing must be performed by an approved, onsite, independent, accredited laboratory.

X.X.4 Concrete Batch Plant Certification:

Concrete batch plants, either permanent or set-up for this project must be certified by NRMCA CPMB 100 per the Plant and Truck Certification Program.

X.X.4.1 Concrete Delivery Vehicle:

Concrete delivery vehicles must be certified by NRMCA CPMB 100 per the Plant and Truck Certification Program.

X.X.4.2 Concrete Batch Plant Operator:

Concrete Batch Plant Operator: Have a current National Ready Mixed Concrete Association (NRMCA) Plant Manager Certification at the Plant Manager level.

SECTION 055005 - METAL FABRICATIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Steel framing and supports for ceiling-hung toilet compartments.
2. Steel framing and supports for operable partitions.
3. Steel framing and supports for overhead doors and grilles.
4. Steel framing and supports for countertops.
5. Steel tube reinforcement for low partitions.
6. Steel framing and supports for mechanical and electrical equipment.
7. Support framing for stone cladding or architectural precast concrete.
8. Steel framing and supports for applications where framing and supports are not specified in other Sections.
9. Elevator machine beams, hoist beams, and divider beams.
10. Steel shapes for supporting elevator door sills.
11. Shelf angles.
12. Metal ladders.
13. Metal ships' ladders.
14. Elevator pit sump covers.
15. Anti-ram metal bollards, and other anti-ram metal framing and reinforcement.
16. General metal bollards (i.e., not used for anti-ram purposes).
17. Miscellaneous steels plates and related framing for FE (Forced Entry) and BR (Ballistic Resistant) security assemblies
18. Miscellaneous steel trim.
19. Loose bearing and leveling plates for applications where not specified in other Sections.

B. Products furnished, but not installed, under this Section include the following:

1. Loose steel lintels.
2. Anchor bolts, steel pipe sleeves, slotted-channel inserts, and wedge-type inserts indicated to be cast into concrete or built into unit masonry.
3. Steel weld plates and angles for casting into concrete for applications where they are not specified in other Sections.

C. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for installing anchor bolts, steel pipe sleeves, slotted-channel inserts, wedge-type inserts, and other items cast into concrete.

2. [Division 04 Section on unit masonry for installing loose lintels, anchor bolts, and other items built into unit masonry.]
3. [Division 05 Section on structural steel framing.]
4. Division 08 Sections for steel embeds related to security doors, windows, and louvers.
5. Division 09 Sections on general painting.
6. Section 099605 “High-Performance Coatings.”
7. Section 323120 “Decorative Metal Fences” for perimeter security fences and general control fences.
8. Section 323305 “Site Furnishings” for metal site furnishings.
9. Division 32 Sections for perimeter security gates and associated fencing, rising bollard barricades, and other perimeter security assemblies.

1.2 COORDINATION

A. Coordinate selection of shop primers with topcoats to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and topcoats are compatible with one another.

B. Coordinate installation of metal fabrications that are anchored to or that receive other work. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 ACTION SUBMITTALS

A. Professional Certification: Provide Shop Drawings and engineering calculations prepared and sealed by Registered Professional Engineer, licensed in accordance with requirements of the OBO Building Code, for fabrications required to comply with structural requirements.

B. Product Data: Manufacturer’s specifications and installation instructions for products used in miscellaneous metal fabrications, including paint products and grout.

C. [Sustainable Design Submittals:

1. Product Data: For recycled content, indicating post-consumer and pre-consumer recycled content and cost.]

D. Shop Drawings: Show fabrication and installation details for all fabrications. Include plans, elevations, sections, and details of metal fabrications and their connections. Show anchorage and accessory items.

E. Delegated-Design Submittal: Include analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

F. Calculations: Submit engineering calculations for fabrications required to comply with structural requirements.

1.4 INFORMATIONAL SUBMITTALS

A. Design Modifications: Submit for review proposed substitution requests in accordance with Division 01.

B. Qualification Data: For professional engineer.

C. Certificates:

1. Submit certification that materials receiving polyurethane coating system have received compatible surface preparation and priming.
2. Submit certification that steel to be galvanized contains elements within ranges listed below:

a. Carbon: Less than 0.25 percent.
b. Phosphorus: Less than 0.05 percent.
c. Manganese: Less than 1.35 percent.
d. Silicon: Within range of 0 to 0.04 percent or 0.15 to 0.25 percent.

3. [Mill Certificates: Signed by stainless-steel manufacturers certifying that products furnished comply with requirements.]
4. Welding certificates.

5. [Paint Compatibility Certificates: From manufacturers of topcoats applied over shop primers, certifying that shop primers are compatible with topcoats.]

D. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.5 QUALITY ASSURANCE

A. Designer/Engineer Qualifications: Design elements required to meet structural requirements under direct supervision of a Registered Professional Engineer, licensed in accordance with requirements of the OBO Building Code.

B. Fabricator and Installer Qualifications: Not less than 5 years documented, successful experience with work comparable to Work of this Project.

C. Welding Standards:

1. Comply with applicable provisions of AWS D1.1 “Structural Welding Code--Steel,” AWS D1.2 “Structural Welding Code--Aluminum,” and AWS D1.3 “Structural Welding Code--Sheet Steel.”
2. Welder qualifications: AWS certified for type of welding required.
3. Finish joints in accordance with National Ornamental & Miscellaneous Metals Association (NOMMA) Guideline 1:

   a. Finish 1: No evidence of a welded joint.
   b. Finish 2: Completely sanded joint, some undercutting and pinholes acceptable.
   c. Finish 3: Partially dressed weld with splatter removed.
   d. Finish 4: Good quality, uniform undressed weld with minimal spatter.

D. Galvanizing:

1. Coating Applicator: Company specializing in hot dip galvanizing after fabrication approved by manufacturer or fabricator.
2. Hot-Dip Galvanizing Fabrication Practices: Conform to requirements of ASTM A123, A143, A384 and A385 unless otherwise specified.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with metal fabrications by field measurements before fabrication. Verify conditions in existing buildings affecting the metal fabrications prior to the submission of shop drawings for review.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to site at such intervals to ensure uninterrupted progress of work.

B. Store materials to permit easy access for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration. If bolts and nuts become dry or rusty, clean and lubricate before use with lubricants that are compatible with laminated glazing.

C. Do not store materials on structure in a manner that might cause distortion or damage to structural members or supporting structures. Repair or replace damaged materials or structures as directed.

D. Store materials, other than fabricated steel, in weather-tight containers until ready for use in work. Store containers in dry place.

E. Store electrodes in rod ovens and heat in accordance with AWS Code, Section 4.5 prior to use in welding.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design metal fabrications.

B. Design Requirement:

1. Use materials of size and thickness indicated or, if not indicated, as required to produce strength and durability in finished product for use intended.
2. Design and fabricate components to support loads indicated or required to comply with requirements of authorities having jurisdiction over Project.
3. Design modifications:

a. May be proposed by manufacturer to satisfy performance requirements.
b. Must conform to design and specified durability and strength.
c. Must maintain profiles and alignments indicated.

C. Structural Performance:

1. Treads, Platforms, and Gratings: Capable of withstanding uniform load of 5.00 kN/m^2 , and a non-concurrent concentrated load of 1.33 kN acting over an area of 2580 mm^2 applied at any point. These elements shall be capable of withstanding stresses resulting from railing loads in addition to loads specified above.
2. Ladders, including landings, shall withstand the effects of loads and stresses within limits and under conditions specified in ANSI A14.3.
3. Refer to Structural Drawings and OBO-ICS IBC Chapter 16 for structural performance requirements for elements not listed above.

D. Visual Requirements: For metal fabrications exposed to view, use materials which are smooth and free of surface blemishes, including pitting, seam marks, roller marks, rolled trade names, and roughness.

E. Interface with Other Systems:

1. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions and directions for installation of anchors, including concrete inserts, sleeves, anchor bolts and miscellaneous items having integral anchors, which will be embedded in concrete or masonry construction.
2. Coordinate delivery of such items to Project site.
3. Metal fabrications shall be detailed to ensure that no reinforcing steel embedded in concrete substrates are damaged during installation of post-installed anchors, except as explicitly approved by the Structural Engineer of Record.

F. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior metal fabrications by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: **<Insert temperature change, but not less than 67 deg C, ambient; 100 deg C, material surfaces.>**

2.2 METALS

A. Metal Surfaces, General: Provide materials with smooth, flat surfaces unless otherwise indicated. For metal fabrications exposed to view in the completed Work, provide materials without seam marks, roller marks, rolled trade names, or blemishes.

B. [Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than [25] <Insert value> percent.]

C. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

D. Steel Sheet:

1. Uncoated, Cold-Rolled Steel Sheet: ASTM A1008 either commercial steel, Type B, or structural steel, Grade 25, unless another grade is required by design loads; exposed.
2. Uncoated, Hot-Rolled Steel Sheet: ASTM A1011 either commercial steel, Type B, or structural steel, Grade 30, unless another grade is required by design loads.
3. Galvanized Steel Sheet: ASTM A653, G90 coating, either commercial steel, Type B, or structural steel, Grade 33, unless another grade is required by design loads.

E. Stainless-Steel Sheet, Strip, and Plate: ASTM A 240/A 240M or ASTM A 666, **[Type 304] [Type 316L]**.

F. Stainless-Steel Bars and Shapes: ASTM A 276, **[Type 304] [Type 316L]**.

G. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from plate complying with ASTM A 36/A 36M or ASTM A 283/A 283M, Grade C or D, minimum 0.0747 inch thick.

H. Rolled-Stainless-Steel Floor Plate: ASTM A 793.

I. Steel Tubing: ASTM A 500/A 500M, cold-formed steel tubing.

J. Steel Pipe: ASTM A 53/A 53M, Standard Weight (Schedule 40) unless otherwise indicated.

K. Slotted Channel Framing: Cold-formed metal box channels (struts) complying with MFMA-4.

1. Size of Channels: **[41 by 41 mm] [As indicated]** <Insert size>.
2. Material: Galvanized steel, ASTM A 653/A 653M, **[commercial steel, Type B] [structural steel, Grade 230]**, with Z275 coating; **[2.8-mm (12 gauge)] [2-mm (14 gauge)] [1.6-mm (16 gauge)]** nominal thickness.
3. Material: Cold-rolled steel, ASTM A 1008/A 1008M, **[commercial steel, Type B] [structural steel, Grade 230]**; **[2.5-mm (12 gauge)] [1.7-mm (114 gauge)] [1.35-mm (16 gauge)]** minimum thickness; **[unfinished] [coated with rust-inhibitive, baked-on, acrylic enamel] [hot-dip galvanized after fabrication]**.

L. Aluminum Plate and Sheet: ASTM B 209M, Alloy 6061-T6.

M. Aluminum Extrusions: ASTM B 221M, Alloy 6063-T6.

N. Aluminum Castings: ASTM B 26/B 26M, Alloy 443.0-F.

2.3 FASTENERS

A. General: Unless otherwise indicated, provide **[Type 304][Type 316]** stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941M, Class Fe/Zn 5, at exterior walls. Select fasteners for type, grade, and class required.

1. Provide stainless-steel fasteners for fastening aluminum.

B. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM F 568M, Property Class 4.6; with hex nuts, ASTM A 563M; and, where indicated, flat washers.

C. Steel Bolts and Nuts: Regular hexagon-head bolts, ASTM A 325M, Type 3; with hex nuts, ASTM A 563M, Class 8S3; and, where indicated, flat washers.

D. Stainless-Steel Bolts and Nuts: Regular hexagon-head annealed stainless-steel bolts, ASTM F 738M; with hex nuts, ASTM F 836M; and, where indicated, flat washers; Alloy **[Group A1 with Type 304] [Group A4 with Type 316L]**.

E. Anchor Bolts: ASTM F 1554, Grade 36, of dimensions indicated; with nuts, ASTM A 563M; and, where indicated, flat washers.

1. Hot-dip galvanize or provide mechanically deposited, zinc coating where item being fastened is indicated to be galvanized.

F. [Anchors, General: Anchors capable of sustaining, without failure, a load equal to six times the load imposed when installed in unit masonry and four times the load imposed when installed in concrete, as determined by testing according to ASTM E 488/E 488M, conducted by a qualified independent testing agency.]

G. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed, all hot-dip galvanized per ASTM F 2329.

H. Post-Installed Anchors: **[Torque-controlled expansion anchors][or][chemical anchors]**.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941M, Class Fe/Zn 5, unless otherwise indicated.
2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group A1 for Type 304] [Group A4 for Type 316L]** stainless-steel bolts, ASTM F 738M, and nuts, ASTM F 836M.

I. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 41 by 22 mm by length indicated with anchor straps or studs not less than 75 mm long at not more than 200 mm o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, all zinc-plated to comply with ASTM B 633, Class Fe/Zn 5, as needed for fastening to inserts.

2.4 MISCELLANEOUS MATERIALS

A. Shop Primers: Provide primers that comply with Division 09 Sections on painting and on high performance coatings.

1. Ferrous metal - typical painting systems: Universal shop primer; fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79.

a. [Use primer with a VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).]

2. Ferrous metal - polyurethane coating system: Moisture-cure organic zinc-rich primer complying with SSPC-Paint 20 or SSPC-Paint 29 and compatible with topcoat.

a. [Use primer with VOC content of 420 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).]

B. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

C. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

D. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.5 FABRICATION, GENERAL

A. Shop Assembly: Preassemble items in the shop to greatest extent possible. Disassemble units only as necessary for shipping and handling limitations. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1 mm unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

C. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

D. Form exposed work with accurate angles and surfaces and straight edges.

E. Weld corners and seams continuously to comply with AWS recommendations and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing**[and contour of welded surface matches that of adjacent surface]**.

F. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Where exposed fasteners are required, use Phillips flat-head (countersunk) fasteners unless otherwise indicated. Locate joints where least conspicuous.

G. Fabricate seams and other connections that are exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

H. Cut, reinforce, drill, and tap metal fabrications as indicated to receive finish hardware, screws, and similar items.

I. Provide for anchorage of type indicated; coordinate with supporting structure. Space anchoring devices to secure metal fabrications rigidly in place and to support indicated loads.

J. Where units are indicated to be cast into concrete or built into masonry, equip with integrally welded steel strap anchors, 3.2 by 38 mm, with a minimum 150-mm embedment and 50-mm hook, not less than 200 mm from ends and corners of units and 600 mm o.c., unless otherwise indicated.

K. Galvanized Steel:

1. Fabricate items in accordance with Class **[I][II][III]** guidelines as described in AGA's Recommended Details for Galvanized Structures.
2. Use fabrication practices for products in accordance with applicable portions of ASTM A143, A384 and A385, except as specified herein. Avoid fabrication techniques which could cause distortion or embrittlement of steel.
3. Consult Project Director/COR regarding potential warpage problems or potential handling problems during the galvanizing process which may require modification of design before fabrication proceeds.
4. Remove welding slag and burrs prior to delivery for galvanizing.
5. Provide vent and drain holes and/or lifting lugs to facilitate handling during the galvanizing process that are suitable to Project Director/COR and fabricator.

    a. Locate holes so as not to be visible on exposed surfaces. If this is not possible, plug holes with zinc solder after galvanizing and file smooth. Do not fill holes indicated to remain as weep holes.
    b. Remove lifting lugs after galvanizing.

6. After galvanizing, fill holes that were required for the galvanizing process.
7. Remove, by blast cleaning or other methods, surface contaminants and coatings which would not be removable by normal chemical cleaning process in galvanizing operation.

2.6 MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Provide steel framing and supports not specified in other Sections as needed to complete the Work.

B. Fabricate units from steel shapes, plates, and bars of welded construction unless otherwise indicated. Fabricate to sizes, shapes, and profiles indicated and as necessary to receive adjacent construction.

1. Fabricate units from slotted channel framing where indicated.
2. Furnish inserts for units installed after concrete is placed.

C. Fabricate supports for operable partitions from continuous steel beams of sizes **[indicated] [recommended by partition manufacturer]** with attached bearing plates, anchors, and braces as **[indicated][recommended by partition manufacturer]**. Drill or punch bottom flanges of beams to receive partition track hanger rods; locate holes where indicated on operable partition Shop Drawings.

D. [Galvanize miscellaneous framing and supports where indicated.]

E. [Prime miscellaneous framing and supports with [zinc-rich primer] [primer specified in Division 09 Section on "High-Performance Coatings"] where indicated.]

2.7 SHELF ANGLES

A. Fabricate shelf angles from steel angles of sizes indicated and for attachment to concrete framing. Provide horizontally slotted holes to receive 19-mm bolts, spaced not more than 150 mm from ends and 600 mm o.c. unless otherwise indicated.

1. Provide mitered and welded units at corners.
2. Provide open joints in shelf angles at expansion and control joints. Make open joint approximately 50 mm larger than expansion or control joint.

B. For cavity walls, provide vertical channel brackets to support angles from backup masonry and concrete.

C. Galvanize**[and prime]** shelf angles located in exterior walls.

D. Furnish wedge-type concrete inserts, complete with fasteners, to attach shelf angles to cast-in-place concrete.

2.8 METAL LADDERS

A. General:

1. Comply with ANSI A14.3, except for elevator pit ladders.
2. For elevator pit ladders, comply with ASME A17.1/CSA B44.
3. Ladder safety cages are prohibited. Where height of fixed ladder exceeds 7315 mm, it shall have a personal fall arrest system (PFAS) compliant with OSHA 29 CFR 1910.28

B. Steel Ladders:

1. Space siderails 450 mm apart unless otherwise indicated.

2. Siderails: Continuous, **[9.5-by-64-mm] [12.7-by-64-mm]** steel flat bars, with eased edges.

3. Rungs: **[19-mm-] [25-mm-]** diameter steel bars.
4. Fit rungs in centerline of siderails; plug-weld and grind smooth on outer rail faces.
5. Provide nonslip surfaces on top of each rung, either by coating rung with aluminum-oxide granules set in epoxy-resin adhesive or by using a type of manufactured rung filled with aluminum-oxide grout.
6. Provide nonslip surfaces on top of each rung by coating with abrasive material metallically bonded to rung.
7. Provide platforms as indicated fabricated from welded or pressure-locked steel bar grating, supported by steel angles. Limit openings in gratings to no more than **[12 mm] [19 mm]** in least dimension.
8. Support each ladder at top and bottom and not more than 1500 mm o.c. with welded or bolted steel brackets.

9. Galvanize **[and prime]**exterior ladders, including brackets.
10. Prime interior ladders, including brackets and fasteners.

C. Safety Cages are prohibited.

2.9 METAL SHIPS' LADDERS

A. Provide metal ships' ladders where indicated. Fabricate of open-type construction with channel or plate stringers and pipe and tube railings unless otherwise indicated. Provide brackets and fittings for installation.

1. Treads shall be not less than 127 mm exclusive of nosing or less than 216 mm including the nosing, and riser height shall be not more than 241 mm.
2. Fabricate ships' ladders, including railings from steel.
3. Fabricate treads**[and platforms]** from **[welded or pressure-locked steel bar grating] [pressure-locked stainless-steel bar grating][pressure-locked aluminum bar grating] [extruded-aluminum plank grating]**. Limit openings in gratings to no more than **[12 mm] [19 mm]** in least dimension.
4. Fabricate treads and platforms from rolled-steel floor plate.

B. Galvanize **[and prime]**exterior steel ships' ladders, including treads, railings, brackets, and fasteners.

C. Prime interior steel ships' ladders.

2.10 METAL FLOOR PLATE

A. Fabricate from rolled-**[steel] [stainless-steel]** floor plate of thickness indicated below:

1. Minimum Thickness: **[3.2 mm][4.8 mm][6.4 mm][8 mm][9.5 mm][As indicated]**.

B. Provide **[steel][stainless-steel]** angle supports as indicated.

C. Include **[steel][stainless-steel]** angle stiffeners, and fixed and removable sections as indicated.

D. Provide flush **[steel][stainless-steel]** bar drop handles for lifting removable sections, one at each end of each section.

2.11 ELEVATOR PIT SUMP COVERS

A. Fabricate from **[3.2-mm][4.8-mm]** rolled-steel floor plate with four 25-mm- diameter holes for water drainage and for lifting.

B. Provide steel angle supports as indicated.

2.12 STEEL BAR GRATES

A. Acceptable manufacturer: Manufacturer specializing in fabrication of types of units required, who has tested units for load-bearing strength and deflection, and has currently published load tables based on recognized test procedures.

B. Comply with NAAMM MBG 531, “Metal Bar Grating Manual.”

C. Cross bars: Rectangular.

D. Bearing bars: Rectangular.

E. Surface: **[Plain][Serrated]**.

F. Fabrication:

1. Fabricate grates by welding steel bars.
2. Weld toe plates to grate where required.
3. Do not notch bearing bars at supports.
4. Provide welded trim bars of same size and shape as bearing bars to edges and openings.

G. Removable Grates:

1. Provide secure anchorage which can be removed from inside only, or make grate removable by use of special tools at exterior if there is no access from inside. Where applicable, provide locking design in accordance with OBO Code requirements.
2. Furnish special tools to Project Director/COR.

H. Hinged Grates:

1. Provide hinged sections where indicated; out-opening.
2. Provide minimum two galvanized hinges per section; hinge quantity and size as required for dimensions of hinged sections.
3. **[Provide latch mechanism to allow opening of hinged sections from inside without use of tools or keys. Provide latch guards to prevent release of latch from outside.]**
4. **[Provide steel hasp drilled for padlock.]**

I. Grates exposed to foot traffic: Provide maximum opening width of 6 mm.

J. Provide **[galvanized steel][stainless steel]** grates.

2.13 ALUMINUM BAR GRATES

A. Bearing Bars: 31 mm x 3 mm aluminum 6063 T5 alloy, spaced at 25 mm on center with spacers at 100 mm on center, staggered.

B. Finish: Mill.

2.14 GENERAL METAL BOLLARDS

A. The requirements of this Article relate to metal bollards which are not use for anti-ram security.

B. Fabricate metal bollards from Schedule 40 steel pipe.

1. Cap bollards with 6-mm (1/4-inch-) thick steel plate.
2. Where bollards are indicated to receive light fixtures, provide cutouts for fixtures and holes for wire.

C. [Fabricate bollards with 10-mm- (3/8-inch-) thick steel baseplates for bolting to concrete slab. Drill baseplates at all four corners for 19-mm (3/4-inch) anchor bolts.

1. Where bollards are to be anchored to sloping concrete slabs, angle baseplates for plumb alignment of bollards.]

D. Fabricate sleeves for bollard anchorage from steel pipe with 6-mm (1/4-inch-) thick steel plate welded to bottom of sleeve. Make sleeves not less than 200 mm (8 inches) deep and 19 mm (3/4 inch) larger than OD of bollard.

E. Fabricate internal sleeves for removable bollards from Schedule 40 steel pipe or 6-mm- (1/4-inch) wall-thickness steel tubing with an OD approximately 1.5 mm (1/16 inch) less than ID of bollards. Match drill sleeve and bollard for 19-mm (3/4-inch) steel machine bolt.

F. Prime bollards with **[zinc-rich primer.][primer specified in Section 099605 "High-Performance Coatings."]**

2.15 ANTI-RAM BOLLARDS

A. Fabricate anti-ram bollards in accordance with DS approved security details in the “DS Security Detail Handbook (Red Book),” and in accordance with Construction Drawings.

B. Refer to the Article on FABRICATION, GENERAL for additional general fabrication requirements.

C. Finish: All exterior steel related to bollards and anti-ram assemblies shall be **[galvanized][stainless steel]**.

2.16 FORCED-ENTRY (FE) AND BALLISTIC-RESISTANCE (BR) PENETRATION SECURITY ASSEMBLIES

A. Fabricate assemblies in accordance with DS approved security details in the “DS Security Detail Handbook (Red Book),” and in accordance with Construction Drawings.

B. Refer to the Articles on FABRICATION, GENERAL and on FASTENERS for general fabrication requirements.

C. Finish:

1. All interior steel assemblies shall be prime coated or galvanized, unless noted as stainless steel on the Construction Drawings.
2. All exterior steel assemblies shall be **[galvanized][stainless steel]**.

2.17 MISCELLANEOUS STEEL TRIM

A. Unless otherwise indicated, fabricate units from steel shapes, plates, and bars of profiles shown with continuously welded joints and smooth exposed edges. Miter corners and use concealed field splices where possible.

B. Provide cutouts, fittings, and anchorages as needed to coordinate assembly and installation with other work.

1. Provide with integrally welded steel strap anchors for embedding in concrete or masonry construction.

C. Galvanize **[and prime]**exterior miscellaneous steel trim. **<Confirm and specify coating requirements where stainless steel trim elements are required, such as where exposed to corrosive atmospheres.>**

D. Prime interior miscellaneous steel trim.

2.18 LOOSE BEARING AND LEVELING PLATES

A. Provide loose bearing and leveling plates for steel items bearing on masonry or concrete construction. Drill plates to receive anchor bolts and for grouting.

B. Galvanize plates.

C. Prime plates with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

2.19 LOOSE STEEL LINTELS

A. Fabricate loose steel lintels from steel angles and shapes of size indicated for openings and recesses in masonry walls and partitions at locations indicated. Fabricate in single lengths for each opening unless otherwise indicated. Weld adjoining members together to form a single unit where indicated.

B. Size loose lintels to provide bearing length at each side of openings equal to 1/12 of clear span, but not less than 200 mm unless otherwise indicated.

C. Galvanize **[and prime]**loose steel lintels located in exterior walls. **<Confirm and specify coating requirements where stainless steel loose lintels are required, such as where exposed to corrosive atmospheres.>**

D. Prime loose steel lintels located in exterior walls with **[zinc-rich primer.][primer specified in Section 099600 "High-Performance Coatings."]**

E. Prime interior loose steel lintels.

2.20 STEEL WELD PLATES AND ANGLES

A. Provide steel weld plates and angles not specified in other Sections, for items supported from concrete construction as needed to complete the Work. Provide each unit with no fewer than two integrally welded steel strap anchors for embedding in concrete.

2.21 FINISHES, GENERAL

A. Finish metal fabrications after assembly.

B. Finish exposed surfaces to remove tool and die marks and stretch lines, and to blend into surrounding surface.

2.22 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize items as indicated to comply with ASTM A 153/A 153M for steel and iron hardware and with ASTM A 123/A 123M for other steel and iron products.

1. Do not quench or apply post galvanizing treatments that might interfere with paint adhesion.

B. Shop Preparation for Galvanized Metal: Clean galvanized metal surfaces designated to be field painted in accordance with SSPC-SP1, “Solvent Cleaning,” followed by SSPC-SP2, “Hand Tool Cleaning,” or SSPC-SP3, “Power Tool Cleaning.”

C. Shop prime iron and steel items not indicated to be galvanized unless they are to be embedded in concrete, sprayed-on fireproofing, or masonry, or unless otherwise indicated.

D. Preparation for Shop Priming: Prepare surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."][SSPC-SP 3, "Power Tool Cleaning."][requirements indicated below:]**

1. [Exterior Items: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Items Indicated to Receive Zinc-Rich Primer: SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."

3. Items Indicated to Receive Primers Specified in Division 09 Section "High-Performance Coatings": SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
4. Other Items: SSPC-SP 3, "Power Tool Cleaning."]

E. Shop Priming: Apply shop primer to comply with SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting.

1. Stripe paint corners, crevices, bolts, welds, and sharp edges.

2.23 STAINLESS STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend to finish.

1. At all welds: Remove oxides, carbon precipitation, and weld splatter at or around welded joints and passivate surfaces in accordance with ASTM A380 and ASTM A967.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces in accordance with ASTM A380 and ASTM A967. Remove embedded foreign matter and leave surfaces chemically clean.

2.24 ALUMINUM FINISHES

A. As-Fabricated Finish: AA-M12.

B. Clear Anodic Finish: AAMA 611, Class I, AA-M12C22A41.

PART 3 - EXECUTION

3.1 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.

D. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction. Provide threaded fasteners for use with concrete and masonry inserts, toggle bolts, through bolts, lag screws, wood screws, and other connectors.

E. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

F. General Corrosion Protection:

1. Do not combine materials that can form an electrolytic couple that will accelerate corrosion in the presence of moisture unless moisture is permanently excluded from junction of such materials.
2. Coat concealed surfaces of aluminum that come into contact with grout, concrete, masonry, wood, or dissimilar metals with the following:

   a. Cast Aluminum: Heavy coat of bituminous paint.
   b. Extruded Aluminum: Two coats of clear lacquer.

3.2 INSTALLING ANTI-RAM BOLLARDS AND FE/BR SECURITY ASSEMBLIES

A. Install in accordance with DS approved security details in the “DS Security Detail Handbook (Red Book),” and in accordance with Construction Drawings.

3.3 INSTALLING LADDERS

A. Coordinate with concrete formwork and pouring of concrete.

B. Coat portion of rungs to be embedded in concrete with heavy coat of bituminous paint. Do not extend coating onto exposed surfaces.

3.4 INSTALLING BAR GRATINGS

A. Install gratings to comply with recommendations of referenced metal bar grating standards that apply to grating types and bar sizes indicated, including installation clearances and standard anchoring details.

B. Attach nonremovable units to supporting members by welding where both materials are same; otherwise, fasten by bolting with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.

C. Attach removable units to supporting members with type and size of clips and fasteners indicated or, if not indicated, as recommended by grating manufacturer for type of installation conditions shown.

3.5 INSTALLING GENERAL METAL BOLLARDS

A. Fill bollards solidly with concrete.

1. For bollards with decorative caps, fill with concrete and allow to cure seven days before installing.
2. For bollards without caps, mound top surface to shed water
3. Do not fill removable bollards or bollards receiving light fixtures with concrete.

B. [Anchor bollards to existing construction with [expansion anchors] [anchor bolts] [through bolts]. Provide four 19-mm (3/4-inch) bolts at each bollard unless otherwise indicated.

1. Embed anchor bolts at least 100 mm (4 inches) in concrete.]

C. Anchor bollards in place with concrete footings. Center and align bollards in holes 75 mm (3 inches) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace bollards in position until concrete has cured.

D. Anchor internal sleeves for removable bollards in place with concrete footings. Center and align sleeves in holes 75 mm (3 inches) above bottom of excavation. Place concrete and vibrate or tamp for consolidation. Support and brace sleeves in position until concrete has cured.

E. Place removable bollards over internal sleeves and secure with 19-mm (3/4-inch) machine bolts and nuts. After tightening nuts, drill holes in bolts for inserting padlocks. Owner furnishes padlocks.

3.6 INSTALLING BEARING AND LEVELING PLATES

A. Clean concrete and masonry bearing surfaces of bond-reducing materials, and roughen to improve bond to surfaces. Clean bottom surface of plates.

B. Set bearing and leveling plates on wedges, shims, or leveling nuts. After bearing members have been positioned and plumbed, tighten anchor bolts. Do not remove wedges or shims but, if protruding, cut off flush with edge of bearing plate before packing with nonshrink grout. Pack grout solidly between bearing surfaces and plates to ensure that no voids remain.

3.7 INSTALLING MISCELLANEOUS FRAMING AND SUPPORTS

A. General: Install framing and supports to comply with requirements of items being supported, including manufacturers' written instructions and requirements indicated on Shop Drawings.

B. Anchor supports for **[operable partitions][, overhead doors,] [and] [overhead grilles]** securely to, and rigidly brace from, building structure.

3.8 ADJUSTING AND CLEANING

A. [Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. Paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 0.05-mm dry film thickness.]

B. [Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 Sections on painting and on high performance coatings.]

C. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

END OF SECTION 055005

SECTION 057005 - DECORATIVE METAL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Decorative mechanical grilles and frames.
2. Custom door pulls.
3. Combination hall push-button stations.
4. Metal reveals at wood paneling.

B. Related Requirements:

1. Section 057305 "Decorative Metal Railings" for decorative metal railings.

1.2 COORDINATION

A. Coordinate installation of anchorages for decorative metal items. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product, including finishing materials.

B. Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: Show fabrication and installation details for decorative metal.

1. Include plans, elevations, component details, and attachment details.
2. Indicate materials and profiles of each decorative metal member, fittings, joinery, finishes, fasteners, anchorages, and accessory items.

D. Patterns, Models, or Plaster Castings: Made from proposed patterns for each design of custom casting required.

E. Samples for Initial Selection: For products involving selection of color, texture, or design**[including mechanical finishes]**.

F. Samples for Verification: For each type of exposed finish.
   1. Sections of linear shapes.
   2. Full-size Samples of castings and forgings.

      a. For custom castings, submit finished Samples showing ability to reproduce detail**[, cast-metal color,]** and quality of finish.**[Samples may be of similar previous work.]**

   3. Samples of **[welded] [and] [brazed]** joints showing quality of workmanship**[and color matching of materials]**.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[fabricator] [organic-coating applicator] [anodic finisher] [powder-coating applicator]**.
B. Mill Certificates: Signed by manufacturers of stainless-steel certifying that products furnished comply with requirements.

C. Welding certificates.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: A firm experienced in producing decorative metal similar to that indicated for this Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

B. Installer Qualifications: Fabricator of products.

C. Organic-Coating Applicator Qualifications: A firm experienced in successfully applying organic coatings, of type indicated, to aluminum extrusions and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

D. Anodic Finisher Qualifications: A firm experienced in successfully applying anodic finishes of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

E. Powder-Coating Applicator Qualifications: A firm experienced in successfully applying powder coatings of type indicated and employing competent control personnel to conduct continuing, effective quality-control program to ensure compliance with requirements.

F. Welding Qualifications: Qualify procedures and personnel according to the following:

   1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."
   2. AWS D1.2/D1.2M, "Structural Welding Code - Aluminum."

3. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."
4. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

G. Sample Installation: Build sample installation to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build sample installation for the following types of decorative metal:

a. <Insert, in separate subparagraphs, description of each decorative metal type including sample installation size>.

2. Subject to compliance with requirements, approved sample installations may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store decorative metal in a well-ventilated area, away from uncured concrete and masonry, and protected from weather, moisture, soiling, abrasion, extreme temperatures, and humidity.

B. Deliver and store cast-metal products in wooden crates surrounded by enough packing material to ensure that products are not cracked or otherwise damaged.

1.8 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with decorative metal by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 METALS, GENERAL

A. Metal Surfaces, General: Use materials with smooth, flat surfaces unless otherwise indicated. Use materials without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

2.2 ALUMINUM

A. Fabricate products from alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, and with strength and durability properties for each aluminum form required not less than that of alloy and temper designated below.

B. Bars and Shapes: ASTM B 221M (ASTM B 221), Alloy 6063-T5/T52.

C. **[Pipe] [and] [Round Tubing]**: ASTM B 429/B 429M, Alloy 6063-T6.

D. Tubing: ASTM B 210M (ASTM B 210), Alloy 6063-T832.

E. Plate and Sheet: ASTM B 209M (ASTM B 209), **[Alloy 3003-H14] [Alloy 5005-H32] [Alloy 6061-T6]**.

F. Forgings: ASTM B 247M (ASTM B 247), Alloy 6061-T6.

G. Castings: ASTM B 26/B 26M, Alloy A356.0-T6.

2.3 COPPER AND COPPER ALLOYS

A. Fabricate products from alloys indicated and temper to suit application and forming methods but with strength and stiffness not less than H01 (quarter-hard) for plate, sheet, strip, and bars and H55 (light-drawn) for tube and pipe.

2.4 BRONZE

A. Extruded Shapes: ASTM B 455, Alloy UNS C38500 (architectural bronze).

B. Pipe: ASTM B 43, Alloy UNS C23000 (red brass, 85 percent copper).

C. Tube: ASTM B 135M (ASTM B 135), Alloy UNS C23000 (red brass, 85 percent copper).

D. Castings: ASTM B 62, Alloy UNS C83600 (85-5-5-5 or No. 1 composition commercial red brass) or ASTM B 584, Alloy UNS C86500 (No. 1 manganese bronze).

E. Plate, Sheet, Strip, and Bars: ASTM B 36/B 36M, Alloy UNS C28000 (muntz metal, 60 percent copper).

2.5 BRASS

A. Extruded Shapes: ASTM B 249/B 249M, Alloy UNS C36000 (free-cutting brass).

B. Seamless Tube: ASTM B 135M (ASTM B 135), Alloy UNS C26000 (cartridge brass, 70 percent copper).

C. Castings: ASTM B 584, Alloy UNS C85200 (high-copper yellow brass).

D. Plate, Sheet, Strip, and Bars: ASTM B 36/B 36M, Alloy UNS C26000 (cartridge brass, 70 percent copper).

2.6 NICKEL SILVER

A. Extruded Shapes: ASTM B 249/B 249M, Alloy UNS C79600.

B. Castings: ASTM B 584, Alloy UNS C97300 (12 percent leaded nickel silver).

2.7 COPPER

A. Tube: ASTM B 75/B 75M, Alloy UNS C12200 (phosphorous deoxidized, high residual phosphorous copper).

B. Castings: ASTM B 824, with a minimum of 99.9 percent copper.

C. Plate, Sheet, Strip, and Bars: ASTM B 152/B 152M, Alloy UNS C11000 (electrolytic tough pitch copper) or Alloy UNS C12200 (phosphorous deoxidized, high-residual phosphorous copper).

2.8 STAINLESS STEEL

A. Tubing: ASTM A 554, Grade MT 304.

B. Pipe: ASTM A 312/A 312M, Grade TP 304.

C. Castings: ASTM A 743/A 743M, Grade CF 8 or Grade CF 20.

D. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, Type 304.

E. Bars and Shapes: ASTM A 276, Type 304.

F. Wire Rope and Fittings:

1. Wire Rope: **[1-by-19] [7-by-7] [7-by-19]** <**Insert designation**> wire rope made from wire complying with ASTM A 492, Type 316.
2. Wire-Rope Fittings: Connectors of types indicated, fabricated from stainless steel, and with capability to sustain without failure a load equal to minimum breaking strength of wire rope with which they are used.

2.9 STEEL AND IRON

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.

B. Tubing: ASTM A 500/A 500M (cold formed) or ASTM A 513, Type 5 (mandrel drawn).

C. Bars: Hot-rolled, carbon steel complying with ASTM A 29/A 29M, Grade 1010.

D. Plates, Shapes, and Bars: ASTM A 36/A 36M.

E. Cast Iron: Either gray iron, ASTM A 48/A 48M, or malleable iron, ASTM A 47/A 47M unless otherwise indicated.

F. Steel Sheet, Cold Rolled: ASTM A 1008/A 1008M, either commercial steel or structural steel, exposed.

2.10 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:
   1. Aluminum Items: **[Aluminum] [Type 304 stainless-steel]** fasteners.
   2. Copper-Alloy (Bronze) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners where concealed, muntz metal (Alloy 280) fasteners where exposed.
   3. Copper-Alloy (Brass) Items: Silicon bronze (Alloy 651 or Alloy 655) fasteners where concealed, brass (Alloy 260 or 360) fasteners where exposed.
   4. Stainless-Steel Items: Type 304 stainless-steel fasteners.
   5. Uncoated-Steel Items: Plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating where concealed, Type 304 stainless-steel fasteners where exposed.
   6. Galvanized-Steel Items: Plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.
   7. Dissimilar Metals: Type 304 stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Unless otherwise indicated, select fasteners of type, grade, and class required to produce connections suitable for anchoring indicated items to other types of construction indicated.

C. Provide concealed fasteners for interconnecting components and for attaching decorative metal items to other work unless **[otherwise indicated] [exposed fasteners are unavoidable]**.

   1. Provide Phillips tamper-resistant or hex socket flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Fastener systems with an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC193] [ICC-ES AC308]**.

   1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941M (ASTM F 1941), Class Fe/Zn 5 unless otherwise indicated.
   2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy Group A1 (1) stainless-steel bolts, ASTM F 738M (ASTM F 593), and nuts, ASTM F 836M (ASTM F 594).

2.11 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

   1. For aluminum, provide type and alloy as recommended by producer of metal to be welded and as required for color match, strength, and compatibility in fabricated items.

B. Brazing Rods: For copper alloys, provide type and alloy as recommended by producer of metal to be brazed and as required for color match, strength, and compatibility in fabricated items.

C. Etching Cleaner for Galvanized Metal: Complying with MPI#25.

D. Galvanizing Repair Paint: High-zinc-dust-content paint complying with SSPC-Paint 20 and compatible with paints specified to be used over it.

E. Lacquer for Copper Alloys: Clear, acrylic lacquer specially developed for coating copper-alloy products.

F. Shop Primers: Provide primers that comply with Division 09 Section, “Painting and Finishing.

G. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

2.12 FABRICATION, GENERAL

A. Assemble items in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

B. Make up wire-rope assemblies in the shop to field-measured dimensions with fittings machine swaged. Minimize amount of turnbuckle take-up used for dimensional adjustment so maximum amount is available for tensioning wire ropes. Tag wire-rope assemblies and fittings to identify installation locations and orientations for coordinated installation.

C. Form decorative metal to required shapes and sizes, true to line and level with true curves and accurate angles and surfaces. Finish exposed surfaces to smooth, sharp, well-defined lines and arris.

D. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing the Work.

E. Form simple and compound curves in bars, pipe, tubing, and extruded shapes by bending members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces.

F. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1 mm (1/32 inch) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

G. Mill joints to a tight, hairline fit. Cope or miter corner joints. Fabricate connections that will be exposed to weather in a manner to exclude water.

H. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.

I. Provide necessary rebates, lugs, and brackets to assemble units and to attach to other work. Cut, reinforce, drill, and tap as needed to receive finish hardware, screws, and similar items unless otherwise indicated.

J. Comply with AWS for recommended practices in shop **[welding] [and] [brazing]**. **[Weld] [and] [braze]** behind finished surfaces without distorting or discoloring exposed side. Clean exposed **[welded] [and] [brazed]** joints of flux, and dress exposed and contact surfaces.

1. Where **[welding] [and] [brazing]** cannot be concealed behind finished surfaces, finish joints to comply with NOMMA's "Voluntary Joint Finish Standards" for **[Type 1 Welds: no evidence of a welded joint] [Type 2 Welds: completely sanded joint, some undercutting and pinholes okay] [Type 3 Welds: partially dressed weld with spatter removed] [Type 4 Welds: good quality, uniform undressed weld with minimal splatter]**.

K. Provide castings that are sound and free of warp, cracks, blowholes, or other defects that impair strength or appearance. Grind, wire brush, sandblast, and buff castings to remove seams, gate marks, casting flash, and other casting marks.

2.13 DECORATIVE MECHANICAL GRILLES

A. Fabricate decorative grilles from perforated **[aluminum] [brass] [bronze] [stainless-steel] [steel]** sheet or plate of thickness, size, and pattern indicated. Form perforations by punching, cutting, or drilling to produce openings of sizes and shapes indicated. Roll, press, and grind perforated metal to flatten and to remove burrs and deformations.

B. Drill and countersink grilles for mounting screws at 50 mm (2 inches) from corners and at 250 mm (10 inches) or less o.c. Provide units with oval-head self-tapping machine screws.

C. Fabricate grille frames from extruded **[aluminum] [brass] [bronze] [stainless-steel] [steel]** of profiles and to sizes and shapes indicated. Miter frame members at corners and connect with concealed splice plates **[welded] [brazed]** to back of frames.

1. Secure grilles in frames with 12-mm- (0.5-inch-) long **[welds] [brazing]** along perimeter of grilles at 100 mm (4 inches) o.c.
2. Provide frame profiles to match existing frames.
3. Drawings indicate frame profiles required and are based on products of one manufacturer. Similar frame profiles produced by other manufacturers may be considered, provided deviations are minor and do not change design concept as judged solely by Project Director/COR.

D. Drill and countersink frames for mounting screws at 100 mm (4 inches) from corners and at 400 mm (16 inches) or less o.c. Provide units with oval-head self-tapping machine screws.

2.14 CUSTOM DOOR PULLS FOR NON-FEBR DOORS

A. Fabricate custom door pulls from **[brass] [bronze] [stainless-steel]** bar stock of profile indicated, fabricated to shapes indicated. Form curves by bending to produce uniform curvature of radii indicated; maintain profile of member throughout entire bend without buckling, twisting, or otherwise deforming exposed surfaces. Where radii of bends are too small to avoid buckling, grind bars after bending to restore original profile. Drill and tap door pulls to receive through bolts for attachment to doors.

B. Fabricate backing plates for custom door pulls from 3.2-mm (1/8-inch) **[brass] [bronze] [stainless-steel]** sheet. Cut to shape indicated and bevel edges at a 45-degree angle for one-half thickness of metal. Drill and countersink holes where indicated for screws and bolts.

C. Provide units with oval-head through bolts for mounting pulls and with oval-head wood screws for mounting backing plates.

2.15 COMBINATION HALL PUSH-BUTTON STATIONS

A. Fabricate units of **[brass] [bronze] [stainless steel]** to comply with details indicated. Coordinate with elevator signal equipment to provide integrated, closely fitted assemblies.

1. Fabricate faceplates from 3.2-mm- (1/8-inch-) thick sheet with edges beveled at a 45-degree angle for one-half thickness of metal.
2. Provide units with rectangular, split-bowl trash receptacle, designed for recess mounting in nominal 100-mm (4-inch) wall depth. Fabricate recessed cabinets, top rings, and split bowls of same metal as face of units; fabricate removable receptacles of drawn aluminum. Nominal dimensions of units are 250 by 250 by 90 mm (10 by 10 by 3-1/2 inches) in depth.
3. Provide units with emergency pictorial signs and text, complying with requirements of authorities having jurisdiction, indicating that in fire emergency, elevators should not be used and that stairways should be used instead. Engrave pictorial sign and text into front surface of faceplates to a depth of 1.6 mm (1/16 inch) with engraving painted red. Make signs 125 mm (5 inches) wide by 200 mm (8 inches) high.
4. Provide cutouts in faceplates of units for push buttons of elevator hall push-button station**[, card reader,]** and elevator key switches. Coordinate locations and sizes of cutouts so additional faceplate is not required and so faces of push buttons are flush with fronts of faceplates and key switches project beyond faceplate only by depth of bezel.

2.16 METAL REVEALS

A. Fabricate metal reveals for wood paneling from **[19-by-19-by-3-mm (3/4-by-3/4-by-1/16-inch) extruded-bronze] [19-by-19-by-0.6-mm (3/4-by-3/4-by-0.025-inch) brake-formed, stainless-steel]** channels. Drill for mounting screws 150 mm (6 inches) from ends of channels and not more than 600 mm (24 inches) o.c. Locate mounting screws at same heights for all channels. Provide **[black-finished,]**hex-socket, wafer-head screws for mounting reveals.

2.17 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

2.18 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.

B. Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm] [AA-M12C22A31, Class II, 0.010 mm]** or thicker.

C. Color Anodic Finish: AAMA 611, **[AA-M12C22A42/A44, Class I, 0.018 mm] [AA-M12C22A32/A34, Class II, 0.010 mm]** or thicker.

1. Color: **[Champagne] [Light bronze] [Medium bronze] [Dark bronze] [Black]** <Insert color>.
2. Color: **[Match Project Director/COR's sample] [As selected by Project Director/COR from full range of industry colors and color densities]**.

D. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 0.04 mm (1.5 mils). Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]** <Insert color and gloss>.

E. Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.005 mm (0.2 mil) for primer and 0.02 mm (0.8 mil) for topcoat.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]**.

F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]** <Insert color and gloss>.

G. High-Performance Organic Finish: **[Three] [Four]**-coat fluoropolymer finish complying with AAMA 2605 and containing not less than **[50] [70]** percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Color and Gloss: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]** <Insert color and gloss>.

2.19 COPPER-ALLOY FINISHES

A. Finish designations for copper alloys comply with the system established for designating copper-alloy finish systems defined in NAAMM's "Metal Finishes Manual for Architectural and Metal Products."

B. Buffed Finish: M21 (Mechanical Finish: buffed, smooth specular).

C. Hand-Rubbed Finish: M31-M34 (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed).

D. Medium-Satin Finish: M32 (Mechanical Finish: directionally textured, medium satin).

E. Fine-Matte Finish: M42 (Mechanical Finish: nondirectional finish, fine matte).

F. Buffed Finish, Lacquered: M21-O6x (Mechanical Finish: buffed, smooth specular; Coating: clear, organic, air dried, as specified below):

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

G. Hand-Rubbed Finish, Lacquered: M31-M34-O6x (Mechanical Finish: directionally textured, fine satin; Mechanical Finish: directionally textured, hand rubbed; Coating: clear, organic, air dried, as specified below):

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

H. Medium-Satin Finish, Lacquered: M32-O6x (Mechanical Finish: directionally textured, medium satin; Coating: clear, organic, air dried, as specified below):

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

I. Fine-Matte Finish, Lacquered: M42-O6x (Mechanical Finish: nondirectional finish, fine matte; Coating: clear, organic, air dried, as specified below):

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

J. Statuary Conversion Coating over Satin Finish: M31-C55 (Mechanical Finish: directionally textured, fine satin; Chemical Finish: conversion coating, sulfide)**[, with color matching Project Director/COR's sample]**.

K. Patina Conversion Coating: M36-C12-C52 (Mechanical Finish: directionally textured, uniform; Chemical Finish: nonetched cleaned, degreased; Chemical Finish: conversion coating, ammonium sulfate)**[, with color matching Project Director/COR's sample]**.

L. Statuary Conversion Coating, Bright Relieved and Lacquered: M12-C55-M2x-O6x (Mechanical Finish: matte finish, as cast; Chemical Finish: conversion coating, sulfide; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below)**[, with color matching Project Director/COR's sample]**:

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

M. Blackened, Bright Relieved, and Lacquered: M33-O60-M2x-O6x (Mechanical Finish: directionally textured, coarse satin; Coating: black, air dried; Mechanical Finish: buffed, as specified; Coating: clear, organic, air dried, as specified below)**[, with blackening and buffing matching Project Director/COR's sample]**:

1. Clear, Organic Coating: Lacquer specified for copper alloys; applied by air spray in two coats per manufacturer's written instructions, with interim drying, to a total thickness of 0.025 mm (1 mil).

2.20 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Bright, Cold-Rolled, Unpolished Finish: No. 2B.

D. Directional Satin Finish: No. 4.

E. Dull Satin Finish: No. 6.

F. Reflective, Directional Polish: No. 7.

G. Mirrorlike Reflective, Nondirectional Polish: No. 8.

H. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

I. Colored, Oxide-Film Finish: Clear, oxide interference film produced by degreasing and then immersing in a mixture of chromic and sulfuric acids.

1. Product: Subject to compliance with requirements, provide INCO colored stainless-steel finish as developed and licensed by International Nickel Co., Ltd.
2. Color: **[Match Project Director/COR's sample] [As selected by Project Director/COR from finisher's full range]**.

2.21 STEEL AND IRON FINISHES

A. Galvanizing: Hot-dip galvanize products made from rolled, pressed, and forged steel shapes, castings, plates, bars, and strips indicated to be galvanized to comply with ASTM A 123/A 123M.

1. Hot-dip galvanize steel and iron hardware indicated to be galvanized to comply with ASTM A 153/A 153M.
2. Do not quench or apply post-galvanizing treatments that might interfere with paint adhesion.
3. Fill vent and drain holes that will be exposed in finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

B. Preparing Galvanized Items for Shop Priming: After galvanizing, thoroughly clean decorative metal of grease, dirt, oil, flux, and other foreign matter, and treat with etching cleaner.

C. Preparing Nongalvanized Items for Shop Priming: Prepare uncoated ferrous-metal surfaces to comply with **[SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."] [SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."] [requirements indicated below:]**

1. Exteriors (SSPC Zone 1B): SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Interiors (SSPC Zone 1A): SSPC-SP 7/NACE No. 4, "Brush-off Blast Cleaning."

D. Primer Application: Apply shop primer to prepared surfaces of items unless otherwise indicated. Comply with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Primer need not be applied to surfaces to be embedded in concrete or masonry.

1. Shop prime uncoated ferrous-metal surfaces with **[universal shop primer] [primers specified in Division 09 Section "Exterior Painting."] [primers specified in Division 09 Section "Interior Painting."]** unless **[zinc-rich primer is] [primers specified in Division 09 Section "High-Performance Coatings" are]** indicated.
2. Do not apply primer to galvanized surfaces.

E. Shop-Painted Finish: Comply with **[Division 09 Section "Exterior Painting."] [Division 09 Section "High-Performance Coatings."]**

1. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]**.

F. High-Performance Coating: Apply epoxy intermediate and polyurethane topcoats to prime-coated surfaces. Comply with coating manufacturer's written instructions and with requirements in SSPC-PA 1, "Paint Application Specification No. 1: Shop, Field, and Maintenance Painting of Steel," for shop painting. Apply at spreading rates recommended by coating manufacturer.

1. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]**.

G. Powder-Coat Finish: Prepare, treat, and coat nongalvanized ferrous metal to comply with resin manufacturer's written instructions and as follows:

1. Prepare uncoated ferrous-metal surfaces to comply with SSPC-SP 6/NACE No. 3, "Commercial Blast Cleaning."
2. Treat prepared metal with iron-phosphate pretreatment, rinse, and seal surfaces.
3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 0.04 mm (1.5 mils).
4. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]**.

H. Powder-Coat Finish: Prepare, treat, and coat galvanized metal to comply with resin manufacturer's written instructions and as follows:

1. Prepare galvanized metal by thoroughly removing grease, dirt, oil, flux, and other foreign matter.
2. Treat prepared metal with zinc-phosphate pretreatment, rinse, and seal surfaces.
3. Apply thermosetting polyester or acrylic urethane powder coating with cured-film thickness not less than 0.04 mm (1.5 mils).
4. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range]**.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of decorative metal.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. Provide anchorage devices and fasteners where needed to secure decorative metal to in-place construction.

B. Perform cutting, drilling, and fitting required to install decorative metal. Set products accurately in location, alignment, and elevation, measured from established lines and levels. Provide temporary bracing or anchors in formwork for items to be built into concrete, masonry, or similar construction.

C. Fit exposed connections accurately together to form tight, hairline joints or, where indicated, uniform reveals and spaces for sealants and joint fillers. Where cutting, welding, and grinding are required for proper shop fitting and jointing of decorative metal, restore finishes to eliminate evidence of such corrective work.

D. Do not cut or abrade finishes that cannot be completely restored in the field. Return items with such finishes to the shop for required alterations, followed by complete refinishing, or provide new units as required.

E. Install concealed gaskets, joint fillers, insulation, and flashings as work progresses.

F. Restore protective coverings that have been damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at same location.

1. Retain protective coverings intact; remove coverings simultaneously from similarly finished items to preclude nonuniform oxidation and discoloration.

G. Field Welding: Comply with applicable AWS specification for procedures of manual shielded metal arc welding and requirements for welding and for finishing welded connections in "Fabrication, General" Article. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations.

H. Field Brazing: Comply with requirements for brazing and for finishing brazed connections in "Fabrication, General" Article. Braze connections that are not to be left as exposed joints but cannot be shop brazed because of shipping size limitations.

I. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

1. Coat concealed surfaces of aluminum that will be in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 INSTALLING DECORATIVE MECHANICAL GRILLES

A. Mount decorative grilles at heights and in positions indicated, adjusting ductwork to be centered on grilles if any.

1. Secure to framing and blocking with specified fasteners.
2. On marble, brick, and other solid surfaces, secure with wood screws in plastic plugs.

3.4 INSTALLING CUSTOM DOOR PULLS

A. Install door pulls at heights and locations shown. Install with backing plates on both sides of doors. Fasten backing plates to doors with oval-head **[wood] [self-tapping metal]** screws and secure pulls through doors and backing plates with oval-head machine screws.

3.5 INSTALLING COMBINATION HALL PUSH-BUTTON STATIONS

A. Coordinate installation of combination hall push-button stations with installation of related elevator signal equipment components. Secure units in place with faceplate overlapping surrounding wall finish and drawn into contact with surrounding wall finish at entire perimeter of faceplate.

3.6 INSTALLING METAL REVEALS AT WOOD PANELING

A. Install metal reveals between wood panels as paneling is installed. Secure to wood grounds with specified screws.

3.7 CLEANING AND PROTECTION

A. Unless otherwise indicated, clean metals by washing thoroughly with clean water and soap, rinsing with clean water, and drying with soft cloths.

B. Clean copper alloys according to metal finisher's written instructions in a manner that leaves an undamaged and uniform finish matching approved Sample.

C. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint and paint exposed areas with same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

1. Apply by brush or spray to provide a minimum 0.05-mm (2.0-mil) dry film thickness.

D. Touchup Painting: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint are specified in Division 09 Section, “Painting and Finishing.”

E. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780/A 780M.

F. Protect finishes of decorative metal from damage during construction period with temporary protective coverings approved by decorative metal fabricator. Remove protective covering at time of Substantial Completion.

G. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

END OF SECTION 057005

SECTION 057305 - DECORATIVE METAL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Stainless-steel decorative railings.
2. Post-supported railings with glass infill.
3. Preparation, coordination, fabrication and installation of Work.
4. Anchors, supports, inserts and fasteners.
5. Finishing.

B. Products Furnished But Not Installed Under This Section: Provide templates for anchor and bolt installation specified in other Sections.

C. Related Requirements:

1. **[Division 06 Section "Rough Carpentry"] [Division 06 Section "Miscellaneous Rough Carpentry"]** for wood blocking for anchoring railings.
2. **[Division 06 Section "Exterior Architectural Woodwork"] [Section 064023 "Interior Architectural Woodwork"]** for wood railings.
3. Division 09 Section "Non-Structural Metal Framing" for metal backing for anchoring railings.

1.2 DEFINITIONS

A. Railings: Guards, handrails, and similar devices used for protection of occupants at open-sided floor areas and for pedestrian guidance and support, visual separation, or wall protection.

B. Guardrail: A system of building components located near open sides of elevated walking surfaces for purpose of minimizing possibility of accidental fall from walking surface to lower level.

C. Handrail:

1. Horizontal or sloping rail grasped by hand for guidance or support, and for arresting falls on adjacent walking surface.
2. Handrails may form part of a guardrail system.

D. Weld: Braze, solder or weld, as applicable for the particular type, alloy and gage of metal, and as recommended by AISI, AWS, CDA and NAAMM.

1.3 COORDINATION AND SCHEDULING

A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.

B. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not meet structural performance requirements.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Professional Certification: Provide Shop Drawings and engineering calculations prepared and sealed by Registered Professional Engineer, licensed in Project jurisdiction, for railings.

B. Product Data: For the following:

1. Manufacturer's product lines of railings assembled from standard components.
2. Grout, anchoring cement, and paint products.

C. Shop Drawings: Include plans, elevations, sections, and attachment details.

1. Include anchorage and accessory items and integration details of related Work.

D. Samples for Initial Selection: For products involving selection of color, texture, or design**[, including mechanical finishes]**.

E. Samples for Verification: For each type of exposed finish required.

1. Sections of each distinctly different linear railing member, including handrails, top rails, posts, and balusters; 300 mm square for sheet or plate and 300 mm long for extrusions or running trim.
2. Fittings and brackets.
3. Welded connections.
4. Submit samples with adhered protective film laminate to preserve finish.

F. Delegated-Design Submittal: For installed products indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.6 INFORMATIONAL SUBMITTALS

A. Calculations, Submit, for information only, engineering calculations.

B. Qualification Data: For **[professional engineer] [testing agency]**.

C. Mill Certificates: Signed by manufacturers of stainless-steel products certifying that products furnished comply with requirements.

D. Welding certificates.

E. Product Test Reports: Based on evaluation of comprehensive tests performed by a qualified testing agency, according to ASTM E 894 and ASTM E 935.

F. Evaluation Reports: For post-installed anchors, from ICC-ES.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: Submit cleaning and maintenance data for materials provided.

1.8 QUALITY ASSURANCE

A. Designer/Engineer Qualifications: Design elements required to meet structural requirements under direct supervision of a Registered Professional Engineer, licensed in Project jurisdiction.

B. Installer and Fabricator Qualifications: Not less than 5 years documented, successful experience in fabrication of custom work similar to Work of this Project.

C. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.6/D1.6M, "Structural Welding Code - Stainless Steel."

a. Finish 1: No evidence of a welded joint.

D. Sample Installation: Build sample installations to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build sample installations as shown on Drawings.
2. Build sample installations for each form and finish of railing consisting of two posts, top rail, infill area, and anchorage system components that are full height and are not less than 600 mm (24 inches) in length.
3. Subject to compliance with requirements, approved sample installations may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design railings, including attachment to building construction.

B. Glazing in Permanent Railing Systems, Guards, and Balustrades: ASTM E2358.

C. General: In engineering railings to withstand structural loads indicated, determine allowable design working stresses of railing materials based on the following:

1. Stainless Steel: 60 percent of minimum yield strength.

D. Design Requirements:

1. Use materials of size and thickness indicated or, if not indicated, as required to produce strength and durability in finished product for use intended.
2. Design and fabricate components to support loads indicated or required to comply with requirements of authorities having jurisdiction over Project.
3. Design modifications:

a. May be proposed by manufacturer to satisfy performance requirements.
b. Must conform to design and specified durability and strength.
c. Must maintain profiles and alignments indicated.

E. Structural Requirements:

1. Design, fabricate and install to support gravity loads and loads of related components as required for proper support and rigidity of configurations indicated, including provisions for deflection, expansion and contraction forces.
2. Handrails:

a. Capable of withstanding concentrated load of 200 lb-f (890 N) applied in any direction at any point along the top, and uniform load of 50 lb-f/lf (730 N/m) applied in any direction at the top, when tested according to ASTM E935.
b. Design in accordance with ASTM E985, to withstand concentrated load of 300 lb-f (1335 N) applied in any direction at any point along the top, and uniform load of 50 lb-f/linear foot (730 N/m) applied in any direction at the top, when tested according to ASTM E935.
c. Do not assume uniform and concentrated loads act concurrently.

3. Guardrails:

a. Toprails:

1) Capable of withstanding concentrated load of 200 lb-f (890 N) applied in any direction at any point along the top, and uniform load of 50 lb-f/lf (730 N/m) applied in any direction at the top, when tested according to ASTM E935.
2) Do not assume uniform and concentrated loads act concurrently.

b. Intermediate rails/infill area: Capable of withstanding horizontal concentrated load of 50 lb-f (220 N) applied on a 1 square foot (.09 square meters) area at any point, including intermediate rails or similar elements.

F. Visual Requirements:

1. Metal surfaces:

a. Fabricate surfaces exposed to view from materials which are smooth and free of surface blemishes.
b. Do not use materials which have stains and discolorations, including welds, exposed in completed Work.

2. Surface flatness and edges: For exposed Work provide cold-rolled, cold-finished, cold-drawn, extruded, machine cut materials produced to commercial standard for flatness with edges and corners sharp and true to angle or curvature required.
3. Perform welding, brazing and soldering such that surfaces exposed to view in completed Work will be free of pitting, runs, spatter, cracks, warping, dimpling, depressions, distortion, discoloration and other imperfections.

G. Interface With Other Systems:

1. Coordinate and furnish anchorages, setting drawings, diagrams, templates, instructions and directions for installation of anchors, including concrete inserts, sleeves, anchor bolts and miscellaneous items having integral anchors, which will be embedded in concrete or masonry construction.
2. Coordinate delivery of such items to Project site.

H. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes acting on exterior railings by preventing buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.

1. Temperature Change: 67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces.

2.2 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Same metal and finish as supported rails unless otherwise indicated.

1. Provide cast-metal brackets with flange tapped for concealed anchorage to threaded hanger bolt.
2. Provide either formed- or cast-metal brackets with predrilled hole for exposed bolt anchorage.
3. Provide formed-steel brackets with predrilled hole for bolted anchorage and with snap-on cover that matches rail finish and conceals bracket base and bolt head.
4. Provide extruded-aluminum brackets with interlocking pieces that conceal anchorage. Locate set screws on bottom of bracket.

2.3 STAINLESS STEEL

A. Alloys and Tempers:

1. Provide alloys which will weld and machine properly, and will finish to match COR's sample and adjacent components of assembly.
2. Use temper or hardness to provide greatest strength and durability, consistent with necessary forming, fabrication and finishing processes.

B. Tubing: ASTM A 554, **[Grade MT 304] [Grade MT 316] [Grade MT 316L]**.

C. Pipe: ASTM A 312/A 312M, **[Grade TP 304] [Grade TP 316] [Grade TP 316L]**.

D. Castings: ASTM A 743/A 743M, **[Grade CF 8 or CF 20] [Grade CF 8M or CF 3M]**.

E. Sheet, Strip, Plate, and Flat Bar: ASTM A 666, **[Type 304] [Type 316] [Type 316L]**.

F. Bars and Shapes: ASTM A 276, **[Type 304] [Type 316] [Type 316L]**.

2.4 GLASS AND GLAZING MATERIALS

A. Safety Glazing: Glazing shall comply with 16 CFR 1201, Category II.

B. Tempered Glass: ASTM C 1048, Kind FT (fully tempered), Condition A (uncoated), Type 1 (transparent flat glass), Quality-Q3. Provide products that have been tested for surface and edge compression according to ASTM C 1048 and for impact strength according to 16 CFR 1201 for Category II materials.

1. Glass Color: Clear.
2. Thickness for Glass Infill Panels: As required by structural loads, but not less than 10.0 mm.
3. Manufacturing Process: Manufacture fully tempered glass as follows:

a. By vertical (tong-held) or horizontal (roller-hearth) process, at manufacturer's option.

C. Laminated Glass: ASTM C 1172, Condition A (uncoated), Type I (transparent flat glass), Quality-Q3 with two plies of glass and ionoplast interlayer not less than 0.060 inch 1.52 mm thick.

1. Kind: LT (laminated tempered).
2. Glass Color: Clear.
3. Interlayer Color: Clear.
4. Glass Plies for Glass Infill Panels: Thickness required by structural loads, but not less than 5.0 mm each.

D. Safety Glazing Labeling: Permanently mark glass with certification label of the SGCC or another certification agency acceptable to Project Director/COR based on input from OBO/PDCS/DE. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.

E. Glazing Gaskets for Glass Infill Panels: Glazing gaskets and related accessories recommended or supplied by railing manufacturer for installing glass infill panels in post-supported railings.

2.5 FASTENERS

A. Fastener Materials: Unless otherwise indicated, provide the following:

1. Stainless-Steel Components: **[Type 304] [Type 316]** stainless-steel fasteners.
2. Dissimilar Metals: **[Type 304] [Type 316]** stainless-steel fasteners.

B. Fasteners for Anchoring to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated**[and capable of withstanding design loads]**.

C. Provide concealed fasteners for interconnecting railing components and for attaching railings to other work unless **[otherwise indicated] [exposed fasteners are unavoidable] [exposed fasteners are the standard fastening method for railings indicated]**.

1. Provide **[Phillips] [tamper-resistant] [square or hex socket]** flat-head machine screws for exposed fasteners unless otherwise indicated.

D. Post-Installed Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC193**[or ICC-ES AC308]**.

1. Material for Interior Locations: Carbon-steel components zinc plated to comply with ASTM B 633 or ASTM F 1941M (ASTM F 1941), Class Fe/Zn 5, unless otherwise indicated.

2. Material for Exterior Locations and Where Stainless Steel Is Indicated: Alloy **[Group A1 (1)] [Group A4 (2)]** stainless-steel bolts, ASTM F 738M (ASTM F 593), and nuts, ASTM F 836M (ASTM F 594).

2.6 MISCELLANEOUS MATERIALS

A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.7 FABRICATION

A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1 mm (1/32 inch) unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate. Locate weep holes in inconspicuous locations.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.

G. Connections: Fabricate railings with welded or nonwelded connections unless otherwise indicated.

H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove flux immediately.
4. At exposed connections, finish exposed welds to comply with NOMMA's "Voluntary Joint Finish Standards" for Type 1 welds; no evidence of a welded joint.

I. Mechanical Connections: Connect members with concealed mechanical fasteners and fittings. Fabricate members and fittings to produce flush, smooth, rigid, hairline joints.

1. Fabricate splice joints for field connection using an epoxy structural adhesive if this is manufacturer's standard splicing method.

J. Form changes in direction as follows:

1. By bending or by inserting prefabricated elbow fittings.

K. Bend members in jigs to produce uniform curvature for each configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.

L. Close exposed ends of hollow railing members with prefabricated end fittings.

M. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns, unless clearance between end of rail and wall is 6 mm (1/4 inch) or less.

N. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers, or other means to transfer loads through wall finishes to structural supports and to prevent bracket or fitting rotation and crushing of substrate.

O. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

P. For railing posts set in concrete, provide stainless-steel sleeves not less than 150 mm (6 inches) long with inside dimensions not less than 13 mm (1/2 inch) greater than outside dimensions of post, with metal plate forming bottom closure.

2.8 GLAZING PANEL FABRICATION

A. General: Fabricate to sizes and shapes required; provide for proper edge clearance and bite on glazing panels.

1. Clean-cut or flat-grind edges at butt-glazed sealant joints to produce square edges with slight chamfers at junctions of edges and faces.
2. Grind smooth exposed edges, including those at open joints, to produce square edges with slight chamfers at junctions of edges and faces.

B. Infill Panels: Provide **[tempered] [laminated, tempered] glass panels[for both straight and curved sections]**.

2.9 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipment.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.10 STAINLESS STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.

C. Directional Satin Finish: ASTM A 480/A 480M, No. 4.

D. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.2 INSTALLATION, GENERAL

A. Fit exposed connections together to form tight, hairline joints.

B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
2. Set posts plumb within a tolerance of 2 mm in 1 m (1/16 inch in 3 feet).
3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed 5 mm in 3 m (1/4 inch in 12 feet).

C. Control of Corrosion: Prevent galvanic action and other forms of corrosion by insulating metals and other materials from direct contact with incompatible materials.

D. Adjust railings before anchoring to ensure matching alignment at abutting joints.

E. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.3 RAILING CONNECTIONS

A. Nonwelded Connections: Use mechanical or adhesive joints for permanently connecting railing components. Use wood blocks and padding to prevent damage to railing members and fittings. Seal recessed holes of exposed locking screws using plastic cement filler colored to match finish of railings.

B. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article whether welding is performed in the shop or in the field.

C. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 50 mm (2 inches) beyond joint on either side, fasten internal sleeve securely to one side, and locate joint within 150 mm (6 inches) of post.

3.4 ANCHORING POSTS

A. Use steel pipe sleeves preset and anchored into concrete for installing posts. After posts have been inserted into sleeves, fill annular space between post and sleeve with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

B. Form or core-drill holes not less than 125 mm (5 inches) deep and 20 mm (3/4 inch) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.

C. Cover anchorage joint with flange of same metal as post, **[welded to post after placing anchoring material] [attached to post with set screws].**

D. Leave anchorage joint exposed with **[3-mm (1/8-inch) buildup, sloped away from post] [anchoring material flush with adjacent surface]**.

E. Anchor posts to metal surfaces with flanges, angle type, or floor type as required by conditions, connected to posts and to metal supporting members as follows:

1. For stainless-steel railings, weld flanges to posts and bolt to metal-supporting surfaces.

3.5 ATTACHING RAILINGS

A. Anchor railing ends to concrete and masonry with **[sleeves concealed within] [flanges connected to] [brackets on underside of rails connected to]** railing ends and anchored to wall construction with anchors and bolts.

B. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and **[welded to railing ends] [or] [connected to railing ends using nonwelded connections]**.

C. Attach handrails to walls with wall brackets**[except where end flanges are used]**. Provide brackets with 38-mm (1-1/2-inch) clearance from inside face of handrail and finished wall surface. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

1. Use type of bracket with **[flange tapped for concealed anchorage to threaded hanger bolt] [predrilled hole for exposed bolt anchorage]**.
2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

D. Secure wall brackets**[and railing end flanges]** to building construction as follows:

1. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
2. For hollow masonry anchorage, use toggle bolts.
3. For wood stud partitions, use hanger or lag bolts set into wood backing between studs. Coordinate with carpentry work to locate backing members.
4. For steel-framed partitions, use hanger or lag bolts set into**[fire-retardant-treated]** wood backing between studs. Coordinate with stud installation to locate backing members.
5. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements using self-tapping screws of size and type required to support structural loads.
6. For steel-framed partitions, fasten brackets with toggle bolts installed through flanges of steel framing or through concealed steel reinforcements.

3.6 INSTALLING GLASS PANELS

A. Post-Supported Glass Railings: Install assembly to comply with railing manufacturer's written instructions and with requirements in other Part 3 articles. Erect posts and other metal railing

components, then set factory-cut glass panels. Do not cut, drill, or alter glass panels in field. Protect edges from damage.

3.7 FIELD QUALITY CONTROL

A. Testing Agency: Project Director/COR will engage a qualified testing agency to perform tests and inspections and to prepare test reports. Payment for these services will be made by Project Director/COR.

B. Extent and Testing Methodology: Testing agency will randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Test railings according to ASTM E 894 and ASTM E 935 for compliance with performance requirements.

C. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Project Director/COR and comply with specified requirements.

D. Perform additional testing and inspecting, at Contractor's expense, to determine compliance of replaced or additional work with specified requirements.

E. Glazing in Permanent Railing Systems, Guards, and Balustrades shall be tested, at Contractor’s expense, according to ASTM E2353-21.

3.8 CLEANING

A. Clean stainless steel by washing thoroughly with clean water and soap, rinsing with clean water, and wiping dry.

B. Clean and polish glass as recommended in writing by manufacturer. Wash both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion.

3.9 PROTECTION

A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit or provide new units.

END OF SECTION 057305

SECTION 061719 - CROSS-LAMINATED TIMBER PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes framing using structural cross-laminated timber (CLT) panels and their connections.

1.2 REFERENCE STANDARDS

A. IBC 2024 – International Building Code

B. APA PRG 320-2019 - Standard for Performance-Rated Cross-Laminated Timber

C. ANSI/AWC NDS 2021 – National Design Specification for Wood Construction.

D. ANSI 405-2018 – Standard Adhesives for Use in Structural Glued Laminated Timber

E. ALSC PS-20-20 – American Softwood Lumber Standard Product Standard 20

F. ASCE 7-16 – Minimum Design Loads for Buildings and Other Structures

G. AWS D1.1:2020 – Structural Welding Code - Steel

H. <add/subtract>

1.3 PERFORMANCE REQUIREMENTS FOR DELEGATED DESIGN

A. CLT and connectors shall be engineered by a registered design professional in the state in which the Project is located, using the performance requirements and design criteria indicated in this section and the Contract Documents.

B. CLT and connectors shall withstand the effects of structural loads shown on the Drawings in accordance with ASCE 7.

C. Member and connection designs shall conform to NDS.

D. Where alternative materials and methods of design are used, it is the responsibility of the delegated registered design professional to attain approval from the Authority Having Jurisdiction.

1.4 SUBMITTALS

A. Product Data: For each type of product.

1. Include report data on CLT, adhesives, fabrication, and protection.
2. Sealers, coatings, moisture barriers and similar architectural finishes.
3. Adhesives, caulking, and tape.
4. Fasteners and connection hardware, including installation instructions.

B. Samples: Submit three samples for each type of architectural appearance grade CLT panel, with factory sealer or finish, as applicable. Size: 12 inch x12 inch.

C. Shop Drawings.

1. Installation drawings.

a. Indicate member locations, elevations, and spacing. Label each CLT panel with a piece number or other unique mark.
b. Indicate the interface of CLT panels to adjacent supporting structure and elements and components.
c. Do not reproduce details from the structural Contract Documents for use as installation drawings.

2. Piece drawings for each CLT panel:

a. Show layout, dimensions, and elevations of each panel.
b. Clearly indicate layup type, stress grade, appearance classification, and shop finishes.
c. Include dimensioned details of cuts, openings, holes, fasteners, and connection hardware.
d. Provide weight and center of gravity coordinates of each panel

3. Piece drawings for steel hardware connections.

a. Show layout, dimensions, thicknesses, and detail for each connection.
b. Provide, weld sizes, weldment type, and bolt assemblies.
c. Indicate primer coating or other finishes to be applied.

D. Operations & Maintenance Manual: Provide manufacturer’s maintenance and operation data for material components within this section. In addition to items specified in Division 01 Section "Systems Manual / O&M Data," includes the following data:

1. Procedures and schedules for inspecting, monitoring, and repairing CLT assemblies.
2. Procedures on mounting or penetrating CLT units for future MEP infrastructure expansion.

E. CLT supplier to provide an accurate fully detailed three-dimensional (3D) model of the interfaces (supports, abutments, etc.), CLT panels, secondary timber members, plus all connections prior to submission of shop drawings. Model shall be generated using Cadwork V25 or higher, or

approved alternate (compatible with AutoCAD 2011 and Revit 2018). 3D model shall use as-built X, Y, Z coordinates of structure and foundations that support CLT.

F. Moisture Control Method Statement: The Contractor shall submit for record a written statement of the means and methods employed to monitor and manage the effects of moisture exposure on the CLT during construction.

G. Installation Method Statement: The Contractor shall hire a registered design professional to author and submit for record a written statement of the means and methods employed for the installation and temporary support of CLT panels and supporting structure during construction.

H. Structural Drawings and Calculations for the Delegated Design of CLT panels and connections.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Label individual CLT panels with the 3rd party mark demonstrating it complies with APA PRG 320. Acceptable 3rd party marks include, APA, PFS-TECO, and Intertek.

B. Installer Qualifications: Company specializing in performing work of the type specified and with a minimum three years of documented experience.

C. Pre-installation meeting: Prior to performing CLT installation work on site, the Contractor shall initiate a pre-installation meeting to review installation procedures, connection procedures, and inspection requirements. At a minimum the meeting shall include representatives from the following: Contractor, Owner's Representative, Authority Having Jurisdiction, Testing Laboratory, CLT manufacturer, Structural Engineer, and CLT Installer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Delivery, storage and protection to be coordinated by the manufacturer with the installer and the Contractor.

B. Support CLT panels during shipment on non-marking material in the same positions as during storage.

C. Store CLT panels to prevent staining, cracking, distortion, warping or other physical damage.

1. Place stored panels so identification marks are clearly visible.
2. Store with adequate bracing.
3. Protect panels to prevent contact with the ground surface and water splash.
4. Separate panels with striping to allow air circulation around all faces of members.
5. Slit underside of membrane covering during storage on site.
6. Do not deface CLT panels

D. Handle and transport CLT panels in a position consistent with their shape and design in order to avoid excessive stresses that would cause splitting or damage. Protect corners and edges with wood blocking.

E. Lift and support CLT panels only at designated points indicated in the Contractor's Installation Method Statement.

F. Cover stored CLT panels on top and sides with a water repellant membrane in a manner that does not trap moisture.

1.7 EXTRA MATERIALS

A. Provide manufacturer's standard maintenance devices (e.g., special tools) associated with inspecting, monitoring, and torquing assembly components. Provide protective covering and labeling to facilitate storage and retrieval.

B. Provide extra materials as specified below. Extra materials shall match the products installed. Package these materials with protective covering for storage and include labels describing content:

1. Manufacturer's CLT Repair Kits: Two (2)
2. Bolts, Fasteners, Brackets: 1 percent of each type installed, but not less than one complete assembly connection.
3. Field-applied Coatings: Two (2) standard size containers of each type.

1.8 WARRANTY

A. Furnish the manufacturer's two-year warranty that assures the CLT product will be free of defects in material and workmanship from the date of substantial completion.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Approved Vendor and Product:

1. <list>

2.2 MATERIALS

A. CLT Lamination type and thickness: lumber laminations 3rd party stress graded per grading rules that comply with ALSC PS 20 or CLSAB CSA O141. Lamination thickness varies as indicated in the manufacturers Product Evaluation Report.

B. CLT Moisture Content: 12% plus or minus 3% at time of manufacture.

C. CLT Use Classification: Dry service classification.

D. CLT Appearance Classification: Industrial or Architectural Appearance on one or two faces shall be specified in The Drawings and meet the criteria listed in Manufacturer's product definition. At a minimum, appearance classifications in APA PRG 320 Appendix A shall govern.

E. Fasteners: As specified on the Drawings and satisfying the following:

1. Nails shall conform to the NDS or ASTM F1667
2. Threaded fasteners shall conform to NDS. Proprietary fasteners shall be approved for use by the AHJ based on testing to ICC Acceptance Criteria 233.

F. Steel Hardware: As specified on the Drawings and satisfying the following.

1. Structural Steel: ASTM A36, Fy=36ksi, Fu=58ksi
2. Gauge Steel Straps and Hangers: Proprietary products approved for use by the AHJ based on testing to ICC Acceptance Criteria 13.
3. Primer: Primer paint shall be zinc rich SSPC-Paint 20, Type II, Organic and comply with all applicable SSPC requirements. Where a finish coat is applied, the contractor shall verify compatibility.
4. Weldment: Low Hydrogen E70XX electrodes conforming to AWS.
5. Bolt assemblies: ASTM A325, Hot-Dip Galvanized, threads excluded from shearing planes.

G. Adhesive Tape: Rothoblaas Flexi Band

H. Subfloor Construction Adhesive: Henkel/Loctite PL400 conforming to ASTM D3498.

I. Plywood: As specified on the Drawings and satisfying the following:

1. Conform to the requirements of DOC PS1, DOC PS 2, or APA PRP 210.
2. Exterior or Exposure 1 type.

J. End Grain Sealer: <List>

K. <Add other Structural Connection products/materials i.e. Threaded Rod Adhesives>

2.3 FABRICATION

A. Fabricate finished CLT panels to APA PRG 320 tolerances unless noted otherwise.

B. Tolerance of cut-out and opening edge locations and center of hole locations within a finished CLT panel: Plus or minus 3/16 inch.

C. Verify field dimensions and site conditions prior to fabrication.

D. Fabricate panels with 90-degree edges. Do not chamfer edges, unless noted otherwise.

E. Shop fabricate CLT panels to receive connections to the greatest extent possible, including cutting to length, so as to avoid field cutting, drilling, or other fabrication. Where field fabrication is required, clearly indicate field fabrication on shop drawings.

F. Mark CLT panels for identification during installation. Ensure marks will be concealed from view in the final building assembly.

G. Product labels or other markings shall not be placed on architectural appearance CLT panel surfaces.

H. Fabricate steel hardware and connections with joints neatly fitted and welded to tolerances compatible with the CLT panel fabrication. Trial fit connections in shop prior to shipping.

I. Structural steel hardware shall be prime painted. Clean surfaces to be prime painted. Remove loose rust and mill scale and splatter, slag, or flux deposits. At a minimum prepare surfaces to SSPC-SP1 “Solvent Cleaning”, and SSPC-SP 2 “Hand Tool Cleaning. Immediately after surface preparation, apply primer according to manufacturer’s written instructions and at rate recommended by SSPC to provide a minimum dry film thickness of 3 mils. Use priming methods that result in full coverage of joints, corners, edges, and surfaces.

J. Structural steel welding shall be in accordance with AWS and performed by AWS certified welders.

K. Structural steel bolt holes shall be standard size unless noted otherwise.

2.4 SHOP FINISH

A. CLT panel faces are finished as bare wood with an 80 grit sanded surface unless noted otherwise.

B. Apply end grain sealer on all perimeter and interior panel edges where end grain laminations are exposed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to installation, survey the construction in areas to receive CLT panels with Installer present for compliance with requirements, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install CLT panels in accordance with manufacturer's recommendations and the Installation Method Statement.

B. Install CLT panels in accordance with final reviewed shop drawings, level and plumb, and with uniform, close-fitting joints.

C. Leave CLT panels accessible to allow for complete monitoring in accordance with the Moisture Control Method Statement.

D. Provide temporary shores, guys, braces, and other supports during installation to keep the CLT panels and supporting structure secure and in alignment against environmental loads and temporary construction loads. Any failure to make proper and adequate provisions for stresses and stability during installation shall be solely the responsibility of the Contractor.

E. Handle and temporarily support CLT panels to prevent surface damage, edge damage, and other effects that might interfere with indicated finish.

F. Install connections as indicated in the structural drawing Contract Documents.

G. Provide an impervious moisture barrier at all locations where CLT panels abut concrete or masonry construction.

H. Coordinate the installation of CLT panels with size, location, and installation of building service and construction assembly components.

I. Field finish of CLT panels: As specified in Division 9.

J. Repair damaged surfaces and finishes after completing installation to the satisfaction of the Architect.

K. Site cutting, trimming, boring, or other modifications of CLT panels, other than shown on shop drawings, is not permitted without review and approval of the Architect or Structural Engineer.

3.3 PROTECTION

A. Protection of CLT panels shall be in accordance with the Moisture Control Method Statement and the manufacturer’s Product Care recommendations.

B. Do not remove protection until it no longer serves its intended purpose, including protection from moisture, sunlight, and damage from work of other trades.

C. Do not deface CLT panels.

3.4 INSTALLATION TOLERANCES

A. Overall Square: For rectangular areas where multiple CLT panels have been installed, the two corner-to-corner diagonal measurements of an area shall not deviate from each other by more than 1/2 inch or 0.25% of the length (inches) of the shortest side of the rectangle, whichever is greater.

B. Walls:

1. Plumb: Do not exceed the greater of h/500 or 3/16 inch deviation from plumb per story measured at any point along the wall. For multistory buildings, the total plumb measured at any point along wall shall not exceed the lesser of H/500 or 2 inches.
2. Position: Plus or minus 3/8 inch from theoretical at base, max.
3. Misalignment and gaps at abutted wall panel joints:

   a. Exposed: 1/8 inch, max.
   b. Concealed: 3/16 inch, max.

C. Floors and Roofs:

1. Elevation: Plus or minus 3/8 inch from theoretical, max.
2. Misalignment and gaps at abutted panel joints:

   a. Exposed: 1/8 inch, max.
   b. Concealed: 3/16 inch, max.

D. CLT and supporting structure connections used may require tighter installation tolerances than specified above. The manufacturer and installer are responsible for coordination during the shop drawings process.

3.5 FIELD QUALITY CONTROL

A. The Contractor shall keep a QA/QC log that can be made available to the Architect at any time. The QA/QC log shall include items such as but not limited to:

1. Environmental conditions at all stages, such as during fabrication, storage, transportation, installation and until building is finished.
2. Quality control log showing the actual length, thickness and width of the CLT panels. Length, width, thickness and diagonal measurement to be noted on top surface of CLT panels. Tolerances as per these specifications.
3. Site deliveries including verified load manifests with notes of damaged or missing materials and elements.
4. Material and element install log with sign off for QC on hardware/fastener installation.
5. Log of equipment used, such as but not limited to torque drills (with torque clutch) for screw installation through steel plates etc.
6. Record moisture levels of CLT in accordance with the Moisture Control Method Statement.
7. Log of any changes, modifications, damage, or repair.

3.6 DEMONSTRATION & TRAINING

A. Comply with Division 01, Section 017905 "Demonstration and Training" for general requirements of demonstration and training documentation.

B. The manufacturer's representative shall provide 'hands-on' training sessions for the Government O&M personnel.

1. Schedule as follows:

a. Classroom Instruction: Two (2) hours.
b. Field Demonstration: Four (4) hours.

C. Training shall cover the following topics:

1. Maintenance and repair including manufacturer's data within the O&M manual.
2. Inspection requirements and/or techniques with appropriate specialty tools.
3. Monitoring requirements with appropriate/specified equipment and diagnostic analysis.

END OF SECTION 061719

SECTION 061800 - GLUED-LAMINATED CONSTRUCTION

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. Framing using structural glued-laminated timber.

B. Related Requirements:

1. Section 061000 "Rough Carpentry" for dimension lumber items associated with structural glued-laminated timber.
2. Section 061300 "Heavy Timber Construction" for framing using [**timbers**] [**and**] [**round wood poles**].
3. Section 061516 "Wood Roof Decking" for glued-laminated wood roof decking.

1.3 DEFINITIONS

A. Structural Glued-Laminated (Glulam) Timber: An engineered, stress-rated timber product assembled from selected and prepared wood laminations bonded together with adhesives and with the grain of the laminations approximately parallel longitudinally.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on lumber, adhesives, fabrication, and protection.
2. For preservative-treated wood products. Include chemical treatment manufacturer's written instructions for handling, storing, installing, and finishing treated material.
3. For connectors. Include installation instructions.

B. Sustainable Design Submittals:

1. <Double click to insert sustainable design text for regional materials.>
2. <Double click to insert sustainable design text for certified wood.>
3. <Double click to insert sustainable design text for certified wood.>
4. <Double click to insert sustainable design text for laminating adhesive.>

C. Shop Drawings:

1. Show layout of structural glued-laminated timber system and full dimensions of each member.
2. Indicate species and laminating combination.
3. Include large-scale details of connections.

D. Samples: Full width and depth, 24 inches (600 mm) long, showing the range of variation to be expected in appearance of structural glued-laminated timber[**including variations due to specified treatment**].

1. Apply specified factory finish to three sides of half length of each Sample.

E. Delegated-Design Submittal: For structural glued-laminated timber and timber connectors.

F. Operations & Maintenance Manual: Provide manufacturer's maintenance and operation data for material components within this section. In addition to items specified in Division 01 Section "Systems Manual / O&M Data," include the following data:

1. Procedures and schedules for inspecting, monitoring, and repairing glue-laminated assemblies.
2. Procedures on mounting or penetrating glue-laminated units for future MEP infrastructure expansion.

1.5 INFORMATIONAL SUBMITTALS

A. Certificates of Conformance: Issued by a qualified testing and inspecting agency indicating that structural glued-laminated timber complies with requirements in AITC A190.1.

B. Material Certificates: For preservative-treated wood products, from manufacturer. Indicate type of preservative used and net amount of preservative retained.

C. Research/Evaluation Reports: For [**structural glued-laminated timber**] [**and**] [**timber connectors**], from ICC-ES.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: [**An AITC- or APA-EWS-licensed firm**] [**certified for chain of custody by an FSC-accredited certification body**].

B. <Double click to insert sustainable design text for manufacturer qualifications.>

C. <Double click to insert sustainable design text for vendor qualifications.>

1.7 DELIVERY, STORAGE, AND HANDLING

A. General: Comply with provisions in AITC 111.

B. Individually wrap members using plastic-coated paper covering with water-resistant seams.

1.8 EXTRA MATERIALS

A. Provide manufacturer's standard maintenance devices (e.g., special tools) associated with inspecting, monitoring, and torquing assembly components. Provide protective covering and labeling to facilitate storage and retrieval.

B. Provide extra materials as specified below. Extra materials shall match the products installed. Package these materials with protective covering for storage and include labels describing content:

1. Manufacturer’s CLT Repair Kits: Two (2).
2. Timber Connectors (as defined in Part 2.4): 1 percent of each type installed, but not less than one complete assembly connection.
3. Field-applied Coatings: Two (2) standard size containers of each type.

1.9 WARRANTY

A. Furnish the manufacturer’s two-year warranty that assures the glue-laminated product will be free of defects in material and workmanship from the date of substantial completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer, as defined in Division 01 Section "Quality Requirements," to design structural glued-laminated timber and connectors.

B. Structural Performance: Structural glued-laminated timber and connectors shall withstand the effects of structural loads shown on Drawings without exceeding allowable design working stresses listed in AITC 117 or determined according to ASTM D3737 and acceptable to authorities having jurisdiction.

C. Seismic Performance: Structural glued-laminated timber and connectors shall withstand the effects of earthquake motions determined according to [**ASCE/SEI 7**] <**Insert requirement**>.

2.2 STRUCTURAL GLUED-LAMINATED TIMBER

A. General: Provide structural glued-laminated timber that complies with AITC A190.1 and AITC 117 or research/evaluation reports acceptable to authorities having jurisdiction.

1. Factory mark each piece of structural glued-laminated timber with AITC Quality Mark or APA-EWS trademark. Place mark on surfaces that are not exposed in the completed Work.
2. Provide structural glued-laminated timber made from single species.
3. Provide structural glued-laminated timber made from solid lumber laminations; do not use laminated veneer lumber.
4. Provide structural glued-laminated timber made with wet-use adhesive complying with AITC A190.1.
5. <Double click to insert sustainable design text for laminating adhesive.>

B. <Double click to insert sustainable design text for regional wood materials.>

C. <Double click to insert sustainable design text for certified wood.>

D. Species and Grades for Structural Glued-Laminated Timber: [**Alaska cedar**] [**Douglas fir-larch**] [**Southern pine**] [**Any species**] <**Insert species**> in grades needed to comply with "Performance Requirements" Article.

E. Species and Grades for Structural Glued-Laminated Timber: [**Alaska cedar**] [**Douglas fir-larch**] [**Southern pine**] [**Any species**] <**Insert species**> that complies with [**structural properties**] [**combination symbols**] [**beam stress classifications**] indicated.

F. Species and Grades for [**Beams**] [**and**] [**Purlins**]:

1. Species and Beam Stress Classification: [**Ponderosa pine, 16F-1.3E**] [**Alaska cedar, 20F-1.5E**] [**Eastern spruce, 20F-1.5E**] [**Any species, 20F-1.5E**] [**Any species, 24F-1.7E**] [**Douglas fir-larch, 24F-1.8E**] [**Southern pine, 24F-1.8E**] [**Douglas fir-larch or southern pine, 24F-1.8E**] [**Southern pine, 30F-2.1E**] <**Insert species and beam stress classification**>.
2. Lay-up: [**Balanced**] [**Either balanced or unbalanced**].
3. Species and Combination Symbol: <**Insert species and combination symbol**>.

G. Species and Grades for Arches:

1. Species and Beam Stress Classification: [**Alaska cedar, 20F-1.5E**] [**Eastern spruce, 20F-1.5E**] [**Any species, 20F-1.5E**] [**Any species, 24F-1.7E**] [**Douglas fir-larch, 24F-1.8E**] [**Southern pine, 24F-1.8E**] [**Douglas fir-larch or southern pine, 24F-1.8E**] <**Insert species and beam stress classification**>.
2. Lay-up: [**Balanced**] [**Either balanced or unbalanced**].
3. Species and Combination Symbol: [**Alaska cedar, 20F-V13 WS**] [**Douglas fir-larch, 24F-V8 WS**] [**Southern pine, 24F-V5 SP**] [**Alaska cedar, 20F-V12 WS**] [**Douglas fir-larch, 24F-V4 WS**] [**Southern pine, 24F-V3 SP**] <**Insert species and combination symbol**>.

H. Species and Grades for [**Columns**] [**and**] [**Truss Members**]:

1. Species and Combination Symbol: [**Alaska cedar, 70**] [**Douglas fir-larch, 1**] [**Douglas fir-larch, 3**] [**Southern pine, 47**] [**Southern pine, 50**] <**Insert species and combination symbol**>.

I. Appearance Grade: [**Premium**] [**Architectural**] [**Industrial**] [**Framing**], complying with AITC 110.

1. For Premium and Architectural appearance grades, fill voids as required by AITC 110.[**For Premium appearance grade, use clear wood inserts, of matching grain and color, for filling voids and knot holes more than 1/4 inch (6 mm) wide.**]

2.3 PRESERVATIVE TREATMENT

A. Preservative Treatment: Where preservative-treated structural glued-laminated timber is indicated, comply with AWPA U1, Use [**Category 1**] [**Category 2**] [**Category 3A**] [**Category 3B**] [**Category 4A**].

1. Use preservative solution without[**water repellents or**] substances that might interfere with application of indicated finishes.
2. Do not incise structural glued-laminated timber or wood used to produce structural glued-laminated timber.

B. Preservative:[**One of the following:**]

1. Oxine copper (copper-8-quinolinolate) in a light petroleum solvent.
2. Pentachlorophenol in light petroleum solvent.
3. Copper naphthenate in a light petroleum solvent.
4. Ammoniacal zinc copper arsenate (ACZA) in a water solution.
5. Chromated copper arsenate (CCA) in a water solution.
6. Ammoniacal copper quat Type A (ACQ-C) in a water solution.
7. Propiconazole tebuconazole imidacloprid (PTI) in a water emulsion.

C. After dressing members, apply a copper naphthenate field-treatment preservative to comply with AWPA M4 to surfaces cut to a depth of more than 1/16 inch (1.5 mm).

2.4 TIMBER CONNECTORS

A. <Double click here to find, evaluate, and insert list of manufacturers and products.>

B. Fabricate beam seats from [**steel**] [**stainless steel**] with [**0.239-inch (6-mm)**] [**3/16-inch (5-mm)**] [**3/8-inch (9.5-mm)**] bearing plates, 3/4-inch- (19-mm-) diameter-by-12-inch- (300-mm-) long deformed bar anchors, and 0.239-inch (6-mm) side plates.

C. Fabricate arch base shoes from [**steel**] [**stainless steel**] with 1-inch (25-mm) baseplates and 3/8-inch (9.5-mm) side plates.

D. Fabricate beam hangers from [**steel**] [**stainless steel**] with 0.179-inch (4.6-mm) stirrups and 0.239-inch (6-mm) top plates.

E. Fabricate hinge connectors from [**steel**] [**stainless steel**] with 0.179-inch (4.6-mm) side plates and [**3/4-inch (19-mm)**] [**1-inch (25-mm)**] top and bottom plates.

F. Fabricate strap ties from [**steel**] [**stainless steel**], [**2-1/2 inches (63 mm) wide by 0.179 inch (4.6 mm)**] [**3 inches (75 mm) wide by 0.239 inch (6 mm)**] thick.

G. Fabricate tie rods from round steel bars with upset threads connected with forged-steel turnbuckles complying with ASTM A668/A668M.

H. Provide bolts, 3/4 inch (19 mm) unless otherwise indicated, complying with ASTM A307, Grade A (ASTM F568M, Property Class 4.6); nuts complying with ASTM A563 (ASTM A563M); and, where indicated, flat washers.

I. Provide shear plates, [**2-5/8 inches (66.7 mm)**] [**4 inches (102 mm)**] in diameter, complying with ASTM D5933.

J. Materials: Unless otherwise indicated, fabricate from the following materials:

1. Structural-steel shapes, plates, and flat bars complying with ASTM A36/A36M.
2. Round steel bars complying with ASTM A575, Grade M 1020.
3. Hot-rolled steel sheet complying with ASTM A1011/A1011M, Structural Steel, Type SS, Grade 33.
4. Stainless steel flat bars complying with ASTM A666, [**Type 304**] [**Type 316**].
5. Stainless steel bars and shapes complying with ASTM A276, [**Type 304**] [**Type 316**].
6. Stainless steel plate, sheet, and strip complying with ASTM A240/A240M or ASTM A666, [**Type 304**] [**Type 316**].

K. Finish steel assemblies and fasteners with rust-inhibitive primer, 2-mil (0.05-mm) dry film thickness.

L. Hot-dip galvanize steel assemblies and fasteners after fabrication to comply with ASTM A123/A123M or ASTM A153/A153M.

2.5 MISCELLANEOUS MATERIALS

A. End Sealer: Manufacturer's standard, transparent, colorless wood sealer that is effective in retarding the transmission of moisture at cross-grain cuts and is compatible with indicated finish.

B. Penetrating Sealer: Manufacturer's standard, transparent, penetrating wood sealer that is compatible with indicated finish.

2.6 FABRICATION

A. Shop fabricate for connections to greatest extent possible, including cutting to length and drilling bolt holes.

1. Dress exposed surfaces as needed to remove planing and surfacing marks.

B. Camber: Fabricate horizontal and inclined members of less than 1:1 slope with either circular or parabolic camber equal to 1/500 of span.

C. Where preservative-treated members are indicated, fabricate (cut, drill, surface, and sand) before treatment to greatest extent possible. Where fabrication must be done after treatment, apply a field-treatment preservative to comply with AWPA M4.

1. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
2. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.

D. End-Cut Sealing: Immediately after end cutting each member to final length[**and after preservative treatment**], apply a saturation coat of end sealer to ends and other cross-cut surfaces, keeping surfaces flood coated for not less than 10 minutes.

E. Seal Coat: After fabricating, sanding, and end-coat sealing, apply a heavy saturation coat of penetrating sealer on surfaces of each unit[**except for preservative-treated wood where treatment included a water repellent**].

2.7 FACTORY FINISHING

A. Wiped Stain Finish: Manufacturer's standard, dry-appearance, penetrating acrylic stain and sealer; oven dried and resistant to mildew and fungus.

1. Color: [**As indicated by manufacturer's designations**] [**Match Architect's sample**] [**As selected by Architect from manufacturer's full range**] <**Insert color**>.

B. Clear Finish: Manufacturer's standard, two-coat, clear varnish finish; resistant to mildew and fungus.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates in areas to receive structural glued-laminated timber, with Installer present, for compliance with requirements, installation tolerances, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Erect structural glued-laminated timber true and plumb and with uniform, close-fitting joints. Provide temporary bracing to maintain lines and levels until permanent supporting members are in place.

1. Handle and temporarily support glued-laminated timber to prevent surface damage, compression, and other effects that might interfere with indicated finish.

B. Framing Built into Masonry: Provide 1/2-inch (13-mm) clearance at tops, sides, and ends of members built into masonry; bevel cut ends 3 inches (76 mm); and do not embed more than 4 inches (102 mm) unless otherwise indicated.

C. Cutting: Avoid extra cutting after fabrication. Where field fitting is unavoidable, comply with requirements for shop fabrication.

D. Fit structural glued-laminated timber by cutting and restoring exposed surfaces to match specified surfacing[**and finishing**].

1. Predrill for fasteners using timber connectors as templates.
2. Finish exposed surfaces to remove planing or surfacing marks and to provide a finish equivalent to that produced by machine sanding with No. 120 grit sandpaper.
3. Coat cross cuts with end sealer.
4. Where preservative-treated members must be cut during erection, apply a field-treatment preservative to comply with AWPA M4.

   a. Use inorganic boron (SBX) treatment for members not in contact with the ground and continuously protected from liquid water.
   b. Use copper naphthenate treatment for members in contact with the ground or not continuously protected from liquid water.

E. Install timber connectors as indicated.

1. Unless otherwise indicated, install bolts with same orientation within each connection and in similar connections.
2. Install bolts with orientation as indicated or, if not indicated, as directed by Architect.

3.3 ADJUSTING

A. Repair damaged surfaces**[and finishes]** after completing erection. Replace damaged structural glued-laminated timber if repairs are not approved by Architect.

3.4 PROTECTION

A. Do not remove wrappings on individually wrapped members until they no longer serve a useful purpose, including protection from weather, sunlight, soiling, and damage from work of other trades.

1. Coordinate wrapping removal with finishing work. Retain wrapping where it can serve as a painting shield.
2. Slit underside of wrapping to prevent accumulation of moisture inside the wrapping.

3.5 DEMONSTRATION & TRAINING

A. Comply with Division 01, Section 017905 “Demonstration and Training” for general requirements of demonstration and training documentation.

B. The manufacturer’s representative shall provide ‘hands-on’ training sessions for the Government O&M personnel.

1. Schedule as follows:

a. Classroom Instruction: Two (2) hours.
b. Field Demonstration: Four (4) hours.

C. Training shall cover the following topics:

1. Maintenance and repair including manufacturer’s data within the O&M manual.
2. Inspection requirements and/or techniques with appropriate specialty tools.
3. Monitoring requirements with appropriate/specified equipment and diagnostic analysis.

END OF SECTION 061800

SECTION 062025 - INTERIOR FINISH CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior trim.
2. Interior plywood paneling.

B. Related Requirements:

1. Section 064025 “Interior Architectural Woodwork” for cabinets and other architectural woodwork.
2. Division 09 Section “Painting and Finishing” for priming and backpriming of interior finish carpentry.

1.2 DEFINITIONS

A. MDF: Medium-density fiberboard.

B. MDO: Plywood with a medium-density overlay on the face.

C. PVC: Polyvinyl chloride.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

B. Sustainable Design Submittals:

1. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
2. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
3. Chain-of-Custody Qualification Data: For manufacturer and vendor.
4. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
5. Product Data: For installation adhesives, indicating VOC content.
6. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.

C. Samples for Verification:

1. For each species and cut of lumber and panel products with nonfactory-applied finish, with half of exposed surface finished; 300 sq. cm (50 sq. in.) for lumber and 200 by 250 mm (8 by 10 inches) for panels.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation.

1. Protect materials from weather by covering with waterproof sheeting, securely anchored.
2. Provide for air circulation around stacks and under coverings.

B. Deliver interior finish carpentry materials only when environmental conditions comply with requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions comply with requirements specified for installation areas.

1.6 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet-work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Regional Materials: The following wood products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

1. Interior trim.
2. Interior plywood paneling.

B. Certified Wood: The following wood products shall be certified as "FSC Pure"[or "FSC Mixed Credit"] according to FSC STD-01-001 and FSC STD-40-004.

1. Interior trim.
2. Interior plywood paneling.

3. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

C. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with applicable rules of any rules-writing agency certified by the American Lumber Standard Committee's (ALSC) Board of Review. Grade lumber by an agency certified by the ALSC's Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber, mark grade stamp on end or back of each piece, or omit grade stamp and provide certificates of grade compliance issued by grading agency.

D. Softwood Plywood: DOC PS 1.

E. Hardboard: ANSI A135.4.

F. MDF: ANSI A208.2, Grade 130.

2.2 FIRE-RETARDANT-TREATED WOOD MATERIALS

A. Fire-Retardant-Treated Wood Materials: Where fire-retardant-treated materials are indicated, use materials complying with requirements that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products according to test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of the Architectural Woodwork Standards. Do not use materials that are warped, discolored, or otherwise defective.

2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested according to ASTM E 84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 3.2 m (10.5 feet) beyond the centerline of the burners at any time during the test.

1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
2. For items indicated to receive a stained, transparent, or natural finish, use organic resin chemical formulation.
3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
4. Mill lumber before treatment, and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

2.3 INTERIOR TRIM

A. Hardwood Lumber Trim for Transparent Finish (Stain or Clear Finish):

1. Species: Honduras Mahogany or other hardwood with similar weight, moisture content, and hardness, and approved by the Project Director/COR.
2. Weight: Air Dried, 30-52 pounds per cubic foot, minimum.
3. Moisture Content: 12 percent.
4. Janka Hardness Test: 2200 minimum.
5. Finger Jointing: Not allowed.
6. Gluing for Width: Use for lumber trim wider than 150 mm (6 inches).
7. Veneered Material: Not allowed.
8. Face Surface: [Surfaced (smooth)][Saw textured].
9. Matching: Selected for compatible grain and color.

B. Lumber Trim for Opaque Finish (Painted Finish): Finished lumber (S4S), either finger-jointed or solid lumber, of one of the following species and grades:

1. Grade Finish or 1 Common eastern white pine; NELMA or NLGA.
2. Grade 1 Common spruce-pine-fir; NELMA, NLGA, WCLIB, or WWPA.
3. Grade A Finish alder, aspen, basswood, cottonwood, gum, magnolia, soft maple, sycamore, tupelo, or yellow poplar; NHLA.

C. Moldings: Made to patterns included in WMMPA WM 7. Wood moldings made from kiln-dried stock and graded under WMMPA WM 4.

1. Moldings for Transparent Finish (Stain Finish): Honduras Mahogany or other hardwood with the following properties and approved by the Project Director/COR:

   a. Weight: Air Dried, 30-52 pounds per cubic foot, minimum.
   b. Moisture Content: 12 percent.
   c. Janka Hardness Test: 2200 minimum.

2. Moldings for Opaque Finish (Painted): P-grade eastern white, Idaho white, lodgepole, ponderosa, or sugar pine.
3. Molding shapes as indicated on Drawings.

2.4 PANELING

A. Hardwood Veneer Plywood Paneling: Manufacturer's stock hardwood plywood panels complying with HPVA HP-1.

1. Face Veneer Species and Cut: Honduras Mahogany, plain sawn or sliced cuts (Basis-of-Design), or other Semi-open grain hardwood with similar weight, moisture content, and hardness: African Mahogany, plain sawn or ribbon striped cut; African Rosewood, plain sawn; Brazilian Cherry (Jatoba Heartwood), plain sawn; Brazilian Walnut (Ipe), plain sawn; or Teak, plain sawn or sliced cuts.
2. Veneer Matching: [Random match] [Selected for similar color and grain].
3. Backing Veneer Species: Any hardwood compatible with face species.
4. Construction: Veneer core.
5. Thickness: 4 mm (5/32 inch).
6. Panel Size: [**1219 by 2438 mm (48 by 96 inches)**] [**1219 by 3048 mm (48 by 120 inches)**].
7. Panel Size: [1200 by 2400 mm] [1200 by 3000 mm].
8. Glue Bond: Type II (interior).
9. Finish: Class I.
10. ASTM E 84: Flame Spread 25 maximum, Smoke Developed 450 maximum

2.5 MISCELLANEOUS MATERIALS

A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.

B. Low-Emitting Materials: Adhesives shall comply with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.

1. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2. Adhesives shall have a VOC content of **[30]** <**Insert value**> g/L or less.

D. Paneling Adhesive: Comply with paneling manufacturer's written instructions for adhesives.

1. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.
2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

E. Multipurpose Construction Adhesive: Formulation, complying with ASTM D 3498, that is recommended for indicated use by adhesive manufacturer.

1. Adhesives shall have a VOC content of **[70]** <**Insert value**> g/L or less.
2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.6 FABRICATION

A. Back out or kerf backs of the following members, except those with ends exposed in finished work:

1. Interior standing and running trim, except shoe and crown molds.
2. Wood-board paneling.

B. Ease edges of lumber less than 25 mm (1 inch) in nominal thickness to 1.5-mm (1/16-inch) radius and edges of lumber 25 mm (1 inch) or more in nominal thickness to 3-mm (1/8-inch) radius.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Clean substrates of projections and substances detrimental to application.

B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours unless longer conditioning is recommended by manufacturer.

3.3 INSTALLATION, GENERAL

A. Do not use materials that are unsound; warped; improperly treated or finished; inadequately seasoned; too small to fabricate with proper jointing arrangements; or with defective surfaces, sizes, or patterns.

B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials.

1. Use concealed shims where necessary for alignment.
2. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
3. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.
4. Install to tolerance of 3 mm in 2438 mm (1/8 inch in 96 inches) for level and plumb. Install adjoining interior finish carpentry with 0.8-mm (1/32-inch) maximum offset for flush installation and 1.5-mm (1/16-inch) maximum offset for reveal installation.
5. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

3.4 STANDING AND RUNNING TRIM INSTALLATION

A. Install trim with minimum number of joints as is practical, using full-length pieces from maximum lengths of lumber available.

1. Do not use pieces less than 610 mm (24 inches) long, except where necessary.
2. Stagger joints in adjacent and related standing and running trim.
3. Cope at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint.
4. Use scarf joints for end-to-end joints.
5. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.
6. Match color and grain pattern of trim for transparent finish (stain or clear finish) across joints.
7. Install trim after gypsum-board joint finishing operations are completed.
8. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting.
9. Fasten to prevent movement or warping.
10. Countersink fastener heads on exposed carpentry work and fill holes.

3.5 PANELING INSTALLATION

A. Plywood Paneling: Select and arrange panels on each wall to minimize noticeable variations in grain character and color between adjacent panels.

1. Leave 6-mm (1/4-inch) gap to be covered with trim at top, bottom, and openings.
2. Install with uniform tight joints between panels.
3. Attach panels to supports with manufacturer's recommended panel adhesive and fasteners.
4. Space fasteners and adhesive as recommended by panel manufacturer.
5. Conceal fasteners to greatest practical extent.

3.6 ADJUSTING

A. Replace interior finish carpentry that is damaged or does not comply with requirements.

1. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.

B. Adjust joinery for uniform appearance.

3.7 CLEANING

A. Clean interior finish carpentry on exposed and semi-exposed surfaces.

B. Restore damaged or soiled areas and touch up factory-applied finishes if any.

3.8 PROTECTION

A. Protect installed products from damage from weather and other causes during construction.

B. Remove and replace finish carpentry materials that are wet, moisture damaged, and mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 062025

SECTION 064023 - INTERIOR ARCHITECTURAL WOODWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior standing and running trim.
2. Closet and utility shelving.
3. Interior frames and jambs.
4. Wood-veneer-faced architectural cabinets.
5. Plastic-laminate-faced architectural cabinets.
6. Flush wood paneling and wainscots.
7. Plastic-laminate countertops.
8. Stone countertops.
9. Solid surfacing countertops.
10. Wood furring, blocking, shims, and hanging strips for installing interior architectural woodwork items that are not concealed within other construction.
11. Shop finishing of interior architectural woodwork.

B. Material Index / Material Codes Include:

1. **WDG-[##] or [WDB-[##] <INTERIOR STANDING AND RUNNING TRIM .>**
2. **WDG-[##] <INTERIOR FRAMES AND JAMBS.>**
3. **WDG-[##] <WOOD CABINETS.>**
4. **PLG-[##] <PLASTIC-LAMINATE-CLAD CABINETS.>**
5. **WDW-[##] <FLUSH WOOD PANELING AND WAINSCOTS.>**
6. **STG-[##] <STONE COUNTERTOPS.>**
7. **SOG-[##] <SOLID SURFACE COUNTERTOPS.>**

C. Related Requirements:

1. **[Division 06 Section "Rough Carpentry"] [Division 06 Section "Miscellaneous Rough Carpentry"]** for wood furring, blocking, shims, and hanging strips required for installing interior architectural woodwork that are concealed within other construction before interior architectural woodwork installation.
2. Division 06 Section on "Interior Finish Carpentry" for interior carpentry exposed to view that is not specified in this Section.
3. Division 09 Section “Painting and Finishing” for priming and backpriming of interior finish carpentry.

1.2 DEFINITIONS

A. MDF: Medium-density fiberboard.

B. MDO: Plywood with a medium-density overlay on the face.

C. PVC: Polyvinyl chloride.

1.3 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections, to ensure that interior architectural woodwork can be supported and installed as indicated.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For the following:

1. Cabinet hardware and accessories.
2. Handrail brackets.
3. Anchors.
4. Adhesives.
5. Finishing materials and processes.
6. Wood-Preservative Treatment:

    a. Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
    b. Indicate type of preservative used and net amount of preservative retained.
    c. Include chemical-treatment manufacturer's written instructions for finishing treated material and manufacturer's written warranty.

7. Fire-Retardant Treatment: Include data and warranty information from chemical-treatment manufacturer and certification by treating plant that treated materials comply with requirements.
8. Waterborne Treatments: For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced to levels specified before shipment to Project site.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Data: For installation adhesives, indicating VOC content.
3. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.

4. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
5. Chain-of-Custody Qualification Data: For manufacturer and vendor.
6. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
7. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings:

1. Include the following:

   a. Dimensioned plans, elevations, and sections.
   b. Attachment details.

2. Show large-scale details.
3. Show locations and sizes of furring, blocking, and hanging strips, including blocking and reinforcement concealed by construction and specified in other Sections.
4. Show veneer leaves with dimensions, grain direction, exposed face, and identification numbers indicating the flitch and sequence within the flitch for each leaf.
5. Show location/size/type of woodwork hardware and cutouts for plumbing/electrical fixtures.
6. Apply **[AWI Quality Certification] [WI Certified Compliance]** Program label to Shop Drawings.
7. Show direction of veining, grain, or other directional patterns for countertops.
8. Show locations and details of countertop joints.

D. Samples: For each exposed product, cabinet hardware exposed in the finished work, and for each shop-applied color and finish specified.

1. Lumber and Panel Products with Transparent Finish: Not less than 300 mm (12 inches) long by full width by full depth sections, for each species and cut, finished on one side and one edge.

2. Veneer Leaves: Representative of and selected from flitches to be used for transparent-finished interior architectural woodwork.

3. Lumber and Panel Products with Shop-Applied Opaque Finish: Not less than 300 mm (12 inches) long by full width by full depth sections for lumber and 300 by 300 mm (12 by 12 inches) for panels, for each finish system and color.

   a. Finish one-half of exposed surface.

4. Plastic laminate: Submit minimum 50 mm by 75 mm (2 inch by 3 inch) samples of manufacturer's full range of standard color and texture samples for selection by COR, based on input from the A/E of Record.
5. Cabinetry and millwork items: Submit samples showing construction, finish, color and gloss for the following:

a. Finished veneer wood: 2 adjacent finished edges, 300 mm x 300 mm (12 inch x 12 inch) for each veneer required.
b. Plastic laminate cabinet door section: 300 mm x 300 mm x 19 mm (12 inch x 12 inch x 3/4 inch) with finger pull.
c. Finished solid wood: 19 mm x 150 mm x 300 mm (3/4 inch x 6 inch x 12 inch) for each type of wood.
d. Plastic laminate top and edge with finished edges: 300 mm x 300 mm (12 inch x 12 inch) x depth of fascia.

6. Submit samples of each type of stone species and finish for stone countertops indicating anticipated range of stone color and texture in finished Work.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[architectural woodwork manufacturer] [and] [Installer]**.

B. Product Certificates: For the following:

1. Composite wood and agrifiber products.
2. Adhesives.

C. Evaluation Reports: For [**preservative-treated**] [**and**] **[fire-retardant-treated]** wood materials, from ICC-ES.

1.7 CLOSEOUT SUBMITTLAS

A. Quality Standard Compliance Certificates: **[AWI Quality Certification Program] [WI Certified Compliance Program]** certificates.

B. Maintenance Data: For countertop materials to include in maintenance manuals. Include Product Data for care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.8 QUALITY ASSURANCE

A. Manufacturer's Qualifications: Employs skilled workers who custom fabricate products similar to those required for this Project and whose products have a record of successful in-service performance.

1. Manufacturer's Certification: Licensed participant in **[AWI's Quality Certification Program] [WI's Certified Compliance Program]**.

2. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body or other LEED recognized equivalent certification body for Certified Wood Pilot Alternative Compliance Path (ACP) to achieve green building credits.

3. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body or other LEED recognized equivalent certification body for Certified Wood Pilot Alternative Compliance Path (ACP) to achieve green building credits.

B. Installer Qualifications: [Manufacturer of products] [and] [Licensed participant in AWI's Quality Certification Program] [Licensed participant in WI's Certified Compliance Program].

1. If a local alternate quality control program is proposed, it will be at the discretion of the Project Director/COR to use that program.
2. Installer Qualifications: Not less than 5 years documented successful experience with work comparable to Work of this Project.

C. Mockups: Build sample installations to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups of **[typical interior architectural woodwork as shown on Drawings]** <**Insert description**>.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR specifically approves such deviations by Change Order, based on input from the A/E of Record.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with the Architectural Woodwork Standards, Section 2.

B. Do not deliver interior architectural woodwork until painting and similar finish operations that might damage woodwork have been completed in installation areas.

C. Store woodwork in installation areas or in areas where environmental conditions comply with requirements specified in "Field Conditions" Article.

1. Handle and store fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install interior architectural woodwork until building is enclosed, wet-work is complete, and HVAC system is operating and maintaining temperature and relative humidity at levels designed for building occupants for the remainder of the construction period.

B. Field Measurements: Where interior architectural woodwork is indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication, and indicate measurements on Shop Drawings.

1. Locate concealed framing, blocking, and reinforcements that support woodwork by field measurements before being concealed by construction and indicate measurements on Shop Drawings.

C. Established Dimensions: Where interior architectural woodwork is indicated to fit to other construction, establish dimensions for areas where woodwork is to fit. Provide allowance for trimming at site, and coordinate construction to ensure that actual dimensions correspond to established dimensions.

D. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

1.11 COORDINATION

A. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of Work specified in other Sections to ensure that architectural woodwork can be supported and installed as indicated.

B. Coordinate locations of utilities that will penetrate countertops or backsplashes.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Frames: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings indicated on Drawings, based on testing at positive pressure in accordance with NFPA 252 or UL 10C.

1. Smoke- and Draft-Control Assemblies: Listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing in accordance with UL 1784 and installed in compliance with NFPA 105.

B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing in accordance with NFPA 257 or UL 9.

2.2 ARCHITECTURAL WOODWORK, GENERAL

A. Quality Standard: Unless otherwise indicated, comply with the Architectural Woodwork Standards for grades of interior architectural woodwork indicated for construction, finishes, installation, and other requirements.

1. The Contract Documents contain requirements that are more stringent than the Architectural Woodwork Standards. Comply with Contract Documents and Architectural Woodwork Standards.

B. Regional Materials: Wood products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

C. Certified Wood: Wood products shall be certified as "FSC Pure"**[or "FSC Mixed Credit"]** according to FSC STD-01-001 and FSC STD-40-004, or other LEED recognized equivalent certification body for Certified Wood Pilot Alternative Compliance Path (ACP) to achieve green building credits.

1. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

D. Lumber: DOC PS 20 and applicable rules of grading agencies indicated. If no grading agency is indicated, comply with applicable rules of any rules-writing agency certified by the American Lumber Standard Committee's (ALSC) Board of Review. Grade lumber by an agency certified by the ALSC's Board of Review to inspect and grade lumber under the rules indicated.

1. Factory mark each piece of lumber with grade stamp of grading agency.
2. For exposed lumber, mark grade stamp on end or back of each piece, or omit grade stamp and provide certificates of grade compliance issued by grading agency.

E. Softwood Plywood: DOC PS 1.

F. Hardboard: ANSI A135.4.

G. MDF: ANSI A208.2, Grade 130.

H. Particleboard: ANSI A208.1, **[Grade M-2] [Grade M-2-Exterior Glue]**.

I. Melamine-Faced Particleboard: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with NEMA LD 3, Grade VGL, for Test Methods 3.3, 3.4, 3.6, 3.8, and 3.10.

1. Color: **[White] [Black] [Gray] [As approved by the Project Director/COR from manufacturer's full range] <Insert color>**.

2.3 INTERIOR STANDING AND RUNNING TRIM FOR TRANSPARENT FINISH **[WDG-[##] OR [WDB-[##]]**

A. Architectural Woodwork Standards Grade: Custom and Premium, as indicated.

B. Hardwood Lumber:

1. Wood Species and Cut: Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.

2. Moisture:

   a. Wood Moisture Content: [**5 to 10] [8 to 13] [4 to 9]** percent.
   b. Finger Jointing: Not allowed.
   c. Provide split species on trim that faces areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.

3. For trim items**[other than base]** wider than available lumber, use veneered construction. Do not glue for width.

   a. For veneered base, use hardwood lumber core, glued for width.

4. For base wider than available lumber, glue for width. Do not use veneered construction.
5. For rails thicker than available lumber, use veneered construction. Do not glue for thickness.

2.4 INTERIOR STANDING AND RUNNING TRIM FOR OPAQUE FINISH **[WDG-[##] OR [WDB-[##]]**

A. Architectural Woodwork Standards Grade: Custom.

1. Wood Species: Any closed-grain hardwood.
2. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.
3. Finger Jointing: **[Allowed] [Not allowed]**.

2.5 CLOSET AND UTILITY SHELVING

A. Architectural Woodwork Standards Grade: Custom.

B. Shelf Material: 19-mm (3/4-inch) [**solid lumber for transparent finish**] [**solid lumber for opaque finish**] [**plastic-laminate-clad panel product with plastic-laminate-clad edge**].

C. Cleats: 19-mm (3/4-inch) solid lumber.

D. Wood Species: Match species indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.

2.6 INTERIOR FRAMES AND JAMBS FOR TRANSPARENT FINISH **[WDG-[##]]**

A. Architectural Woodwork Standards Grade: Custom and Premium, as indicated.

B. Wood Species and Cut: Match species and cut indicated for other types of transparent-finished architectural woodwork located in same area of building unless otherwise indicated.

1. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.
2. Provide split species on frames and jambs that face areas with different wood species, matching each face of woodwork to species and cut of finish wood surfaces in areas finished.

C. For frames or jambs wider than available lumber, use veneered construction. Do not glue for width.

1. Do not use plain-sawn softwood lumber with exposed, flat surfaces more than 76 mm (3 inches) wide.

D. Fire-Rated Interior Frames and Jambs: Products fabricated from fire-retardant particleboard or fire-retardant MDF with veneered exposed surfaces and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252.

1. Fire Rating: 20 minutes.

2.7 INTERIOR FRAMES AND JAMBS FOR OPAQUE FINISH **[WDG-[##]]**

A. Architectural Woodwork Standards Grade: Custom.

B. Wood Species: Any closed-grain hardwood.

1. Wood Moisture Content: **[5 to 10] [8 to 13] [4 to 9]** percent.

C. Fire-Rated Interior Frames and Jambs: Products fabricated from fire-retardant particleboard with veneered exposed surfaces or fire-retardant MDF and listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing in accordance with NFPA 252.

1. Fire Rating: 20 minutes.

2.8 WOOD CABINETS FOR TRANSPARENT FINISH **[WDG-[##]]**

A. Architectural Woodwork Standards Grade: Custom and Premium, as indicated.

B. Type of Construction: **[Frameless] [Face frame]**.

C. Door and Drawer-Front Style: Flush overlay.

D. Wood for Exposed Surfaces

1. Species: **[Red oak] [White oak] [White ash] [White birch]** <**Insert species**>.

2. Cut: **[Plain sliced/plain sawn] [Rift cut/rift sawn] [Quarter cut/quarter sawn]**.
3. Grain Direction: **[Vertically for drawer fronts, doors, and fixed panels] [Horizontally for drawer fronts, doors, and fixed panels] [Vertically for doors and fixed panels, horizontally for drawer fronts] [As indicated on Drawings]**.
4. Matching of Veneer Leaves: **[Book] [Slip] [Random]**.
5. Veneer Matching within Panel Face: Center-balance match.
6. Veneer Matching within Room: Provide cabinet veneers in each room or other space from a single flitch with doors, drawer fronts, and other surfaces matched in a sequenced set with continuous match where veneers are interrupted perpendicular to the grain.

E. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies**: [Same species and cut indicated for exposed surfaces] [Thermally fused laminate panels] [Compatible species to that indicated for exposed surfaces, stained to match] <Insert requirements>**.

   a. Edges of **Thermally Fused Laminate Panel** Shelves: PVC or polyester edge banding.

2. Drawer Subfronts, Backs, and Sides: **[Solid-hardwood lumber, same species indicated for exposed surfaces] [Solid-hardwood lumber, stained to match species indicated for exposed surfaces] [Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding] <Insert requirements>**.
3. Drawer Bottoms: **[Hardwood plywood] [Thermally fused laminate panels] <Insert requirements>**.

F. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.

2.9 WOOD CABINETS FOR OPAQUE FINISH **[WDG-[##]]**

A. Architectural Woodwork Standards Grade: Custom.

B. Type of Construction: **[Frameless] [Face frame]**.

C. Door and Drawer-Front Style: Flush overlay.

D. Species for Exposed Lumber Surfaces: Any closed-grain hardwood.

E. Panel Product for Exposed Surfaces: MDF.

F. Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: **[Match materials indicated for exposed surfaces] [Thermally fused laminate panels] <Insert requirements>**.

a. Edges of Thermoset Decorative Panel Shelves: PVC or polyester edge banding.

2. Drawer Sides and Backs: **[Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding] <Insert requirements>**.
3. Drawer Bottoms: **[Hardwood plywood] [Thermally fused laminate panels] <Insert requirements>**.

G. **[Dust Panels: 6.4-mm (1/4-inch) plywood or tempered hardboard above compartments and drawers unless located directly under tops.]**

H. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.

2.10 PLASTIC-LAMINATE-CLAD ARCHITECTURAL CABINETS **[PLG-[##]]**

A. Architectural Woodwork Standards Grade: Custom.

B. Type of Construction: **[Frameless] [Face frame]**.

C. Door and Drawer-Front Style: Flush overlay.

D. High-Pressure Decorative Laminate: NEMA LD 3, grades as indicated or if not indicated, as required by quality standard.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Abet Laminati Inc.
b. Formica Corporation.
c. Lamin-Art, Inc.
d. Pionite; a Panolam Industries International, Inc. brand.
e. Wilsonart LLC.

E. Laminate Cladding for Exposed Surfaces:

1. Horizontal Surfaces: Grade HGS.
2. Vertical Surfaces: Grade HGS.
3. Edges: Grade HGS.
4. Pattern Direction: Vertically for doors and fixed panels, horizontally for drawer fronts.

F. Materials for Semiexposed Surfaces:

1. Surfaces Other Than Drawer Bodies: High-pressure decorative laminate, NEMA LD 3, Grade VGS.

2. Edges of Plastic-Laminate Shelves: **[PVC tape, 0.460-mm (0.018-inch) minimum thickness, matching laminate in color, pattern, and finish] [PVC T-mold matching laminate in color, pattern, and finish] [PVC edge banding, 3 mm (0.12 inch) thick, matching laminate in color, pattern, and finish]**.

3. Edges of **Thermally Fused Laminate Panel** Shelves: PVC or polyester edge banding.

4. For semiexposed backs of panels with exposed plastic-laminate surfaces, provide surface of high-pressure decorative laminate, NEMA LD 3, Grade VGS.
5. Drawer Sides and Backs: **[Solid-hardwood lumber] [Thermally fused laminate panels with PVC or polyester edge banding]**.
6. Drawer Bottoms: **[Hardwood plywood] [Thermally fused laminate panels]**.

G. **[Dust Panels: 6.4-mm (1/4-inch) plywood or tempered hardboard above compartments and drawers unless located directly under tops.]**

H. Concealed Backs of Panels with Exposed Plastic-Laminate Surfaces: High-pressure decorative laminate, NEMA LD 3, Grade BKL.

I. Drawer Construction: Fabricate with exposed fronts fastened to subfront with mounting screws from interior of body.

1. Join subfronts, backs, and sides with glued rabbeted joints supplemented by mechanical fasteners or glued dovetail joints.

J. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. Match Project Director/COR's sample.

2.11 FLUSH WOOD PANELING AND WAINSCOTS **[WDW-[##]]**

A. Grade: Custom and Premium, as indicated.

B. Wood Species and Cut: **[White oak, rift sliced] [Select white ash, plain sliced] [Sycamore, plain sliced] [Cherry, plain sliced] [Butternut, plain sliced] [Avodire, quarter sliced]** <Insert species and cut>.

C. Veneer Matching Method:

1. Adjacent Veneer Leaves: Slip match.
2. Within Panel Face: Balance match.
3. Adjacent Veneer Leaves and within Panel Face: Slip, center-balance, or book match.

D. Panel-Matching Method:

1. Premanufactured panel sets selectively reduced in width within each separate area.

E. Vertical Panel-Matching Method: Architectural end slip match; veneer leaves are individually slip matched from lower panels to upper panels.

F. Panel Core Construction: **[Hardwood veneer-core plywood] [Fire-retardant particleboard or fire-retardant MDF]**.

1. Thickness: [**19 mm (3/4 inch)**] [As indicated on Drawings].

G. Exposed Panel Edges: **[Inset solid-wood or wood-veneer matching faces] [Legs of metal channels forming reveals] [Applied solid-wood banding 18 mm (11/16 inch) thick by depth of panels] [Applied bronze flat bars 1.6 mm (1/16 inch) thick by depth of panels] <Insert description>**.

H. Panel Reveals: **[Matte black plastic laminate] [Bronze sheet] [Stainless-steel sheet] [Bronze channels, 25.4 by 25.4 by 3.2 mm (1 by 1 by 1/8 inch) thick] [Stainless-steel channels, 25.4 by 25.4 by 1.6 mm (1 by 1 by 1/16 inch) thick] <Insert description>**.

I. Fire-Retardant-Treated Paneling: Panels shall consist of wood-veneer and fire-retardant particleboard or fire-retardant, medium-density fiberboard (MDF). Panels shall have a flame-spread index of **[25] [75]** or less and a smoke-developed index of 450 or less per ASTM E 84, and be listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction.

J. Assemble panels by gluing and concealed fastening.

2.12 PLASTIC-LAMINATE-CLAD COUNTERTOPS **[PLG-[##]]**

A. Quality Standard: Unless otherwise indicated, comply with the "Architectural Woodwork Standards" for grades of plastic-laminate-clad countertops indicated for construction, finishes, installation, and other requirements.

B. Grade: Custom.

C. High-Pressure Decorative Laminate: NEMA LD 3, Grade HGS.

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

a. Abet Laminati Inc.
b. Formica Corporation.
c. Lamin-Art, Inc.
d. Pionite; a Panolam Industries International, Inc. brand.
e. Wilsonart LLC.

D. Colors, Patterns, and Finishes: Provide materials and products that result in colors and textures of exposed laminate surfaces complying with the following requirements:

1. Match Project Director/COR's sample.

E. Edge Treatment: Same as laminate cladding on horizontal surfaces.

F. Core Material: Exterior-grade plywood.

G. Core Thickness: **[19 mm (3/4 inch)] [29 mm (1-1/8 inch)]**.

1. Build up countertop thickness to 38 mm (1-1/2 inches) at front, back, and ends with additional layers of core material laminated to top.

H. Backer Sheet: Provide plastic-laminate backer sheet, NEMA LD 3, Grade BKL, on underside of countertop substrate.

2.13 GRANITE COUNTERTOPS **[STG-[##]]**

A. Material Standard: Comply with ASTM C 615/C 615M.

B. Description: Uniform, **[fine] [medium]**-grained, **[white] [pink] [gray] [black]** <**Insert color**> stone**[without veining]**.

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Cut: **[Vein] [Fleuri]**.

E. Cut stone from contiguous, matched slabs in which natural markings occur.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.14 MARBLE COUNTERTOPS **[STG-[##]]**

A. Material Standard: Comply with ASTM C503/C503M**[, Classification I Calcite] [, Classification II Dolomite] [, Group A] [, Group B] [, Group C] [, Group D]**.

B. Description: Uniform, fine- to medium-grained, **[white] <Insert color>** stone with only slight veining.

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the fol-lowing]**:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.

D. Cut: [Vein] [Fleuri].

E. Cut stone from contiguous, matched slabs in which natural markings occur.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.15 OTHER STONE COUNTERTOPS **[STG-[##]]**

A. Material Standards:

1. Maximum Absorption per ASTM C97/C97M: <**Insert value**>.
2. Minimum Compressive Strength per ASTM C170/C170M: <**Insert value**>.
3. Minimum Flexural Strength per ASTM C880/C880M: <**Insert value**>.

B. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

C. Cut stone from contiguous, matched slabs in which natural markings occur.

D. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.16 STONE ACCESSORIES:

A. Water-Cleanable Epoxy Adhesive: ANSI A118.3. Use only adhesive formulated for stone and recommended by manufacturer for this application.

B. Sealant for Countertops: Single-component, neutral-curing silicone sealant. Use sealants which will not stain stone.

C. Stone Cleaner: Cleaner specifically formulated for stone types, finish, and application, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

D. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application.

2.17 SOLID SURFACE COUNTERTOP MATERIALS **[SOG-[##]]**

A. Solid Surface Material: Homogeneous-filled plastic resin complying with ICPA SS-1.

1. Type: Provide Standard type unless Special Purpose type is indicated.
2. Integral Sink Bowls: Comply with CSA B45.5/IAPMO Z124.
3. Colors and Patterns: Match Project Director/COR's samples.

2.18 HARDWOOD SHEET MATERIALS

A. Composite Wood and Agrifiber Products: Provide materials that comply with requirements of the Architectural Woodwork Standards for each type of interior architectural woodwork and quality grade specified unless otherwise indicated.

1. Recycled Content of MDF and Particleboard: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <**Insert value**> percent.

2. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.
3. Medium-Density Fiberboard (MDF): ANSI A208.2, Grade 130.
4. Particleboard: ANSI A208.1, Grade M-2-Exterior Glue.
5. Softwood Plywood: DOC PS 1, medium-density overlay.
6. Veneer-Faced Panel Products (Hardwood Plywood): HPVA HP-1.

2.19 PRESERVATIVE-TREATED-WOOD MATERIALS

A. Preservative-Treated-Wood Materials: Provide with water-repellent preservative treatment complying with AWPA N1 (dip, spray, flood, or vacuum-pressure treatment).

B. Extent of Preservative-Treated Wood Materials: Treat **[interior architectural woodwork in contact with concrete or masonry] <Insert requirements>**.

A. Preservative Treatment by Pressure Process: AWPA U1; Use Category **[UC1] [UC2]**.

1. Kiln dry lumber and plywood after treatment to a maximum moisture content of 19 and 18 percent, respectively.
2. Preservative Chemicals: Acceptable to the Project Director/COR**[and containing no arsenic or chromium]**.
3. For exposed items indicated to receive transparent finish, do not use chemical formulations that contain colorants or that bleed through or otherwise adversely affect finishes.
4. Do not use material that is warped or does not comply with requirements for untreated material.
5. Mark lumber with treatment-quality mark of an inspection agency acceptable to the Project Director/COR.

a. For exposed lumber indicated to receive a stained or natural finish, **[mark end or back of each piece] [or] [omit marking and provide certificates of treatment compliance issued by inspection agency]**.

6. Mark plywood with appropriate classification marking of an inspection agency acceptable to authorities having jurisdiction.

a. For exposed plywood indicated to receive a stained or natural finish, mark back of each piece.

2.20 FIRE-RETARDANT-TREATED WOOD MATERIALS

A. Fire-Retardant-Treated Wood Materials: Where fire-retardant-treated materials are indicated, use materials complying with requirements that are acceptable to authorities having jurisdiction and with fire-test-response characteristics specified as determined by testing identical products according to test method indicated by a qualified testing agency.

1. Use treated materials that comply with requirements of the Architectural Woodwork Standards. Do not use materials that are warped, discolored, or otherwise defective.
2. Use fire-retardant-treatment formulations that do not bleed through or otherwise adversely affect finishes. Do not use colorants to distinguish treated materials from untreated materials.
3. Identify fire-retardant-treated materials with appropriate classification marking of qualified testing agency in the form of removable paper label or imprint on surfaces that will be concealed from view after installation.

B. Fire-Retardant-Treated Lumber and Plywood: Products with a flame-spread index of 25 or less when tested in accordance with ASTM E84, with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 3.2 m (10.5 feet) beyond the centerline of the burners at any time during the test.

1. Kiln-dry lumber and plywood after treatment to a maximum moisture content of 19 and 15 percent, respectively.
2. For items indicated to receive a stained, transparent, or natural finish, use organic resin chemical formulation.
3. Mill lumber after treatment within limits set for wood removal that do not affect listed fire-test-response characteristics, using a woodworking shop certified by testing and inspecting agency.
4. Mill lumber before treatment, and implement procedures during treatment and drying processes that prevent lumber from warping and developing discolorations from drying sticks or other causes, marring, and other defects affecting appearance of treated woodwork.

C. Fire-Retardant Particleboard: Made from softwood particles and fire-retardant chemicals mixed together at time of panel manufacture, to achieve flame-spread index of 25 or less and smoke-developed index of 25 or less according to ASTM E 84.

1. For panels 19 mm (3/4 inch) thick and less, comply with ANSI A208.1 for Grade M-2, except for the following minimum properties: modulus of rupture, 11 MPa (1600 psi); modulus of elasticity, 2070 MPa (300,000 psi); internal bond, 550 kPa (80 psi); and screw-holding capacity on face and edge, 1100 and 1000 N (250 and 225 lbf), respectively.
2. For panels 20 to 32 mm (13/16 to 1-1/4 inches) thick, comply with ANSI A208.1 for Grade M-1, except for the following minimum properties: modulus of rupture, 9 MPa (1300 psi); modulus of elasticity, 1720 MPa (250,000 psi); linear expansion, 0.50 percent; and screw-holding capacity on face and edge, 1100 and 780 N (250 and 175 lbf), respectively.

D. Fire-Retardant Fiberboard: Medium-density fiberboard (MDF) panels complying with ANSI A208.2, made from softwood fibers, synthetic resins, and fire-retardant chemicals mixed together at time of panel manufacture, to achieve flame-spread index of 25 or less and smoke-developed index of 200 or less according to ASTM E 84.

2.21 CABINET HARDWARE AND ACCESSORIES

A. General: Provide cabinet hardware and accessory materials associated with architectural cabinets except for items specified in Division 08 Section "Door Hardware."

1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
2. **[Basis-of-Design Product: Subject to compliance with requirements, provide [product indicated on Drawings] <Insert manufacturer name, product name or designation> or comparable product by one of the following:]**

   a. Accuride International.
   b. Blum, Julius & Co., Inc.
   c. CompX International, Inc.
   d. Knape & Vogt Manufacturing Company.

B. Frameless Concealed Hinges (European Type): BHMA A156.9, B01602, 100 135 170 degrees of opening, self-closing.

C. [Butt Hinges: (70-mm), five-knuckle steel hinges made from (2.4-mm-) thick metal, and as follows:

1. Semiconcealed Hinges for Flush Doors: BHMA A156.9, B01361.
2. Semiconcealed Hinges for Overlay Doors: BHMA A156.9, B01521.]

D. Back-Mounted Pulls: BHMA A156.9, B02011.

E. **Tab Pulls: Back mounted, solid metal, 102 mm (4 inch) long.**

F. **[Wire Pulls: Back mounted, solid metal, 102 mm (4 inch) long, 63.5 mm (2 1/2 inches) deep, and 8 mm (5/16 inch) in diameter.]**

G. Catches: Magnetic catches, BHMA A156.9, B03141 Push-in magnetic catches, BHMA A156.9, B03131 Roller catches, BHMA A156.9, B03071 Ball friction catches, BHMA A156.9, B03013.

H. Adjustable Shelf Standards and Supports: BHMA A156.9, B04071; with shelf rests, B04081 BHMA A156.9, B04102; with shelf brackets, B04112.

I. Shelf Rests: BHMA A156.9, B04013; **[metal] [plastic] [two-pin plastic with shelf hold-down clip]**.

J. Drawer Slides: BHMA A156.9.

1. Grade 1 and Grade 2: Side mounted and extending under bottom edge of drawer.

a. Type: Full Partial extension.
b. Material: Zinc-plated Epoxy-coated steel with polymer rollers.

2. Grade 1HD-100 and Grade 1HD-200: Side mounted; full full-overtravel-extension type; zinc-plated-steel, ball-bearing slides.
3. For drawers not more than (75 mm) high and not more than (600 mm) wide, provide **[Grade 2] [Grade 1]**.
4. For drawers more than (75 mm) high, but not more than (150 mm) high and not more than (600 mm) wide, provide **[Grade 1] [Grade 1HD-100]**.
5. For drawers more than (150 mm) high or more than (600 mm) wide, provide **[Grade 1HD-100] [Grade 1HD-200]**.
6. For trash bins not more than (500 mm) high and (400 mm) wide, provide **[Grade 1HD-100] [Grade 1HD-200]**.

K. Slides for Sliding Glass Doors: BHMA A156.9, B07063; **[plastic] [aluminum]**.

L. Door Locks: BHMA A156.11, E07121.

M. Drawer Locks: BHMA A156.11, E07041.

N. Door and Drawer Silencers: BHMA A156.16, L03011.

O. Grommets for Cable Passage: (51-mm) OD, molded-plastic grommets and matching plastic caps with slot for wire passage.

1. Color: **[Brown] [Black] <Insert color>**.

P. Exposed Hardware Finishes: For exposed hardware, provide finish that complies with BHMA A156.18 for BHMA finish number indicated.

1. Satin Stainless Steel: BHMA 630.

Q. For concealed hardware, provide manufacturer's standard finish that complies with product class requirements in BHMA A156.9.

2.22 MISCELLANEOUS MATERIALS

A. Furring, Blocking, Shims, and Nailers: **[Softwood or hardwood lumber] [Fire-retardant-treated softwood lumber]**, kiln-dried to less than 15 percent moisture content.

1. Preservative Treatment: Provide softwood lumber treated by pressure process, AWPA U1; Use Category UC3b.

a. Provide **[where indicated] [where in contact with concrete or masonry] <Insert requirements>.**
b. Kiln-dry lumber after treatment to a maximum moisture content of 19 percent.
c. Preservative Chemicals: Acceptable to the Project Director/COR **[and containing no arsenic or chromium]**.
d. Mark lumber with treatment quality mark of an inspection agency acceptable to the Project Director/COR.

2. Fire-Retardant Treatment: Complying with requirements; provide **[where indicated]** <**Insert requirements**>.

B. Provide self-drilling screws for metal-framing supports, as recommended by metal-framing manufacturer.

C. Anchors: Select material, type, size, and finish required for each substrate for secure anchorage.

1. Provide metal expansion sleeves or expansion bolts for post-installed anchors.
2. Use nonferrous-metal or hot-dip galvanized anchors and inserts at inside face of exterior walls and at floors.

D. Low-Emitting Materials: Adhesives shall comply with testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

E. Installation Adhesive: Product recommended by fabricator for each substrate for secure anchorage.

F. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.

1. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2. Adhesives shall have a VOC content of **[30]** <**Insert value**> g/L or less.

G. Paneling Adhesive: Comply with paneling manufacturer's written instructions for adhesives.

1. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

H. Multipurpose Construction Adhesive: Formulation, complying with ASTM D 3498, that is recommended for indicated use by adhesive manufacturer.

1. Adhesives shall have a VOC content of **[70]** <**Insert value**> g/L or less.
2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.23 FABRICATION, GENERAL

A. Sand fire-retardant-treated wood lightly to remove raised grain on exposed surfaces before fabrication.

A. Back out or kerf backs of the following members, except those with ends exposed in finished work:

1. Interior standing and running trim, except shoe and crown molds.
2. Wood-board paneling.

B. Fabricate interior architectural woodwork to dimensions, profiles, and details indicated.

1. Ease edges to radius indicated for the following:

a. Edges of Solid-Wood (Lumber) Members: 1.5 mm (1/16 inch) unless otherwise indicated.

b. Edges of Rails and Similar Members More Than 19 mm (3/4 Inch) Thick: 3 mm (1/8 inch).

C. Complete fabrication, including assembly, to maximum extent possible before shipment to Project site.

1. Disassemble components only as necessary for shipment and installation.
2. Where necessary for fitting at site, provide allowance for scribing, trimming, and fitting.
3. Trial fit assemblies at fabrication shop that cannot be shipped completely assembled.

a. Install dowels, screws, bolted connectors, and other fastening devices that can be removed after trial fitting.
b. Verify that parts fit as intended, and check measurements of assemblies against field measurements indicated on approved Shop Drawings before disassembling for shipment.

2.24 STONE FABRICATION

A. General:

1. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that may impair structural integrity, function, or appearance.
2. Grade and mark stone for final locations to produce assembled countertop units with an overall uniform appearance.
3. Fabricate stone countertops in sizes and shapes required to comply with requirements indicated.

   a. Clean sawed backs of stones to remove rust stains and iron particles.
   b. Dress joints straight and at right angle to face unless otherwise indicated.
   c. Cut and drill sinkages and holes in stone for anchors, supports, and attachments.
   d. Provide openings, reveals, and similar features as needed to accommodate adjacent work.
   e. Fabricate molded edges with machines having abrasive shaping wheels made to reverse contour of edge profile to produce uniform shape throughout entire length of edge and with precisely formed arris slightly eased to prevent snipping, and matched at joints between units. Form corners of molded edges as indicated with outside corners slightly eased unless otherwise indicated.
   f. Finish exposed faces of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and mockups. Provide matching finish on exposed edges of countertops, splashes, and cutouts.

4. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.

B. Countertop Fabrication:

1. Nominal Thickness: 30 mm (1-3/16 inch).
2. Edge: Straight, slightly eased at top.
3. Splashes: 20 mm (13/16 inch) thick backsplashes and side splashes.
4. Joints: Fabricate countertops in sections for joining in field**[, with joints at locations indicated]**.

   a. Joint Locations: Not within 450 mm (18 inches) of a sink or cooktop and not where a countertop section less than 900 mm (36 inches) long may result, unless unavoidable.
   b. Joint Type: Bonded, 0.8 mm (1/32 inch) or less in width.

5. Cutouts and Holes:

   a. Undercounter Fixtures: Make cutouts in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.

      1) Provide vertical edges, slightly eased at juncture of cutout edges with top and bottom surfaces of countertop and projecting 5 mm (3/16 inch) into fixture opening.

b. Counter-Mounted Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts, and drill holes at corners of cutout locations.
c. Fittings: Drill countertops in shop for plumbing fittings, counter-mounted soap dispensers, and similar items.

2.25 SOLID SURFACING COUNTERTOPS FABRICATION

A. Fabricate countertops according to solid surface material manufacturer's written instructions and to the AWI/AWMAC/WI's "Architectural Woodwork Standards."

1. Grade: Custom.

B. Solid-Surfacing-Material Thickness: As indicated in the drawings.

C. Edge: Straight, slightly eased at top.

D. Splashes: 13 mm (1/2 inch) thick backsplashes and side splashes.

E. Fabricate tops in one piece with shop-applied backsplashes and edges, unless otherwise indicated. Comply with solid-surfacing-material manufacturer's written recommendations for adhesives, sealers, fabrication, and finishing.

1. Install integral sink bowls in countertops in shop.

F. Joints: Fabricate countertops in sections for joining in field**[, with joints at locations indicated]**.

1. Joint Locations: Not within 450 mm (18 inches) of a sink or cooktop and not where a countertop section less than 900 mm (36 inches) long may result, unless unavoidable.

G. Cutouts and Holes:

1. Undercounter Fixtures: Make cutouts in shop using template or pattern furnished by fixture manufacturer. Form cutouts to smooth, even curves.
2. Counter-Mounted Fixtures: Prepare countertops in shop for field cutting openings for counter-mounted fixtures. Mark tops for cutouts, and drill holes at corners of cutout locations.
3. Fittings: Drill countertops in shop for plumbing fittings, counter-mounted soap dispensers, and similar items.

2.26 SHOP FINISHING

A. Finish interior architectural woodwork as specified in this section at fabrication shop. Defer only final touchup, cleaning, and polishing until after installation.

B. Preparation for Finishing: Comply with Architectural Woodwork Standards, Section 5 for sanding, filling countersunk fasteners, sealing concealed surfaces, and similar preparations for finishing interior architectural woodwork, as applicable to each unit of work.

1. Priming: Apply one coat of primer, compatible with finish coats, to all surfaces of painted woodwork. Concealed surfaces of plastic-laminate-clad woodwork do not require priming when surfaced with plastic laminate, backing paper, or thermoset decorative overlay.
2. Backpriming: Apply one coat of sealer or primer, compatible with finish coats, to concealed surfaces of interior architectural woodwork. Apply two coats to end-grain surfaces.

C. Transparent Finish:

1. Architectural Woodwork Standards Grade: Same as item to be finished.

2. Finish: System - 1, Lacquer, Nitrocellulose.
3. Finish: System - 5, Varnish, Conversion.
4. Finish: System - 11, Polyurethane, Catalyzed.
5. Wash Coat for Closed-Grain Woods: Apply wash-coat sealer to woodwork made from closed-grain wood before staining and finishing.
6. Staining: Match approved sample for color.

7. Open Finish for Open-Grain Woods: Do not apply filler to open-grain woods.

8. Filled Finish for Open-Grain Woods:**[After staining, apply wash-coat sealer and allow to dry.]** Apply paste wood filler and wipe off excess. Tint filler to match stained wood.

9. Sheen: Satin, 31-45 or Semigloss, 46-60 gloss units measured on 60-degree gloss meter according to ASTM D 523.

D. Opaque Finish:

1. Architectural Woodworking Standards Grade: Same as item to be finished.
2. Finish: System - 1, Lacquer, Nitrocellulose.
3. Color: Match Project Director/COR's sample.
4. Sheen: Satin, 31-45 or Semigloss, 46-60 gloss units measured on 60-degree gloss meter according to ASTM D 523.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Before installation, condition interior architectural woodwork to humidity conditions in installation areas for not less than 72 hours prior to beginning of installation.

B. Before installing interior architectural woodwork, examine shop-fabricated work for completion and complete work as required, including removal of packing and backpriming of concealed surfaces.

3.3 INSTALLATION

A. Grade: Install interior architectural woodwork to comply with same grade as item to be installed.

B. Assemble interior architectural woodwork and complete fabrication at Project site to the extent that it was not completed during shop fabrication.

C. Install interior architectural woodwork level, plumb, true in line, and without distortion.

1. Shim as required with concealed shims.
2. Install level and plumb to a tolerance of 3 mm in 2400 mm (1/8 inch in 96 inches).

D. Scribe and cut interior architectural woodwork to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.

E. Preservative-Treated Wood: Where cut or drilled in field, treat cut ends and drilled holes in accordance with AWPA M4.

F. Fire-Retardant-Treated Wood: Install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.

G. Anchor interior architectural woodwork to anchors or blocking built in or directly attached to substrates.

1. Secure with countersunk, concealed fasteners and blind nailing.
2. Use fine finishing nails**[or finishing screws]** for exposed fastening, countersunk and filled flush with interior architectural woodwork.
3. For shop-finished items, use filler matching finish of items being installed.

H. Cabinets:

1. Architectural Woodwork Standards Grade: Install cabinets to comply with quality standard grade of item to be installed.
2. Assemble cabinets and complete fabrication at Project site to extent that it was not completed in the shop.

3. Anchor cabinets to anchors or blocking built in or directly attached to substrates. Secure with wafer-head cabinet installation screws.
4. Install cabinets level, plumb, and true in line to a tolerance of 3 mm in 2400 mm (1/8 inch in 96 inches) using concealed shims.

    a. Scribe and cut cabinets to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
    b. Install cabinets without distortion so doors and drawers fit openings and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
    c. Fasten wall cabinets through back, near top and bottom, and at ends not more than 400 mm (16 inches) o.c. with **[No. 10 wafer-head screws sized for not less than 38-mm (1-1/2-inch) penetration into wood framing, blocking, or hanging strips] [No. 10 wafer-head sheet metal screws through metal backing or metal framing behind wall finish] [toggle bolts through metal backing or metal framing behind wall finish]**.

I. Paneling:

1. Install paneling level, plumb, true in line, and without distortion. Shim as required with concealed shims. Install level and plumb to a tolerance of 3 mm in 2400 mm (1/8 inch in 96 inches). Install with no more than 1.6 mm in 2400-mm (1/16 inch in 96-inch) vertical cup or bow and 3 mm in 2400-mm (1/8 inch in 96-inch) horizontal variation from a true plane.

    a. For flush paneling with revealed joints, install with variations in reveal width, alignment of top and bottom edges, and flushness between adjacent panels not exceeding **[0.8 mm (1/32 inch)] [1.5 mm (1/16 inch)]**.

2. Anchor paneling to supporting substrate with **[concealed panel-hanger clips] [splined connection strips] [blind nailing]**.

    a. Do not use face fastening unless **[covered by trim] [otherwise indicated]**.

J. Standing and Running Trim:

1. Install with minimum number of joints possible, using full-length pieces (from maximum length of lumber available) to greatest extent possible.
2. Do not use pieces less than **[900 mm (36 inches)] [1500 mm (60 inches)] [2400 mm (96 inches)]** long, except where shorter single-length pieces are necessary.
3. Scarf running joints and stagger in adjacent and related members.
4. Fill gaps, if any, between top of base and wall with **[plastic wood filler; sand smooth; and finish same as wood base if finished] [latex sealant, painted to match wall]**.
5. Install standing and running trim with no more variation from a straight line than 3 mm in 2400 mm (1/8 inch in 96 inches).

K. Plastic-Laminate-Faced Countertops:

1. Grade: Install countertops to comply with same grade as item to be installed.
2. Assemble countertops and complete fabrication at Project site to the extent that it was not completed in the shop.

    a. Provide cutouts for appliances, plumbing fixtures, electrical work, and similar items. Locate openings accurately, and use templates or roughing-in diagrams to produce accurately sized and shaped openings. Sand edges of cutouts to remove splinters and burrs.

3. Field Jointing: Where possible, make in the same manner as shop jointing, using dowels, splines, adhesives, and fasteners recommended by manufacturer. Prepare edges to be joined in shop so Project-site processing of top and edge surfaces is not required. Locate field joints where shown on Shop Drawings.

    a. Secure field joints in countertops with concealed clamping devices located within 150 mm (6 inches) of front and back edges and at intervals not exceeding 600 mm (24 inches). Tighten in accordance with manufacturer's written instructions to exert a constant, heavy-clamping pressure at joints.

4. Scribe and cut countertops to fit adjoining work, refinish cut surfaces, and repair damaged finish at cuts.
5. Countertop Installation: Anchor securely by screwing through corner blocks of base cabinets or other supports into underside of countertop.
6. Install countertops level and true in line. Use concealed shims as required to maintain not more than a 3-mm-in-2400-mm (1/8-inch-in-96-inches) variation from a straight, level plane.
7. Secure backsplashes **[to tops with concealed metal brackets at 400 mm (16 inches) o.c.] [and] [to walls with adhesive].**
8. Seal joints between countertop and backsplash, if any, and joints where countertop and backsplash abut walls with mildew-resistant silicone sealant or another permanently elastic sealing compound recommended by countertop material manufacturer.

L. Stone Countertops:

1. Fasten subtops to cabinets by screwing through subtops into cornerblocks of base cabinets. Shim as needed to align subtops in a level plane.
2. Install countertops over subtops with full spread of water-cleanable epoxy adhesive.
3. Install countertops by adhering to supports with water-cleanable epoxy adhesive.

4. **[Do not cut stone in field unless otherwise indicated. If stone countertops or splashes require additional fabrication not specified to be performed at Project site, return to fabrication shop for adjustment.]**
5. **[Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight, true, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.]**
6. Set stone to comply with requirements indicated. Shim and adjust stone to locations indicated, with uniform joints of widths indicated and with edges and faces aligned

according to established relationships and indicated tolerances**.[Install anchors and other attachments indicated or necessary to secure stone countertops in place.]**

7. Bond joints with stone adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

   a. Install metal splines in kerfs in stone edges at joints**[where indicated]**. Fill kerfs with stone adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.
   b. Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.

8. Space joints with 1.5-mm (1/16-inch) gap for filling with **[grout] [sealant]**. Use temporary shims to ensure uniform spacing.

   a. **[Install metal splines in kerfs in stone edges at joints[where indicated]. Fill kerfs with [setting adhesive] [sealant] before inserting splines and remove excess immediately after adjoining units are drawn into position.]**
   b. **[Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.]**

9. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Use power saws with diamond blades to cut stone. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

10. **[Install backsplashes and end splashes by adhering to countertops with stone adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Leave 1.5-mm (1/16-inch) gap between splashes and wall for filling with sealant. Use temporary shims to ensure uniform spacing.]**
11. **[Install backsplashes and end splashes by adhering to wall with water-cleanable epoxy adhesive. Leave 1.5-mm (1/16-inch) gap between countertop and splashes for filling with sealant. Use temporary shims to ensure uniform spacing.]**

M. Solid Surfacing Countertops:

1. Fasten countertops by screwing through corner blocks of base units into underside of countertop. Predrill holes for screws as recommended by manufacturer. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's written instructions. Carefully dress joints smooth, remove surface scratches, and clean entire surface.
2. Bond joints with adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.

   a. **[Install metal splines in kerfs in countertop edges at joints[where indicated]. Fill kerfs with adhesive before inserting splines and remove excess immediately after adjoining units are drawn into position.]**

b. **[Clamp units to temporary bracing, supports, or each other to ensure that countertops are properly aligned and joints are of specified width.]**

3. Install backsplashes and end splashes by adhering to wall and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears.
4. Install aprons to backing and countertops with adhesive. Mask areas of countertops and splashes adjacent to joints to prevent adhesive smears. Fasten by screwing through backing. Predrill holes for screws as recommended by manufacturer.
5. Complete cutouts not finished in shop. Mask areas of countertops adjacent to cutouts to prevent damage while cutting. Make cutouts to accurately fit items to be installed, and at right angles to finished surfaces unless beveling is required for clearance. Ease edges slightly to prevent snipping.

3.4 REPAIR

A. Repair damaged and defective interior architectural woodwork, where possible, to eliminate functional and visual defects**[and to result in interior architectural woodwork being in compliance with requirements of Architectural Woodwork Standards for the specified grade]**.

B. Where not possible to repair, replace defective woodwork.

C. Shop Finish: Touch up finishing work specified in this Section after installation of interior architectural woodwork.

1. Fill nail holes with matching filler where exposed.
2. Apply specified finish coats, including stains and paste fillers if any, to exposed surfaces where only sealer/prime coats are shop applied.

D. Field Finish: See **[Division 09 Section "Interior Painting"] [and] [Division 09 Section "Staining and Transparent Finishing"]** for final finishing of installed interior architectural woodwork not indicated to be shop finished.

3.5 CLEANING

A. Clean interior architectural woodwork on exposed and semiexposed surfaces.

B. Stone Countertops:

1. In-Progress Cleaning: Clean countertops as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.
2. Remove and replace stone countertops of the following description:

a. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Project Director/COR.
b. Defective countertops.
c. Defective joints, including misaligned joints.

d. Interior stone countertops and joints not matching approved Samples and mockups.
e. Interior stone countertops not complying with other requirements indicated.

3. Replace in a manner that results in stone countertops matching approved Samples and mockups, complying with other requirements, and showing no evidence of replacement.
4. Clean stone countertops no fewer than six days after completion of **[sealant installation] [installation]**, using clean water and soft rags. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that may damage stone.
5. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions.

3.6 PROTECTION

A. Protect installed products from damage from weather and other causes during construction.

B. Remove and replace interior architectural woodwork materials that are wet, moisture damaged, and mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 064023

SECTION 074115 - STANDING-SEAM METAL ROOF PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes standing-seam metal roof panels.

B. Related Sections include the following:

1. Division 06 Section on Rough Carpentry for wood nailers, curbs, and blocking.
2. Section 076205 “Sheet Metal Flashing and Trim.”

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Project Director/COR, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of roof accessories and roof-mounted equipment.
2. Review and finalize construction schedule and verify availability of Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review structural loading limitations of **[deck] [purlins and rafters]** during and after roofing.
6. Review flashings, special details, drainage, penetrations, equipment curbs, and condition of other construction that affect metal panels.
7. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
8. Review temporary protection requirements for metal panel systems during and after installation.
9. Review procedures for repair of metal panels damaged after installation.
10. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

1. Product Test Reports: For roof materials, documentation indicating that roof materials comply with Solar Reflectance Index requirements.
2. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1:10 (1-1/2 inches per 12 inches).

D. Samples for Verification: For each type of exposed finish required, prepared on Samples of size indicated below.

1. Metal Panels: 300 mm (12 inches) long by actual panel width. Include clips, fasteners, closures, and other metal panel accessories.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, for tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. UL-Certified, Portable Roll-Forming Equipment: UL-certified, portable roll-forming equipment capable of producing metal panels warranted by manufacturer to be the same as factory-formed products. Maintain UL certification of portable roll-forming equipment for duration of work.

C. Sample installations: Build sample installations to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build sample installation of typical roof area and eave, including fascia, and soffit **[as shown on Drawings]**; approximately 1200 mm (48 inches) square by full thickness, including attachments, underlayment, and accessories.
2. Approval of sample installations does not constitute approval of deviations from the Contract Documents contained in sample installations unless Project Director/COR specifically approves such deviations in writing.
3. Approved sample installations may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal panels during installation.

E. Copper Panels: Wear gloves when handling to prevent fingerprints and soiling of surface.

1.8 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.9 COORDINATION

A. Coordinate sizes and locations of roof curbs, equipment supports, and roof penetrations with actual equipment provided.

B. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including rupturing, cracking, or puncturing.
b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: 10 years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 10 years from date of Substantial Completion.

C. Installation Warranty: provide 2-year guarantee covering the proper material or product application preventing failure due to hot-water corrosion, damage due to inappropriate slip sheet, absorptive separation material, or other installer induced failure.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. [Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.]

B. Solar Reflectance Index (SRI): Three-year-aged SRI not less than **[64] [32]** or initial SRI not less than **[82] [39]** when calculated according to ASTM E 1980, based on testing identical products by a qualified testing agency.

C. [Energy Performance: Provide roof panels that are listed on the EPA/DOE's ENERGY STAR "Roof Product List" for [low] [steep]-slope roof products.]

D. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E72:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: **[As indicated on Drawings] <Insert loads>.**
3. Deflection Limits: For wind loads, no greater than [**1/180**] [**1/240**] <**Insert deflection**> of the span.
4. **<Insert serviceability requirements>**.

E. Air Infiltration: Air leakage of not more than 0.06 cfm/sq. ft. (0.3 L/s per sq. m) when tested according to ASTM E1680[**or ASTM E283**] at the following test-pressure difference:

1. Test-Pressure Difference: **[1.57 lbf/sq. ft. (75 Pa)] [6.24 lbf/sq. ft. (300 Pa)]**.

F. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E1646[**or ASTM E331**] at the following test-pressure difference:

1. Test-Pressure Difference: **[2.86 lbf/sq. ft. (137 Pa)] [6.24 lbf/sq. ft. (300 Pa)]**.

G. Wind-Uplift Resistance: Provide metal roof panel assemblies that comply with UL 580 for wind-uplift-resistance class indicated.

1. Uplift Rating: **[UL 30] [UL 60] [UL 90]**.

2. Hail Resistance: **[MH] [SH]**.

2.2 STANDING-SEAM METAL ROOF PANELS

A. Provide factory-formed metal roof panels designed to be installed by lapping and interconnecting raised side edges of adjacent panels with joint type indicated and mechanically attaching panels to supports using concealed clips in side laps. Include clips, cleats, pressure plates, and accessories required for weathertight installation.

1. Steel Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1514.
2. Aluminum Panel Systems: Unless more stringent requirements are indicated, comply with ASTM E 1637.

B. Vertical-Rib, Snap-Joint, Standing-Seam Metal Roof Panels <**Insert drawing designation**>: Formed with vertical ribs at panel edges and **[intermediate stiffening ribs symmetrically spaced] [a flat pan]** between ribs; designed for sequential installation by mechanically attaching panels to supports using concealed clips located under one side of panels, engaging opposite edge of adjacent panels, and snapping panels together.

C. Metallic-Coated Steel Sheet: Zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, Z275 (G90) coating designation, or aluminum-zinc alloy-coated steel

sheet complying with ASTM A 792/A 792M, Class AZM150 (Class AZ50) coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

1. Nominal Thickness: [**0.71 mm (0.028 inch)**] [**0.86 mm (0.034 inch)**] [**1.02 mm (0.040 inch)**] [**1.32 mm (0.052 inch)**].
2. Exterior Finish: Two-coat fluoropolymer.
3. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR from manufacturer's full range]**.

D. Aluminum Sheet: Coil-coated sheet, ASTM B 209M (ASTM B 209), alloy as standard with manufacturer, with temper as required to suit forming operations and structural performance required.

1. Thickness: [**0.81 mm (0.032 inch)**] [**1.02 mm (0.040 inch)**].
2. Surface: **[Smooth, flat] [Embossed]** finish.
3. Exterior Finish: Two-coat fluoropolymer.
4. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR from manufacturer's full range]**.

E. Clips: **[One-piece fixed] [Two-piece floating]** to accommodate thermal movement.

1. Material: **[0.71-mm- (0.028-inch-)] [1.63-mm- (0.064-inch-)]** nominal thickness, zinc-coated (galvanized) or aluminum-zinc alloy-coated steel sheet.
2. Material: [**0.64-mm- (0.025-inch-)**] [**1.59-mm- (0.062-inch-)**] thick, stainless-steel sheet.

F. Panel Coverage: [**254 mm (10 inches)**] [**305 mm (12 inches)**] [**356 mm (14 inches)**] [**406 mm (16 inches)**] [**457 mm (18 inches)**] [**610 mm (24 inches)**] <Insert dimension>.

G. Panel Height: [**25 mm (1.0 inch)**] [**38 mm (1.5 inches)**] [**44 mm (1.75 inches)**] <Insert dimension>.

2.3 UNDERLAYMENT MATERIALS

A. Self-Adhering, High-Temperature Underlayment: Provide self-adhering, cold-applied, sheet underlayment, a minimum of 0.75 mm (30 mils) thick, consisting of slip-resistant, polyethylene-film top surface laminated to a layer of butyl or SBS-modified asphalt adhesive, with release-paper backing. Provide primer when recommended by underlayment manufacturer.

1. Thermal Stability: Stable after testing at 116 deg C (240 deg F); ASTM D 1970.
2. Low-Temperature Flexibility: Passes after testing at minus 29 deg C (20 deg F); ASTM D 1970.

B. Felt Underlayment: ASTM D 226/D 22M, Type II (No. 30), asphalt-saturated organic felts.

C. Slip Sheet: Manufacturer's recommended slip sheet, of type required for application.

2.4 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C 645; cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90Z275 hot-dip galvanized coating designation or ASTM A 792/A 792M, Class AZM150 (Class AZ50) coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closures: Provide closures at eaves and ridges, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 25-mm- (1-inch-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, eaves, rakes, corners, bases, framed openings, ridges, fasciae, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

D. Gutters: Formed from same material as roof panels, complete with end pieces, outlet tubes, and other special pieces as required. Fabricate in minimum 2400-mm- (96-inch-) long sections, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Furnish gutter supports spaced a maximum of 900 mm (36 inches) o.c., fabricated from same metal as gutters. Provide wire ball strainers of compatible metal at outlets. Finish gutters to match **[metal roof panels] [roof fascia and rake trim]**.

E. Downspouts: Formed from same material as roof panels. Fabricate in 3-m- (10-foot-) long sections, complete with formed elbows and offsets, of size and metal thickness according to SMACNA's "Architectural Sheet Metal Manual." Finish downspouts to match gutters.

F. Roof Curbs: Fabricated from same material as roof panels, 1.2-mm (0.048-inch) nominal thickness; with bottom of skirt profiled to match roof panel profiles and with welded top box and integral full-length cricket. Fabricate curb subframing of 1.5-mm- (0.060-inch-) nominal thickness, angle-, C-, or Z-shaped steel sheet. Fabricate curb and subframing to withstand indicated loads of size and height indicated. Finish roof curbs to match metal roof panels.

1. Insulate roof curb with 25-mm- (1-inch-) thick, rigid insulation.

G. Panel Fasteners: Self-tapping screws designed to withstand design loads.

H. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 13 mm (1/2 inch) wide and 3 mm (1/8 inch) thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.5 FABRICATION

A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. On-Site Fabrication: Subject to compliance with requirements of this Section, metal panels may be fabricated on-site using UL-certified, portable roll-forming equipment if panels are of same profile and warranted by manufacturer to be equal to factory-formed panels. Fabricate according to equipment manufacturer's written instructions and to comply with details shown.

C. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

D. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

E. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Aluminum: Fabricate nonmoving seams with flat-lock seams. Form seams and seal with epoxy seam sealer. Rivet joints for additional strength.
3. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
4. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
5. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.

6. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

   a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal panel manufacturer for application, but not less than thickness of metal being secured.

2.6 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are unacceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Steel Panels and Accessories:

   1. Two-Coat Fluoropolymer: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
   2. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.013 mm (0.5 mil).

D. Aluminum Panels and Accessories:

   1. Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

   1. Examine primary and secondary roof framing to verify that rafters, purlins, angles, channels, and other structural panel support members and anchorages have been installed within alignment tolerances required by metal roof panel manufacturer.

2. Examine solid roof sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal roof panel manufacturer.

3. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Underlayment: Apply primer if required by manufacturer. Comply with temperature restrictions of underlayment manufacturer for installation. Apply at locations indicated **[below] [on Drawings]**, wrinkle free, in shingle fashion to shed water, and with end laps of not less than 150 mm (6 inches) staggered 600 mm (24 inches) between courses. Overlap side edges not less than 90 mm (3-1/2 inches).**[Extend underlayment into gutter trough.]** Roll laps with roller. Cover underlayment within 14 days.

1. Apply over the entire roof surface.
2. Apply over the roof area indicated below:

   a. Roof perimeter for a distance up from eaves of **[600 mm (24 inches)] [900 mm (36 inches)] <Insert dimension>** beyond interior wall line.
   b. Valleys, from lowest point to highest point, for a distance on each side of **[450 mm (18 inches)] <Insert dimension>**. Overlap ends of sheets not less than 152 mm (6 inches).
   c. Rake edges for a distance of **[450 mm (18 inches)] <Insert dimension>**.
   d. Hips and ridges for a distance on each side of **[300 mm (12 inches)] <Insert dimension>.**
   e. Roof-to-wall intersections for a distance from wall of **[450 mm (18 inches)] <Insert dimension>**.
   f. Around dormers, chimneys, skylights, and other penetrating elements for a distance from element of **[450 mm (18 inches)] <Insert dimension>.**

B. Felt Underlayment: Apply at locations indicated **[below] [on Drawings]**, in shingle fashion to shed water, and with lapped joints of not less than 50 mm (2 inches).

1. Apply over the entire roof surface.
2. Apply on roof not covered by self-adhering sheet underlayment. Lap over edges of self-adhering sheet underlayment not less than 75 mm (3 inches), in shingle fashion to shed water.

C. Slip Sheet: Apply slip sheet over underlayment before installing metal roof panels.

D. Flashings: Install flashings to cover underlayment to comply with requirements specified in Section 076205 "Sheet Metal Flashing and Trim."

3.4 METAL PANEL INSTALLATION

A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Shim or otherwise plumb substrates receiving metal panels.
2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as metal panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.
2. Aluminum Panels: Use aluminum or stainless-steel fasteners for surfaces exposed to the exterior; use aluminum or galvanized-steel fasteners for surfaces exposed to the interior.

C. Anchor Clips: Anchor metal roof panels and other components of the Work securely in place, using manufacturer's approved fasteners according to manufacturers' written instructions.

D. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

E. Standing-Seam Metal Roof Panel Installation: Fasten metal roof panels to supports with concealed clips at each standing-seam joint at location, spacing, and with fasteners recommended in writing by manufacturer.

1. Install clips to supports with self-tapping fasteners.
2. Install pressure plates at locations indicated in manufacturer's written installation instructions.

3. Snap Joint: Nest standing seams and fasten together by interlocking and completely engaging factory-applied sealant.
4. Watertight Installation:

a. Apply a continuous ribbon of sealant or tape to seal joints of metal panels, using sealant or tape as recommend in writing by manufacturer as needed to make panels watertight.
b. Provide sealant or tape between panels and protruding equipment, vents, and accessories.
c. At panel splices, nest panels with minimum 150-mm (6-inch) end lap, sealed with sealant and fastened together by interlocking clamping plates.

F. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal roof panel manufacturers; or, if not indicated, types recommended by metal roof panel manufacturer.

G. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level as indicated. Install work with laps, joints, and seams that will be permanently watertight and weather resistant.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and achieve waterproof and weather-resistant performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 3 m (10 feet) with no joints allowed within 610 mm (24 inches) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently weather resistant and waterproof, form expansion joints of intermeshing hooked flanges, not less than 25 mm (1 inch) deep, filled with mastic sealant (concealed within joints).

H. Gutters: Join sections with riveted and soldered or lapped and sealed joints. Attach gutters to eave with gutter hangers spaced not more than 900 mm (36 inches) o.c. using manufacturer's standard fasteners. Provide end closures and seal watertight with sealant. Provide for thermal expansion.

I. Downspouts: Join sections with telescoping joints. Provide fasteners designed to hold downspouts securely 25 mm (1 inch) away from walls; locate fasteners at top and bottom and at approximately 1500 mm (60 inches) o.c. in between.

1. Provide elbows at base of downspouts to direct water away from building.
2. Connect downspouts to underground drainage system indicated.

J. Roof Curbs: Install flashing around bases where they meet metal roof panels.

K. Pipe Flashing: Form flashing around pipe penetration and metal roof panels. Fasten and seal to metal roof panels as recommended by manufacturer.

3.5 ERECTION TOLERANCES

A. Installation Tolerances: Shim and align metal panel units within installed tolerance of 6 mm in 6 m (1/4 inch in 20 feet) on slope and location lines as indicated and within 3-mm (1/8-inch) offset of adjoining faces and of alignment of matching profiles.

3.6 FIELD QUALITY CONTROL

A. Manufacturer's Field Service: Engage a factory-authorized service representative to test and inspect metal roof panel installation, including accessories. Report results in writing.

B. Remove and replace applications of metal roof panels where tests and inspections indicate that they do not comply with specified requirements.

C. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

D. Prepare test and inspection reports.

3.7 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 074115

SECTION 074215 - INSULATED METAL WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Foamed-insulation-core metal wall panels.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Meet with Project Director/COR, metal panel Installer, metal panel manufacturer's representative, structural-support Installer, and installers whose work interfaces with or affects metal panels, including installers of doors, windows, and louvers.
2. Review and finalize construction schedule and verify availability of Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
3. Review methods and procedures related to metal panel installation, including manufacturer's written instructions.
4. Examine support conditions for compliance with requirements, including alignment between and attachment to structural members.
5. Review flashings, special siding details, wall penetrations, openings, and condition of other construction that affect metal panels.
6. Review governing regulations and requirements for insurance, certificates, and tests and inspections if applicable.
7. Review temporary protection requirements for metal panel assembly during and after installation.
8. Review procedures for repair of metal panels damaged after installation.
9. Document proceedings, including corrective measures and actions required, and furnish copy of record to each participant.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for each type of panel and accessory.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings:

1. Include fabrication and installation layouts of metal panels; details of edge conditions, joints, panel profiles, corners, anchorages, attachment system, trim, flashings, closures, and accessories; and special details.
2. Accessories: Include details of the flashing, trim, and anchorage systems, at a scale of not less than 1:10 (1-1/2 inches per 12 inches).

D. Samples for Verification: For each type of exposed finish, prepared on Samples of size indicated below.

1. Metal Panels: 300 mm (12 inches) long by actual panel width. Include fasteners, closures, and other metal panel accessories.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For each product, tests performed by a qualified testing agency.

C. Field quality-control reports.

D. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For metal panels to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Sample Installations: Build sample installations to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build sample installation of typical metal panel assembly as shown on Drawings, including **[corner,] [soffits,]** supports, attachments, and accessories.
2. Approval of sample installations does not constitute approval of deviations from the Contract Documents contained in sample installations unless Project Director/COR specifically approves such deviations in writing.

3. Subject to compliance with requirements, approved sample installations may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver components, metal panels, and other manufactured items so as not to be damaged or deformed. Package metal panels for protection during transportation and handling.

B. Unload, store, and erect metal panels in a manner to prevent bending, warping, twisting, and surface damage.

C. Stack metal panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store metal panels to ensure dryness, with positive slope for drainage of water. Do not store metal panels in contact with other materials that might cause staining, denting, or other surface damage.

D. Retain strippable protective covering on metal panels during installation.

1.8 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit assembly of metal panels to be performed according to manufacturers' written instructions and warranty requirements.

1.9 COORDINATION

A. Coordinate metal panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.

1.10 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace components of metal panel systems that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

   a. Structural failures including rupturing, cracking, or puncturing.
   b. Deterioration of metals and other materials beyond normal weathering.

2. Warranty Period: 10-years from date of Substantial Completion.

B. Special Warranty on Panel Finishes: Manufacturer's standard form in which manufacturer agrees to repair finish or replace metal panels that show evidence of deterioration of factory-applied finishes within specified warranty period.

1. Exposed Panel Finish: Deterioration includes, but is not limited to, the following:

   a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
   b. Chalking in excess of a No. 8 rating when tested according to ASTM D 4214.
   c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 10-years from date of Substantial Completion.

C. Special Weathertightness Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace insulated metal wall panel assemblies that fail to remain weathertight, including leaks, within specified warranty period.

1. Warranty Period: 5-years from date of Substantial Completion.

D. Installation Warranty: 2-years standard material workmanship warranty from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. [**Recycled Content**: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <Insert value> percent.]

B. Structural Performance: Provide metal panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E72:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: **[As indicated on Drawings] <Insert loads>.**
3. Deflection Limits: For wind loads, no greater than [**1/180**] [**1/240**] <**Insert deflection**> of the span.
4. **<Insert serviceability requirements>**.

C. Air Infiltration: Air leakage of not more than 0.3 L/s per sq. m (0.06 cfm/sq. ft.) when tested according to ASTM E283 at the following test-pressure difference:

1. Test-Pressure Difference: **[75 Pa (1.57 lbf/sq. ft.)] [300 Pa (6.24 lbf/sq. ft.)]**.

D. Water Penetration under Static Pressure: No water penetration when tested according to ASTM E331 at the following test-pressure difference:

1. Test-Pressure Difference: **[135 Pa (2.86 lbf/sq. ft.)] [300 Pa (6.24 lbf/sq. ft.)]**.

E. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1. Temperature Change (Range): **[67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces] <Insert temperature range>**.

F. Fire-Test-Response Characteristics: Provide metal wall panels and system components with the following fire-test-response characteristics, as determined by testing identical panels and system components per test method indicated below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify products with appropriate markings of applicable testing agency.

1. Fire-Resistance Characteristics: Provide materials and construction tested for fire resistance per ASTM E 119.
2. Intermediate-Scale Multistory Fire Test: Tested mockup, representative of completed multistory wall assembly of which wall panel is a part, complies with NFPA 285 for test method and required fire-test-response characteristics of exterior non-load-bearing wall panel assemblies.
3. Radiant Heat Exposure: No ignition when tested according to NFPA 268.
4. Potential Heat: Acceptable level when tested according to NFPA 259.
5. Surface-Burning Characteristics: Provide wall panels with a flame-spread index of 25 or less and a smoke-developed index of 450 or less, per ASTM E 84.

2.2 FOAMED-INSULATION-CORE METAL WALL PANELS

A. General: Provide factory-formed and -assembled metal wall panels fabricated from two metal facing sheets and insulation core foamed in place during fabrication, and with joints between panels designed to form weathertight seals. Include accessories required for weathertight installation.

1. Insulation Core: Modified isocyanurate or polyurethane foam using a non-CFC blowing agent, with maximum flame-spread and smoke-developed indexes of 25 and 450, respectively.

a. Closed-Cell Content: 90 percent when tested according to ASTM D 6226.
b. Density: 32 to 42 kg/cu. m (2.0 to 2.6 lb/cu. ft.) when tested according to ASTM D 1622.
c. Compressive Strength: Minimum 140 kPa (20 psi) when tested according to ASTM D 1621.
d. Shear Strength: 179 kPa (26 psi) when tested according to ASTM C 273/C 273M.

B. Concealed-Fastener, Foamed-Insulation-Core Metal Wall Panels <**Insert drawing designation**>: Formed with tongue-and-groove panel edges; designed for sequential installation by interlocking panel edges and mechanically attaching panels to supports using concealed clips or fasteners.

1. Metallic-Coated Steel Sheet: Facings of zinc-coated (galvanized) steel sheet complying with ASTM A 653/A 653M, Z275 (G90) coating designation, or aluminum-zinc alloy-coated steel sheet complying with ASTM A 792/A 792M, Class AZM150 (Class AZ50)

coating designation; structural quality. Prepainted by the coil-coating process to comply with ASTM A 755/A 755M.

a. Nominal Thickness: **[0.56 mm (0.022 inch)] [0.71 mm (0.028 inch)] [0.86 mm (0.034 inch)]**.
b. Exterior Finish: Three-coat fluoropolymer.

1) Color: As selected by Project Director/COR from manufacturer's full range.

c. Interior Finish: Siliconized polyester.

1) Color: As selected by Project Director/COR from manufacturer's full range.

2. Backer Board: On back side of exterior facing.
3. Panel Coverage: [**900 mm (36 inches)**] [**1000 mm (40 inches)**] nominal.
4. Panel Thickness: [**25 mm (1.0 inch)**] [**38 mm (1.5 inches)**] [**50 mm (2.0 inches)**] [**62 mm (2.5 inches)**] [**75 mm (3.0 inches)**] [**100 mm (4.0 inches)**] [**125 mm (5.0 inches)**].
5. Thermal-Resistance Value (R-Value): R-19 according to ASTM C 1363.

2.3 MISCELLANEOUS MATERIALS

A. Miscellaneous Metal Subframing and Furring: ASTM C 645, cold-formed, metallic-coated steel sheet, ASTM A 653/A 653M, G90Z275 hot-dip galvanized coating designation or ASTM A 792/A 792M, Class AZM150 (Class AZ50) aluminum-zinc-alloy coating designation unless otherwise indicated. Provide manufacturer's standard sections as required for support and alignment of metal panel system.

B. Panel Accessories: Provide components required for a complete, weathertight panel system including trim, copings, fasciae, mullions, sills, corner units, clips, flashings, sealants, gaskets, fillers, closure strips, and similar items. Match material and finish of metal panels unless otherwise indicated.

1. Closures: Provide closures at eaves and rakes, fabricated of same metal as metal panels.
2. Backing Plates: Provide metal backing plates at panel end splices, fabricated from material recommended by manufacturer.
3. Closure Strips: Closed-cell, expanded, cellular, rubber or crosslinked, polyolefin-foam or closed-cell laminated polyethylene; minimum 25-mm- (1-inch-) thick, flexible closure strips; cut or premolded to match metal panel profile. Provide closure strips where indicated or necessary to ensure weathertight construction.

C. Backer Board: Hardboard complying with ANSI A135.4, Class 1 tempered, **[3 mm (1/8 inch)] [6 mm (1/4 inch)]** thick unless otherwise indicated.

D. Flashing and Trim: Provide flashing and trim formed from same material as metal panels as required to seal against weather and to provide finished appearance. Locations include, but are not limited to, bases, drips, sills, jambs, corners, endwalls, framed openings, rakes, fasciae, parapet caps, soffits, reveals, and fillers. Finish flashing and trim with same finish system as adjacent metal panels.

E. Panel Fasteners: Self-tapping screws designed to withstand design loads. Provide exposed fasteners with heads matching color of metal panels by means of plastic caps or factory-applied coating. Provide EPDM or PVC sealing washers for exposed fasteners.

F. Panel Sealants: Provide sealant type recommended by manufacturer that are compatible with panel materials, are nonstaining, and do not damage panel finish.

1. Sealant Tape: Pressure-sensitive, 100 percent solids, gray polyisobutylene compound sealant tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape 13 mm (1/2 inch) wide and 3 mm (1/8 inch) thick.
2. Joint Sealant: ASTM C 920; elastomeric polyurethane or silicone sealant; of type, grade, class, and use classifications required to seal joints in metal panels and remain weathertight; and as recommended in writing by metal panel manufacturer.
3. Butyl-Rubber-Based, Solvent-Release Sealant: ASTM C 1311.

2.4 FABRICATION

A. General: Fabricate and finish metal panels and accessories at the factory, by manufacturer's standard procedures and processes, as necessary to fulfill indicated performance requirements demonstrated by laboratory testing. Comply with indicated profiles and with dimensional and structural requirements.

B. Provide panel profile, including major ribs and intermediate stiffening ribs, if any, for full length of panel.

C. Fabricate metal panel joints with factory-installed captive gaskets or separator strips that provide a weathertight seal and prevent metal-to-metal contact, and that minimize noise from movements.

D. Sheet Metal Flashing and Trim: Fabricate flashing and trim to comply with manufacturer's recommendations and recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated.

1. Form exposed sheet metal accessories that are without excessive oil canning, buckling, and tool marks and that are true to line and levels indicated, with exposed edges folded back to form hems.
2. Seams for Steel: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.
3. Sealed Joints: Form nonexpansion, but movable, joints in metal to accommodate sealant and to comply with SMACNA standards.
4. Conceal fasteners and expansion provisions where possible. Exposed fasteners are not allowed on faces of accessories exposed to view.
5. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, noncorrosive metal recommended in writing by metal panel manufacturer.

a. Size: As recommended by SMACNA's "Architectural Sheet Metal Manual" or metal wall panel manufacturer for application but not less than thickness of metal being secured.

2.5 FINISHES

A. Protect mechanical and painted finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable if they are within one-half of the range of approved Samples. Noticeable variations in same piece are not acceptable. Variations in appearance of other components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Steel Panels and Accessories:

1. Exterior Three-Coat Fluoropolymer Finish: AAMA 621. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Interior Siliconized Polyester Finish: Epoxy primer and silicone-modified, polyester-enamel topcoat; with a dry film thickness of not less than 0.005 mm (0.2 mil) for primer and 0.02 mm (0.8 mil) for topcoat.
3. Concealed Finish: Apply pretreatment and manufacturer's standard white or light-colored acrylic or polyester backer finish consisting of prime coat and wash coat with a minimum total dry film thickness of 0.013 mm (0.5 mil).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances, metal panel supports, and other conditions affecting performance of the Work.

1. Examine wall framing to verify that girts, angles, channels, studs, and other structural panel support members and anchorage have been installed within alignment tolerances required by metal wall panel manufacturer.
2. Examine wall sheathing to verify that sheathing joints are supported by framing or blocking and that installation is within flatness tolerances required by metal wall panel manufacturer.

3. Verify that air- or water-resistive barriers have been installed over sheathing or backing substrate to prevent air infiltration or water penetration.

B. Examine roughing-in for components and systems penetrating metal panels to verify actual locations of penetrations relative to seam locations of metal panels before installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Miscellaneous Supports: Install subframing, furring, and other miscellaneous panel support members and anchorages according to ASTM C 754 and metal panel manufacturer's written recommendations.

3.3 METAL PANEL INSTALLATION

A. General: Install metal panels according to manufacturer's written instructions in orientation, sizes, and locations indicated. Install panels perpendicular to supports unless otherwise indicated. Anchor metal panels and other components of the Work securely in place, with provisions for thermal and structural movement.

1. Shim or otherwise plumb substrates receiving metal panels.
2. Flash and seal metal panels at perimeter of all openings. Fasten with self-tapping screws. Do not begin installation until air- or water-resistive barriers and flashings that will be concealed by metal panels are installed.
3. Install screw fasteners in predrilled holes.
4. Locate and space fastenings in uniform vertical and horizontal alignment.
5. Install flashing and trim as metal panel work proceeds.
6. Locate panel splices over, but not attached to, structural supports. Stagger panel splices and end laps to avoid a four-panel lap splice condition.
7. Align bottoms of metal panels and fasten with blind rivets, bolts, or self-tapping screws. Fasten flashings and trim around openings and similar elements with self-tapping screws.
8. Provide weathertight escutcheons for pipe- and conduit-penetrating panels.

B. Fasteners:

1. Steel Panels: Use stainless-steel fasteners for surfaces exposed to the exterior; use galvanized-steel fasteners for surfaces exposed to the interior.

C. Metal Protection: Where dissimilar metals contact each other or corrosive substrates, protect against galvanic action as recommended in writing by metal panel manufacturer.

D. Joint Sealers: Install gaskets, joint fillers, and sealants where indicated and where required for weathertight performance of metal wall panel assemblies. Provide types of gaskets, fillers, and sealants indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal wall panel manufacturer.

1. Seal metal wall panel end laps with double beads of tape or sealant, full width of panel. Seal side joints where recommended by metal wall panel manufacturer.
2. Prepare joints and apply sealants to comply with requirements in Division 07 Section on "Joint Sealants."

3.4 INSULATED METAL WALL PANEL INSTALLATION

A. General: Apply continuous ribbon of sealant to panel joint on concealed side of insulated metal wall panels as vapor seal; apply sealant to panel joint on exposed side of panels for weather seal.

1. Fasten foamed-insulation-core metal wall panels to supports with fasteners at each lapped joint at location and spacing and with fasteners recommended by manufacturer.
2. Apply panels and associated items true to line for neat and weathertight enclosure. Avoid "panel creep" or application not true to line.
3. Provide metal-backed washers under heads of exposed fasteners on weather side of insulated metal wall panels.
4. Locate and space exposed fasteners in uniform vertical and horizontal alignment. Use proper tools to obtain controlled uniform compression for positive seal without rupture of washer.
5. Provide sealant tape at lapped joints of insulated metal wall panels and between panels and protruding equipment, vents, and accessories.
6. Apply a continuous ribbon of sealant tape to panel side laps and elsewhere as needed to make panels weathertight.

B. Foamed-Insulation-Core Metal Wall Panels: Fasten metal wall panels to supports with concealed clips at each joint at location and spacing and with fasteners recommended by manufacturer. Fully engage tongue and groove of adjacent panels.

1. Install clips to supports with self-tapping fasteners.

C. Accessory Installation: Install accessories with positive anchorage to building and weathertight mounting, and provide for thermal expansion. Coordinate installation with flashings and other components.

1. Install components required for a complete metal panel system including trim, copings, corners, seam covers, flashings, sealants, gaskets, fillers, closure strips, and similar items. Provide types indicated by metal panel manufacturer; or, if not indicated, provide types recommended by metal panel manufacturer.

D. Flashing and Trim: Comply with performance requirements, manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual." Provide concealed fasteners where possible, and set units true to line and level. Install work with laps, joints, and seams that are permanently watertight.

1. Install exposed flashing and trim that is without buckling and tool marks, and that is true to line and levels indicated, with exposed edges folded back to form hems. Install sheet metal flashing and trim to fit substrates and to achieve waterproof performance.
2. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 3 m (10 feet) with no joints allowed within 600 mm (24 inches) of corner or intersection. Where lapped expansion provisions cannot be used or would not be sufficiently waterproof, form expansion joints of intermeshing hooked flanges, not less than 25 mm (1 inch) deep, filled with mastic sealant (concealed within joints).

3.5 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections.

B. Water-Spray Test: After installation, test area of assembly as directed by Project Director/COR for water penetration according to AAMA 501.2.

C. Metal wall panels will be considered defective if they do not pass test and inspections.

D. Additional tests and inspections, at Contractor's expense, are performed to determine compliance of replaced or additional work with specified requirements.

E. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Remove temporary protective coverings and strippable films, if any, as metal panels are installed, unless otherwise indicated in manufacturer's written installation instructions. On completion of metal panel installation, clean finished surfaces as recommended by metal panel manufacturer. Maintain in a clean condition during construction.

B. After metal panel installation, clear weep holes and drainage channels of obstructions, dirt, and sealant.

C. Replace metal panels that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 074215

SECTION 075558 - FLUID-APPLIED PROTECTED MEMBRANE ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes fluid-applied roof assembly using hot rubberized-asphalt membranes in Protected Membrane Roof (PMR) assembly.

B. Related Sections include the following:

1. Division 06 Section on Rough Carpentry for wood nailers, curbs, and blocking.
2. Section 076205 “Sheet Metal Flashing and Trim.”
3. Division 22 Section on Storm Drainage Piping Specialties for roof drains.

1.2 PERFORMANCE REQUIREMENTS

A. Exterior Fire-Test Exposure: ASTM E 108 or UL 790, Class A roof covering.

B. FM Global Listing: Roofing, base flashings, and component materials shall comply with requirements of FM Global 4450 or FM Global 4470 as part of a roofing system, and shall be listed in FM Global’s “RoofNav” for Class 1 or noncombustible construction, as applicable. Identify materials with FM Global markings.

1. Fire/Windstorm Classification: **[Class 1A-60] [Class 1A-75] [Class 1A-90] [Class 1A 105] [Class 1A-120]**.
2. Hail Resistance Rating: **[MH] [SH]**.

1.3 SUBMITTALS

A. Product Data: For each type of product specified.

1. Identify manufacturer’s recommended pouring temperature; range is typically 182 deg C to 205 deg C (360 deg F – 400 deg F).

B. Shop Drawings:

1. Provide shop drawings and details at expansion joints, penetrations, curbs, control joints, drains, rise walls, roof edges, and terminations.
2. Show installation of membrane, protection course, drainage course, filter fabric, insulation, and overburden.

3. Shop drawing shall be signed by authorized representative of membrane manufacturer stating that submittal details conform to manufacturer's warranty requirements for this specific Project.

C. Samples:

1. Reinforcement fabric.
2. Smooth and granule-surfaced modified bitumen membrane flashing sheets.
3. Drainage course.
4. Insulation.
5. Filter fabric.
6. Paver.

D. Certificates:

1. Submit manufacturer's certification stating materials ordered and supplied are compatible with each other and suited for purpose intended.
2. Submit letter indicating that manufacturer has reviewed project documents and will issue the specified warranty upon successful completion of the installation.
3. Submit manufacturer's current approval of installer and date of initial certification.

E. Certified Test Results: Submit certification showing that each batch of material is tested to ensure conformance with the manufacturer's published physical properties.

F. Qualification Data: List of projects of similar nature by both manufacturer and applicator which have been installed during last five years.

G. Warranties: Submit two copies conforming to warranty requirements of this Section.

1.4 QUALITY ASSURANCE

A. Installer qualifications:

1. Approved by manufacturer of accepted roofing system.
2. A single applicator with a minimum of five years previous successful experience in installations of similar systems.

B. Manufacturer qualifications: Minimum ten years previous successful experience in installations of similar systems.

C. Conformance with Regulatory Requirements:

1. Products manufactured in the United States shall conform to U.S. Federal regulations, safety standards, and codes.

2. Products manufactured in countries outside the United States shall be approved by Governing sanctioning entity for country; either country in which project is located or product is manufactured may be used.

D. Laboratory Testing and Samples:

1. Obtain field samples of the completed roof membrane, laps, and/or assembly.
2. Take samples at locations designated by Project Director/COR, and test for compliance with the requirements on the Contract Documents and with manufacturer's published performance criteria.
3. Perform test in accordance with ASTM methods applicable to this system.
4. Contractor is responsible for all costs of extraction and patching of roofing samples, and for testing.
5. Correct deficiencies identified by tests in accordance with the manufacturer's recommended procedures.
6. If for any reason, areas that are tested fail to meet requirements of this Section and manufacturer, costs associated with re-sampling, re-testing, correcting, and patching is the responsibility of the Contractor.

E. Deviation from Construction Drawings or approved Shop Drawings is not permitted without prior written approval from Project Director/COR and roof membrane manufacturer.

F. Obtain written approval from the manufacturer for any materials not manufactured or provided by manufacturer stating that materials are acceptable and are compatible with other materials and systems required.

G. Pre-installation Conference: Conduct conference at Project site. Comply with requirements in Division 01 Section "Construction Execution and Coordination." Review methods and procedures related to roofing system including, but not limited to, the following:

1. Meet with Project Director/COR, testing and inspecting agency representative, roofing Installer, roofing system manufacturer's representative, deck Installer, and installers whose work interfaces with or affects roofing including installers of roof accessories and roof-mounted equipment.
2. Review methods and procedures related to roofing installation, including manufacturer's written instructions. Review roofing contractor’s application procedures for a torch applied roof. Verify that all of roofing subcontractor’s personnel that will be using a torch on the roof has a current certification.
3. Review and finalize construction schedule in relation to activities of this Section, and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
4. Examine deck substrate conditions and finishes for compliance with requirements, including flatness and fastening.
5. Review structural loading limitations of roof deck during and after roofing.

6. Review base flashings, special roofing details, roof drainage, roof penetrations, equipment curbs, and condition of other construction that will affect roofing system.
7. Review governing regulations, and requirements for certificates.
8. Review temporary protection requirements for roofing system during and after installation.
9. Review roof observation and repair procedures after roofing installation.

H. Upon completion of installation, a technical representative of the manufacturer to certify that roofing system has been installed according to manufacturer’s most current published specifications and details shall conduct an inspection.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials in manufacturer's original, unopened containers or packages with labels intact and legible.

B. Store materials in accordance with manufacturer's recommendations. Store rolled goods up on roll ends on clean raised platforms. Store other materials in dry area, protected from water and direct sunlight, and maintain at a temperature of 16 to 27 deg C (60 to 80 deg F).

C. Provide continuous protection of materials against deterioration.

D. Materials Stored on Roof Levels for Immediate Use:

1. Distribute to prevent concentrated loads that would impose excessive strain on deck or structural members.
2. Positively secure to prevent displacement by wind.
3. Tarp for protection from exposure.

1.6 PROJECT CONDITIONS

A. Environmental Requirements:

1. Apply roofing in dry weather.
2. Do not expose membrane and accessories to a constant temperature in excess of 82 deg C (180 deg F).

1.7 SEQUENCING AND SCHEDULING

A. Do not install more roofing in one day than can be night sealed with roofing and flashing in the same day.

1.8 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer's standard or customized form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period.

1. Install in such a manner that the roof system manufacturer will furnish a written warranty agreeing to replace/repair defective materials, including leakage of water, abnormal aging or deterioration of materials, and other failures of the materials to perform as required within warranty period.
2. Special warranty includes membrane roofing, base flashings, roof insulation, fasteners, roofing accessories, roof pavers, and other components of membrane roofing system.
3. Warranty Period: Ten years from date of Substantial Completion.

B. Contractor's Workmanship Warranty: In addition, furnish a written warranty agreeing to repair/replace defective installation and workmanship labor causing leakage of water, deterioration of materials, and other failures of the installed system, sealants, painting, coatings, and related work on this project, to perform as required within the warranty period.

1. Warranty Period: **[10] [5]** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PRODUCT LISTINGS

A. Subject to compliance with requirements, provide comparable products to those listed in this Section.

2.2 SHEET MATERIALS

A. Roofing Membranes:

1. American Hydrotech, Inc.; Monolithic Membrane 6125.
2. American Permaquik Inc.; Permaquik 6100.
3. Barrett Company; Ram-Tough 250.
4. Henry Company; 790-11.

B. Primary Membrane:

1. Primary waterproofing membrane shall be hot-applied rubberized asphalt composed of specially selected blend of refined asphalts, synthetic rubber and mineral stabilizers, and having the physical properties identified below. References to Canadian General Standards Board (CSGB) standards are only to identify the key source document for the requirements;

the performance requirements listed in this Section govern over any values identified in the CSGB standards.

a. Solids Content: 100 percent.
b. Low Temperature Flexibility and Adhesion: No cracking, delamination, or loss of adhesion at -11 deg C (13 deg F) in accordance with CGSB 37-GP-50-M89, "Hot Applied Rubberized Asphalt for Roofing and Waterproofing."
c. Flow 3 mm (1/8-inch) film on 75% angle for 5 hours at 60 deg C (140 deg F): No flow in accordance with ASTM D5329.
d. Cone Penetration: More than 10 at 0 deg C (32 deg F), less than 110 at 25 deg C (77 deg F), less than 200 at 50 deg C (122 deg F) in accordance with ASTM D5329.
e. Water Absorption: Gain of 0.09g in accordance with CGSB 37-GP-50-B89.
f. Flash Point (Open Cup): 285 deg C (545 deg F) in accordance with ASTM D92.
g. Water Vapor Permeance (3mm Film): 0.01 perms in accordance with ASTM E96 Procedures A and 0.02 perms in accordance with ASTM E96 Procedure E.
h. Ratio of Toughness to Peak Load: 0.04 minimum in accordance with CGSB 37-GP-50-M89.
i. Toughness: 9.2J in accordance with CGSB 37-GP-50-M89.
j. Crack Bridging Capability: No cracking, splitting, or loss of adhesion in accordance with CGSB 37-GP-50-M89.
k. Heat Stability (5 hours at 200 deg C (390 deg F): Meets flow, penetration and low temperature flexibility in accordance with CGSB 37-GP-50-M89.1.
l. Recycled Content: 11 percent for standard membrane.

C. Membrane Fabric Reinforcement, an inorganic spun bonded polyester fabric reinforcement sheet, 39 gm/sq m (1.18 oz/sq yd) of sufficient porosity to allow good interplay bonding between layers of membrane:

1. "CCW-500 Reinforcing Fabric" by Carlisle Coatings and Waterproofing (CCW).
2. As supplied or recommended by membrane manufacturer for membrane system.

D. Surface Conditioner for concrete surfaces:

1. "Surface Conditioner" by American Hydrotech, Inc.
2. As supplied or recommended by the membrane manufacturer for membrane system.

E. Flashing: Provide one of the following two base flashing systems. Provide Neoprene flashing as underlayment course for either system.

1. SBS-Modified Bituminous Flashing Sheet: ASTM D 6164, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet.

a. Base Ply: Grade S, Type I or Type II, polyester-reinforced, SBS-modified asphalt sheet; smooth surfaced; suitable for application method specified.

b. Top Ply: Grade G, granular surfaced; suitable for application method specified. Granular color, white.

2. APP-Modified Bituminous Flashing Sheet: ASTM D 6222, Type I or Type II, polyester-reinforced, APP-modified asphalt sheet; suitable for application method specified.

a. Base Ply: Grade S, smooth surfaced.
b. Top Ply: Grade G, granular surfaced. Granule color, white.

2.3 RELATED MATERIALS:

A. Primer, synthetic rubber-based or bituminous-based type primer:

1. “920-18 Primer” by Henry.
2. “CCW-550 Primer” by CCW.
3. As supplied by membrane manufacturer for membrane system.

B. Asphalt Primer for Modified Bitumen Flashings: ASTM D 41.

C. Separation/Protection Course: Formulated rubberized asphalt separation/protection sheet with synthetic fiber reinforcement:

1. “Hydroflex 10” by American Hydrotech, Inc.
2. “modifiedPLUS” by Henry.
3. “Protection Cap 250FR” by CCW.
4. As supplied or recommended by membrane manufacturer for membrane system.

D. Prefabricated Drainage Course, a composite drainage system consisting of a three-dimensional, crush-proof, drainage core and a non-woven needle punched filter fabric on one side of the core:

1. ‘Hydrodrain 300, 400, 700, or 1000” by American Hydrotech, Inc.
2. “DB200”, “DB350”, “DB500”, or “DB656” by Henry.
3. “MiraDrain” by CCW.
4. As supplied or recommended by membrane manufacturer for membrane system.

E. Filter Fabric Sheet, non-woven, water permeable polymeric fabric:

1. “Filter Fabric Sheet” by American Hydrotech, Inc.
2. “HP Protection Mat” by CCW.
3. As supplied or recommended by membrane manufacturer for membrane system.

F. Termination Bar: Stainless steel, type 302/304, 3 mm (11 gauge) minimum, 25 mm (1-inch) wide. Pre-drill fastener holes at 150 mm (6-inches) on-center.

G. Rubberized Asphalt Mastic:

1. "Monolithic Membrane 7800" by American Hydrotech.
2. "CCW-704 Mastic" by CCW.
3. As supplied or recommended by membrane manufacturer for membrane system.

H. Edge Sealant: Rubberized asphaltic plastic roof cement that is gun-grade version for sealing top edges of base flashings and terminations of cap sheet.

1. "Elastomastic 209" by Henry Co.
2. "Ruberoid" by GAF.
3. "BlackJack 1010" by Gibson Homas.
4. "SBS Mastic" by Soprema.

I. Elastomeric Plastic Roof Cement: Rubberized plastic roof cement/adhesive to be used for temporary seals of flashings and three coursing of seams and cuts in modified bitumen sheets.

1. "Ruberoid" by GAF.
2. "MBR Utility Cement" by Johns Manville.
3. "MB Gold Elastomeric Flashing Cement" by Monsey.
4. "PA-1021" by Siplast,
5. "SBS Elastic Cement" by Soprema.

J. Precast Concrete Paver Ballast:

1. Locally fabricated and sources materials subject to U.S. standards.
2. Precast Pavers: Nominal size 300 mm by 300 mm by 50 mm thick (12-inch by 12-inch by 2-inch).
3. Compressive strength of 20,000 kN/m2 (3000 psi).
4. In locations with freezing climates, provide plain-steel welded wire reinforcement: 29 mm dia (9 gauge). Provide two bars in each direction; space approximately 75 mm (3-inches) from each edge, leaving about 150 mm (6-inches) between parallel bars. Reinforcement shall not be visible on any surface.
5. Non-skid top finish free of voids, smooth bottom finish with beveled or rounded bottom edges and corners free of fins and projections.
6. Natural concrete color (grey).

2.4 INSULATION:

A. Loose Laid Insulation: Extruded polystyrene foam board, 24 to 26 kg/m^3 density, 276 kN/m^2 (40 psi) compressive strength, ASTM C-578-85, 600 mm by 2,400 mm (24-inch by 96-inch) sized boards.

1. "Styrofoam Roofmate" by Dow Chemical Co.
2. "CertiFoam 25" by DiversiFoam Products.
3. "Foamular" by Owens Corning.

B. Heat Resistant Insulation: Molded hydrous calcium silicate-based or perlite-based heat resistant rigid pipe insulation. Insulation shall be pre-manufactured, and sized for installation around circular/tubular element.

1. "Calsilite Pipe Insulation" by Calsilite Manufacturing Corporation
2. "Sproule Pipe Insulation" by Industrial Insulation Group
3. "Thermo-12 Gold" by Johns Manville

C. Compressible Fill Insulation: Foil or paper faced compressible fiberglass batten roll insulation. Insulation shall be proper size and thickness to insert at openings at penetrations, perimeters, and curbs.

1. Foil- or paper-faced compressible fiberglass batten roll insulation as manufactured by Owens Corning.

PART 3 - EXECUTION

3.1 EXAMINATION OF SURFACES

A. Contractor shall examine the substrate, roof deck, and related surfaces and verify that there are no conditions such as inadequate anchorage, foreign materials, moisture, ridges, or other conditions, which would prevent the satisfactory installation of the roofing system.

B. Verify that concrete deck has been prepared and is in condition to receive waterproofing materials.

1. Concrete has wood float or wood trowel finish.
2. Concrete was moist cured and free of curing compounds.
3. Concrete was cured for minimum of 28 days prior to application of waterproofing membrane.
4. Perform moisture test by taping down 300 mm x 300 mm (12-inch x 12-inch) x 0.15 mm (6-mil) clear polyethylene sheet to concrete and observe for condensation on underside of polyethylene in 4 hour cycles. Apply roof asphalt primer once no condensation is observed.

C. Correct or complete any condition requiring correction or completion prior to installation of roofing system. Notify Project Director/COR in writing of unacceptable conditions.

D. Verify the location of electrical lines, piping, conduit, and similar obstructions. Perform work in such a manner as to avoid contact with the above-mentioned items.

E. Start of Execution for work of this Section constitutes acceptance of substrate and site conditions.

3.2 PREPARATION

A. Clean and prepare substrate according to manufacturer's written recommendations. Provide clean, dust-free, and dry substrate for roofing application.

B. Mask off adjoining surfaces not receiving roofing to prevent spillage from affecting other construction.

C. Mask and protect substrates at locations to receive new sealants and locations above the top of the finished traffic surface.

D. Apply test patch of surface conditioner and waterproofing membrane and verify adhesion to substrate.

E. Apply surface conditioner as recommended by manufacturer for horizontal and vertical surfaces.

F. Protect roof drains and other deck penetrations to prevent spillage and migration of roofing fluids.

G. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

H. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

I. Remove contaminants from metal surfaces which may adversely affect adhesion or performance of coating system and apply asphalt primer.

3.3 CONTROL JOINTS, CONSTRUCTION JOINTS AND CRACKS

A. Prepare and treat substrates to receive roofing membrane, including joints and cracks, roof drains, and penetrations, according to roofing system manufacturer's written instructions.

B. Rout and fill joints and cracks in substrate. Before filling, remove dust and dirt according to ASTM D 4258.

1. Apply 3 .2 mm (125-mil) coat of hot rubberized asphalt approximately 450 mm (18-inches) wide over crack.
2. Embed strip of reinforcing fabric into a layer of hot fluid-applied, rubberized asphalt and roll fabric down into hot membrane.
3. Extend reinforcing fabric a minimum of 150 mm (6-inches) on each side of nonmoving joints and cracks, and beyond roof drains and penetrations.
4. Apply second layer of hot fluid-applied, rubberized asphalt over reinforcing fabric.

C. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joints with elastomeric sheet extended a minimum of 150 mm (6-inches) on each side of joints and adhere to

substrates in a layer of hot fluid-applied, rubberized asphalt. Apply second layer of hot fluid-applied, rubberized asphalt over elastomeric sheet.

3.4 BASE FLASHING INSTALLATION – BASE PLY

A. Installation of exposed Neoprene flashing is not permitted.

B. Install base ply of modified bitumen base flashing extending horizontally 100 mm (4-inches) beyond edge of cant or flange and vertically 100 mm (4-inches), minimum above the top of the cant.

C. Length of base flashings shall be maximum 2 m (6-feet). Lap ends of base flashings 100mm (4-inches), minimum. Seal top edge of base flashing on a daily basis with a continuous troweling of elastomeric roof cement.

D. Check lap seams and seal unbonded or discontinuous seams using a heated steel trowel.

3.5 DRAINS

A. Apply 3.2 mm (125 mil) coat of hot rubberized asphalt extending approximately 450 mm (18-inches) from the drain clamping flange or ring.

B. Apply elastomeric sheet extending approximately 300 mm (12-inches) from the drain clamping flange or ring and roll down into hot membrane.

C. Apply second 3.2 mm (125-mil) coat of hot rubberized asphalt over the elastomeric sheet if required by the waterproofing membrane manufacturer.

D. Temporarily block drains during membrane and flashing application.

3.6 ROOFING MEMBRANE APPLICATION

A. Install in accordance with manufacturer’s current published application procedures, and recommendations of “The NRCA Roofing and Waterproofing Manual” from National Roofing Contractor’s Association (NRCA).

B. Manufacturer's technical representative shall be present as work proceeds on detail areas such as crack repair and work at expansion joints. Install materials in accordance with manufacturer's printed instructions.

C. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.

D. Heat rubberized asphalt until free flowing, generally 190 to 205 deg C (375 to 400 deg F), but not above 205 deg C (400 deg F). Heat rubberized asphalt in double-jacketed, oil-bath melter with mechanical agitator. Recommended pouring temperature range is 182 to 205 deg C (360 to 400 deg F).

E. Apply uniform coating of hot rubberized asphalt to substrate and adjoining surfaces indicated to receive membrane using squeegee complying with manufacturer's recommendations.

F. Apply hot rubberized asphalt membrane at a rate to provide a continuous, monolithic coating of 90 mils minimum. Fully embed a layer of the spunbonded polyester fabric reinforcing sheet overlapping adjacent layers 200 mm (8-inches). Apply a second layer of continuous monolithic coat of hot rubberized asphalt membrane at a minimum thickness of 3.2 mm (125-mils) resulting in a total membrane thickness of 5.5 mm (215-mils) minimum.

G. Overlap fabric reinforcing sheet 50mm (2-inches) minimum with hot rubberized asphalt membrane applied between the overlapped fabric sheets.

H. Cover waterproofing with protection course with overlapped joints before membrane is subject to construction traffic. Protection course also prevents insulation from sticking to membrane.

I. Daily Seal:

1. Install temporary night seal at completion of each day's work and remove upon resumption of work.
2. Ensure that water does not flow beneath any completed sections of the membrane system. This will include completion of all flashings, terminations, and daily seals. When possible, install starting at the highest point of the project area, working to the lowest point.
3. Seal membrane edge with continuous troweling of plastic roof cement. Caution must be exercised to ensure that membrane is not temporarily sealed near drainage medium in such a way to promote water migration below the membrane or impede drainage.
4. Install daily night seal in such a manner to seal new roof system to roof deck to prevent moisture migration from either new roof or exposed concrete deck.
5. Install daily night seals by extending the new roof membrane beyond the insulation and sealing to the existing roof surface using plastic cement.
6. When work is resumed, remove and dispose of membrane where cement or other sealants were previously applied before resuming installation.

J. Heat Exhaust Vents:

1. Install heat resistant insulation around vent pipe through roof.
2. Install new sheet metal base around insulation and strip flange into new roof.

K. Insulation Filler: Install compressible fiberglass insulation at openings in deck at penetrations, perimeters, and/or curbs.

3.7 BASE FLASHING APPLICATION – TOP PLY

A. Installation of exposed neoprene flashing is not permitted.

B. Apply top ply of modified bitumen flashings only after roofing membrane application has been completed.

C. "Torch de-granulate" or prime granulated surfaces of flashings to receive flashing. Pre-heat the subject area of the underlying granule-surfaced sheet so that granules can be "depressed" or sunk into the compound and the bitumen compound exudes up through the granules to result in a bituminous material-to-bituminous material contact.

D. Prime granulated surfaces with a uniform coating of asphalt primer. Permit primer to dry prior to application of modified bitumen membrane flashing.

E. Cut modified bitumen flashing membrane to extend a minimum of 100 mm (4-inches) above the top of the membrane top ply covering the cant. The overall minimum height of the top of the flashing membrane above the top of the roof surface is 200 mm (8-inches) above the concrete paver ballast.

F. Extend the flashing membrane horizontally 100 mm (4-inches) onto the field of the roof surface beyond the bottom edge of the cant strip.

G. Cut flashing from roll using selvage edge as lap seam for adjacent sheets resulting in sheet lengths of nominal 1 m (3 feet).

H. Lap ends a minimum of 100 mm (4-inches) and stagger laps from laps of underlying plies.

I. Fully adhere and conform top ply of flashing to substrate. Extend bleed-out of applied base flashing a minimum of 13 mm (1/2-inch) beyond the side or end lap.

J. "Broom-in" the flashing ply immediately upon installation using a damp sponge mop.

K. Coat bleed-out on granulated sheets with granules to match finish surfacing.

L. Install three-coursing at vertical seams and termination bars:

1. Utilize masking or duct tape to create vertical and horizontal straight edge of three-coursing.
2. Apply elastomeric plastic roof cement embedded with reinforcing fabric at vertical lap seams and horizontal termination bars.
3. Apply final coat of elastomeric roof cement. After application of three-coursing, remove tape.
4. Embed granules into plastic cement, in any exposed areas of three-coursing immediately after application, to achieve uniform base flashing color.

M. Walls:

1. Mechanically attach top edge of modified bitumen membrane flashing with appropriate fasteners and termination bar. Fastener spacing shall be 150 mm (6-inches) on-center. Apply three-coursing over termination bars.

N. Curbs:

1. For curbs with non-removable hoods/covers/units, extend flashing to full height of curb and apply three-coursing. For curbs with removable hoods/covers/units, wrap flashing sheet over top of curb and secure to top or inside of curb with angle termination bar and appropriate fasteners spaced 150 mm (6-inches) on-center.
2. Apply a boot or oval section of modified bitumen sheet over outside corners of curb flashings to conceal cuts in flashing material at corner laps.
3. Install flashing sheets on adjoining perpendicular sides (outside corners) of curbs or walls so that outside corners of flashing sheet align and are rounded.

O. Metal Flange Flashing (Pitch Pans, Metal Edge, Pipe Boxes, Vent Stacks, etc.):

1. Prime top and bottom of metal flanges and components completely and allow to dry prior to installation.
2. Before membrane ply has been applied, install metal flange flashings in a bed of roof cement. Strip-in flange/metal with strips of base flashing (base ply) extending a minimum of 100 mm (4-inches) beyond edge of flange/metal.

3.8 SEPARATION/PROTECTION LAYER INSTALLATION

A. Install Separation/Protection Layer as Follows:

1. Embed the separator sheet into the membrane while it is still hot to ensure good bond.
2. Overlap adjoining sheet edges (dry) a minimum of 50 mm to 75 mm (2-inches to 3-inches) to ensure complete coverage.
3. The separator sheet must be covered by the drainage course and finish materials as soon as possible, within thirty days of membrane installation.

3.9 PROTECTED MEMBRANE ASSEMBLY

A. Flood Test: Prior to installation of protected membrane assembly, perform flood test in accordance to Article on FIELD QUALITY CONTROL.

B. Prefabricated Drainage Course:

1. Install drainage course in accordance with the manufacturer's recommendations.

2. Layout and position drainage course and allow to lay flat. Cut and fit drainage course to perimeter and penetrations. If drainage layer to be installed has polymeric sheet on bottom side, installation of the separator sheet on top of membrane is not required.
3. Overlap adjacent panels at ends and sides so laps of both the core and fabric are in the direction of flow of water.
4. Connect adjacent panels along longitudinal side utilizing the flangeless and flanged edges of adjoining panels. Connect ends of adjoining panels by interlocking two rows of dimples of both panels.
5. Expose two rows of dimpled core by pulling the filter fabric back at panel end. Place the end of the next two panels over the two rows of dimples and interlock.
6. Overlap edges of filter fabric material of adjacent drainage panels a minimum of 225 mm (9-inches) along longitudinal edge and 75 mm (3-inches) along ends.
7. Wrap drain assemblies with strip of drainage course material and secure with adjustable tie.
8. Wrap exposed edges of drainage course material with filter fabric.
9. Place subsequent topping materials as soon as possible.

C. Insulation:

1. Install extruded polystyrene insulation boards in two thick layers over the drainage course. Stagger the end joints of adjacent rows and joints of the bottom layer from joints of the top layer.
2. Fit all boards tightly, allowing no more than 6 mm (1/4-inch) between boards. Insulation should be cut and placed as necessary, to be not more than 50 mm (2-inch) from cant strips, walls, curbs, and projections through the roof.

D. Filter Fabric and Paver:

1. Once the drainage course and insulation have been placed over the entire area, install a single ply of the specified filter fabric, lapping each sheet not less than 150 mm (6-inches) over the preceding sheet.
2. Extend the fabric 50 mm (2-inches) to 75 mm (3-inches) over the end of the insulation board at penetrations and the perimeters.
3. Wrap ends of insulation board at perimeter edge conditions, risewalls, and penetrations. Extend loose edge of fabric 300 mm (12-inches) below edge of insulation board.
4. Fabric should be extended up to the base of the scuppers and drains, but should not cover the scupper/drain or in any way restrict the flow of water.
5. Install concrete pavers over filter fabric over the entire roof area. Cut pavers with masonry saw and place as necessary, including at junctures where roof slope changes.

3.10 FIELD QUALITY CONTROL

A. On start-up, raise the oil bath temperature of the meter to 230 deg C (450 deg F) maximum.

B. Do not hold material at pouring temperature for longer than five hours. If pouring is to be delayed, reduce temperature to between 132 deg C and 160 deg C (270 deg F – 320 deg F) and hold until pouring is to be resumed. Do not heat the compound above 210 deg C (410 deg F).

C. Prolonged heating (longer than five hours) or heating above 210 deg C (410 deg F) may cause the compound to gel in the melter. A rapid increase in viscosity of the material accompanied by stringiness indicates that gelling has begun. The compound temperature must be reduced promptly or the material should be removed promptly from the kettle.

D. Visually inspect surfaces for voids or ruptures and make necessary repairs.

E. Thickness Tests:

1. Before material attains final set, verify applied thickness in presence of Project Director/COR or their representative.
2. Obtain and record thickness measurement every 9.3 sq m (100 sq ft) of surface area. Submit report of thickness measurements and approximate locations of the measurements to Project Director/COR.
3. Where readings indicate thickness less than specified, immediately apply additional membrane to produce required thickness.

F. Perform peel and adhesion testing required by the manufacturer.

G. Do not permit traffic on roof after roofing membrane has been installed, other than for roofing installation, until roofing pavers have been installed.

H. Flood Testing: See Article on PROTECTED MEMBRANE ASSEMBLY of this Section for timing of testing.

1. Plug drains on horizontal surfaces.
2. Use sandbags or other means to restrict runoff.
3. Flood deck with water to depth of 50 mm (2-inches) from top of membrane.
4. Allow to stand forty-eight hours.
5. Repair leaks and retest.

I. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion.

1. Notify Project Director/COR 48 hours in advance of date and time of inspection.

J. Roofing system will be considered defective if it does not pass tests and inspections.

1. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.11 PROTECTING AND CLEANING

A. Protection:

1. Provide special protection or avoid heavy traffic on completed work when ambient temperature is above 26 deg C (80 deg F).
2. Restore to original condition or replace work or materials damaged during handling of roofing materials.
3. Emergency Edge Sealing Equipment: Maintain on-site equipment necessary to apply emergency temporary edge seal in the event of sudden storms or inclement weather.
4. Temporary Fire Protection Accessories: Minimum of two fully charged 9 kg (20-pounds) dry chemical fire extinguishers in separate, easily accessible torch work locations at all times.

B. Remove debris, adhesives, and sealants from surfaces.

C. Remove debris and material waste from Project site.

D. Remove bituminous deposits and/or stains from exposed/visible finishes on building, equipment, and/or appurtenances.

END OF SECTION 075558

SECTION 076205 - SHEET METAL FLASHING AND TRIM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes the following shop or field-formed sheet metal work for moisture protection at roofing:

1. Roof penetration sleeves and counterflashing.
2. General metal roof counterflashing.
3. Expansion joint covers.
4. Roof drain flashing for primary drains.
5. Scuppers.
6. Vent hoods.
7. Pipe boxes.
8. Curb cap flashing.
9. Miscellaneous roof sheet metal accessories.

B. Related Requirements:

1. Division 06 Section on rough carpentry for wood nailers, curbs, and blocking.
2. Section 075558 “Fluid-Applied Protection Membrane Roofing.
3. **[Division 07 Section on XXX roofing system.]**
4. Division 07 Section(s) on roof accessories for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
5. Refer to other Sections for incidental flashing for purposes other than roofing.

1.2 STANDARDS

A. National Roofing Contractors Association (NRCA):

1. NRCA Roofing and Waterproofing Manual.

B. Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA):

1. Architectural Sheet Metal Manual.

1.3 SUBMITTALS

A. Product Data: For each type of product for underlayment, adhesives, sealants, and pourable pitch pan grout, and pourable sealers.

B. Shop drawings: Show layouts of sheet metal flashing and trim, including plans and elevations. Distinguish between shop- and field-assembled work.

1. Identify material, thickness, weight, and finish for each item and location including profiles, shapes, seams and dimensions.
2. Details for fastening, joining, supporting, and anchoring sheet metal flashing and trim, including fasteners, clips, cleats and attachments to adjoining work.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver sheet metal flashing materials and fabrications undamaged. Unload, store and install sheet metal flashing and fabrications in a manner to prevent bending, warping, twisting and surface damage.

B. Stack materials on platforms or pallets, covered with suitable weathertight and ventilated covering. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage.

1.5 WARRANTY

A. Contractor's Workmanship Warranty: Coordinate inclusion of sheet metal flashing written warranty as part of membrane warranty which shall warrant sheet metal work to be free of leaks and defects in workmanship.

1. Warranty Period: **[10] [5]** years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 PRODUCT LISTINGS

A. Subject to compliance with requirements, provide comparable products to those listed in this Section.

2.2 SHEET METAL MATERIAL

A. Stainless-Steel Sheet: ASTM A167, Type 302/304, softer temper. Thickness as specified for each application.

1. Use for all roof applications except roof drain flashing.
2. Finish: No. 4 (fine reflective, polished directional satin).

B. Sheet Lead: FS QQ-L-201,Grade B for roof drain flashing.

C. [Copper: ASTM B370, cold-rolled except where soft tempered required for forming, 4.87 kg/sqm, 0.548 mm thick (16 ounce/square foot).]

D. [Aluminum: ASTM B 209M, Alloy 6061-T6. Minimum thickness 0.8 mm for sheet and 2.0 mm for extruded materials. Alloy and temper recommended by manufacturer for use and structural performance for roofing. Mill finished.]

E. [Prefinished Aluminum: Sheet or extruded with full strength Kynar 500® PVDF resin-based coating with a top side dry film thickness of 0.70 to 0.80 mil over 0.20 to 0.30 mil prime coats. Coat reverse side with primer and wash coat of 0.30 mil plus or minus 0.05 mil.

1. Color: As selected from manufacturer's standard selection.]

F. [Titanium-Zinc: Fine zinc with copper, titanium and aluminum. European standards EN 988, DIN 18339, thickness 0.70 mm, size 500, tensile strength 110 N/mm^2. Galvanized steel or prefinished galvanized steel sheet metal products are not acceptable.

1. Finish: Bright rolled.

a. Basis of Design: Rheinzink.]

2.3 FASTENERS

A. Fasteners shall be of same metal as flashing and sheet metal, or noncorrosive metal.

B. Exposed fasteners shall be self-sealing or gasketed for watertight installation.

C. Heads of fasteners (including but not limited to rivets, screws, and bolts) that are exposed or visible shall have same manufactured finishes as item being secured, and color shall match where applicable.

D. Mechanical Fasteners:

1. Washers: Steel washers with bonded rubber sealing gasket.
2. Screws: Self-tapping sheet metal type compatible with material fastened.
3. Rivets: Stainless steel for head and stem, closed end, type and size and recommended by sheet metal manufacturer.

2.4 RELATED MATERIALS

A. Metal Accessories: Sheet metal clips, straps, anchoring devices, and similar accessory units as required for installation of work, matching or compatible with material being installed, noncorrosive, size, and gauge required for performance.

B. Underlayment: Modified bitumen roof flashings continued underneath sheet edge metal with slip sheet: Rosin-sized paper, minimum 0.16 kg (0.4-lb.)/sq. m..

1. Alternate products may include self-adhering roof underlayment for high temperature-applications.

a. Basis of Design: “ Ice & Watershield HT” by W. R. Grace.

C. Solder:

1. Use with Ferrous Metal or Copper: 50 percent tin, 50 percent lead solder, alloy grade 58, ASTM B 32.
2. Use with Stainless Steel: 60-40 tin/lead solder, ASTM B 32.

D. Flux:

1. Phosphoric acid type, manufacturer's standard.
2. Use with Stainless Steel: Acid-chloride type flux, except use rosin flux over tinned surfaces.
3. Use with Steel or Copper: Rosin flux. 50-50 tin/lead solder, ASTM B 32.

E. Adhesives: Type recommended by flashing sheet manufacturer for waterproof and weather-resistant seaming and for adhesive application of flashing sheet.

F. Sealant:

1. Polyurethane Sealant: One component polyurethane sealant, color to match finish of metal.

   a. Basis of Design: "Dynatrol I" by Pecora Corp.

2. Silicone Sealant: Low modulus silicone sealant for sealing metal-to-metal surface (i.e., metal edge, cover plates), color to match finish of metal.

   a. Basis of Design: "895 Silicone Building Sealant" by Pecora Corp.

3. Elastomeric Butyl Tape: Self-adhering elastomeric butyl tape, 3-mm by 9-mm (1/8-inch by 3/8-inch.

   a. Basis of Design: "Extru-Seal" by Pecora Corp.

G. Grout for Pitch Pans:

1. Quick setting formula: U.S. Army Corps of Engineers CRD-C-621 “Specification for Nonshrink Grout.”

   a. Basis of Design: “SonoGrout 10K” by Sonneborn Building Products.

H. Pourable Sealer:

1. Pourable polyurethane sealer, approved for compatibility by roofing system manufacturer.

   a. "Fillguard M Pourable Sealer" by Firestone
   b. "1-Part Pourable Sealant" by ChemLink.

I. Termination Bar: 3 mm (1/8-inch) thick, 25 mm (1-inch) wide stainless steel bar with flat profile, factory punched oval holes sized 6-mm by 9-mm (1/4-inch by 3/8-inch), and spaced 150mm (6-inches) on-center:

1. Basis of Design: "TB 125" by The TruFast Corp. or “Heavy Flat Bar” by Olympic.

J. Stainless Steel Clamp: Stainless steel banding with worm-drive tightening, sized for application.

1. Basis of Design: "Make-A-Clamp Kit" by Dynamic Fastener.

2.5 FABRICATION - GENERAL

A. Fabricate work in accordance with SMACNA Architectural Sheet Metal Manual and other recognized industry practices, and accepted shop drawings.

B. Comply with material manufacturer’s instructions and recommendations for forming material.

C. Shop-fabricate work to greatest extent possible. Fabricate inside and outside corners for metal edges, counterflashing, and coping caps.

D. Fabricate for waterproof and weather resistant performance with expansion provisions for running work sufficient to permanently prevent leakage, damage, or deterioration of work. Form work to fit substrates.

E. Make angle bends and folds for interlocking metal with full regard for expansion and contraction to avoid buckling or fullness in metal after installation.

F. Form materials with straight lines, sharp angles, smooth curves, and true levels. Avoid tool marks, buckling, and oil canning.

G. Fold back edges on concealed side of exposed edge to form hem.

H. Lap joints 25 mm (1-inch) minimum. Rivet and solder joints on parts that are to be permanently and rigidly assembled.

I. Seams:

1. Fabricate non-moving seams in sheet metal with flat-lock seams.
2. [Metal Other than Aluminum: Tin edges to be seamed, form seams, and solder.]

J. Expansion Provisions: Where lapped or bayonet type expansion provisions in work cannot be used, or would not be sufficiently waterproof or weatherproof, form expansion joints of intermeshing hooked flanges, not less than 25 mm (1-inch) deep, filled with mastic sealant concealed within joints.

K. Forming to Accept Sealant Joints: Where movable, non-expansion type joints are indicated or are required for proper performance of work, form metal to facilitate proper installation of elastomeric sealants in conformance with SMACNA “Architectural Sheet Metal Manual.”

2.6 SHEET METAL FABRICATIONS

A. Counterflashings: Minimum 0.635 mm (24 gauge) stainless steel, formed in maximum 3 meters (10 foot) lengths. Utilize two piece configuration at walls.

B. Penetration Flashing Pans and Bonnets: 0.635 mm (24 gauge) stainless steel. Fabricate pan with 6 mm (1/4-inch) hem at top edge and with 100 mm (4-inch) flanges with rounded corners. Fabricate to provide installed minimum clear inside perimeter dimension of 50 mm (2-inches) on each side of penetrating element and 150 mm (6-inch) height.

C. Angle Termination Bar: 25-mm by 25-mm (1-inch by 1-inch) angle of 0.635-mm (24 gauge_ stainless steel.

D. Expansion Joints Cover and Clips: Minimum 0.635 mm (24 gauge) stainless steel.

E. Roof Drain Flashing: 750-mm by 750-mm (30-inch by 30-inch) of 16 mm (0.63 inches) thick lead sheet.

F. Scupper: Minimum 0.635 mm (24 gauge) stainless steel.

G. Vent Hoods: Minimum 0.635 mm (24 gauge) stainless steel with 100 mm (4-inch) flanges with rounded corners.

H. Pipe Box (Base, Hood, and Face Plate): 0.635 mm (24 gauge) stainless steel. Base shall be 200 mm (8-inches) in height, 100 mm (4-inch) wide flanges with rounded corners and sized to provide minimum 50 mm (2-inch) clearance between pipes and box.

I. Continuous Cleats: Continuous strips, same base material, and fascia profile, and next heavier gauge available as adjacent metal item.

J. [Metal Edge: 0.635 mm (24 gauge) prefinished galvanized steel with 150 mm (6-inch) wide cover plates.]

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify that substrates are smooth and clean to extent needed for sheet metal work.

B. Verify that reglets, nails, cants, and blocking to receive sheet metal are installed and free of concrete and soil.

C. Do not start sheet metal work until conditions are satisfactory.

3.2 INSTALLATION

A. Install fabricated sheet metal items in accordance with manufacturer's installation instructions and recommendations and with SMACNA Architectural Sheet Metal Manual.

B. Install sheet metal with lines, arises, and angles sharp and true, and plane surfaces free from objectionable wave, warp, or buckle. Exposed edges of sheet metal shall be folded back to form 6 mm (1/4-inch) hem on concealed side from view.

C. Locate field joints not less than 300 mm (12-inches), nor more than 1 meter (3 feet) from actual corner. Laps shall be 25 mm (1-inch), riveted and soldered at following locations: prefabricated corners; transitions; changes in direction, elevation, and plane; and at intersections. Prefabricated corners or transitions are required at changes in direction, elevation, or plane, and at intersections. Finished work shall be free from water retention and leakage under all weather conditions in relation to joint, lap, and corner forming work.

D. Anchor units of work securely in place to prevent damage or distortion from wind or buckling. Provide for thermal expansion of metal units; conceal fasteners where possible; and set units true to line and level as indicated. Install work with laps, joints, and seams permanently watertight and weatherproof.

E. Separations: Provide for separation of metal from non-compatible metal or corrosive substrates by coating concealed surfaces with zinc chromate, bituminous coating, or other permanent separation at locations of contact as recommended by manufacturer or fabricator. Do not use materials incompatible with roofing system.

F. Counterflashings:

1. Install counterflashings under equipment housing flanges and new receivers along rise or parapet walls.
2. Secure counterflashing at 150 mm (6-inches) on-center with self-tapping screws.
3. Lap adjacent sections of receivers and counterflashings minimum of 100 mm (4-inches). Apply continuous bead of silicone sealant in lap.
4. **[At existing construction, saw cut joint in substrate as required to facilitate installation of new receiver and counterflashing. Clean and prepare joint surfaces to receive sealant. Apply continuous bead of silicone sealant along top edge of reglet.]**
5. **[Trim existing counterflashing to receive new flashing. Secure new flashing to receiver utilizing self-tapping screws spaced at 150 mm (6 inches) on center.**
6. **Install wind clips to termination bar spaced at 600 mm (24 inches) on center.]**

G. Penetration Pans:

1. Fully solder joints and connections.
2. Prime top and bottom of flanges.
3. Install with flanges set in uniform troweling of plastic roof cement on membrane base ply, secure and strip-in flanges.
4. Fill penetration pan to within 25 mm (1-inch) of top of pan with non-shrink grout. Fill remainder of pan with pourable sealer.

5. Install umbrella counterflashing or hood.

H. Roof Penetration Hoods and Umbrella Counterflashing:

1. Install watertight hood or umbrella counterflashing at sleeves and penetration locations, such as pipes and conduit penetrating roof, and at equipment supports and over penetration pans.
2. Round or Pipe Penetrations:

   a. Set umbrella counterflashing in silicone sealant.
   b. Fully solder connections and seams and install in accordance with Construction Drawings.
   c. Tighten draw bands.
   d. Seal top of umbrella counterflashing with silicone sealant.

3. Square Penetration:

   a. Secure umbrella counterflashing to penetration with self-drilling screw.
   b. Set umbrella counterflashing in elastomeric butyl tape.
   c. Seal top of umbrella counterflashing with silicone sealant.

4. Angle or Structural Steel Penetration:

   a. Attach umbrella counterflashing to structural steel member by welding.
   b. Paint assembly after installation.

I. Expansion Joint Cover:

1. Install wood curbs.
2. Install underlayment, form envelope, and secure underlayment to curb. Fill envelope with compressible insulation.
3. Securely fasten expansion joint cover to curb with grommeted fasteners spaced at 150 mm (6 inches) on center.

J. Roof Drain Flashing:

1. After membrane installation, prime bottom of lead flashing sheet and set in uniform bed of plastic roof cement at specified locations.
2. Extend lead flashing into drain bowl or pipe a minimum of 50 mm (2-inches) and over top of piping/bowl connection. Apply continuous bead of polyurethane sealant.
3. If drain bowl and pipe connection is contaminated with bituminous material, strip-in area with three-coursing of plastic roof cement and fabric.
4. Prime top surface of lead flashing sheet to receive strip-in membrane.

K. Scupper:

1. After field membrane is installed, install metal scupper insert into wall opening. Set scupper in bed of plastic roof cement, and secure flanges of scupper to wall and deck.
2. Strip-in flanges of scupper with appropriate flashing plies.

3. Install silicone sealant around exterior opening of scupper between metal insert and wall.

L. Pipe Box:

1. Prime top and bottom of flanges.
2. Fully solder joints and connections.
3. Install with flanges set in plastic roof cement on base ply, secure, and strip-in.
4. Fill pans with grout to height of 3/4 of total pan height.
5. Fill remaining height of pitch pans with pourable sealer.
6. Install hood over pan, securing to each side with self-tapping screws.
7. Install face plate to cover box opening around pipe penetrations.

M. Scupper:

1. After field membrane is installed, install metal scupper insert into wall opening. Set scupper in bed of plastic roof cement, and secure flanges of scupper to wall and deck.
2. Strip-in flanges of scupper with appropriate flashing plies.
3. Install silicone sealant around exterior opening of scupper between metal insert and wall.

N. Continuous Cleat:

1. At exposed edges of gravel guards, fascias, cap flashings, and where required, attach continuous cleat at 150 mm (6-inches) on-center with appropriate fasteners positioned on the vertical face.
2. At a distance of 3 meters (10 feet) from each direction of all outside or inside corners, install fasteners 75 mm (3-inches) on-center.

O. [Metal Edge:

1. Apply uniform continuous bead of plastic roof cement on roof membrane.
2. Embed strips of underlayment into plastic roof cement under metal edge. Extend underlayment from edge of flange to minimum 25 mm (1 inch) below bottom edge of nailer.
3. Prime bottom side of metal edge. Set in bed of plastic roof cement over membrane, and lock to cleat. Install adjacent section of metal edge with approximately 6-mm (1/4 inch) space between sections.
4. Secure horizontal flange of metal edge to wood nailer with appropriate fasteners spaced at 75 mm (3 inches) on center, staggered.
5. Install covers at joints, locking into cleat. Embed flange into plastic roof cement, and install continuous beads of silicone sealant placed on each side of joint on fascia. Fasten joint cover with appropriate fastener centered in joint.
6. Prime top metal surface of flange to receive strip-in membrane.]

3.3 CLEANING

A. Remove flux and residual acid immediately by neutralizing with baking soda and washing with clean water. Leave work clean and free of stains, scrap, and debris.

B. Clean exposed metal surfaces, removing substances which might cause corrosion of metal or deterioration/damage of finishes. Paint areas of prefinished metal where finish is damaged; match color.

C. Prime soldered area of phosphatized metal after cleaning to prevent rusting.

D. Paint with aluminized paint, metal flashings that have been soiled with bitumen. Use medium nap roller to apply paint to surfaces to achieve monolithic finished color.

END OF SECTION 076205

SECTION 077234 - FORCED-ENTRY (FE) / BALLISTIC RESISTANT (BR) ROOF HATCHES

PART 1 - GENERAL

1.1 SUMMARY

A. The extent and location(s) of high-security roof hatches is indicated on Contract Drawings.

B. Related Sections include the following:

1. Section 055005 “Metal Fabrications” for stairs, ladders, and platforms to provide access to roof hatches.
2. Division 07 Sections for interfacing of roof hatches with roofing, insulation, flashing, and other components of the work.
3. Division 07 Sections for standard roof hatches.
4. Section 080001 “Blast Requirements”
5. Section 087155 “Security Door Hardware”; see requirements to Adjust and Clean.
6. **[Section 099602 “High Performance FEBR Coatings.”]**

1.2 PRE-INSTALLATION MEETINGS

A. Before beginning installation of FE/BR assemblies, the Contractor shall conduct a pre-installation conference at the Project site with installation sub-contractor, roofing sub-contractor, the Project Director/COR, and other interested parties to review installation procedures and manuals, schedules, and coordination of FE/BR-assembly installation with other elements of the Work.

1.3 ACTION SUBMITTALS

A. General:

1. Action submittals should be accepted by the PD/COR prior to procurement of associated items by Contractor; premature procurement is at the risk of Contractor.
2. Refer to Division 01 Section on Submittals for general administrative requirements.
3. All Action submittals shall be submitted together in one submission.

B. Product Data:

1. Product data for each element of work, whether purchased from other manufacturers or provided as hatch Fabricator's standard production to include hardware, weather-stripping, fasteners, gaskets, seals and accessary items. Include data substantiating that products comply with the requirements of this Section.

C. Shop Drawings: Shop drawings for each hatch unit. Provide plans, elevations, and sections at 1:20 scale. Provide details of fabrication, hatch seals, applied accessories, anchorages, and interfaces with adjoining and supporting construction at 1:5 scale. Include the following:

1. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
2. Unit information:

    a. Manufacturers model number.
    b. Government DOS certification model number.
    c. DOS 4-digit code.
    d. Mark (hatch no.).
    e. Hatch/frame finish.
    f. Hatch type.

3. Elevation Drawings (in plan):

    a. Rough opening dimensions.
    b. Hatch opening dimensions.
    c. Frame opening dimensions.
    d. Substrate/rough opening material.
    e. Manufacturer's name and reference number for primer and finish paint, including number of coats applied.
    f. Separate steel sub-frames/embeds (number and list), where applicable.
    g. Detail symbols.
    h. Hardware and hardware symbols.
    i. Ladder or ships ladder integration

4. Section Drawings:

    a. Relate to sections and details on drawing.
    b. Identify "Attack" and "Protected" sides.

5. Details: Show section at 1:5 scale of members indicating construction, size, and thickness of components, frame profile, anchorage, steel sub-frames/embeds (where applicable), continuous shim plates (where applicable), location of conduit entry into both sub-frame and hatch frame, fastenings, shims, sealant, backer rods, and means of separating dissimilar metals and ladder/ship ladder details shall be on separate sheets from plan and elevation drawing.

    a. Sections through the curb (long and short direction) that shows dimensions of the curb, edge condition and all items protruding into the opening to include lifting devices, springs, and ladders.
    b. Details shall include contract drawing information of “products by others” such as flashing, ladders, and finishes surrounding the product.

        1) Details for flashing and weather proofing associated with Division 07, shall be coordinated with the weather proofing submittal/design and shall be shown for frame/roof curb condition.
        2) Details for the hatch shall be coordinated with safety rails, ladders, or ship ladders and shown in the drawings.

6. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, finish/paint system, and legend.

    a. Breakdown of Product Line Items: If Manufacturer produces one contract line item as several parts, they shall break out items on drawings. Each item shall be a subdivision of that product line-item number.

7. Coordination Drawings: provide coordination drawings with roof curb, roof weatherproof system, ladder, and Fall protection (as required).
8. Design Data including supporting calculations of each of the required performances.
9. Testing Laboratory Qualifications in accordance with the Part 1 Article on QUALITY ASSURANCE.
10. Shop finish samples for each required metal and finish showing required colors, textures and sheen; apply on 150mm lengths or squares of typical member shapes or plates used in the work.
11. Certificates: Letter from manufacturer indicating the products have been certified by Bureau of Diplomatic Security (DS) in accordance with the Part 2 Article on PERFORMANCE REQUIREMENTS.
12. Installation instructions customized for each type of application.

1.4 INFORMATIONAL SUBMITTALS

A. General:

1. Informational submittals shall be submitted at least four weeks prior to installation.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Installer Qualification Data:

1. Submit resumes of all team lead installers (present and responsible for each install) documenting the installers conformance with experience requirements in accordance with the Part 1 Article on QUALITY ASSURANCE. Each resume shall include at least three references (including contract information) that can provide verification that the installer has the expertise required to perform a successful installation.
2. Submit manufacturers' certification to Project Director/COR for team lead installer indicating that she/he is capable of properly installing the FE/BR products, in accordance with the Part 1 Article on QUALITY ASSURANCE. The installer's qualifications require approval by OBO/CFSM/SM/SCD/SEB and OBO/OPS/FAC.

C. Qualification Data: For Manufacturer and Installer in accordance with the Part 1 Article on QUALITY ASSURANCE.

1.5 CLOSEOUT SUBMITTALS:

A. General:

1. Refer to Division 01 Sections on Submittals and on Closeout for general administrative requirements.

B. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

C. Maintenance Data:

1. Data shall include instructions for cleaning and maintenance.

D. Inspection Reports and Certificates of Compliance: See forms at end of this Section.

1. Provide Table of contents and/or bookmarks organizing by building and floor for each product using contract identification number.
2. Provide plan showing location of products (one plan may cover multiple products or whole floor if legible).
3. Provide completed Certificates of Compliance documenting that all FE/BR hatch assemblies have been installed in accordance with contract documents. Certificates of Compliance must be signed by the installation team leader and the General Contractors Quality Control.
4. Provide any additional QC documents used by Contractor during the installation.

1.6 QUALITY ASSURANCE

A. Quality Control for Forced-Entry/Ballistic Resistant (FE/BR) Products: Certify compliance of fabricated and assembled FE/BR products specified in this Section with each quality control procedure established by the Government; these procedures are identified in the Compliance Form at end of this Section. Other quality control forms are also found at end of this Section.

B. Testing Laboratory Qualifications: For compliance with non-security performance requirements on security hatch assemblies of this Section, use only those testing laboratories, which have successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

C. Installer Qualifications: Team lead installers (present and responsible for each install) shall have installed FE/BR hatch assemblies for a DOS project within last three years (minimum of five installed FE/BR or non-FE/BR roof hatches).

D. Pre-Installation:

1. Pre-Installation Conference: See Part 1 Article on PRE-INSTALLATION MEETINGS.

E. Installation Team Training: The Team leader (at no cost to the U.S. Government) shall provide the crew which is to actually perform installations of FE/BR assemblies with on-site, hands-on training to include installation of the entire assembly of the first FE/BR hatch. The Team leader shall also instruct the crew on preventive measures which must be taken to protect installers from injury and protect FE/BR assemblies from damage during construction.

F. Additional Assistance: Manufacturer's technical representative (at no cost to the U.S. Government) shall provide General Contractor any additional advice, instruction, or inspection required to enable General Contractor to complete installation certification in accordance with this Section.

G. Certification by General Contractor: Prior to final completion, the General Contractor shall provide to the Project Director/COR a certification that the FE/BR materials have been installed in accordance with the manufacturer's instructions, these specifications and are operational. Use Certificates of Compliance forms at end of this Section. Deviation from these requirements is only permitted with the written approval of the Project Director/COR with input from the OBO/CFSM/SM Physical Security Engineer, Designer of Record, and OBO/OPS/FAC. Specifically the General Contractor's certification shall include verification that:

1. The Installer team leader trained the installation crew and supervised the installation of the hatch.
2. Verify roof curb is installed square and rough opening is correct size.
3. Shim each bolt, as required; maintain minimum anchor embedment.
4. Ensure that hatches equipped with deadbolts turn freely without binding as applicable.
5. All temporary bolts have been replaced with permanent bolts.
6. All frame bolts have been torqued to meet the manufacturer’s specifications. Shims have been inserted at all bolt locations.
7. Frame bolts/screws shall comply with approved shop drawings.
8. All FE/BR product bolts, screws and anchors are metric products to the extent feasible.
9. Any cladding or removable covers that conceal the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs, cladding, and removable covers for each hatch have been tagged and won't be installed until after the final QA inspection has been conducted by the OBO/SEB representative.
10. At each hatch assembly, there is a consistent gap between the hatch leaf and the hatch frames.
11. All access plates for each hatch have been installed as indicated in the approved shop drawings.
12. Each hatch frame head has been installed level and the non- hinge side jamb has been installed plumb and square.
13. Each lockset fully engages and freely operates.
14. If applicable ballistic trim bars have been installed per the approved shop drawings.
15. The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers. One ID plate should be located on the hatch frame and one ID plate should be located under the hatch leaf.
16. Weather proofing and flashing is installed as shown on the approved shop drawings.

1.7 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. Provide a label as an embossed/printed metal plate mechanically fastened to the frame and hatch for permanent identification. Locate ID label plate on the protected side, under the hatch edge at the hinge side of the base unit frame. The label shall be approximately 40 by 75 mm and shall cite:

1. Manufacturer's name/city/state.
2. Contract number.
3. Month/year of fabrication.
4. Mark number.
5. DOS model number. (Certification Number).
6. DOS Code.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver roof hatch units to the project site prefabricated, prefinished, assembled, and equipped with accessory units to the greatest extent feasible. Ship hatch in export wood crates separate from any subframes/embeds (if applicable). Comply with the Government's criteria and manufacturer's recommendations for packaging, handling, storage, and delivery.

B. As applicable, clearly mark subframes with hatch mark number and identify jambs with “attack side”. Package subframes/embeds separate from the hatch assemblies. Protect each subframe/embed piece to minimize damage to finished surfaces.

C. Package and ship installation hardware (anchors, bolts, screws, shims, ballistic trim, shop drawings, etc.) for each hatch in the same crate as the hatch assembly.

D. Provide protection of pre-finished stainless steel finishes during delivery and on-site storage.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which the manufacturer agrees to repair or replace hatches that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

   a. Failure to meet performance requirements.
   b. Structural failures including excessive deflection, water leakage, air infiltration, or condensation.
   c. Deterioration of metals, other materials, and metal finishes beyond normal weathering.
   d. Failure of hardware components.

2. Warranty Period:

   a. Hatches: Manufacturer shall warrant hatches for period of five years from substantial completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Fabricate and install FE/BR hatch assemblies to achieve indicated levels of resistance. Extend resistance to include anchorages, interfaces with adjoining substrates, and hardware.

B. Manufacturers must be certified by Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Rev H.

C. Certified Units: Provide units which are produced by manufacturer who has previously produced forced entry or ballistic hatches or doors or commercial roof hatches, within last 5 years, units of similar security attack resistances of equivalent size and resistance ratings, and which have been certified FE/BR products by Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Rev H.

D. DOS Hatch Codes: The following labels in Table 2.1, "Roof Hatch Codes" apply based upon the physical security resistance and fire rating associated with each hatch:

TABLE 2.1, "ROOF HATCH CODES"

DOS CODE	1st DIGIT - HATCH COMPO-SITION	2nd DIGIT - FIRE RATING	3rd DIGIT - FORCED-ENTRY RATING	4th DIGIT - BALLISTIC-RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	1.5 hours (class D at exterior)	15 minutes	Note Used
3	*	3 hours (class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4	*	45 minutes (class C)	5 minutes	Armor-Piercing (.30-06)

Notes for above Table 2.1:

a. Composition - Column 1: Designated whether door has a transparency.
b. Fire Rating - Column 2: Fire-rated assemblies: Where indicated for fire resistance, provide flush steel Hatches-and-frame units; comply with NFPA 80, Standard for Fire Doors and Windows. Provide units that have been tested by recognized testing agency in accordance with NFPA No. 252 and ASTM E 152. Provide rated units where shown or as scheduled.
c. Forced Entry Rating - Column 3: Forced-Entry (FE) resistant assemblies: Where hatch assembly is shown, or scheduled as FE, provide door manufacturer's material and fabrication for panels, inserts, hardware, devices, and framing of units for the

above ratings by the Physical Security Division of the Bureau of Diplomatic Security (DS/PSP/PSD).

d. Ballistic Resistance Rating - Column 4: Ballistic resistant (BR) assemblies: Where hatch assembly is shown, or scheduled as BR, provide door manufacturer's materials and fabrication for panel, inserts, and framing of units for the above ratings by DS/PSP/PSD ratings.

E. Sound Transmission Class: Provide acoustical sound batt insulation, door gaskets and others to achieve an STC-50 rating. Acoustics shall be integrated into the design and not unduly complicate the operation of the hatch (i.e., no installing an additional hatch above or below the FE/BR hatch).

F. Design roof hatch lid to have a drip edge to direct water away from the hatch frame and onto the hatch flashing and finally to the roofing waterproofing system.

G. Wind Resistance: Force entry / ballistic resistant door assemblies shall withstand the effects of wind loads determined as follows, with no permanent deformation or breakage within door assembly when designed in according to ASCE 7-16, as adopted and amended by the OBO Building Code:

1. Basic Wind Speed: Shall be as indicated in the Structural Drawings.

H. Blast Resistance:

1. [Text prepared by a qualified and cleared blast consultant with project specific performance requirements or design shall either be inserted in this location or provided in a separate document and referenced in this location. Preference is for insertion in this location.]

2.2 MATERIALS, GENERAL

A. Stainless Steel: Sheets, Plates, Bars, Tubes, and shapes; Stainless Steel, Type 316, 2205 or 2101: ASTM A240M; low, moderate, and extreme ACL.

B. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics in any voids, not requiring TSS or in conflict with the door fasteners and latches or locks.

C. Hatch Gaskets: Provide primary sound reduction and weatherproof gasketing; provide special-performance secondary hatch seals where indicated. Hatch sound and weather gaskets shall be continuous around the opening. Refer to the Part 2 Article on PERFORMANCE REQUIREMENTS for sound requirements.

D. Shims: Provide 1.5 mm (1/16 inch) thick plastic shims with break-off tabs.

E. Inserts, Anchors, Bolts, Fasteners: Standard units of strengths required to endure performances; Stainless steel, grade shall match tested/certified condition. Provide compatible washer that prevents galvanic action.

1. Stainless Steel Bolts, Hex Headed Screws, Nuts, and Washers: AISI Type 316 (Alloy Group 2), complying with ASTM F593 and ASTM A594, or ASTM A193 and ASTM A194, or ASTM A320 and ASTM A194; provide compatible AISI Type 316 washers where appropriate.
2. Anchors (Frame to Subframe/Substrate Attachment): Stainless steel, hot-dip, zinc-coated steel, or iron, complying with ASTM B 633 and ASTM F1941 for fasteners; provide sufficient mechanical properties to satisfy the specified performance requirements.
3. All anchors for hatches shall be metric (Class 8.8) equivalent to SAE J429 Grade 5 or other appropriate high strength bolts and hardened nuts and washers, or as needed to satisfy the performance requirements and comply with standard OBO specifications for FE/BR and Blast resistant products. In no case the strength of the bolt shall be less than the as tested condition. Contractor's design shall provide appropriate corrosion prevention where dissimilar metals are in close proximity and to address the atmospheric corrosion performance requirements identified in this specification

F. Butyl tape: Provide a layer of butyl tape between the concrete curb/roofing and roof hatch unit.

G. Curb: Design hatch to be used on a standard 600 mm (24 inches) concrete curb, measured from top of roof slab. If curb is not 600 mm (24") (e.g., renovation) the curb must be built up to 600 mm (24") with Stainless steel.

H. Hatch sleeve: Design hatch with a 500 mm (20 inches) extension sleeve from top of hatch roof curb into the roof opening with predrilled bolt slots.

2.3 HARDWARE AND DEVICES

A. General: Provide operating hardware, devices, and accessories, which will fulfill indicated level of safety and functional response to each form of attack or environmental impact, protect building and its occupancy with indicated level of security and will permit occupants to operate roof hatches in normal manner for access and exiting to roof.

B. Hardware: Provide locking hardware that is operated from the protected side of the hatch. No access hardware shall be provided on the attack side.

C. Lift Assist: Provide a primary and secondary lift assist system. (e.g., gas struts, springs, linear actuator, etc.).

D. Safety Rails: Provide an OSHA compliant 1067 mm (42 inches tall) safety railing/gate system anchored to the frame, not the roof, without compromising integrity of the hatch.

E. Design shall incorporate provision for either a ladder or ships ladder to be fastened directly to the hatch assembly. During coordination drawings development ensure conformance with all required clearances (e.g., head clearance).

2.4 FABRICATION AND ASSEMBLY

A. General: Fabricate to achieve performance requirements. Conform to Contract Drawings.

B. Stainless Steel: Fabricate units of stainless steel sheet of thicknesses indicated, but not less than 1.50 mm. Reinforce hatch and curb/well panels with welded-in-place ribs and edge channels of stainless steel. Reinforce work at hardware/device/accessory locations with welded stainless steel inserts. Provide stainless steel-sheet formed shapes for gasket housings, flashing reglets, and similar elements.

1. At Fabricator's option, equivalent strength aluminum extrusions may be substituted for formed steel-sheet shapes specified above.
2. Fabricate forced-entry resistant units of not-less-than 3.0 mm stainless steel-sheet exposed faces (on the attack side), and with non-removable, flush fastener heads and tightly covered/protected joints between hatches and curb/well. To the greatest extent practicable, locate hardware, devices, and accessories inside unit (on protected side).
3. Fabricate ballistic resistant units of stainless steel sheets/plates, with exposed faces of thickness, which has been certified to resist ballistics at specified ratings.

C. Provide stainless steel-sheet formed shapes for gasket housings, flashing reglets, and similar elements.

D. To the greatest extent practicable, prefabricate high security roof hatches at factory. Disassemble only to extent necessary for handling, delivery, and installation.

E. Hatch frames shall have pre-drilled horizontally slotted bolt-hole patterns not to exceed 300 mm on center.

F. Provide insulated, double-walled construction of hatches and well or curb of units.

G. Size: Hatch opening shall comply with model IBC and OSHA requirements for hatch clearances.

1. Hatch with Ladder: Standard size 770 (30-1/2 inches) x 940 (37 inches).
2. Hatch with Ship Ladder: Size must be dictated by design. Minimum dimensions 1000 mm (39-1/2 inches) x 1000 mm (39-1/2 inches).

H. Weld seams and grind smooth. Comply with AWS D1.6/D1.6M Latest year Structural Welding Code for Stainless Steel.

I. Hatch Door should overhang frame with a drip edge to run water away from the frame onto flashing away from hatch.

2.5 SHOP FINISHING

A. General: Apply finishes as indicated on approved Drawings. As applicable for risk associated with Atmospheric Corrosivity Level (ACL) for the project location. Refer to the Part 2 Article on CORROSION RESISTANCE PERFORMANCE for acceptable component materials for various ACL

B. [Stainless Steel: These components do not require coating, but may be coated for aesthetic purposes. See Section 099602 "High-Performance FE/BR Coatings" where coatings are applied.]

C. **[Fluoropolymer Coatings: Fluoropolymer coatings may be used over any acceptable base metal. See Section 099602 "High-Performance FE/BR Coatings."]**

2.6 ACCESSORIES

A. Fall Protection: Design roof hatch to accept fall protection railing above the roof level. It shall be capable of being installed directly to the roof hatch assembly and shall be removable if necessary using bolted fasteners. Comply with all requirements of OSHA 1910.29 and the model IBC for design of such railing to include not limited to height, railing size, rail spacing, load ratings, etc.

1. At the Contractor's option, the FE/BR roof hatch may incorporate a ladder or ships' ladder, designed by the Designer-of Record, to be fastened directly to the hatch assembly.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Prior to start of installation, inspect the building and verify all conditions and dimensions as being acceptable to receive the Work of this Section.

B. If any conditions are found that may inhibit proper execution of the Work, immediately notify the Project Director/COR in writing. Installation shall not proceed until remedial action, acceptable to the Project Director/COR, has been executed.

3.2 INSTALLATION

A. General: Install security hatch assemblies in accordance with approved shop drawings, manufacturer's data and instructions, and requirements of these specifications, and the checklists associated with attached Certificate of Compliance forms.

1. Install any fire rated assemblies in compliance with recommendations and instructions of SDI-100 and SDI-105.

a. At fire-rated openings, comply with NFPA 80.

2. Avoid cutting rebar during concrete sub-frame installation.
3. Install minimum one shim per bolt, for rough opening (RO) frame clearance.
4. Match finish of cap plugs used in frame with frame finish to the maximum extent possible. Do not install cap plugs until after the final QA inspection, conducted by an

OBO/CFSM/SM/SCD/SEB representative or another representative as designated by Project Director/COR, of the hatches has been completed.

B. Flashing: Install roof hatch and integrated flashing with roofing waterproofing systems in accordance with coordination drawings.

C. Anchorage:

1. The contractor shall verify substrates involved, and supply any special fastening tools (e.g., special drill, bit, tap) required by anchoring system.
2. The hatch manufacturer shall provide anchors appropriate for substrate to which frame and sub-frame is to be fastened. The anchor shall be acceptable for shock/short duration loading and have potential for removal and re-installation during life of building.

3.3 FIELD QUALITY CONTROL

A. Hatch installation team leader shall supervise installation crew during their installation of all FE/BR hatch. Upon completion of installation.

3.4 ADJUST AND CLEAN

A. Repair damaged elements, restore abraded surfaces, touch-up base-coat paint finish with air-drying primer and top finish coats in accordance with Section 099602 “High-Performance FE/BR Coatings,” and remove imperfections from exposed natural metal finishes.

B. Upon request of Project Director/COR, remove protective coverings, and clean exposed surfaces.

C. Check and readjust hardware, devices, and accessories with hatch-to-frame-and-sill/ threshold clearances set for proper operation of locks, hatch seals, and other operational units. Do not remove permanently applied performance labels.

3.5 DEMONSTRATION

A. The installation team leader (refer to the Part 1 Article on QUALITY ASSURANCE) shall fully train the Embassy staff in the proper operation and maintenance of the FE/BR hatch assemblies. This training shall be performed at no cost to the US government.

END OF SECTION 077234

Certificate of Compliance

FE/BR Roof Hatches
Hatch Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING/ SUPERVISION

1	The Installer team leader trained the installation crew and supervised the installation of the hatch.	**Installer Team Leader's Name/ Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Verify roof curb is installed square and rough opening is correct size.		
3	Shim each bolt, as required; maintain minimum anchor embedment		
4	Ensure that hatches equipped with deadbolts turn freely without binding as applicable.		
5	All temporary bolts have been replaced with permanent bolts		
6	All frame bolts have been torqued to meet the manufacturer's specifications. Shims have been inserted at all bolt locations.		
7	Frame bolts/screws shall comply with approved shop drawings.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
8	All FE/BR product bolts, screws and anchors are metric products to the extent feasible		
9	Any cladding or removable covers that conceal the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs, cladding, and removable covers for each hatch have been tagged and won't be installed until after the final QA inspection has been conducted by the OBO/SEB representative.		
10	At each hatch assembly, there is a consistent gap between the hatch leaf and the hatch frames		
11	All access plates for each hatch have been installed as indicated in the approved shop drawings.		
12	Each hatch frame head has been installed level and the non- hinge side jamb has been installed plumb and square.		
13	Each lockset fully engages and freely operates		
14	If applicable ballistic trim bars have been installed per the approved shop drawings.		
15	The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers. One ID plate should be located on the hatch frame and one ID plate should be located under the hatch leaf.		
16	Weather proofing and flashing is installed as shown on the approved shop drawings.

U. S. DEPARTMENT OF STATE
OVERSEAS BUILDINGS OPERATIONS
GUIDE SPECIFICATIONS

2023-10-01

SECTION 080001 – BLAST REQUIREMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes performance and design requirements, as well as administrative and procedural requirements for quality control and quality assurance as related to blast resistance requirements. Related specification sections include, but are not limited to the following:

1. Section 083454 Forced Entry (FE)/Ballistic Resistant (BR) Door Assemblies.
2. [Division 08 Section on Aluminum Window Walls & Windows.]
3. Section 084414 Structurally-Framed Security Curtain Wall System
4. Section 085651 Aluminum Security Windows
5. Section 085652 Aluminum Security Teller Windows.
6. Section 088855 Security Glazing.
7. Section 089117 Security Louvers.
8. [Division 08 Section on Fixed Non-Security Louvers.]

1.2 SUBMITTALS

A. Blast Report: Submit blast report containing blast environment and corresponding building design based on loads identified in Table 2.1 “Façade Blast Loads.” This report shall have a summary narrative, tabular summaries of member requirements and responses, design sketches and supporting calculations with their own table of contents. Discussion of ductile detailing for canopies and similar elements shall be included in the Blast Report. Incorporate methodology and requirements identified in OBO International Codes Supplements (OBO-ICS) to the International Building Code (IBC) Chapter 16. Blast Report and window shop drawings shall be submitted at the same time.

B. Design Calculations: Submit design analysis and calculations verifying conformance of ALL façade components to the specified blast criteria; such as glazing, mullions, steel plate assemblies, etc. All facade calculations that demonstrate the performance of the blast resistant facade must use the WINGARD software (no earlier than version PE 5.5.1) for determining the glass reaction forces and the industry standard of practice for performing dynamic response calculations. Calculation submittals shall be signed and sealed by a Registered Professional Engineer.

1. Loads imposed on Structure: All submitted calculations must clearly indicate the loads imposed on the supporting structure by the facade. Calculations shall indicate both the blast loads imposed and the conventional loads imposed separately.
2. Calculations shall use a consistent reference system and be coordinated with labeling system used on shop drawings.

C. Shop Drawings: Submit shop drawings signed and sealed by a Registered Professional Engineer, showing the proposed facade profiles and anchorages that demonstrate compliance with the design intent.

D. Qualification Data: Submit qualifications for window Subcontractors and Subcontractor's blast engineers verifying years of experience; include list of completed projects having similar scope of Work identified by name, location, date, reference names and phone numbers.

1.3 QUALITY ASSURANCE

A. Contractor/Subcontractor Qualifications.

1. A firm with documented, successful experience with work comparable to that specified in applicable components included in Part 2 of this Section.

B. Engineer Qualifications:

1. All calculations using dynamic 'blast loads' specified in terms of a peak pressure and impulse shall be performed by a Registered Professional Engineer having formal training in structural dynamics, and 5 years demonstrated experience with blast resistant design, determining dynamic loads, structural detailing, and dynamic response.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS, GENERAL

A. References:

1. Design and analysis referenced standards:

a. OBO International Codes Supplement (OBO-ICS) to the International Building Code (IBC); edition as identified in the project contract.
b. United Facilities Criteria (UFC), Design and Analysis of Hardened Structures to Conventional Weapons Effects, UFC 3-340-01.
c. United Facilities Criteria (UFC), Structures to Resist the Effects of Accidental Explosions, UFC 3-340-02.
d. U.S. General Services Administration, Window Glazing Analysis Response and Design, WINGARD, Technical Manual. Applied Research Associates, Inc. Vicksburg, MS, 2005

2. Unless otherwise noted, all requirements of UFC 3-340-02 and the OBO ICS IBC will be enforced.

B. Definitions:

1. Conventional Loads: Loads acting on façade elements defined by applicable building codes that are not blast loads. Conventional Loads include, but are not limited to wind, thermal and seismic loads.
2. Strength Increase Factor (SIF): An increase in design yield strength to account for the tendency of materials to have a yield strength capacity greater than the specified minimum.
3. Dynamic Increase Factor (DIF): An increase in design yield strength to account for the increase strain rates of a material under rapidly applied dynamic loading.

C. Delegated Design:

1. General: Provide delegated design services, submittals, shop drawings and calculations in conformance with the standards and references identified in this Section, and requirements identified in this Specification Section. The work in this Section requires delegated design services except for specific work that is specifically excluded. In addition, refer to other technical specification sections, Division 01 Sections, and general contract requirements regarding Delegated Design.

D. Blast Loads: Blast loads as identified in Table 2.1, “Façade Blast Loads.”. These shall be characterized by a linearly decaying pressure-time history defined by the given peak pressure and impulse. Negative phase effects shall not be considered. All glazing shall be designed for the following dynamic loading:

TABLE 2.1 – FAÇADE BLAST LOADS

Building	Facade	Level	Window Types	Pressure kPa (psi)	Impulse kPa -msec (psi-ms)
<Building A>	<North>	<L1 to roof>			
	<South>	<L2 to Lx>			
	<East>				
<Building B>	<North>				
	<East>				
<Building C>	<South>				

2.2 EXTERIOR GLASS AND WINDOW WALL BLAST DESIGN CRITERIA

A. General: All glass and window wall systems (frames, connections, anchorages, and other window hardware) shall be designed, fabricated, and installed to resist the applied blast loads defined in this section. All glass systems located directly in front of the blast resistant exterior concrete walls are exempt from these requirements. Refer to the Part 2 Article on EXTERIOR DOOR BLAST DESIGN CRITERIA for blast design requirements for glazing in doors and fixed glazing adjacent to doors such as transoms and sidelites.

B. Load Combinations: The dynamic blast pressures shall be considered as an independent load case and shall not be combined with wind or other design loads, with the exception of gravity; however, designing to meet the blast requirements does not eliminate the need to design the window systems to meet all other applicable loading conditions. The window system components are subject to compliance with all other conventional requirements and service loads.

C. The blast load used for the design of the provided window systems shall correspond to the blast loads at the location of the particular window, as identified in Table 2.1, "Façade Blast Loads."

D. Glass Performance Criteria: Design, fabricate, and install glass units to comply with the following:

1. Software:

a. Blast analysis of rectangular glazing shall be completed using the computer software WINGARD (no earlier than version PE 5.5.1), distributed by the General Services Administration. The recommended glazing parameters are identified in Table 2.2-1, "Glass and Laminate Material Properties."

b. For non-rectangular blast window openings, high fidelity Finite Element Analysis (FEA) modeling is required in order to investigate possible bite failure from the nonsymmetric glazing response. The following procedure specifies the minimum requirements that must be satisfied:

1) FEA Boundary Condition Criteria:

a) Window frame shall utilize rigid elements.
b) Glass bite modeled using actual dimensions. The captured bite shall account for the glass edge being held by the frame to resist displacements perpendicular to the plane of the window.
c) Glass shall not be directly attached to the frame and shall allow for any pull-out displacement.
d) Glass to frame (or gasket) interaction may account for friction.
e) Gaskets may be included and bonded to the frame but shall not be bonded to the glass.
f) Gasket preload is acceptable if documented as in accordance with field or manufacturer confirmed installation processes.

2) Calibration of FEA Model to Wingard:

a) Develop a Calibration FEA model to match Wingard performance:
b) Calibration FEA model for a <u>rectangular</u> opening shall match input parameters for the associated Wingard run (i.e. dimensions, bite, loading, and glass make-up).
c) Calibration FEA model shall use boundary condition criteria specified in section 1. Specifically, the boundary conditions integral to the Wingard development are not acceptable (in terms of symmetry, edge restraint, and shape of opening).

d) Tune the response of the FEA calibration to match the performance condition, maximum displacement, and predicted pull-out as they represent the type of physical results from tests that were used to validate Wingard and that are routinely observed or measured in blast tests.
e) GSA Condition 2 (cracked stays in frame) from Wingard results.
f) Maximum predicted inner lite displacement perpendicular to the glass.
g) Predicted pull-out in terms of glass edge node in-plane displacement.
h) Acceptable parameters for tuning include mesh size, element formulation, material properties, and friction at the frame (or gaskets if included).

3) Non-rectangular FEA Model:

a) Incorporate the parameters from the tuned FEA model and modify the geometry to match the shape of the non-rectangular window.
b) Non-rectangular model shall use boundary condition criteria specified in section 1.
c) A Friedlander pressure curve with negative phase is permissible.

2. Glass Hazard Level: Required glazing response under the design blast loading provided below. Where required per the project requirements and the OBO-ICS IBC, glazing layups must have a Forced Entry (FE) resistance rating and a Ballistic Resistance (BR) rating.

a. Glazing response shall be limited to Performance Condition 2 or better.

3. Sizing the glass layup and calculating glass edge reactions shall be computed as follows:

a. Probability of failure for sizing glazing layup:

1) Annealed Glass - 8 breaks per 1000 (static and dynamic).
2) Strengthened and Tempered Glass – 1 break per 1000 (static and dynamic).

b. Probability of failure for frame design:

1) All Glass – 750 breaks per 1000 (dynamic only; static probability of failure as specified for sizing glazing layup).
2) Frame design shall be designed for the highest edge shears between 1 break per 1000 (static and dynamic) and 750 breaks per 1000 (dynamic only).

c. The following material properties and probabilities of failure shall be used for the design of the glass.

TABLE 2.2-1 – GLASS AND LAMINATE MATERIAL PROPERTIES

Material Type	Annealed	Heat Strengthened	Fully Thermally Tempered	Polycarbonate	Polyvinyl Butyral (PVB)	Sentry-Guard (SG)
Young's Modulus, ksi	10,000	10,000	10,000	345	50.0	30.0
Poisson's Ratio	0.22	0.22	0.22	0.38	0.50	0.50
Elongation at Break	-	-	-	-	1.37	0.5
Unit Weight, pcf	155.5	155.5	155.5	69.1	65.7	58.8
Peak Stress corresponding to Pf, psi	4,000	7,600	16,000	9,500	3,500	4,000
Coefficient of Variation	0.28	0.15	0.10	0.15	-	-

4. Glazing retention: The glass unit retention system shall resist the blast loads specified in this section within limits and under conditions indicated.

   a. Glazing Bite: Provide a glazing bite engineered to resist the design blast loading. The basis of design is shown on the architectural drawings. Alternate bite details are acceptable if proven through engineering. Minimum frame bite shall be 25-mm.

E. Window Frame Performance Blast Design Criteria:

1. Design Methods: The performance of the window frames shall be demonstrated by one of the following methods:

   a. Inelastic dynamic structural analysis methods. Such analysis methods must be validated through comparison with explosive testing of similar components.
   b. Explosive testing. Explosive testing may be used for components or systems for which there are not validated analysis methods. Explosive testing methods are further defined in the major paragraph on "Blast Test Performance Requirements" within this Article on EXTERIOR GLASS AND WINDOW WALL BLAST DESIGN CRITERIA. Explosive testing is not mandatory.

2. Blast Loads: Window wall systems (frames, connections, anchorages, and other window hardware) shall be designed for the blast loads defined in Table 2.1, "Façade Blast Loads."
3. Window System Performance Criteria: Design and fabricate glazed window and window wall systems to comply with the following:

    a. Steel Window Frame Performance Criteria:

        1) Rotation (θ) and Ductility(μ): Window and window wall mullion end rotations and displacement ductility shall not exceed the following at the specified design blast loading:

            a) Mullion member over entire span: $\theta \leq 9°$ and $\mu \leq 15$.

    b. Aluminum Window Frame Performance Criteria:

        1) Rotation (θ) and Ductility(μ): Window and window wall mullion end rotations and displacement ductility shall not exceed the following at the specified design blast loading:

            a) For members where ultimate tensile strength is 10% higher than yield strength: $\theta \leq 9°$ and $\mu \leq 15$
            b) For members where ultimate tensile strength is NOT 10% higher than yield strength: $\mu \leq 1$

    c. All blast window frame design shall address, at a minimum, the response of axial effects on connections, stability and compression buckling of the mullions, and the potential for glazing and bite failure at the large response limits provided above.
    d. Rebound shall be considered in the design of the frame and anchorage system.
    e. Components: Design window and window wall mullions and frames using the expected dynamic yield strength of their respective materials. Expected dynamic yield strength shall account for SIF and DIF as defined in Table 2.2-2, "Material Enhancement Factors."
    f. Metal Shapes and Extrudes:

        1) Material Enhancement Factors: Material properties shall be enhanced with the applicable factors listed in Table 2.2-2, "Material Enhancement Factors.". These factors shall be applied to the yield stress for the members. These dynamic enhancement factors do not apply to connection design.

TABLE 2.2-2 – MATERIAL ENHANCEMENT FACTORS

Material	Grade	SIF	DIF
Aluminum	6061-T6	1.14	1.02
Aluminum	6063-T6	1.24	1.02
Steel	A992, A500 Gr. B, A572 Gr. 50, or Equivalent	1.05	1.19
Steel	A36, or Equivalent	1.10	1.29

2) If aluminum extrusion and steel are both assumed to contribute to blast resistance, the steel and the aluminum mullions shall be designed as combined or composite sections as defined below:

   a) Composite section properties of mullion components may only be used if calculations demonstrate strain compatibility across the interface between the aluminum and steel components.
   b) Combined section properties of mullion components may be used if calculations demonstrate deformation compatibility across the interface between the aluminum and steel components.

3) Snap on elements or other aluminum extrusions that are not structurally connected together to act as a single composite member under blast deformations shall not be considered in determining the structural capacity of the mullion.

4. Anchorage and Connection Design: The glazed aluminum window and window wall system anchorages shall be designed, fabricated, and installed to meet the conditions specified in this Section within limits and under conditions indicated.

   a. Reaction Forces: Connections to the structure shall be engineered for the calculated reaction forces of the specified design load of the window and window wall framing members.
   b. Contractor to be responsible for coordination of window anchorage hardware and the supporting structure.
   c. Design anchorages and connections as per the latest versions of AISC LRFD manuals for steel connections, the latest version of the Aluminum Design Manual for aluminum connections, and the latest version of ACI-318 or PCI Design Handbook for anchorage to concrete. Where detailing is partially or completely out

of the scope of ACI-318, supplement the principles laid out in this document with rational engineering and industry-accepted principles of mechanics or documented design methodologies approved by the Project Director/COR. Clearly document all assumptions used for the design of the anchorages and connections for review by the design team.

1) Load factor for blast reactions shall be 1.0.
2) Resistance factors specified in the noted design manuals shall be used to design applicable components.
3) Where a resistance factor is not specified or an LRFD code does not apply, use a resistance factor of 0.67 on the ultimate strength of the component.
4) Anchor/breakout reinforcing shall be designed as required by embed design.

F. Blast Test Performance Requirements: Performance of exterior windows and window wall systems may be demonstrated through blast testing that complies with the performance criteria described below.

1. Test results for system assemblies similar to the exterior windows and window wall systems provided for this Project. These test results shall be supported by calculations, subject to the requirements herein.

   a. The Blast Consultant for this Project shall determine the applicability of the test results for the similar window system assemblies.

2. Testing methods shall adhere to ASTM F1642.
3. OBO reserves the right to reject test data considered insufficient.

G. Unless otherwise noted, all requirements of UFC 3-340-02 and the 2019 OBO Design Standards shall be enforced.

2.3 EXTERIOR METAL WINDOW WALL INFILL PANEL BLAST DESIGN CRITERIA

A. General: Exterior non-glazed metal infill panels, that are supported by the exterior window wall systems, shall be designed, fabricated, and installed to resist the applied blast loads defined in this section, preferably by the window wall subcontractor. Non-glazed surfaces located along the exterior facade shall be designed for blast. The Contractor is responsible for the final design and coordination of all delegated design items, including any metal infill plates or panels required to meet blast and/or FE/BR requirements. This includes metal closure plate assemblies (plates, tubes, welds, bolts, embed plate, etc.) at the boundary of the exterior façade and adjacent the concrete walls.

B. Load Combinations: The dynamic blast pressures shall be considered as an independent load case and shall not be combined with wind or other design loads, with the exception of gravity; however, designing to meet the blast requirements does not eliminate the need to design the non-glazed surfaces to meet all other applicable loading conditions.

C. The blast load used for the design of the provided infill panels shall correspond to the location of the particular panel, as identified in Table 2.1, "Facade Blast Loads."

D. Performance Criteria: Design, fabricate, and install non-glazed units to comply with the following with the aluminum or steel performance requirements listed below:

1. Aluminum non-glazed components with ultimate tensile strength greater than 10% of the yield strength.

   a. End rotation shall not exceed: $\theta \leq 9°$ and $\mu \leq 15$.

2. Steel non-glazed components.

   a. Steel plate shall not exceed an end rotation of $\theta \leq 10°$ and $\mu \leq 30$.
   b. Steel studs, with yield strength less than 33 ksi, or steel section supporting non-glazed surfaces shall not exceed end rotation of $\theta \leq 9°$ and $\mu \leq 20$ for a linear displaced shape.

3. Connections shall be design per the requirements listed in connections subparagraph in the major paragraph on "Window Frame Performance Blast Design Criteria" in the Part 2 Article on EXTERIOR GLASS AND WINDOW WALL BLAST DESIGN CRITERIA.

2.4 EXTERIOR DOOR BLAST DESIGN CRITERIA

A. All exterior doors located within a blast-resistant building envelope shall satisfy blast requirements specified in Section 083454 "FE/BR Door Assemblies."

PART 3 - EXECUTION (NOT USED)

END OF SECTION 080001

SECTION 081115 - HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes doors which do not have FE/BR requirements:

1. Interior standard steel doors and frames.
2. Exterior standard steel doors and frames.
3. Interior custom hollow-metal doors and frames.
4. Exterior custom hollow-metal doors and frames.

B. Related Requirements:

1. Section 083454 “FE/BR Door Assemblies.”
2. Section 087135 "Non-Security Door Hardware" for door hardware for hollow-metal doors.
3. Division 08 Section on general “Glazing” for glass view panels in hollow metal doors.
4. Division 09 Sections for painting and coatings.

1.2 DEFINITIONS

A. Minimum Thickness: Minimum thickness of base metal without coatings according to NAAMM-HMMA 803 or SDI A250.8.

1.3 COORDINATION

A. Coordinate anchorage installation for hollow-metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

B. Coordinate requirements for installation of door hardware, electrified door hardware, and access control and security systems.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, core descriptions, **[fire-resistance ratings,] [temperature-rise ratings,]** and finishes.

B. Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Environmental Product Declaration: For each product.
3. Health Product Declaration: For each product.
4. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

C. Shop Drawings: Include the following:

1. Elevations of each door type.
2. Details of doors, including vertical- and horizontal-edge details and metal thicknesses.
3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
4. Locations of reinforcement and preparations for hardware.
5. Details of each different wall opening condition.
6. Details of electrical raceway and preparation for electrified hardware, access control systems, and security systems.
7. Details of anchorages, joints, field splices, and connections.
8. Details of accessories.
9. Details of moldings, removable stops, and glazing.

D. Product Schedule: For hollow-metal doors and frames, prepared by or under the supervision of supplier, using same reference numbers for details and openings as those on Drawings. Coordinate with final door hardware schedule.

1.6 INFORMATIONAL SUBMITTALS

A. Product Test Reports: For each type of hollow-metal door and frame assembly, for tests performed by a qualified testing agency.

B. Oversize Construction Certification: For assemblies required to be fire-rated and exceeding limitations of labeled assemblies.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow-metal doors and frames palletized, packaged, or crated to provide protection during transit and Project-site storage. Do not use nonvented plastic.

1. Provide additional protection to prevent damage to factory-finished units.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow-metal doors and frames vertically under cover at Project site with head up. Place on minimum 100-mm- (4-inch-) high wood blocking. Provide minimum 6-mm (1/4-inch) space between each stacked door to permit air circulation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction for fire-protection ratings**[and temperature-rise limits]** indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Smoke- and Draft-Control Assemblies: Provide assemblies with gaskets listed and labeled for smoke and draft control by a qualified testing agency acceptable to authorities having jurisdiction, based on testing according to UL 1784 and installed in compliance with NFPA 105.

2. [Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.]

3. Temperature-Rise Limit: **[Where indicated] [At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 250 deg C (450 deg F) above ambient after 30 minutes of standard fire-test exposure.

B. Fire-Rated, Borrowed-Lite Assemblies: Complying with NFPA 80 and listed and labeled by a qualified testing agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257 or UL 9.

C. Thermally Rated Door Assemblies: Provide door assemblies with U-factor of not more than **[2.84 W/K x sq. m** (0.50 deg Btu/F x h x sq. ft.)**] [2.27 W/K x sq. m** (0.40 deg Btu/F x h x sq. ft.)**] [2.16 W/K x sq. m** (0.38 deg Btu/F x h x sq. ft.)**] <Insert U-factor>** when tested according to ASTM C 518.

2.2 INTERIOR STANDARD STEEL DOORS AND FRAMES

A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Standard-Duty Doors and Frames: SDI A250.8, Level 1; SDI A250.4, Level C. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: **[45 mm** (1-3/4 inches)**] [35 mm** (1-3/8 inches)**]**.
c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 0.8 mm (0.032 inch).
d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless]**.
e. Core: **[Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated]**doors.

2. Frames:

a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.0 mm (0.042 inch).
b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
c. Construction: Full profile welded.

3. Exposed Finish: Prime.

C. Heavy-Duty Doors and Frames: SDI A250.8, Level 2; SDI A250.4, Level B. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.0 mm (0.042 inch).
d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless]**.
e. Core: **[Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated]**doors.

2. Frames:

a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch).
b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
c. Construction: Full profile welded.

3. Exposed Finish: Prime.

D. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3; SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

   a. Type: As indicated in the Door and Frame Schedule.
   b. Thickness: 45 mm (1-3/4 inches).
   c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch).
   d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless] [Model 3, Stile and Rail]**.
   e. Core: **[Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
   f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board] core for fire-rated [and temperature-rise-rated]**doors.

2. Frames:

   a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch).
   b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
   c. Construction: Full profile welded.

3. Exposed Finish: Prime.

E. Maximum-Duty Doors and Frames: SDI A250.8, Level 4; SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

   a. Type: As indicated in the Door and Frame Schedule.
   b. Thickness: 45 mm (1-3/4 inches).
   c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.7 mm (0.067 inch).
   d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless]**.
   e. Core: **[Manufacturer's standard] [Kraft-paper honeycomb] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
   f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board]** core for fire-rated **[and temperature-rise-rated]**doors.

2. Frames:

   a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.7 mm (0.067 inch).
   b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
   c. Construction: Full profile welded.

3. Exposed Finish: Prime.

2.3 EXTERIOR STANDARD STEEL DOORS AND FRAMES

A. Construct hollow-metal doors and frames to comply with standards indicated for materials, fabrication, hardware locations, hardware reinforcement, tolerances, and clearances, and as specified.

B. Heavy-Duty Doors and Frames: SDI A250.8, Level 2; SDI A250.4, Level B. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: Metallic-coated steel sheet, minimum thickness of 1.0 mm (0.042 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]**coating.
d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless]**.
e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
f. Bottom Edges: Close bottom edges of doors**[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
g. Core: **[Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
h. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 1.3 mm (0.053 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]**coating.
b. Construction: Full profile welded.

3. Exposed Finish: Prime.

C. Extra-Heavy-Duty Doors and Frames: SDI A250.8, Level 3; SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: Metallic-coated steel sheet, minimum thickness of 1.3 mm (0.053 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]**coating.
d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless] [Model 3, Stile and Rail]**.
e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.

f. Bottom Edges: Close bottom edges of doors**[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
g. Core: **[Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
h. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 1.3 mm (0.053 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]** coating.
b. Construction: Full profile welded.

3. Exposed Finish: Prime.

D. Maximum-Duty Doors and Frames: SDI A250.8, Level 4; SDI A250.4, Level A. **[At locations indicated in the Door and Frame Schedule]** <**Insert locations**>.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: Metallic-coated steel sheet, minimum thickness of 1.7 mm (0.067 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]** coating.
d. Edge Construction: **[Model 1, Full Flush] [Model 2, Seamless]**.
e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
f. Bottom Edges: Close bottom edges of doors**[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
g. Core: **[Manufacturer's standard] [Polystyrene] [Polyurethane] [Polyisocyanurate] [Vertical steel stiffener]**.
h. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener with insulation] [laminated mineral board]** core for fire-rated doors.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 1.7 mm (0.067 inch), with minimum **[ZF120 (A40)] [ZF180 (A60)]** coating.
b. Construction: Full profile welded.

3. Exposed Finish: Prime.

2.4 INTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

A. Hollow-Metal Doors and Frames: NAAMM-HMMA 860; SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of **[0.8 mm (0.032 inch)] [1.0 mm (0.042 inch)] [1.3 mm (0.053 inch)]**.
d. Edge Construction: **[Continuously welded with no] [Projection or tack welded with no] [Interlocking with] [Projection or tack welded with]** visible seam.
e. Core: Steel stiffened.
f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board]** core for fire-rated **[and temperature-rise-rated]**doors.

2. Frames:

a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch).
b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
c. Construction: **[Knocked down] [Slip-on drywall] [Face welded] [Full profile welded]**.

3. Exposed Finish: Prime.

B. Commercial Doors and Frames: NAAMM-HMMA 861; SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.0 mm (0.042 inch).
d. Edge Construction: Continuously welded with no visible seam.
e. Core: Steel stiffened.
f. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board]** core for fire-rated [and temperature-rise-rated]doors.

2. Frames:

a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch), except 1.7 mm (0.067 inch) for openings exceeding1219 mm (4 feet) wide.

b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same material as adjacent door frame.
c. Construction: **[Face] [Full profile]** welded.

3. Exposed Finish: Prime.

C. Commercial Laminated Doors and Frames: NAAMM-HMMA 867; SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of **[0.8 mm (0.032 inch)] [1.0 mm (0.042 inch)] [1.3 mm (0.053 inch)]**.
d. Edge Construction: **[Continuously welded with no visible seam] [Interlocking with visible seam] [Interlocking with no visible seam] [Projection, spot, or tack welded with or without visible seams]**.
e. Edge Bevel: **[Bevel lock and hinge edges 3.2 mm in 50 mm (1/8 inch in 2 inches)] [Bevel lock edge 3.2 mm in 50 mm (1/8 inch in 2 inches)]**.
f. Core: **[Kraft-paper honeycomb] [Polyisocyanurate] [Polystyrene] [Polyurethane] [Vertical steel stiffener]**.
g. Fire-Rated Core: Manufacturer's standard **[vertical steel stiffener] [laminated mineral board]** core for fire-rated **[and temperature-rise-rated]**doors.

2. Frames:

a. Materials: **[Uncoated] [Metallic-coated]** steel sheet, minimum thickness of 1.3 mm (0.053 inch).
b. **[Sidelite] [and] [Transom]** Frames: Fabricated from same thickness material as adjacent door frame.
c. Construction: **[Knocked down] [Slip-on drywall] [Face welded] [Full profile welded]**.

3. Exposed Finish: **[Prime] [Unprimed]**.

2.5 EXTERIOR CUSTOM HOLLOW-METAL DOORS AND FRAMES

A. Commercial Doors and Frames: NAAMM-HMMA 861; SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).

c. Face: Metallic-coated steel sheet, minimum thickness of 1.30 mm (0.053 inch), with minimum **[ZF120 (A40)] [ZF180 (G60 or A60)]** coating.
d. Edge Construction: Continuously welded with no visible seam.
e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
f. Bottom Edges: Close bottom edges of doors**[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
g. Core: Steel stiffened.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 1.3 mm (0.053 inch), except 1.7 mm (0.067 inch) for openings exceeding1200 mm (4 feet) wide; with minimum **[ZF120 (A40)] [ZF180 (G60 or A60)]** coating.
b. Construction: Full profile welded.

3. Exposed Finish: Prime.

B. Commercial Laminated Doors and Frames: NAAMM-HMMA 867; SDI A250.4, Physical Performance Level A. **[At locations indicated in the Door and Frame Schedule] <Insert locations>**.

1. Doors:

a. Type: As indicated in the Door and Frame Schedule.
b. Thickness: 45 mm (1-3/4 inches).
c. Face: Metallic-coated steel sheet, minimum thickness of **[1.3 mm (0.053 inch)] [1.0 mm (0.042 inch)]**, with minimum **[ZF120 (A40)] [ZF180 (G60 or A60)]** coating.
d. Edge Construction: **[Continuously welded with no visible seam] [Interlocking with visible seam] [Interlocking with no visible seam] [Projection, spot, or tack welded with or without visible seams]**.
e. Top Edge Closures: Close top edges of doors with flush closures of same material as face sheets. Seal joints against water penetration.
f. Bottom Edges: Close bottom edges of doors**[where required for attachment of weather stripping]** with end closures or channels of same material as face sheets. Provide weep-hole openings in bottoms of exterior doors to permit moisture to escape.
g. Core: **[Kraft-paper honeycomb] [Polyisocyanurate] [Polystyrene] [Polyurethane] [Vertical steel stiffener]**.

2. Frames:

a. Materials: Metallic-coated steel sheet, minimum thickness of 1.3 mm (0.053 inch), with minimum **[ZF120 (A40)] [ZF180 (G60 or A60)]** coating.
b. Construction: **[Knocked down] [Face welded] [Full profile welded]**.

3. Exposed Finish: **[Prime] [Unprimed]**.

2.6 BORROWED LITES

A. Fabricate of **[uncoated] [metallic-coated]** steel sheet, minimum thickness of **[1.3 mm (0.053 inch)] [1.0 mm (0.042 inch)]**.

B. Construction: **[Knocked down] [Face welded] [Full profile welded]**.

C. Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as metal as frames.

D. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.

2.7 HOLLOW-METAL PANELS

A. Provide hollow-metal panels of same materials, construction, and finish as adjacent door assemblies.

2.8 FRAME ANCHORS

A. Jamb Anchors:

1. Type: Anchors of minimum size and type required by applicable door and frame standard, and suitable for performance level indicated.
2. Quantity: Minimum of three anchors per jamb, with one additional anchor for frames with no floor anchor. Provide one additional anchor for each 600 mm (24 inches) of frame height above 2.1 m (7 feet).
3. Postinstalled Expansion Anchor: Minimum 10-mm- (3/8-inch-) diameter bolts with expansion shields or inserts, with manufacturer's standard pipe spacer.

B. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor.

C. Floor Anchors for Concrete Slabs with Underlayment: Adjustable-type anchors with extension clips, allowing not less than 50-mm (2-inch) height adjustment. Terminate bottom of frames at top of underlayment.

D. Material: ASTM A 879/A 879M, Commercial Steel (CS), 12G (04Z) coating designation; mill phosphatized.

1. For anchors built into exterior walls, steel sheet complying with ASTM A 1008/A 1008M or ASTM A 1011/A 1011M; hot-dip galvanized according to ASTM A 153/A 153M, Class B.

2.9 MATERIALS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

C. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

D. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B.

E. Inserts, Bolts, and Fasteners: Hot-dip galvanized according to ASTM A 153/A 153M.

F. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hollow-metal frames of type indicated.

G. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics.

H. Glazing:

1. Factory install glazing in doors.
2. Buildings Subject to Blast Requirements: Glazing in doors shall use laminated tempered glass or laminated heat-strengthened glass, minimum thickness of 12-mm for laminated portion, with 25-mm frame bite. For doors with insulated glass, laminated portion shall be on interior (protected) side of building. Refer to OBO-ICS IBC Section 422.
3. In addition, comply with requirements in Division 08 general “Glazing” Section.

2.10 FABRICATION

A. Door Astragals: Provide overlapping astragal on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 19 mm (3/4 inch) beyond edge of door on which astragal is mounted or as required to comply with published listing of qualified testing agency.

B. Hollow-Metal Frames: Fabricate in one piece except where handling and shipping limitations require multiple sections. Where frames are fabricated in sections, provide alignment plates or angles at each joint, fabricated of metal of same or greater thickness as frames.

1. **[Sidelite] [and] [Transom Bar]** Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by welding.
2. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated.
3. Door Silencers: Except on weather-stripped frames, drill stops to receive door silencers as follows. Keep holes clear during construction.

   a. Single-Door Frames: Drill stop in strike jamb to receive three door silencers.
   b. Double-Door Frames: Drill stop in head jamb to receive two door silencers.

C. Hardware Preparation: Factory prepare hollow-metal doors and frames to receive templated mortised hardware, and electrical wiring; include cutouts, reinforcement, mortising, drilling, and tapping according to SDI A250.6, the Door Hardware Schedule, and templates.

1. Reinforce doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.
2. Comply with BHMA A156.115 for preparing hollow-metal doors and frames for hardware.

D. Glazed Lites: Provide stops and moldings around glazed lites where indicated. Form corners of stops and moldings with **[butted] [or] [mitered]** hairline joints.

1. Provide stops and moldings flush with face of door, and with **[beveled] [square]** stops unless otherwise indicated.
2. Multiple Glazed Lites: Provide fixed and removable stops and moldings so that each glazed lite is capable of being removed independently.
3. Provide fixed frame moldings on outside of exterior and on secure side of interior doors and frames. Provide loose stops and moldings on inside of hollow-metal doors and frames.
4. Coordinate rabbet width between fixed and removable stops with glazing and installation types indicated.
5. Provide stops for installation with countersunk flat- or oval-head machine screws spaced uniformly not more than 225 mm (9 inches) o.c. and not more than 50 mm (2 inches) o.c. from each corner.

2.11 STEEL FINISHES

A. Prime Finish: Clean, pretreat, and apply manufacturer's standard primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead- and chromate-free primer complying with SDI A250.10; recommended by primer manufacturer for substrate; compatible with substrate and field-applied coatings despite prolonged exposure.

PART 3 - EXECUTION

3.1 PREPARATION

A. Remove welded-in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces. Touch up factory-applied finishes where spreaders are removed.

B. Drill and tap doors and frames to receive nontemplated, mortised, and surface-mounted door hardware.

3.2 INSTALLATION

A. General: Install hollow-metal doors and frames plumb, rigid, properly aligned, and securely fastened in place. Comply with approved Shop Drawings and with manufacturer's written instructions.

B. Hollow-Metal Frames: Comply with SDI A250.11.

1. Set frames accurately in position; plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete, remove temporary braces without damage to completed Work.

    a. Where frames are fabricated in sections, field splice at approved locations by welding face joint continuously; grind, fill, dress, and make splice smooth, flush, and invisible on exposed faces. Touch-up finishes.
    b. Install frames with removable stops located on secure side of opening.

2. Fire-Rated Openings: Install frames according to NFPA 80.
3. Floor Anchors: Secure with postinstalled expansion anchors.

    a. Floor anchors may be set with power-actuated fasteners instead of postinstalled expansion anchors if so indicated and approved on Shop Drawings.

4. Solidly pack mineral-fiber insulation inside frames.
5. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with grout or mortar.

6. In-Place Concrete or Masonry Construction: Secure frames in place with postinstalled expansion anchors.**[Countersink anchors, and fill and make smooth, flush, and invisible on exposed faces.]**
7. Installation Tolerances: Adjust hollow-metal frames to the following tolerances:

    a. Squareness: Plus or minus 1.6 mm (1/16 inch), measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.

b. Alignment: Plus or minus 1.6 mm (1/16 inch), measured at jambs on a horizontal line parallel to plane of wall.
c. Twist: Plus or minus 1.6 mm (1/16 inch), measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
d. Plumbness: Plus or minus 1.6 mm (1/16 inch), measured at jambs at floor.

C. Hollow-Metal Doors: Fit and adjust hollow-metal doors accurately in frames, within clearances specified below.

1. Non-Fire-Rated Steel Doors: Comply with SDI A250.8.
2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.
3. Smoke-Control Doors: Install doors according to NFPA 105.

D. Glazing: Comply with installation requirements in Division 08 Section on "Glazing" and with hollow-metal manufacturer's written instructions.

3.3 CLEANING AND TOUCHUP

A. Prime-Coat Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat and apply touchup of compatible air-drying, rust-inhibitive primer.

END OF SECTION 081115

SECTION 081415 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Solid-core doors with **[wood-veneer] [MDO] [hardboard or MDF] [and] [plastic-laminate]** faces.
2. Hollow-core doors with **[wood-veneer] [hardboard or MDF] [and] [plastic-laminate]** faces.
3. **[Shop priming] [Factory finishing]** flush wood doors.
4. Factory fitting flush wood doors to frames and factory machining for hardware.

B. Related Requirements:

1. **[Section 062025 "Interior Finish Carpentry] [Section 064023 "Interior Architectural Woodwork"]** for wood door frames**[including fire-rated wood door frames]**.
2. Division 06 Section "Flush Wood Paneling" for requirements for veneers from the same flitches for both flush wood doors and flush wood paneling.
3. Division 08 Section on general "Glazing" for glass view panels in flush wood doors.
4. Division 08 Section “Wood Sound Control Door Assemblies” for acoustically rated wood door application.
5. Section 087135 “Non-Security Door Hardware.”
6. Division 09 Sections on painting, coatings, and finishing for field finishing doors.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of door. Include details of core and edge construction**[, louvers,]** and trim for openings.**[Include factory-finishing specifications.]**

B. Sustainable Design Submittals:

1. Product Certificates: For materials manufactured within 150 km (100 miles) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
2. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
3. Chain-of-Custody Qualification Data: For manufacturer and vendor.
4. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

5. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; and the following:

1. Dimensions and locations of blocking.
2. Dimensions and locations of mortises and holes for hardware.
3. Dimensions and locations of cutouts.
4. Undercuts.
5. Requirements for veneer matching.
6. Doors to be factory finished and finish requirements.
7. Fire-protection ratings for fire-rated doors.

D. Samples:

1. Factory finishes applied to actual door face materials, approximately 200 by 250 mm (8 by 10 inches), for each material and finish**.[For each wood species and transparent finish, provide set of three Samples showing typical range of color and grain to be expected in finished Work.]**
2. Plastic laminate, 150 mm (6 inches) square, for each color, texture, and pattern selected.
3. Louver blade and frame sections, 150 mm (6 inches) long, for each material and finish specified.
4. Frames for light openings, 150 mm (6 inches) long, for each material, type, and finish required.

1.4 INFORMATIONAL SUBMITTALS

A. Sample Warranty: For special warranty.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Mark each door on bottom rail with opening number used on Shop Drawings.

1.6 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weathertight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during remainder of construction period.

PART 2 - PRODUCTS

2.1 FLUSH WOOD DOORS, GENERAL

A. Quality Standard: In addition to requirements specified, comply with [AWI's, AWMAC's, and WI's "Architectural Woodwork Standards] [WDMA I.S.1-A, "Architectural Wood Flush Doors]."

1. Contract Documents contain selections chosen from options in quality standard and additional requirements beyond those of quality standard. Comply with those selections and requirements in addition to quality standard.

B. Regional Materials: Wood doors shall be manufactured within 100 miles (150 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

C. Certified Wood: Wood doors shall be certified as "FSC Pure"**[or "FSC Mixed Credit"]** according to FSC STD-01-001 and FSC STD-40-004.

D. Adhesives: Use adhesives that meet the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

E. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

F. WDMA I.S.1-A Performance Grade:

1. Heavy Duty unless otherwise indicated.
2. Extra Heavy Duty: **[Gathering and Classrooms] [representational and PAA and community use toilets][Non-corridor workrooms adjacent to enclosed offices with wood] [and] [patient rooms][and where indicated]**.
3. Standard Duty: **[Enclosed offices where scheduled as wood][Representational and PAA closets][Inside Residential dwelling unit interior doors] [and where indicated]**.

G. Fire-Rated Wood Doors: Doors complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 or UL 10C.

1. Oversize Fire-Rated Door Assemblies: For units exceeding sizes of tested assemblies, provide certification by a qualified testing agency that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.
2. Temperature-Rise Limit: **[Where indicated] [At vertical exit enclosures and exit passageways]**, provide doors that have a maximum transmitted temperature end point of not more than 250 deg C (450 deg F) above ambient after 30 minutes of standard fire-test exposure.
3. Cores: Provide core specified or mineral core as needed to provide fire-protection rating indicated.
4. Edge Construction: Provide edge construction with intumescent seals concealed by outer stile. Comply with specified requirements for exposed edges.
5. Pairs: Provide fire-retardant stiles that are listed and labeled for applications indicated without formed-steel edges and astragals. Provide stiles with concealed intumescent seals. Comply with specified requirements for exposed edges.

H. Smoke- and Draft-Control Door Assemblies: Listed and labeled for smoke and draft control, based on testing according to UL 1784.

I. Particleboard-Core Doors:

1. Particleboard: ANSI A208.1, **[Grade LD-1] [or] [Grade LD-2]**.
2. Particleboard: Straw-based particleboard complying with requirements in ANSI A208.1, Grade M-2, except for density.
3. Blocking: Provide wood blocking in particleboard-core doors as needed to eliminate through-bolting hardware.
4. Provide doors with **[glued-wood-stave] [or] [structural-composite-lumber]** cores instead of particleboard cores for doors indicated to receive exit devices.

J. Structural-Composite-Lumber-Core Doors:

1. Structural Composite Lumber: WDMA I.S.10.

   a. Screw Withdrawal, Face: 3000 N (700 lbf).
   b. Screw Withdrawal, Edge: 1800 N (400 lbf).

K. Mineral-Core Doors:

1. Core: Noncombustible mineral product complying with requirements of referenced quality standard and testing and inspecting agency for fire-protection rating indicated.
2. Blocking: Provide composite blocking with improved screw-holding capability approved for use in doors of fire-protection ratings indicated as needed to eliminate through-bolting hardware.
3. Edge Construction: At hinge stiles, provide laminated-edge construction with improved screw-holding capability and split resistance. Comply with specified requirements for exposed edges.

L. Hollow-Core Doors:

1. Construction: **[Institutional] [Standard]** hollow core.

2. Blocking: Provide wood blocking with minimum dimensions as follows:

   a. 125-by-450-mm (5-by-18-inch) lock blocks at both stiles.
   b. 250-mm (5-inch) top- and bottom-rail blocking.
   c. 64 mm (2-1/2-inch) midrail blocking.

2.2 VENEER-FACED DOORS FOR TRANSPARENT FINISH

A. Interior Solid-Core Doors <**Insert drawing designation**>:

1. Grade: **[Premium, with Grade AA faces] [Premium, with Grade A faces] [Custom (Grade A faces)] [Custom (Grade B faces)]**.

2. Species: **[Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>**.

3. Cut: **[Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut]**.

4. Match between Veneer Leaves: **[Book] [Slip] [Pleasing]** match.

5. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
6. Pair and Set Match: Provide for doors hung in same opening**[or separated only by mullions]**.

7. Room Match: Match door faces within each separate room or area of building. Corridor-door faces do not need to match where they are separated by **[3 m (10 feet)] [6 m (20 feet)]** <**Insert dimension**> or more.
8. Exposed Vertical Edges: Same species as faces or a compatible species - edge Type A.
9. Core: **[Particleboard] [Glued wood stave] [Structural composite lumber] [Either glued wood stave or structural composite lumber] [Either glued or nonglued wood stave or structural composite lumber]**.
10. Construction: **[Five] [Five or seven]** plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before veneering.

B. Interior Hollow-Core Doors <**Insert drawing designation**>:

1. Grade: **[Premium, with Grade AA faces] [Premium, with Grade A faces] [Custom (Grade A faces)] [Custom (Grade B faces)]**.

2. Species: **[Anigre] [Select white ash] [Figured select white ash] [Select white birch] [Select red birch] [Cherry] [Select red gum] [Figured select red gum] [Select white maple] [Red oak] [White oak] [Persimmon] [Sapele] [Sycamore] [Walnut] <Insert species>**.

3. Cut: **[Rotary cut] [Plain sliced (flat sliced)] [Quarter sliced] [Rift cut]**.

4. Match between Veneer Leaves: **[Book] [Slip] [Pleasing]** match.

5. Assembly of Veneer Leaves on Door Faces: **[Center-balance] [Balance] [Running]** match.
6. Pair and Set Match: Provide for doors hung in same opening**[or separated only by mullions]**.
7. Exposed Vertical Edges: Same species as faces or a compatible species - edge Type A.
8. Construction: Seven plies.

2.3 DOORS FOR OPAQUE FINISH

A. Interior Solid-Core Doors <**Insert drawing designation**>:

1. Grade: **[Premium] [Custom]**.

2. Faces: **[MDO] [Any closed-grain hardwood of mill option] [Hardboard or MDF]**.

a. Apply MDO to **[standard-thickness, closed-grain, hardwood face veneers] [or] [directly to high-density hardboard crossbands]**.
b. Hardboard Faces: ANSI A135.4, Class 1 (tempered) or Class 2 (standard).

3. Exposed Vertical**[and Top]** Edges: Any closed-grain hardwood.
4. Core: **[Particleboard] [Glued wood stave] [Structural composite lumber] [Either glued wood stave or structural composite lumber] [Either glued or nonglued wood stave or structural composite lumber]**.
5. Construction: **[Three] [Five] [Five or seven]** plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before veneering.**[Faces are bonded to core using a hot press.]**
6. Construction: **[Three] [Seven]** plies, either bonded or nonbonded.

B. Interior Hollow-Core Doors <**Insert drawing designation**>:

1. Grade: **[Premium] [Custom]**.
2. Faces: **[Any closed-grain hardwood of mill option] [Hardboard or MDF]**.

a. Hardboard Faces: ANSI A135.4, Class 1 (tempered) or Class 2 (standard).
b. MDF Faces: ANSI A208.2, Grade 150 or Grade 160.

3. Exposed Vertical**[and Top]** Edges: Any closed-grain hardwood.

2.4 PLASTIC-LAMINATE-FACED DOORS

A. Interior Solid-Core Doors

1. Grade: **[Premium] [Custom]**.

2. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, **[Grade HGS] [Grade HSH]**.
3. Colors, Patterns, and Finishes: **[As indicated] [As selected by Project Director/COR from laminate manufacturer's full range of products]**.
4. Exposed Vertical Edges: **[Hardwood edges for staining to match faces] [Hardwood edges for painting] [Plastic laminate that matches faces, applied before faces]**.
5. Core: **[Particleboard] [Glued wood stave] [Structural composite lumber] [Either glued wood stave or structural composite lumber]**.

6. Construction: Three plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before faces are applied.**[Faces are bonded to core using a hot press.]**
7. Construction: Five plies. Stiles and rails are bonded to core, then entire unit is abrasive planed before faces and crossbands are applied.**[Faces are bonded to core using a hot press.]**

B. Interior Hollow-Core Doors <**Insert drawing designation**>:

1. Grade: **[Premium] [Custom]**.

2. Plastic-Laminate Faces: High-pressure decorative laminates complying with NEMA LD 3, **[Grade HGS] [Grade HSH]**.
3. Colors, Patterns, and Finishes: **[As indicated] [As selected by Project Director/COR from laminate manufacturer's full range of products]**.
4. Exposed Vertical Edges: **[Hardwood edges for staining to match faces] [Hardwood edges for painting] [Plastic laminate that matches faces, applied before faces]**.

2.5 LIGHT FRAMES AND LOUVERS

A. Wood Beads for Light Openings in Wood Doors: Provide manufacturer's standard wood beads unless otherwise indicated.

1. Wood Species: **[Same species as door faces] [Species compatible with door faces] [Any closed-grain hardwood]**.
2. Profile: **[Flush rectangular beads] [Recessed tapered beads] [Recessed tapered beads with exposed banding] [Lipped tapered beads] [Manufacturer's standard shape]**.
3. At wood-core doors with 20-minute fire-protection ratings, provide wood beads and metal glazing clips approved for such use.

B. Wood-Veneered Beads for Light Openings in Fire-Rated Doors: Manufacturer's standard wood-veneered noncombustible beads matching veneer species of door faces and approved for use in doors of fire-protection rating indicated. Include concealed metal glazing clips where required for opening size and fire-protection rating indicated.

C. Metal Frames for Light Openings in Fire-Rated Doors: Manufacturer's standard frame formed of 0.048-inch-1.2-mm- thick, cold-rolled steel sheet; **[factory primed for paint] [with baked-enamel- or powder-coated]** finish; and approved for use in doors of fire-protection rating indicated.

D. Wood Louvers: Door manufacturer's standard solid-wood louvers unless otherwise indicated.

1. Wood Species: **[Same species as door faces] [Species compatible with door faces] [Any closed-grain hardwood]**.

E. Metal Louvers:

1. Blade Type: **[Vision-proof, inverted V] [Vision-proof, inverted Y] [Darkroom-type, double inverted V]**.
2. Metal and Finish: Hot-dip galvanized steel, 1.0 mm (0.040 inch) thick, **[factory primed for paint] [with powder-coated]** finish.

F. Louvers for Fire-Rated Doors: Metal louvers with fusible link and closing device, listed and labeled for use in doors with fire-protection rating of 1-1/2 hours and less.

1. Metal and Finish: Hot-dip galvanized steel, 1.0 mm (0.040 inch) thick, **[factory primed for paint] [with powder-coated]** finish.

2.6 FABRICATION

A. Factory fit doors to suit frame-opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.

1. Comply with NFPA 80 requirements for fire-rated doors.

B. Factory machine doors for hardware that is not surface applied. Locate hardware to comply with DHI-WDHS-3. Comply with final hardware schedules, door frame Shop Drawings, BHMA-156.115-W, and hardware templates.

1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
2. Metal Astragals: Factory machine astragals and formed-steel edges for hardware for pairs of fire-rated doors.

C. Transom and Side Panels: Fabricate matching panels with same construction, exposed surfaces, and finish as specified for associated doors. Finish bottom edges of transoms and top edges of rabbeted doors same as door stiles.

1. Fabricate door and transom panels with full-width, solid-lumber**[, rabbeted,]** meeting rails. Provide factory-installed spring bolts for concealed attachment into jambs of metal door frames.

D. Openings: Factory cut and trim openings through doors.

1. Light Openings: Trim openings with moldings of material and profile indicated.
2. Glazing:

a. Buildings Subject to Blast Requirements: Glazing in doors shall use laminated tempered glass or laminated heat-strengthened glass, minimum thickness of 12-mm for laminated portion, with 25-mm frame bite. For doors with insulated glass, laminated portion shall be on interior (protected) side of building. Refer to OBO-ICS IBC Section 422.
b. Factory install glazing in doors
c. In addition, comply with applicable requirements in Division 08 Section on general "Glazing."

3. Louvers: Factory install louvers in prepared openings.

2.7 SHOP PRIMING

A. Doors for Opaque Finish: Shop prime faces, all four edges, edges of cutouts, and mortises with one coat of wood primer specified in **[Division 09 Section on "Exterior Painting."] [Division 09 Section on "Interior Painting."]**

2.8 FACTORY FINISHING

A. General: Comply with referenced quality standard for factory finishing. Complete fabrication, including fitting doors for openings and machining for hardware that is not surface applied, before finishing.

1. Finish faces, all four edges, edges of cutouts, and mortises. Stains and fillers may be omitted on bottom edges, edges of cutouts, and mortises.

B. Factory finish doors where indicated in schedules or on Drawings as factory finished.

C. Transparent Finish:

1. Grade: **[Premium] [Custom]**.

2. Finish: AWI's, AWMAC's, and WI's "Architectural Woodwork Standards" **[System 5, conversion varnish] [System 9, UV curable, acrylated epoxy, polyester, or urethane] [System 10, UV curable, water based] [or] [System 11, catalyzed polyurethane] <Insert finish designation>**.
3. Staining: **[Match Project Director/COR's sample] [As selected by Project Director/COR from manufacturer's full range] [None required]**.

4. Effect: **[Open-grain finish] [Filled finish] [Semifilled finish, produced by applying an additional finish coat to partially fill the wood pores]**.
5. Sheen: **[Satin] [Semigloss]**.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine doors and installed door frames, with Installer present, before hanging doors.

1. Verify that installed frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Hardware: For installation, see Section 087135 "Non-Security Door Hardware."

B. Installation Instructions: Install doors to comply with manufacturer's written instructions and referenced quality standard, and as indicated.

1. Install fire-rated doors according to NFPA 80.
2. Install smoke- and draft-control doors according to NFPA 105.

C. Job-Fitted Doors: Align and fit doors in frames with uniform clearances and bevels as indicated below; do not trim stiles and rails in excess of limits set by manufacturer or permitted for fire-rated doors. Machine doors for hardware. Seal edges of doors, edges of cutouts, and mortises after fitting and machining.

1. Clearances: Provide 3.2 mm (1/8 inch) at heads, jambs, and between pairs of doors. Provide 3.2 mm (1/8 inch) from bottom of door to top of decorative floor finish or covering unless otherwise indicated. Where threshold is shown or scheduled, provide1/4 inch6.4 mm from bottom of door to top of threshold unless otherwise indicated.

a. Comply with NFPA 80 for fire-rated doors.

2. Bevel non-fire-rated doors 3.2 mm in 50 mm (1/8 inch in 2 inches) 3-1/2 degrees at lock and hinge edges.

3. Bevel fire-rated doors 3.2 mm in 50 mm (1/8 inch in 2 inches) 3-1/2 degrees at lock edge; trim stiles and rails only to extent permitted by labeling agency.

D. Factory-Fitted Doors: Align in frames for uniform clearance at each edge.

E. Factory-Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.3 ADJUSTING

A. Operation: Rehang or replace doors that do not swing or operate freely.

B. Finished Doors: Replace doors that are damaged or that do not comply with requirements. Doors may be repaired or refinished if Work complies with requirements and shows no evidence of repair or refinishing.

END OF SECTION 081415

SECTION 083115 - ACCESS DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes access doors and frames for walls and ceilings.

B. Related Requirements:

1. Division 07 Sections for roof hatches.
2. Section 083454 "Forced-Entry Resistant (FE) and Ballistic Resistant (BR) Door Assemblies" for access doors and frames for security applications.
3. Section 087135 “Non-Security Door Hardware.”
4. Division 09 Section(s) on painting.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details **[, fire ratings,]** material descriptions, dimensions of individual components and profiles, and finishes.

B. Samples: For each type of access door and frame and for each finish specified, complete assembly minimum 150 by 150 mm in size.

C. Product Schedule: For access doors and frames.**[Use same designations indicated on Drawings.]**

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Rated Access Doors and Frames: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection**[and temperature-rise limit]** ratings indicated, according to NFPA 252 or UL 10B.

B. See OBO Building Code Chapter 4 for limitations on the use of access doors for security.

2.2 ACCESS DOORS AND FRAMES

A. Flush Access Doors with Exposed Flanges **<for Concrete or Masonry>**:

1. Description: Face of door flush with frame, with exposed flange and concealed piano hinge.
2. Locations: **[Wall] [Ceiling] [Wall and ceiling]**.
3. Uncoated Steel Sheet for Door: **[Nominal 1.52 mm , 16 gage]**, factory **[primed] [finished]**.
4. Frame Material: **[Same material, thickness, and finish as door]**.
5. Latch and Lock: Cam latch, key operated.

B. Flush Access Doors with Exposed Flanges <for Tile>:

1. Description: Face of door flush with frame, with exposed flange and concealed piano hinge.
2. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
3. Stainless-Steel Sheet for Door: **[Nominal 1.59 mm , 16 gage]**, No. 4 finish.
4. Frame Material: **[Same material, thickness, and finish as door]**.
5. Latch and Lock: Cam latch, key operated.

C. Flush Access Doors with Concealed Flanges <for Gypsum Board or Plaster>:

1. Description: Face of door flush with frame; with concealed flange for **[gypsum board] [plaster]** installation and concealed concealed hinge.
2. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
3. Uncoated Steel Sheet for Door: **[Nominal 1.52 mm , 16 gage], factory [primed] [finished]**.
4. Frame Material: **[Same material and thickness as door]**.
5. Latch and Lock: Cam latch, key operated.

D. Recessed Access Doors with Concealed Flanges < for Gypsum Board, Where Indicated>:

1. Description: Door face recessed **[13 mm] [16 mm] [25 mm] for [gypsum board] [plaster] [acoustical tile] <Insert material>** infill; with concealed flange for **[gypsum board] [plaster] [no bead for acoustical tile]** installation and concealed hinge.
2. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
3. Uncoated Steel Sheet for Door: **[Nominal 1.52 mm , 16 gage] <Insert thickness>**, factory **[primed] [finished]**.
4. Metallic-Coated Steel Sheet for Door: **[Nominal 1.63 mm , 16 gage] <Insert thickness>**, factory **[primed] [finished]**.
5. Stainless-Steel Sheet for Door: **[Nominal 1.59 mm , 16 gage] <Insert thickness>**, **[No. 4] [No. 2b]** finish.
6. Latch and Lock: Cam latch, key operated.

E. Lightweight Glass-Fiber-Reinforced Gypsum Access Panels

1. Description: Door and frame face flush with adjacent surfaces, lift-out panel with no hardware for ceilings and with touch-latch concealed hinges for wall installations.
2. Locations: Ceiling.
3. Corners: Radiused.

4. Embedments: As standard with glass-fiber-reinforced gypsum fabrication manufacturer and as required for reinforcement and for anchorage to substrates and framing.
5. Finish: Smooth for paint finish.

F. CAA Flush Access Doors and Frames:

1. Locations: Gypsum walls and concrete wall and ceiling surfaces.
2. Door: Minimum 4.5-mm- thick steel sheet, flush construction, minimum 300mm by 300mm leaf
3. Frame: Minimum 4.7-by-50-by-50-by-75-mm angle welded with joints ground smooth.
4. Hinges: Heavy-duty steel welded to door and frame.
5. Lock: Heavy-duty, detention deadbolt lock.
6. Hardware Material: Stainless steel, including latch and lifting mechanism assemblies, hold-open arms, and all brackets, hinges, pins, and fasteners.
7. Material: Glass fiber reinforced gypsum access door with radius corner at drywall board ceiling application.
8. Finish: Smooth for paint finish.

2.3 FIRE-RATED ACCESS DOORS AND FRAMES

A. Fire-Rated, Flush Access Doors with Exposed Flanges:

1. Description: Door face flush with frame, **[with a core of mineral-fiber insulation enclosed in sheet metal] [uninsulated]**; with exposed flange, self-closing door, and concealed hinge.
2. Locations: **[Wall] [Ceiling] [Wall and ceiling] <Insert location or substrate>**.
3. Fire-Resistance Rating: Not less than **[that indicated] [that of adjacent construction] [45 minutes] [1 hour] [1-1/2 hours] [2 hours] [3 hours] <Insert requirement>**.
4. Temperature-Rise Rating: **[250 deg C] [139 deg C]** at the end of 30 minutes.

5. Uncoated Steel Sheet for Door: **[Nominal 0.91 mm , 20 gage] <Insert thickness>**, factory **[primed] [finished]**.
6. Frame Material: **[Same material, thickness, and finish as door] <Insert material, thickness, and finish>**.

7. Latch and Lock: Self-latching door hardware, operated by key.

2.4 MATERIALS

A. Steel Plates, Shapes, and Bars: ASTM A 36/A 36M.

B. Steel Sheet: Uncoated or electrolytic zinc coated, ASTM A 879/A 879M, with cold-rolled steel sheet substrate complying with ASTM A 1008/A 1008M, Commercial Steel (CS), exposed.

C. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum Z180 or ZF180 metallic coating.

D. Stainless-Steel Sheet, Strip, Plate, and Flat Bars: ASTM A 666, **[Type 304] [Type 316]**. Remove tool and die marks and stretch lines, or blend into finish.

E. Glass-Fiber-Reinforced Gypsum: ASTM C 1355.

F. Frame Anchors: Same material as door face.

G. Inserts, Bolts, and Anchor Fasteners: Hot-dip galvanized steel according to ASTM A 153/A 153M or ASTM F 2329.

2.5 FABRICATION

A. General: Provide access door and frame assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish mounting holes, attachment devices and fasteners of type required to secure access doors to types of supports indicated.

1. For concealed flanges with drywall bead, provide edge trim for gypsum panels securely attached to perimeter of frames.
2. For concealed flanges with plaster bead for full-bed plaster applications, provide zinc-coated expanded-metal lath and exposed casing bead welded to perimeter of frames.

D. Recessed Access Doors: Form face of panel to provide recess for application of applied finish. Reinforce panel as required to prevent buckling. Provide access sleeves for each latch operator and install in holes cut through finish.

1. For recessed doors with plaster infill, provide self-furring expanded-metal lath attached to door panel.

E. Latch and Lock Hardware:

1. Quantity: Furnish number of latches and locks required to hold doors tightly closed.
2. Keys: Furnish two keys per lock and key all locks alike.

3. [Mortise Cylinder Preparation: Where indicated, prepare door panel to accept cylinder specified in Section 087135 "Non-Security Door Hardware."]

2.6 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

D. Painted Finishes: Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

1. Factory Primed: Apply manufacturer's standard, lead- and chromate-free, universal primer immediately after surface preparation and pretreatment.
2. Factory Finished: Apply manufacturer's standard powder-coat finish immediately after cleaning and pretreating, with minimum dry-film thickness of 0.025 mm for topcoat.

a. Color: **[Match Project Director/COR's sample] [As selected by Project Director/COR from full range of industry colors]**.

E. Stainless-Steel Finishes:

1. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
2. Polished Finish: No. 4 finish. Grind and polish surfaces to produce uniform finish, free of cross scratches.

a. Run grain of directional finishes with long dimension of each piece.
b. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

F. GFRG Finishes: Field primed and painted according to Division 09 section(s) on “Painting.”

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.

3.3 ADJUSTING

A. Adjust doors and hardware, after installation, for proper operation.

END OF SECTION 083115

SECTION 083322 - OVERHEAD FORCED-ENTRY (FE) COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. FE Service doors as scheduled in Construction Drawings. Refer to the Part 2 Article on PERFORMANCE REQUIREMENTS for FE rating and required level of corrosion resistance.

B. Related Requirements:

1. Section 055005 "Metal Fabrications" for corner guards and bollards.
2. Section 087155 “Security Door Hardware” for padlocks for overhead doors at loading dock for Service Entrance CAC.
3. Section 099602 “High-Performance FE/BR Coatings.”
4. Division 26 Sections for electrical wiring and conduit, fuses, disconnect switches, connection of operator to power supply, installation of control station and wiring, and connection to alarm systems.

1.2 ACTION SUBMITTALS

A. General:

1. Action submittals should be accepted by the Project Director/COR prior to procurement of associated items by the Contractor; premature procurement is at the risk of the Contractor.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Product Data: For each type and size of overhead FE coiling door and accessory.

1. Include typical construction details, material descriptions, dimensions of individual components, profiles for slats, and finishes.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished accessories.
3. Include description of automatic-closing device and testing and resetting instructions.

C. Shop Drawings: For each installation and for special components not dimensioned or detailed in manufacturer's product data.

1. Include cover sheet with project identification, manufacturer name, address, and phone number.
2. Include plans, elevations, sections, and mounting details. Indicate applicable DOS door code.
3. Include details of equipment assemblies, and indicate dimensions, required clearances, method of field assembly, components, and location and size of each field connection.

4. Include points of attachment and their corresponding static and dynamic loads imposed on structure.
5. For exterior components, include details of provisions for assembly expansion and contraction and for excluding and draining moisture to the exterior.
6. Show locations of controls, locking devices, and other accessories.
7. Include diagrams for power, signal, and control wiring. Identify specific voltage requirements for project (i.e., 120 or 240 V).

D. Certificates: Provide one of the following, in accordance with the method of conformance selected by Contractor from two options identified in the Part 2 Article on CONFORMANCE TO SECURITY PERFORMANCE REQUIREMENTS:

1. Letter from manufacturer indicating the products have been certified by Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Revision H.

E. Samples for Initial Selection: Manufacturer's finish charts showing full range of colors and textures available for units with factory-applied finishes.

1. Include similar Samples of accessories involving color selection.

1.3 INFORMATIONAL SUBMITTALS

A. General:

1. Informational submittals shall be submitted at least two weeks prior to installation.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Qualification Data: For Manufacturer and Installer.

1. Submit a resume for the installer lead showing that they meet the minimum requirements.

C. Installation Manual.

1.4 CLOSEOUT SUBMITTALS

A. General:

1. Refer to Division 01 Sections on Submittals and on Closeout for general administrative requirements.

B. Special warranty.

C. Maintenance Data: For overhead coiling doors to include in maintenance manuals.

D. Certificate of Compliance for Installation.

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: An entity with minimum of five years in design and fabrication of heavy overhead coiling doors for use in commercial applications, and in supporting installation and start-up for those doors.

B. Installer Technician Qualifications: An installer who has been trained in coiling door installation and maintenance of units required for this Project.

1. Lead installer shall have a minimum of 5-years of experience in installation of coiling doors and installed a minimum of 50 coiling doors.

C. Comply with the requirements of the OBO Electrical Code (NFPA 70, "National Electrical Code" as amended by OBO).

1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with Chapter 1 of the OBO Electrical Code by testing agency acceptable to Project Director/COR based upon input from OBO/PDCS/DE/EE, and marked for intended use and installation conditions.

D. Certification by General Contractor: Prior to final completion, the General Contractor shall provide to the Project Director/COR a certification that the FE materials have been installed in accordance with the manufacturer's instructions, these specifications and are operational. Use Certificates of Compliance forms at end of this Section. Deviation from these requirements is only permitted with the written approval of the Project Director/COR with input from the OBO/CFSM/SM Physical Security Engineer, Designer of Record, and OBO/OPS/FAC. Specifically the General Contractor's certification shall include verification that:

1. The Installer team leader trained the installation crew and supervised the installation of the FE coiling door.
2. All bolts/screws are per the approved shop drawings.
3. All access plates for each roll-up door have been installed as indicated in the approved shop drawings.
4. Each coiling door head has been installed level and the guide track curtain side jambs have been installed plumb and square.
5. Each lockset fully engages and freely operates.
6. Cycle test a minimum of 20 times:

   a. Limit Switches: Installed and operational.
   b. Emergency hand operated disconnect device for automatically engaging manual operator and releasing brake is installed and operational.
   c. Audible and Visual Signals: Audible alarm and visual indicator lights installed per the shop drawings.

7. Removable stops on guides have been installed.
8. Weatherseal has been installed.
9. When power is lost, while in the open position, the door remains open.
10. Manual override chain is functional.
11. Electric Operator:

12. Control Stations:

    a. Enclosure; for interior mounting.
    b. Push Buttons:

        1) Momentary-contact push-button controls are labeled "Open" and "Stop."
        2) Sustained- or constant-pressure push-button control is labeled "Close." For locations monitored by a guard booth (e.g., at Service CAC).
        3) Fourth momentary-contact push button at guard booth panel with ability to disable functionality of control panel adjacent to door is installed and functional.

    c. Monitoring Lights: At both control panels, include one light to confirm full closure, and second light to confirm constant pressure.

1.6 IDENTIFICATION SYSTEMS

A. Label: Identify each assembly to provide the Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. The label shall be an embossed metal plate or metallic foil with adhesive backing for permanent identification. Locate label on door hood or motor housing. The label shall be approximately 40 x 125 mm (1-1/2 x 5 inches), and shall cite:

1. Manufacturer's name/city/state.
2. Contract number.
3. Month/year of manufacture.
4. Mark number.
5. Government certification model number if applicable and if provided by Diplomatic Security in certification letter.
6. DOS Code (e.g., 2141).
7. Serial Number if applicable.

B. ID Codes: Provide two stamped ID codes, with ID material matching door curtain. Locate one ID code adjacent to label, and one ID code on lowermost slat or locking bar of door.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, and frames completed and prepared for installation and connection with security systems.

B. Pack door assemblies and accessories in crates. Provide two wood cross braces on both sides of the crates. Provide “Tip-and-tell” on inside of crate to assist in ensuring care was taken in shipment. Secure with screws placed on side of crate to be opened.

C. Provide protection of finish using self-adhesive paper.

D. Treat security door assemblies as fragile merchandise packaged and shipped in export wood crates with width end in upright position and blocked together in a mass. Comply with manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents. Clearly mark crates to indicate which side shall be opened first.

E. In each crate, provide a separate compartment for installation hardware. Package and ship installation hardware (anchors, bolts, screws, shims, ballistic trim, shop drawings, etc.) for each door in the same crate as the door assembly.

F. Package and ship shop drawings and installation manual for each door in crate.

1.8 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of doors that fail in materials or workmanship within specified warranty period.

1. Warranty Period: Two years from date of Substantial Completion.

1.9 EXTRA MATERIALS

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Sensors: One set per unit type.
2. Controls: One set per unit type.
3. Switches: One set per unit type.

PART 2 - PRODUCTS

2.1 CONFORMANCE TO SECURITY PERFORMANCE REQUIREMENTS

A. Provide units, including frames and accessories, with the following certification:

1. Pre-Certified Units: Have been certified by Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Rev G or Rev H for identified level minutes of forced-entry protection.

2. Design for Locking Device: Door assembly shall be capable of being secured by one of the following Government-Furnished Government-Installed locks from the interior [Lock device is intended to prevent unauthorized use and does not need to be part of the Forced Entry as long as it controls/limits door access use locally at the door] :

a. Padlock with minimum 10 mm (3/8 inch) shackle diameter, and shackle clearance of 45 mm or less.

b. Lock accepting Medeco keyed six-pin LFIC interchangeable core.

2.2 PERFORMANCE REQUIREMENTS

A. Security: Fabricate and install these FE assemblies to achieve indicated levels of resistance. Extend resistance to include anchorages, interfaces with adjoining substrates, and hardware. Provide specific performance ratings, also referred to as Government Code numbers, as indicated below.

1. Forced-Entry (FE) resistant assemblies: Where overhead coiling door assembly is shown or scheduled as FE, provide door manufacturer's material and fabrication for panels, inserts, hardware, devices, and framing of units for **[5] [15]** minutes of forced-entry protection.
2. DOS Door Labeling: Table 2.2 “Door Codes” below identifies the generic system used by OBO for composite labeling of key performances and attributes for a variety of types of assemblies which incorporate FE and BR resistance. For Overhead FE Coiling Doors, these codes will apply as follows:

   a. 1st Digit: Code 2 will always be used.
   b. 2nd Digit: If applicable, code shall match fire-rating of specific assembly.
   c. 3 Digit: Code shall match FE rating of assembly.
   d. 4th Digit: If applicable, code shall match BR rating of assembly.

TABLE 2.2 – DOOR CODES

DOS CODE	1st DIGIT - DOOR COMPOSITION	2nd DIGIT - FIRE RATING	3rd DIGIT - FORCED-ENTRY RATING	4th DIGIT - BALLISTIC-RESISTANCE RATING
1	Transparent (various sized lites)	None	None	None
2	Opaque	1.5 hours (Class B, Class D at exterior)	15 minutes	NOT USED
3		3 hours (Class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4		45 minutes (Class C)	5 minutes	Armor-Piercing (.30-06)
5		20 minutes	NOT USED	NOT USED
6		1 hour	NOT USED	NOT USED

B. Structural Performance, Exterior Doors: Capable of withstanding design wind loads as calculated in accordance with ASCE/SEI-7 standard (as referenced in the OBO Building Code, OBO-ICS IBC Chapter 16), or as identified in project-specific requirements:

1. Basic Wind Speed: **[As indicated on Drawings] <Insert loads>**.
2. Deflection Limits: Design overhead coiling doors to withstand design wind load without evidencing permanent deformation or disengagement of door components.
3. Doors are not required to be operable under design wind load.

C. Seismic Performance: Overhead coiling doors shall withstand the effects of earthquake motions determined according to Chapter 16 of the OBO Building Code, including applicable references to ASCE/SEI 7.

1. Component Importance Factor: 1.0.

D. Operation Cycles: Door components and operators capable of operating for not less than 20,000 total, and 20 per day. One operation cycle is complete when a door is opened from the closed position to the fully open position and returned to the closed position.

2.3 CORROSION RESISTANCE PERFORMANCE

A. Corrosion Resistance Standards: Provide materials and finishes for the components in accordance with this Article. for the project-specific corrosion risk identified above or elsewhere in the Contract Documents.

1. Corrosion Risk: As indicated in project Contract (e.g., Statement of Work). The OBO Building Code Appendix W categories, the OBO Atmospheric Corrosivity Level for this site is **[Low] [Moderate] [Extreme]**.
2. Corrosion Resistance Standards: Provide materials and finishes for the components in accordance with this article for the project-specific corrosion risk identified above or elsewhere in the Contract Documents.
3. Material Standards for Components: As Permissible Atmospheric Corrosivity Level (ACL) of site listed with each material below:

   a. Steel, Zinc-Coated (Galvanized): Steel sheet; complying with ASTM A653M low and moderate risk.
   b. Stainless Steel, Type 304: ASTM A666M; low and moderate risk
   c. Stainless Steel, Type 316: ASTM A240M; extreme risk.
   d. Aluminum: ASTM B209 (ASTM B209M) sheet or ASTM B221 (ASTM B221M) extrusions; low, moderate, and extreme risk.

4. Finish Standards for Components: As applicable for Risk Level of project site:

   a. Low and Moderate ACL Risk:

      1) Steel, Zinc-Coated (Galvanized): Steel sheet; complying with ASTM A653M. See Section 0996xx "High-Performance FE/BR.Coatings"
      2) Stainless Steel: Type 304: ASTM A666M **[ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 4 (polished directional satin)]**.
      3) Aluminum: Clear Anodic Finish: AAMA 611, **[AA-M12C22A41, Class I, 0.018 mm]** or **[Color Anodic Finish: [AA-M12C22A42/A44, Class I, 0.018 mm] or thicker.]**

   b. c. Extreme Risk:

      1) Stainless Steel: Type 316: ASTM A240M **[ASTM A480/A480M No. 2B (bright, cold rolled)] [ASTM A480/A480M No. 4 (polished directional satin)]**.
      2) Aluminum:

         a) Fluoropolymer coating conforming with FGIA/AAMA 2605 and having minimum 70 percent PVDF resin; provide pretreatment, primer, and other protection associated with severe environments. See Section 099602 "High-Performance FE/BR Coatings."

5. Hood Finish: Match curtain material and finish.
6. Curtain Jamb Guides:

a. Low and Moderate ACL Risk: Galvanized, aluminum, or stainless steel conforming to same standards as for general components above with same ACL risk.
b. Extreme ACL Risk: Stainless steel only, conforming to same standard as for general components above with same ACL risk.

7. Motor and control:

a. Low Risk Exposure: NEMA 4.
b. Medium or Extreme Risk Exposure: NEMA 4X.

2.4 DOOR CURTAIN CONSTRUCTION

A. Door Curtains: Fabricate overhead coiling-door curtain of interlocking metal slats, designed to withstand wind loading indicated, in a continuous length for width of door without splices.

1. Door Curtain Slats: Flat profile slats of minimum 100 mm (4 inch) center-to-center height.

B. Curtain Jamb Guides: Manufacturer's standard angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading. Slot bolt holes for guide adjustment. Provide removable stops on guides to prevent overtravel of curtain, continuous bar for windlocks, and retention groove integrated into body of slat use to retain slats within guides.

C. Endlocks/Windlocks: Retention groove integrated into body of slat use to retain slats within guides.

2.5 HOODS

A. General: Form sheet metal hood to entirely enclose coiled curtain and operating mechanism at opening head. Contour to fit end brackets to which hood is attached. Roll and reinforce top and bottom edges for stiffness. Form closed ends for surface-mounted hoods and fascia for any portion of between-jamb mounting that projects beyond wall face. Equip hood with intermediate support brackets as required to prevent sagging.

1. Mounting: Inside face of wall and as indicated on Drawings.
2. Exterior-Mounted Doors: Fabricate hood to act as weather protection and with a perimeter sealant-joint-bead profile for applying joint sealant.
3. Removable Metal Soffit: Formed or extruded from same metal and with same finish as curtain if hood is mounted above ceiling unless otherwise indicated.

2.6 CURTAIN ACCESSORIES

A. Weatherseals for Exterior Doors: Equip each exterior door with weather-stripping gaskets fitted to entire exterior perimeter of door for a weather-resistant installation unless otherwise indicated.

1. At door head, use 1/8-inch- (3-mm-) thick, replaceable, continuous-sheet baffle secured to inside of hood or field-installed on the header.
2. At door jambs, use replaceable, adjustable, continuous, **[flexible, 1/8-inch- (3-mm-) thick seals of flexible vinyl, rubber, or neoprene] [nylon brushes] <Insert material>**.

2.7 LOCKING DEVICES

A. See the Part 2 Article on CONFORMANCE TO SECURITY PERFORMANCE REQUIREMENTS; required type of device relates to approach to certification utilized.

2.8 COUNTERBALANCE MECHANISM

A. General: Counterbalance doors by means of manufacturer's standard mechanism with an adjustable-tension, steel helical torsion spring mounted around a steel shaft and contained in a spring barrel connected to top of curtain with barrel rings. Use grease-sealed bearings or self-lubricating graphite bearings for rotating members.

B. Counterbalance Barrel: Fabricate spring barrel of manufacturer's standard hot-formed, structural-quality, seamless or welded carbon-steel pipe, of sufficient diameter and wall thickness to support rolled-up curtain without distortion of slats and to limit barrel deflection to not more than 2.5 mm/m (0.03 in./ft) of span under full load.

C. Counterbalance Spring: One or more oil-tempered, heat-treated steel helical torsion springs. Size springs to counterbalance weight of curtain, with uniform adjustment accessible from outside barrel. Secure ends of springs to barrel and shaft with cast-steel barrel plugs.

D. Torsion Rod for Counterbalance Shaft: Fabricate of manufacturer's standard cold-rolled steel, sized to hold fixed spring ends and carry torsional load.

E. Brackets: Manufacturer's standard mounting brackets of cold-rolled steel plate, as required.

2.9 ELECTRIC DOOR OPERATORS

A. General:

1. Electric door operator assembly of size and capacity recommended and provided by door manufacturer for door and operation-cycles requirement specified, with electric motor and factory-prewired motor controls, starter, gear-reduction unit, solenoid-operated brake, clutch, control stations, control devices, integral gearing for locking door, and accessories required for proper operation.
2. Electric operator and components capable of operating for not less than 20 cycles per day for each door.
3. Automatic Closure Speed: Maintain speed between 150 to 225 mm per second (6 to 9 inches per second).
4. Door Operator Location: Operator location as indicated for each door.

a. Top-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on top of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Headroom is required for this type of mounting.
b. Front-of-Hood Mounted: Operator is mounted to the right or left door head plate with the operator on coil side of the door-hood assembly and connected to the door drive shaft with drive chain and sprockets. Front clearance is required for this type of mounting.
c. Wall Mounted: Operator is mounted to the inside front wall on the left or right side of door and connected to door drive shaft with drive chain and sprockets. Side room is required for this type of mounting. Wall-mounted operator can also be mounted above or below shaft; if above shaft, headroom is required.
d. Bench Mounted: Operator is mounted to the right or left door head plate and connected to the door drive shaft with drive chain and sprockets. Side room is required for this type of mounting.
e. Through-Wall Mounted: Operator is mounted on other side of wall from coil side of door.

5. Motors: Reversible-type motor[**with controller (disconnect switch)**] for motor exposure indicated for each door assembly.

a. Electrical Characteristics: Minimum as indicated for each door assembly. If not indicated, large enough to start, accelerate, and operate door in either direction from any position, at automatic speeds identified above, without exceeding nameplate ratings or service factor.
b. Operating Controls, Controllers, Disconnect Switches, Wiring Devices, and Wiring: Manufacturer's standard unless otherwise indicated.
c. Coordinate wiring requirements and electrical characteristics of motors and other electrical devices with building electrical system and each location where installed.

6. Motor Removal: Design operator so motor may be removed without disturbing limit-switch adjustment and without affecting emergency manual operation.
7. Limit Switches: Equip each motorized door with adjustable switches interlocked with motor controls and set to automatically stop door at fully opened and fully closed positions.
8. Emergency Manual Operation: Equip each electrically powered door with capability for emergency manual operation. Design manual mechanism so required force for door operation does not exceed [**110 N (25 lbf)**] [**130 N (30 lbf)**] <**Insert value**>.
9. Emergency Operation Disconnect Device: Equip operator with hand-operated disconnect mechanism for automatically engaging manual operator and releasing brake for emergency manual operation while disconnecting motor without affecting timing of limit switch. Mount mechanism so it is accessible from floor level. Include interlock device to automatically prevent motor from operating when emergency operator is engaged.
10. Prevention of Gravity Closure due to Power Failure: When loss of power occurs, provide a fail-safe motor brake that engages keeping the door at status quo. The assembly shall be capable of manual operation during the loss of power
11. Audible and Visual Signals: Audible alarm and visual indicator lights in compliance with the accessibility standard.
12. Full Closure Sensor: Provide sensor adjacent to door to monitor full closure of door.

13. Control Equipment: Comply with NEMA ICS 1, NEMA ICS 2, and NEMA ICS 6, with NFPA 70 Class 2 control circuit, maximum 24-V ac or dc.
14. Control Stations:

    a. Full-guarded, surface-mounted, heavy-duty type, with general-purpose NEMA ICS 6, Type 1 enclosure; for interior mounting.
    b. Push Buttons: Include momentary-contact push-button controls labeled "Open" and "Stop," and sustained- or constant-pressure push-button control labeled "Close." For locations monitored by a guard booth (e.g., at Service CAC), include fourth momentary-contact push button at guard booth panel with ability to disable functionality of control panel adjacent to door.
    c. Monitoring Lights: At both control panels, include one light to confirm full closure, and second light to confirm constant pressure.

15. Notify electrical contractor to mount control station(s) and to supply appropriate disconnect switch, conduit, and wiring as identified in wiring instructions in overhead door manufacturer’s installation manual.
16. Door and operator meets UL325 for commercial operator requirements.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates areas and conditions, with Installer present, for compliance with requirements for substrate construction and other conditions affecting performance of the Work.

B. Examine locations of electrical connections.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install overhead coiling doors and operating equipment complete with necessary hardware, anchors, inserts, hangers, and equipment supports; according to manufacturer's written instructions and as specified.

B. Install overhead coiling doors, hoods, controls, and operators at mounting locations indicated for each door.

    1. Refer to Construction Drawings and to Division 26 and 33 Sections for installation and infrastructure for Control Station mounted at the nearest CAC guardbooth location.
    2. Place one control panel adjacent to Overhead Coiling Door. When coiling door is in the perimeter of the compound, such as a CAC, place second control panel remotely, and locate in guardbooth unless identified otherwise; refer to the Part 2 Article on ELECTRIC DOOR OPERATORS.

3.3 FIELD QUALITY CONTROL

A. Testing Agency: Engage a qualified testing agency to perform tests and inspections and to furnish three copies of reports to Project Director/COR; they will forward copy to post Facility Manager and to OBO/CFSM/SM.

B. Perform the following tests and inspections**[with the assistance of a factory-authorized service representative]**:

1. Test door release, closing, and alarm operations when activated by smoke detector or building's fire-alarm system. Test manual operation of closed door. Reset door-closing mechanism after successful test.

C. Repair or remove and replace installations where inspections indicate that they do not comply with specified requirements.

D. Reinspect repaired or replaced installations to determine if replaced or repaired door assembly installations comply with specified requirements.

3.4 STARTUP SERVICE

A. Engage a coiling door technician to perform startup service.

1. Complete installation and startup checks according to manufacturer's written instructions.
2. After electrical circuitry has been energized, operate doors to confirm proper motor rotation and door performance.
3. Test and adjust controls and safety devices. Replace damaged and malfunctioning controls and equipment.

3.5 ADJUSTING

A. Adjust hardware and moving parts to function smoothly so that doors operate easily, free of warp, twist, or distortion.

1. Adjust exterior doors and components to be weather resistant.

B. Lubricate bearings and sliding parts as recommended by manufacturer.

3.6 CLEANING

A. Clean surfaces soiled by work utilizing cleaning procedures and materials recommended by Manufacturer.

3.7 DEMONSTRATION

A. Engage a coiling door technician to train Government's maintenance personnel to adjust, operate, and maintain overhead coiling doors. Provide minimum of two 4-hour training sessions, with each held at a distinctly different time period to accommodate personnel identified by Project Director/COR. Review data in maintenance manuals.

1. Classroom duration: 2 hours
2. Field Demonstration: 6 hours

END OF SECTION 083322

Certificate of Compliance

Overhead FE Coiling Doors
FE Coiling Door Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING/ SUPERVISION

1	The Installer team leader trained the installation crew and supervised the installation of the FE coiling door.	**Installer Team Leader's Name/ Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	All bolts/screws are per the approved shop drawings.		
3	All access plates for each roll-up door have been installed as indicated in the approved shop drawings.		
4	Each coiling door head has been installed level and the guide track curtain side jambs have been installed plumb and square.		
5	Each lockset fully engages and freely operates.		
6	Cycle test a minimum of 20 times.		
6a	Limit Switches: Installed and operational.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
6b	Emergency hand operated disconnect device for automatically engaging manual operator and releasing brake is installed and operational.		
6c	Audible and Visual Signals: Audible alarm and visual indicator lights installed per the shop drawings.		
7	Removable stops on guides have been installed		
8	Weather seal has been installed.		
9	When power is lost, while in the open position, the door remains open.		
10	Manual override chain is functional.		
11	Electric Operator: Provided		
12	Control Stations: Provided		
12a	Enclosure; for interior mounting.		
12b	Push Buttons provided: 1) Momentary-contact push-button controls are labeled "Open" and "Stop." 2) Sustained- or constant-pressure push-button control is labeled "Close." For locations monitored by a guard booth (e.g., at Service CAC). 3) Fourth momentary-contact push button at guard booth panel with ability to disable functionality of control panel adjacent to door is installed and functional.		
12c	Monitoring Lights: At both control panels, include one light to confirm full closure, and second light to confirm constant pressure.

SECTION 083454 - FORCED ENTRY (FE) / BALLISTIC RESISTANT (BR) DOOR ASSEMBLIES

PART 1 - GENERAL

1.1 SUMMARY

A. The extent of forced-entry resistant (FE) and ballistic resistant (BR) door assemblies required for the Project is indicated on Contract Drawings, and in Door/Frame/Hardware schedules, including construction, profiles, swing, sizes, hardware, accessories, devices, and locations.

1. Install FE/BR door assemblies only into steel substrate in such a manner that allows for future frame adjustment. This may be structural steel wall or other structural steel assembly, steel sub-frame in concrete, or steel sub-frame attached to concrete or masonry.

B. Related Sections include the following:

1. Section 055005 “Metal Fabrications” for steel supports, except as noted within this Section.
2. Division 08 Sections for doors not designated for special security performances.
3. Section 087155 "Security Door Hardware" for hardware to be installed as work of this Section.
4. Division 08 Section for general glazing.
5. Section 088855 "Security Glazing."
6. Other sections of these specifications for interface of door hardware and device units, with alarm/security/safety/access/monitoring systems; not work of this Section.
7. Section 099602 “High-Performance FE/BR Coatings”

8. [Division 08 Section “GPE Window and Door Requirements.”]

C. [Definitions and Roles for Projects Utilizing the GPE Program:

1. Government Procured Equipment (GPE) Program: Program of the Overseas Buildings Operations (OBO) in which OBO procures security doors and windows in advance of and for use of upcoming projects. All GPE windows and doors shall be designed and engineered prior to award of the project to the Contractor.
2. Fabricator: This entity is fabricator/manufacturer of GPE items.
3. Manufacturer: This entity is manufacturer/fabricator of GPE items.
4. Contractor: Contractor is responsible for design incorporation, delivery, and installation of GPE products. Contractor is also responsible for design and construction of overall facility, as well as installation of GPE items selected by Contractor in conformance with overall requirements of the project. Contractor is responsible for development of a GPE product list and submission of the list to the Government for approval, with Design Development drawings.]

1.2 PRE-INSTALLATION MEETINGS

A. Before beginning installation of FE/BR assemblies, Manufacturer's technical representative shall conduct pre-installation conference at the Project site with installation sub-contractor, electrical sub-contractor, the Project Director/COR, and other interested parties to review installation procedures and manuals, schedules, and coordination of FE/BR-assembly installation with other elements of the Work.

1.3 ACTION SUBMITTALS

A. General:

1. Action submittals should be accepted by the PD/COR prior to procurement of associated items by Contractor; premature procurement is at the risk of Contractor.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Product Data:

1. Product data for each element of work, whether purchased from other manufacturers or provided as door Fabricator's standard production to include door hardware, weather-stripping/gasketing and thresholds. Include data substantiating that products comply with requirements of these specifications.

C. Certificates:

1. Letter from manufacturer indicating the products have been certified by Bureau of Diplomatic Security (DS).
2. Letter from manufacturer indicating the swing weight of the door, as defined within this article, and the total weight of the door for standard rough opening door, 1086 mm x 2210 mm (nominal 3 foot x7 foot).
3. For doors equipped with multi-point locks.

   a. Letter from DOS, DS Lock shop, showing approval of multi-point lock for specific certified product.
   b. For doors equipped with delay egress device, provide letter from DOS, DS Lock shop, that the provided delay device is compatible with multi-point lock and DOS technical system and that annunciation is incorporated per the DOS multi-point lock requirements.

D. Shop Drawings:

1. General:

   a. Show each dimensioned detail of each door assembly.
   b. Indicate performance rating, swing, hardware set, and adjacent construction. Shop drawings must also clearly indicate all modified hardware sets.
   c. Provide drawings on B-size (297 mm x 420 mm) sheets. All dimensions shall be indicated in metric. Show typical door exterior elevations at not less than 1:20 scale.

d. Submittals in PDF format: Provide Table of contents and bookmarks organizing by building and floor for each product using contract identification number.
e. After final modifications and corrections have been incorporated into the drawings, submit drawings as AutoCAD files with .DWG extension in accordance with Division 01 project closeout requirements.

2. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
3. General Notes and Details Sheets:

a. Manufacturer's name and reference numbers for primer and finish paint, including number of coats applied.
b. Information about insulation in door, when provided, and including weather-stripping.
c. Minimum size of FE/BR door shall conform to smallest clear opening requirement of 813 mm (32 inches) in OBO Building Code for accessibility, and for fire and life safety.
d. Terminal strip size, location, and height above bottom of door frame.
e. Door frame socket head cap screw horizontal slotted holes location and sizes.
f. Identify exact location on door and frame of two required ID plates; see the Part 1 Article on IDENTIFICATION SYSTEMS. Identify plate type and size, and type of information included on the plate about door.
g. All FE/BR door mounting bolts, screws and anchors shall be metric products.
h. Door frame socket head cap screws dry torque values
i. Hot-Dip Galvanization specifications refences for each material hot dipped.
j. Ballistic Trim (BT) Bar installation instructions and detail drawings
k. Glazing Panel Chart, including type, dimensions and weight.
l. Abbreviations used.
m. Provide list of any special fastening tools; see the paragraph on "Removable Covers" in the Part 2 Article on CLADDING in regards to tools required for release of snap-in-place covers.
n. Location of conduit entry into both sub-frame and door frame, separate sheet with partial door elevation drawings showing conduit entry and details
o. Sections/details showing FEL thumbturn guards and exterior FEL key guards, separate sheet with detail drawings (elevation, side and opening) and specifications.

4. Unit information:

a. Manufacturers model number.
b. DOS Code number.
c. Mark (door no.).
d. Door/frame finish.
e. Door type.
f. Government certification number.
g. Government certification number for glazing panel(s), if different from door certification.
h. Government certification number for deal tray, if different from door certification.

i. Blast characteristics (i.e., ASTM F2927-xx (xx denotes version at time of testing) and the resistance level achieved Level I, II, III/S, or none).

5. Elevation Drawings (Attack side):

a. Rough opening dimensions.
b. Door opening dimensions.
c. Frame opening dimensions.
d. Vision opening dimensions (in accordance with construction drawings).
e. Clear width opening dimension to demonstrate conformance to accessibility requirements in OBO Building Code Chapter 11.
f. Substrate/rough opening material.
g. Finished floor.
h. Weather-stripping. (hardware component keynote)
i. Door class (fire) rating: rated or non-rated.
j. Separate steel sub-frames (number and list).
k. Detail symbols.
l. Hardware and hardware symbols. Include part numbers, manufacturers and description.
m. Electrical access, including terminal strips.
n. FEL thumbturn guards and exterior FEL key guards, as required.
o. Location of conduit entry into both sub-frame and door frame.
p. Total weight of the actual (not the nominal door size or tested door size) door to include frame, door leaf, and all hardware.

6. Plan Drawings:

a. Relate to elevation on drawing.
b. Identify “Attack” and “Protected” sides.
c. Identify door swing (i.e., RH, LH, RHRB, LHRB).
d. Provide key notes on drawings.
e. Indicate room space numbers taken from Contract Drawings.
f. Clear width opening dimension to demonstrate conformance to accessibility requirements in OBO Building Code Chapter 11

7. Details: Show section at 1:5 scale of members indicating construction, size, and thickness of components. Details shall be on separate sheets from plan and elevations

a. Frame profile, anchorage
b. Steel sub-frames,
c. Continuous shim plates (where applicable),
d. Threshold configuration,
e. Glazing panel together with connections,
f. Section through the door that shows the vertical and horizontal rails, glazing, glazing stops, and cladding or any architectural treatments.
g. Fasteners,
h. Shim gap with dimensions and Shims,
i. Flashing, sealant, backer rods, gaskets,

j. Means of separating dissimilar metals.
k. Undercut for carpet.
l. Sill condition
m. Weather-stripping.
n. Door and frame thickness.
o. Ballistic trim and metric fasteners.
p. Detail shall include contract drawing information of "products by others" such as flashing and finishes surrounding the product and include dimensions of the products where they impact the design, rough opening sizes or installation of the FE/BR product.
q. Details for flashing and weather proofing shall be coordinated with the weather proofing submittal and design shall be shown for sill, head and jamb conditions.

8. Provide a drawing for each door hardware with TSS Wiring & Pneumatic (Terminal #, Terminal Wire, Device Wire, Function, Device Model & Device Type).
9. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, finish/paint system, legend, and glazing specifications.

a. Breakdown of Product Line Items:
b. If Manufacturer produces one contract line item as several parts (e.g., door with transom and sidelights), they shall break out items on drawings. Each item shall be a subdivision of that product line item number.

E. Engineering Calculations:

1. Submit project-specific engineering calculations as described herein and in the General Conditions and to address the performance requirements in this specification section for the door system and its attachment to the supporting building structure.
2. A Blast Report is required to validate items that were not part of the ASTM blast test, for example, concrete anchorages. The report shall have a summary narrative, a tabular summary of results, design sketches and supporting calculations. Calculations shall be numbered with a table of contents.
3. Submit engineering calculations concurrently with corresponding shop drawings.
4. Identify the location of door assembly within the building.
5. Calculations shall bear the seal of a Professional Engineer licensed in the appropriate jurisdiction.

F. Installation Instruction Manual:

1. Manual shall cite all anchorage components, including complete description of anchors, as well as installation criteria such as drilling specifications into concrete or masonry, torque requirements, minimum edge distance, spacing, etc. For sub-frame attachment to concrete, instructions shall include alert to installers to avoid cutting rebar during anchor installation.

a. Provide directions to accommodate/avoid reinforcing rebar.

2. Manual shall be customized for each type of application.

3. Manual shall include installation steps of contract drawing information of "products by others" such as flashing and finishes surrounding the product that identify the other work, where it interfaces with the product. Detailed installation for the "products by others is not required."
4. Develop instructions for unique conditions as they are identified.
5. Manual shall include step-by-step instructions for installing FE/BR doors with supporting photos, illustrations and figures that also includes sections for General Requirements, Safety, General Recommendations/Best Practices for Personal Protection, Equipment (PPE), List of Tools & Expendable Supplies, Door Removal from Crate, and Cleaning
6. Manual shall include step-by-step instructions for replacing the glazing panel with supporting photos, illustrations and figures that also includes sections for General Requirements, List of Tools & Expendable Supplies, Door Removal from Crate, and Cleaning. Identify any special requirement for using a Vacuum Lifter that is attached to an approved lifting equipment.

G. Manufacturer's Technical Representative shall submit list of unique project specific site conditions that require special manufacturer representative inspection and/or installation training.

H. [Samples for Verification:

1. [Door and Frame Corner Fabrication: Provide one 450-by-450-mm (18-by-18-inch) sample for record to OBO. Sample will include a minimum of: one hinge, full-size door corner including full-size sections of extrusions with factory-applied color finish, cladding and removable covers, weather-stripping, hinge, still, and glazing panel and glazing stops (if applicable). If directed by OBO, when a current sample is available at OBO headquarters, an additional sample is not required.]

1.4 INFORMATIONAL SUBMITTALS

A. General:

1. Informational submittals shall be submitted at least four weeks prior to installation.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Qualification Data: For Manufacturer and Installer in accordance with the Part 1 Article on QUALITY ASSURANCE.

C. Mill Certificates: Signed by metal manufacturers, certifying that products furnished comply with requirements of this Section, including requirements associated with chemical and physical properties.

D. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.5 CLOSEOUT SUBMITTALS:

A. General:

1. Refer to Division 01 Sections on Submittals and on Closeout for general administrative requirements.

B. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

C. Maintenance Data.

1. Data shall include instructions for cleaning and maintenance of Spall Shield glazing layer.

D. Inspection Reports and Certificate of Compliance: See forms at end of this Section.

1. Provide Table of contents and/or bookmarks organizing by building and floor for each product using contract identification number.
2. Provide plan showing location of products (one plan may cover multiple products or whole floor if legible).
3. Provide completed certificates of compliance documenting that all FE/BR door assemblies have been installed in accordance with contract documents. Signed by certified installer.
4. Provide any additional QC documents used by Contractor during the installation.
5. Mill Certificates: Signed by metal manufacturers, certifying that products furnished comply with requirements, including chemical and physical properties.
6. Research/Evaluation Reports: For post-installed anchors, from ICC-ES.

1.6 QUALITY ASSURANCE

A. Quality Control for Forced-Entry/Ballistic Resistant (FE/BR) Products: Certify compliance of fabricated and assembled FE/BR products specified in this Section with each quality control procedure established by the Government; these procedures are identified in Compliance Form at end of this Section. Other quality control forms are also found at end of this Section.

B. Testing Laboratory Qualifications: For compliance with non-security performance requirements on security door assemblies of this Section, use only those testing laboratories, which have successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

C. Delegated Design Responsibility: Contractor shall retain an experienced Professional Engineer, registered in the U.S. or in country with significant experience with doors of similar complex performance requirements, and acceptable to the Project Director/COR, to perform responsibilities of Delegated Design.

D. Installer Qualification Data: Submit resumes of all team lead installers (present and responsible for each install) documenting that installer has installed FE/BR door assemblies for a DOS project within last five years. Resume shall include at least three references (including contract information) that can provide verification that installer has expertise required to perform successful installation. Installer's qualifications requires approval by the Office of Overseas Buildings Operations, Construction Facilities Security Management, Security Management, Security Countermeasures Division, Security Engineering Branch (OBO/CFSM/SM/SCD/SEB) and/or FE/BR Program, and the Project Director/COR. Each installer of the installation team shall

be certified by manufacturer as being capable of properly installing the FE/BR doors as part of the on-site Manufacturer's Technical Representative training. The Contractor shall provide written documentation to the Project Director/COR that the installation team is certified in their products installation. Certification to be on the FE/BR manufactures letter head and indicate dates of training and what products they are certified to install.

E. Manufacturer's Technical Representative: For non-GPE project, the manufacturer shall provide technical representative to the project; for GPE projects Contractor shall hire from manufacturer technical representative. Manufacturer's technical representative shall be an employee of manufacturer, and have the following responsibilities:

1. Pre-Installation Conference: See Part 1 Article on PRE-INSTALLATION MEETINGS.
2. Installation Team Training: Manufacturer's technical representative (at no cost to the U.S. Government) shall provide the crew which is to actually perform installations of FE/BR assemblies with minimum of 16 hours of on-site, hands-on training, to include installation of three FE/BR doors.
3. Inspection: See Part 3 Article on FIELD QUALITY CONTROL.
4. Additional Assistance: Manufacturer's technical representative (at no cost to the U.S. Government) shall provide General Contractor any additional advice, instruction, training, supervision, or inspection required to enable General Contractor to complete installation certification described below.

    a. Provide training to the General Contractor to allow them to train the Embassy staff in proper operation and maintenance of FE/BR assemblies.

F. Certification by General Contractor: Prior to final completion, General Contractor shall provide to the Project Director/COR a Certificate of Compliance for each FE/BR door, verifying that each door has been installed in accordance with manufacturer's instructions and the requirements of these Specifications, and is operational. A sample Certificate of Compliance is attached at the end of this Section. Deviation from these requirements is only permitted with the written approval of OBO/CFSM/SM/SCD/SEB or OBO/CFCM/SM/SOD/PSO/FE/BR. Specifically, General Contractor's certification shall include verification that:

1. Manufacturer's technical representative was on site during initial stages of installation and for site-specific unique conditions as required. Team installing door assemblies has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.
2. Verify no damage has occurred to crate during shipping, no 'tip-and-tell' devices are tripped, and BOM (Bill of Materials) is accurate.
3. Each sub-frame has been installed level, plumb and square.
4. All sub-frame assemblies were factory welded, and any large sections that exceed limits of standard shipping containers were clearly identified for field welds.
5. All units with glazing panels were pre-glazed at the factory.
6. Employees performing installation meet specified training and experience qualifications.
7. Employees performing installation meet specified training and experience qualifications.
8. Each door frame head was installed level, and side jamb installed plumb and square.
9. All frame socket head cap screws and threaded openings in sub-frame were cleaned of all oil and debris, were dry-torqued to meet manufacturer's specifications, and were centered

in slotted door frame holes so that slotted hole is visible on both sides of washer. Shims were inserted at all socket head cap screw locations.

10. Frame screws are manufacturer supplied in accordance with approved shop drawings. Deviations from this shall be submitted through Project Director/COR to OBO/CFSM/SM FE/BR Coordination Board for their technical review and approval during shop drawing review phase.

    a. **[Existing Door Replacement: Whenever possible, same screw size and pattern may be used. When existing FE/BR door is being replaced, existing screw may be 12mm diameter screw, and washer grade 8 or equivalent class 10.9 or 12.9 historically used in past. In coordination with OBO/SM, replacement door may use this same attachment.]**

11. All door frame shims are plastic or stainless steel, horseshoe shaped, and 1.5 mm (1/16”) thick with break-away tabs.
12. Shim: All door socket head cap screws were installed and fully shimmed, minimum one shim per screw. Shim gap may exclude through wall flashing and weather proofing up to an additional 3-mm beyond the 6.5 mm, or the as tested gap limits referenced in this section (i.e., gap at the head could be 6.5 mm, plus 3 mm for a drip edge and through wall flashing for a total gap of 9.5 mm, or as tested, at the head or if the weather proofing was thinner, the total allowable gap would need to reflect the weather proofing plus 6.5 mm, or as tested gap space)
13. In no case shall the combined tested gap and weather proofing exceed 12-mm between subframe and the door frame.
14. Doors may be mounted maximum of 6.5 mm proud of subframe on attack side.
15. Door frame socket head cap screw horizontal slotted holes are 19 mm x 35 mm (3/4 inch x 1-1/4 inch) radiused access holes. Washers shall be 27 mm diameter.

    a. **[Existing Door Replacement: Slotted holes may match existing.]**

16. At each door assembly, there is continuous, plus or minus 1.5 mm (1/16 inch), gap between door leaf and door frames, as indicated in FE/BR manufacturer’s shop drawings.
17. Door does not bind on surrounding floor area and provides minimum of 6 mm of clearance between door leaf bottom and floor at any point in door swing after final floor finish has been applied.
18. Aluminum threshold cover plates were installed, and do not exceed limits for accessibility in accordance with OBO Building Code Chapter 11, and as indicated in approved shop drawings.
19. Weather proofing and flashing is installed through the frame and terminated as shown on the approved shop drawings.
20. Door Under cuts:

    a. If there is a threshold, the undercut between the bottom of the door and the top of the threshold shall not exceed 6 mm. Distance between the bottom of the door and the floor slab should not exceed 19mm including threshold.
    b. If there is no threshold, the undercut between the bottom of the door and the top of finish floor shall not exceed 6 mm and shall not exceed 12 mm for carpet (top of finish slab to bottom of the door).

21. Ballistic trim bars have been screwed to sub-frame and not door frame, and as shown on approved shop drawings. Maximum gaps at shim space shall not exceed as tested.

    a. Ballistic trim shall be designed to take into account dimensional requirements of flashing or weather proofing.
    b. Ballistic trim shall be tight to the subframe.
    c. Ballistic trim shall be tight to the door frame and a construction tolerances of up to a maximum of 3 mm is acceptable between the frame and ballistic bar.

22. The door is to be installed plumb and in accordance with approved tested assembly and shop drawings.
23. All forced entry lock (FEL) strikes engage their strike plates with no binding
24. No part of FE/BR door has been altered. No part of FEL has been altered, including but not limited to grinding, bending, cutting or re-welding any part of FEL strike, strike plate (steel coupon with vertical slot welded or screwed to frame) and (if applicable) strike plate receiver (vertical slot in door leaf). The only acceptable fix for defective or altered parts is to unbolt altered piece and replace altered piece in its entirety.
25. No finish materials including exterior cladding or interior trim overlaps door frame/sub-frame gap and ballistic trim bars unless finish materials can be easily removed and reinstalled. Any overlapping finish work (i.e., metal, wood, stone, gypsum board, etc.) must be capable of removal without damaging door frame and surrounding finish work. Door and frame were installed such that removal of door and frame is possible without demolishing finishes and trim, allowing door frame to be adjusted in future, 6 mm in or out of opening.
26. Any cladding that covers door frame screw access holes has either access holes with cap plugs or is attached with screws for easy removal without damage for reinstallation. Cap plugs and cladding for each door have been bagged and will not be installed until after final QA inspection has been conducted by OBO/SEB or FE/BR representative.
27. Manufacturer and installer ensures any decorative cladding around electromagnetic locks installed on door frame will allow lock position to be adjusted in both directions.
28. All access plates for each door have been installed as indicated in approved shop drawings.
29. Each lockset, deadbolt and panic exit device is able to fully engage and freely operate.
30. On doors with panic hardware, panic exit device strike plate has been installed in location that will eliminate any door leaf bounce between door leaf and frame.
31. Each door closer has been installed and closing speeds, latching speeds, and back-check has been adjusted in accordance with manufacturer's instructions. Doors shall close and latch in 5-7 seconds.
32. Automatic door operators have been adjusted as appropriate in accordance with manufacturer's instructions to conform to accessibility and fire protection requirements of the OBO Building Code.
33. Manufacturer has provided two embossed/printed metal plate or metallic foil for each product using machine-applied letters and numbers with raised characters. Locate one label on door frame header so that it is not exposed when door is closed and is clearly visible and not obscured by hardware when door is open. Locate second label on top edge of door leaf.

1.7 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide the Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. Provide two identification labels per door assembly. Labels shall be embossed/printed metal plate or metallic foil with adhesive backing for permanent identification. Locate one label on door frame header so that it is not exposed when door is closed and is clearly visible and not obscured by hardware when door is open. Locate second label on top edge of door leaf. Labels shall be approximately 40 x 75 mm and shall cite:

1. Manufacturer's name/city/state.
2. Contract number.
3. Month/year of manufacture.
4. Mark number.
5. Government certification model number.
6. DOS Code (i.e., 1123, 2123, etc.).
7. SHW Hardware package number/Modification number (as applicable).
8. Blast characteristics (i.e., ASTM F2927-xx (xx is the version at time of testing) level I, II, III/S or none).

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, completed and prepared for installation and connection with security systems. Disassemble hardware for shipping only to extent hardware interferes with shipping. Refer to Division 01 Section “Secure Shipment” for additional requirements.

B. Deliver door assemblies with glazing panels as factory glazed unless otherwise directed by the Government.

C. Pack door assemblies and accessories into maximum of two crates for door and ballistic trim, installation anchors and cladding. Package and ship installation hardware (anchors, bolts, screws, shims, ballistic trim, shop drawings, etc.) for each door in same crate as door assembly.

D. Provide at least two wood cross braces on both sides of crates. In each crate, provide a separate compartment for installation hardware. Provide “Tip-N-Tell” indicators on inside of crate to assist in ensuring care was taken in shipment. Secure side of crate to be opened with screws. Package and ship shop drawings and installation manual for doors prior to door assembly**[may be shipped with the doors]**. When shipped with doors, crate shall clearly indicate on the outside that it contains the shop drawings and installation instructions and be marked, “open first.”

E. Embeds and subframes may be shipped in a container or crated and shall be braced to minimize damage to the finish and studs (embeds).

F. Provide removable spreader bar between jambs used during fabrication, delivery, and installation and to include mullions of each frame assembly, except where threshold covers the spreader bar. Do not mar finishes of assembly with installation or removal of spreader bars. Removeable with mechanical fasteners so as to not damaging finishes and coatings.

G. Provide protection of pre-finished units, such as pre-finished glass or stainless steel, using self-adhesive paper or film or other protective material. In all cases protective material shall be suitable for shipping, storage and construction environments.

H. Treat security door assemblies as fragile merchandise packaged and shipped in export wood crates, with width end in upright position and blocked together in a mass. Comply with manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents. Provide at least two wood cross-braces for door assembly. Clearly mark crates to indicate which side shall be opened first.

I. Clearly mark sub-frames with door mark number and identify head and left and right jambs.

J. Each door shall be shipped with fly sheet that includes all of the identification information found in the Part 1 Article, on IDENTIFICATIONS SYSTEMS.

K. Contractor shall ship sub-frames with adequate temporary bracing for shipping to ensure original shape and configuration.

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure to meet performance requirements.
b. Failures including excessive glazing deflection, water leakage or air infiltration.
c. Deterioration of metals, other materials, and metal finishes beyond normal weathering.
d. Failure of insulating glass. condensation in air gap in insulated glass.
e. Failure of hardware components.
f. Delamination of glazing layup.

2. Warranty Period:

a. Doors: Manufacturer will warrant the doors for a period of five years from substantial completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Fabricate and install FE/BR door assemblies to achieve indicated levels of FE/BR resistance. Extend resistance to include anchorages, interfaces with adjoining substrates, and hardware. Provide specific performance ratings, also referred to as Government Code numbers,

as indicated below. Refer to Article on MATERIALS, GENERAL for composition portion of Government Code.

B. Certified Units: Provide units, including frames and sub-frames which meet the following requirements:

1. Have been certified by Department of State, DS/PSP/PSD SD-STD-01.01, Revision H, Certification Standard, Forced Entry and Ballistic Resistant Standards, dated 16 June 2020.
2. Where required on the exterior of blast designed buildings, provide door that has been tested and passed the latest ASTM F2927-xx, along with the DOS DS ASTM F2927 supplement to damage level I, II, or III/S. Hardware shall comply with Specification Section "087155 Secure Door Hardware".

C. DOS Door Codes: See Table 2.1 "Door Codes" below:

TABLE 2.1 – DOOR CODES

DOS CODE	1st DIGIT - TRANS-PARENCY	2nd DIGIT - FIRE RATING	3rd DIGIT - FORCED-ENTRY RATING	4th DIGIT - BALLISTIC-RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	1.5 hours (class D at exterior)	15 minutes	Note Used
3	*	3 hours (class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4	*	45 minutes (class C)	5 minutes	Armor-Piercing (.30-06)

Notes for above Table 2.1:

1. Composition - Column 1: Designated whether door has a transparency.
2. Fire Rating - Column 2: Fire-rated assemblies: Where indicated for fire resistance, provide flush steel doors-and-frame units; comply with NFPA 80, Standard for Fire Doors and Windows. Provide units that have been tested by recognized testing agency in accordance with NFPA No. 252 and ASTM E 152. Provide rated units where shown or scheduled.
3. Forced Entry Rating - Column 3: Forced-Entry (FE) resistant assemblies: Where door assembly is shown or scheduled as FE, provide door manufacturer's material and fabrication for panels, inserts, hardware, devices, and framing of units for the ratings as noted above.
4. Ballistic Resistance Rating - Column 4: Ballistic resistant (BR) assemblies: Where door assembly is shown or scheduled as BR, provide door manufacturer's materials and fabrication for panel, inserts, and framing of units for the ratings as noted above.

D. Structural Performance: Force entry / ballistic resistant door assemblies shall withstand the effects of wind loads determined, with no permanent deformation or breakage within door assembly when designed in according to ASCE 7-16, as adopted and amended by the OBO Building Code.

1. Basic Wind Speed: Shall be as indicated in the Structural Drawings.

E. Blast Resistance:

1. [TEXT PREPARED BY A QUALIFIED AND CLEARED BLAST CONSULTANT, WITH PROJECT-SPECIFIC PERFORMANCE REQUIREMENTS OR DESIGN, SHALL EITHER BE INSERTED IN THIS LOCATION OR PROVIDED IN A SEPARATE DOCUMENT AND REFERENCED IN THIS LOCATION. PREFERENCE IS FOR INSERTION IN THIS LOCATION.]

2.2 MANUFACTURERS

A. Selection of fabricator/manufacturer for each type of security door assembly, and selection of manufactured elements, which are used in make-up of that assembly, are Contractor's options subject to the following requirements and limitations, and subject to general provisions of Construction Contract:

1. Pre-certified fabricators (by DS) of ballistic-resistant and forced-entry-resistant assemblies are identified in a separate Contract Attachment labeled "Government Certified FE/BR Products and Designs".

B. Standardized Door Unit Dimensions: In a new construction, FE/BR doors shall be sized in a standardized manner for cost-efficiency and future operation and maintenance.

1. Single door width shall be standard rough opening of 1086 mm (nominal minimum 3’-0” door leaf) and increases is rough opening width shall be based on 50 mm increments up to 1386 mm maximum rough opening width (4’-0” nominal door leaf width).

a. Manufacturer’s 1086 mm door shall provide a minimum clear opening of 815 mm (32 inch), as defined by life safety requirements for egress. Failure to meet the minimum egress clear width will automatically disqualify the product.

2. Double door width shall be standard rough opening of 2050 mm (two nominal minimum 3’-0” door leaves) and increases is rough opening width shall be based on 150 mm increments up to 2350 mm maximum rough opening width.

a. Manufacturer’s 2050-mm double door shall provide a minimum clear opening of 815 mm (32 inch), as defined by life safety requirements for egress, for the active leaf. Failure to meet the minimum egress clear width will automatically disqualify the product.

3. Single and Double door heights shall be a standard rough opening of 2210 mm (nominal 7’-0” door leaf height) and may be increased in 100 mm increments up to 2510 mm (8’-0” nominal door leaf height).

4. Use of non-standardized door unit size needs Project Director/COR approval.

2.3 MATERIALS, GENERAL REQUIREMENTS FOR FE/BR DOOR ASSEMBLIES

A. Corrosion Resistance Performance:

1. Atmospheric Corrosion Risk: As indicated in Project Contract (e.g., Statement of Work), the OBO Building Code Appendix W defined OBO Atmospheric Corrosivity Level for this site is **[Low] [Moderate] [Extreme]**. The atmospheric corrosion risk exposure risk type for a given component shall be as defined by OBO Building Code R101.1.2 (i.e., direct exterior, indirect exposure to exterior, and interior exposure only).
2. Corrosion Resistance Standards: Provide materials and finishes for the components in accordance with the material specifications of this Specification Section and the general material type as indicated by this article for project-specific corrosion risk identified above or elsewhere in Contract Documents.
3. Material Standards for Door Components (e.g., inserts, tie rods, hardware, anchors, clips and fasteners) - Exterior Doors: As applicable for the OBO Atmospheric Corrosivity Level (ACL) of site and for both direct exterior exposure and indirect exposure to the exterior:

   a. Mild Steel: Hot-dipped galvanized coating; low and moderate ACL.
   b. Stainless Steel: Low, moderate, and extreme ACL.
   c. Aluminum: Low, moderate, and extreme ACL.

4. Ballistic metal inserts (wholly contained within the door) for forced entry, ballistic and/or blast for aluminum doors and as applicable for the OBO Atmospheric Corrosivity Level (ACL) of site and for both direct exterior exposure and indirect exposure to the exterior:

   a. Stainless Steel: AISI Type 316/316L, 2101 or 2205; low risk, moderate risk, and extreme ACL.
   b. High Strength Steel: various types, when coated to prevent galvanic and other forms of corrosion and when cavity is provided with drain; low, moderate, and extreme ACL with pre-approval of OBO/CFSM/SM/SCD/SEB and OBO/PDCS/DE/CSE.
   c. Other metals or other materials: low, moderate, and extreme ACL with appropriate measures to minimize galvanic corrosion with dissimilar metals.

5. Wood Composite Doors: Not allowed on exterior door applications; low, moderate, and extreme ACL.
6. Interior doors: Material for doors located in interior exposure only conditions, as defined by OBO Building Code R101, shall conform to galvanized mild steel or aluminum, if not indicated otherwise on the Construction Drawings.
7. Finish Standards for Components: as applicable for project site: See finish requirements of this section and Section 099602, “High-Performance FE/BR Coatings.”

B. Assembled Door Characteristics:

1. Maximum weight for single leaf door (include only door slab, hinges, and locking/access devise (FELs and Corbin Russwin 2067 or Multi Point lock (MP)) for full vision or opaque door designed for a 1086 mm x 2210 mm rough opening:

a. Steel Doors:

1) Doors with FEL's and Corbin Russwin: 290 kg.
2) Doors with multi-point Lock: 312 kg.

b. Stainless Steel Doors:

1) Doors with FEL's and Corbin Russwin: 337 kg.
2) Doors with multi-point Lock: 359 kg.

c. Aluminum Doors:

1) Doors with FEL's and Corbin Russwin: 276 kg.
2) Doors with multi-point locks: 300 kg.

2. Maximum Thickness: 70-mm (2-3/4 inches), excluding door hardware, cladding and FEL protector. Glazing stop cannot protrude beyond either surface plane of the door, except as noted for aluminum doors. No fasteners used to secure the glazing stop shall be visible.
3. Maximum Stile Width and Top Rail Height: 203 mm (8 inches) in vision leaf.
4. Bottom Rail Height: 255 mm (10 inches) in vision leaf (measured from the finished floor to bottom of the glazing).
5. On exterior doors, provide door continuous weather-stripping installed in factory between door leaf and door frame.

C. Acoustic Door Core Insulation (Not Thermal):

1. Mineral-Fiber Insulation: ASTM C 665, Type I (blankets without membrane facing); consisting of fibers manufactured from slag or rock wool; with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively; passing ASTM E 136 for combustion characteristics in any voids.

D. Glazing Panels, General: Fabricate glazing panels of sizes shown and scheduled with same performance capabilities as specified/shown for door assembly where installed. Where applicable, achieve performances and combined performances through lamination of transparent sheets, films, and screens of standard manufactured/tested products. Comply with applicable provisions of Division 08 general glazing section and Section 088855 "Security Glazing."

1. Forced-Entry (FE) Resistance: Where assembly is indicated for forced-entry resistance rating (FE), provide glazing panel of size shown or scheduled in accordance with Bureau of Diplomatic Security (DS) certification.
2. Ballistic Resistance (BR): Where assembly is indicated for ballistic-resistance rating (BR), provide glazing panel of size shown or scheduled in accordance with DS certification.

E. Sealants: For sealants required within fabricated security doors, provide type recommended by manufacturer for joint size and movement. Sealant shall remain permanently elastic, non-shrinking, and non-migrating.

2.4 MATERIALS, GENERAL REQUIREMENTS FOR MILD STEEL DOORS

A. Hot-Rolled Steel Sheets and Strips: ASTM A 569, commercial quality, pickled and oiled, except as otherwise indicated.

B. Cold-Rolled Steel Sheets: ASTM A 366, commercial quality, except as otherwise indicated.

C. Galvanized (Zinc-Coated) Steel Sheets: ASTM A 653, minimum G90 zinc coating, mill phosphatized; commercial steel, except as otherwise indicated. Zinc-iron alloy-coated (galvannealed) steel sheet products are not permitted.

1. Stainless Steel Sheets where required for finish: AISI Type 316/316L, complying with ASTM A240; commercial quality, No. 4 directional polish.
2. Plates, Bars, Angles, and Channels: ASTM A36 or ASTM A572
3. Hollow Structural Sections (steel tubes): ASTM A500 or ASTM A1085.
4. Supports and Anchors: For wall assemblies, hot-dip zinc coat support/anchor units after fabrication in compliance with ASTM A 153, Class B.
5. Inserts, Bolts Fasteners: Standard units of strengths required to endure performances; hot-dip zinc coated where used in exterior wall assemblies in compliance with ASTM F2329.
6. Hot-Dip Galvanizing: All mild steel door components must be hot-dip galvanized in accordance with ASTM A123/A123M.

2.5 MATERIALS, GENERAL REQUIREMENTS FOR STAINLESS STEEL DOORS

A. Stainless Steel Plates, Sheets, and Strips: AISI Type 316, 316L, 2101 or 2205, complying with ASTM A240/A240M or ASTM A895/A895M, commercial quality.

B. Stainless Steel Bars and Shapes: AISI Type 316, 316L, 2101 or 2205, or AISI Type 316L where welding is to be performed, complying with ASTM A276/A276M or A582/A582M.

C. Stainless Steel Tubing: AISI Type 316, 316L, 2101 or 2205, complying with ASTM A1016/A1016M.

D. Stainless Steel Wire and Rod: AISI Type 316, 316L, complying with ASTM A555/A555M.

E. Stainless Steel Bolts, Hex Headed Screws, Nuts, and Washers: AISI Type 316 (Alloy Group 2), complying with ASTM F593 and ASTM A594, or ASTM A193 and ASTM A194, or ASTM A320 and ASTM A194; provide compatible AISI Type 316 washers where appropriate.

2.6 MATERIALS, GENERAL REQUIREMENTS FOR ALUMINUM DOORS

A. Maximum Thickness: 70-mm (2-3/4 inches), excluding door hardware, FEL protector and glazing stop, as noted in this Article. Surface-applied glazing stop shall be allowed, if necessary, only on protected side and bump-out thickness shall be less than 13 mm. No fastener shall be used on architectural glazing stop toward the protected side door face while a counter-sunk type fastener can be acceptable on perpendicular face of glazing stop to door protected side face.

1. Glazing stop frame(s) shall not exceed 40 mm in width 13 mm beyond the face of the door and shall be configured internally to cushion all perimeter edges and faces of glazing. Glazing stop frame shall not produce pinch point with hardware. All external bolts to attach glazing stop frame shall be flush mounted or concealed as noted in section 2.4 Alternatively, protruding bolt heads shall be covered with additional trim frame and flush mounted screws.

B. Minimum Aluminum Extrusions: In compliance with FE/BR performance of tested assembly.

C. Aluminum Sheets, Plates, Bars, Tubes, and shapes; Must be in compliance with Aluminum: ASTM B209 (ASTM B209M) stretcher-leveled aluminum alloy or ASTM B221 (ASTM B221M)

D. Minimum sheet thickness: Sheet one-piece 1.02 mm (0.040-inch).

E. Inserts, Bolts, Fasteners: Standard units of strengths required to endure performances; Stainless steel, grade shall match tested/certified condition. Provide compatible washer that minimizes galvanic action. See the Part 2 Article on DOOR COMPONENTS for frame to subframe attachment for anchor bolt requirements.

1. Stainless Steel Bolts, Hex Headed Screws, Nuts, and Washers: AISI Type 316 (Alloy Group 2), complying with ASTM F593 and ASTM A594, or ASTM A193 and ASTM A194, or ASTM A320 and ASTM A194; provide compatible AISI Type 316 washers where appropriate.

F. Door Core Insulation: Not required but may be provided.

G. Glazing Panels, General: Fabricate glazing panels of sizes shown and scheduled with same performance capabilities as specified/shown for door assembly where installed. Where applicable, achieve performances and combined performances through lamination of transparent sheets, films, and screens of standard manufactured/tested products. Comply with applicable provisions of Section 088855, "Security Glazing."

2.7 MATERIALS, GENERAL REQUIREMENTS FOR COMPOSITE DOORS

A. Composite doors may be allowed with approval of OBO and DS and the vendor shall provide material properties and designs for evaluation before DS certification testing.

B. Weights of composite doors shall not exceed the requirements for steel doors.

2.8 HARDWARE

A. General: Provide special units of door hardware to achieve performances, and as shown and scheduled. Standard units for each security door assembly are specified to be furnished as work of Section 087155 "Security Door Hardware"; see Project "Finish Hardware Schedule" and "Data Sheets," and provisions of this Section, as well as notes on door-and-frame schedule.

B. FE and FE/BR Hinges:

1. For FE and FE/BR doors, provide ANSI/BHMA compliant extra-heavy duty needle bearing type hinges, minimum 910 kg (2000 pound) capacity per hinge, for door leaves weighing 200 kg (450 pounds) or more and minimum 450 kg (1000 pound) capacity per hinge for door leaves weighing 200 kg (450 pounds) or less. Polymer and Teflon bearing hinges are not permitted. Provide cycle tested hinges in accordance with ANSI/BHMA 156.1-2013 on an actual door specimen for largest and heaviest planned use to a minimum of 1,000,000 cycles. Test shall be performed using hinges installed in accordance with DS forced-entry test in number and in how hinges are attached. Other minimum requirements are as follows:

    a. Cycle Testing: 1,000,000 (exceeds ANSI requirements; DOS-specific requirement).
    b. Hinge Pin Rise: None Allowed.
    c. Hinge Play: 0.38 mm (.015 inch).
    d. Vertical Wear: 0.76 mm (.030 inch).
    e. Lateral Wear: 1.60 mm (.062 inch).

2. Continuous hinges are prohibited.
3. For doors exceeding maximum standard height, additional hinges may be required and OBO/CFSM/SM/SOD shall review and approve the number proposed hinges before any submission for certification.
4. Welded attachment between hinges and doors and between hinges and frames are prohibited.
5. Stamp each FE and FE/BR hinge with initials of hinge Manufacturer, initials of FEBR door manufacturer and month and year hinge was manufactured, visible on hinge prior to installation.

C. All forced entry locks (FEL) shall include an adjustable and removable strike plate that is bolted with countersunk fasteners (no Philips or regular screws allowed). Strike plates shall be adjustable (in and out) a minimum of 2 mm in each direction.

D. All forced entry locks (FEL) that include a thumbturn, or lever, or exterior keyed FEL's, below 900 mm shall have protective guard to prevent damage to thumbturn or cylinder. The protection shall meet the following requirements:

1. Protect thumbturn on minimum three sides.
2. Be removable and replaceable without disassembly of door.
3. Extends beyond edge of thumbturn, or face of FEL cylinder, a minimum of 1.5 mm.
4. Provides enough clearance (minimum 12-mm) between guard and thumburn, or lever, to allow ease of operation of thumbturn/lever or key.
5. Provide guards that are capable of withstand strike of a blunt object without cracking, bending or fastener failure.
6. Guards shall be designed to minimize risk of snagging clothes (i.e., dresses or pants) should they brush guard while passing through door.
7. Guard designs shall be minimalistic and in congruent with architecture design, including finishes.

E. Mortised Door Hardware, including multi-point locks, shall be installed so that it can be adjusted, repaired, replaced or access to wiring without removal of entire door leaf surface steel or aluminum sheets. No service access to hardware from exterior side of door is allowed.

1. Cover plates shall be designed to blend with architecture of door, and screws shall be counter sunk and finishes of plates and fasteners shall match finish of door to the extent feasible.

F. Doors equipped with multi-point locks and delayed egress shall incorporate annunciations per the DOS multi-point lock requirements.

G. Weather Stripping and Seals: Provide continuous weather stripping/gasketing on all exterior doors and smoke, light or sound gasketing on interior doors where indicated or scheduled; Gasketing shall be integrated, congruent with architecture, and mechanically fastened with noncorrosive fasteners, or integrated into design of door jamb and head; BHMA A156.22; Gasketing shall be UL listed for use on labeled doors; with resilient or flexible seal strips that are easily replaceable and readily available from stocks maintained by manufacturer.

2.9 FABRICATION AND ASSEMBLY

A. General: Fabricate, test, and pre-assemble security door assemblies with hardware at factory; disassemble hardware only to extent necessary for handling, packaging, shipment, and installation at Project. Fabricate metal work to comply with performance requirements. Fabrications shall be rigid, neat, and free from warp/buckle/similar defects, with eased edges and welded joints, ground smooth and flush where exposed to view, to provide continuous, visible flush joints. Welded door seams shall be edge filled and dressed smooth. Weld in accordance with AWS D1.1, Structural Welding Code for Steel, AWS D1.6, Structural Welding Code for Stainless Steel and AWS D1.2 Structural Welding Code for Aluminum.

1. Prepare door leaves and frames of each assembly to receive hardware, devices, and accessory units as shown and scheduled. Reinforce work for hardware and devices and cut work for mortised or concealed units; comply with ANSI A115 series specifications, working from templates supplied by unit manufacturers and suppliers.

a. Locate hardware, devices, and accessories as shown and scheduled (including on approved shop drawings) or, if not otherwise indicated: 1) in accordance with DHI Recommended Locations for Builder's Hardware or, 2) in accordance with security device manufacturer's recommendation for optimum responses, but 3) in any case, as required to achieve required assembly performances. Do not cut or otherwise alter hardware in order to install on door without officially notifying the OBO/SM FE/BR Coordination Team with detail drawings showing/indicating the modification(s) and installation in door along with FE/BR manufacturer’s part number.

b. Except where assembly is equipped with door-seal stripping at jambs and head, provide neoprene door silencers on stops; three at strike jamb for single door, and four at head for double door.

c. Except as otherwise indicated, pre-fabricate and pre-assemble security door assemblies to include full extent of required conduit-protected electrical/electronic power and control wiring placed and supported to avoid conflicts with other elements and subsequent drilling/cutting-in of work during installation of units.
d. Provide access ports, as required, to support general construction 25 mm TSS conduit at door frames and sub-frames/door interface.
e. Clearances between edge of door leaf and frame and edges of door pairs: Not more than 6.5 mm at jambs and head, except between fire-rated pair of doors which shall be as tested.
f. Fabricate frames with horizontally slotted bolt holes to allow for future frame adjustment.
g. Locate and show a path for pneumatic tubing, or door actuator, from entry to the door to the device.

    1) Tubing and wiring location should be coordinated with the anchor holes to minimize pinch risk.

h. Locate terminal block access on hinge side of door frame, between 1.2 meters (47 inches) and 2 meters (80 inches) above the finished floor. The terminal block opening shall have removable cover and provide clear minimum opening of 48 mm (1.9 inch) wide by 250 mm (10 inches) long. Smaller access opening may be provided if access opening is large enough to remove terminal block and it is designed to allow terminal block to hook, or screw, into door and that at least an additional 250-mm of wire is provided, within door, to facilitate removal of terminal block. Any design smaller that reference minimum will also require approval by OBO/CFSM/SM/SCD prior to forced entry/ballistic testing.

    1) Electronic Door Hardware Wiring Diagram: Provide a printed diagram of the factory installed wiring for each electronic device provided with each door assembly. Permanently affix this diagram on the inside of the cover plate that protects the wiring terminal block.
    2) Wires at terminal block shall be labeled properly with electrical door component.

        a) Wiring diagram shall depict conductor number, terminal block number, and wire color for each conductor. It shall also depict which device with model number, as well as which component and polarity of that component that it is connected to. If device is active component such as magnetic lock or access control strike, place voltage of that device on diagram as well (typically 24 volts DC) to ensure that any dual voltage equipment such as some magnetic locks, are pre-configured at factory to 24 volts DC. If device is switch sensor, sensor components may be abbreviated with N.O. for Normally Open, N.C. for Normally Closed, and COM. for common.

    3) Conductor Wire: Each factory installed conductor shall have permanent, numerical, machine labeled identification tag attached to it near termination point so that it is visible when cover plate is removed. These identification

tags shall be sequential in order starting with number 1. Each conductor shall be pre-terminated to factory installed terminal block in sequential order.

4) Terminal Block: Provide terminal block labeled with numerical machine labeled identification tag in sequential order corresponding with appropriate pre-installed conductor.

2. Glazing panels shall be removable without removing door from frame, through top of door or by removing any surface panel, except for as noted within this Article for aluminum doors. Select and size stops, moldings, and anchors to tested design.
3. Glazing panels:

   a. Glazing panels shall be enclosed and cushioned within core of door for continuous perimeter bite of not less than 20 mm on each side, and with 6 mm cushion clearance to fixed metal stop on glazing edges. Glazing panels shall be factory installed with no raw metal edges evident or in contact with glass in door glazing panel openings. Glazing panel opening edges shall be cushioned and trimmed neatly to provide acceptable appearance. Comply with requirements in Section 088855 "Security Glazing" and with AAMA/WDMA 101/I.S.2/NAFS.
   b. Additional Requirements for Glazing Panels for Aluminum Doors: External glazing stop frames for aluminum door are allowed only on the interior side of aluminum doors (not allowed on steel doors) on the interior faces of door. See also the Part 2 Article within on MATERIAL, GENERAL REQUIREMENTS FOR ALUMINUM.

4. Sub-frames: Provide steel sub-frames for all FE or FE/BR doors for installation at concrete, masonry, and other non-steel rough openings and for structural steel openings where depth is less than door frame depth. Steel subframe material shall conform to ASTM A36 or ASTM A529 or ASTM A572 for plates, bars, and shapes; and ASTM A500 or ASTM A1085 for hollow structural sections (“steel tubes”). No steel element tapped to receive threaded fasteners shall be less than 12 mm (1/2 inch) thick. For individual openings, sub-frames shall be provided by door supplier. For larger, multi-panel openings, sub-frames may be provided by either door supplier or Contractor; in either case they shall be designed by door supplier and shown with door shop drawings. For larger elevations that require knock-down subframe, provide hot-dipped embeds. Sub-frame depths shall be no less than door frame depth on side of subframe that door is bolted. When embed plate is used in concrete, provide adjustable “mud box” to allow for bolt to penetrate plate and be fully unencumbered. Coordinate sub-frame anchor locations with door frame bolt hole locations. Contractor shall ensure steel sub-frame is assembled and braced so that deformations during installation, or concrete pouring, do not exceed the installation tolerances of the supported door system. Where sub-frames are hot-dipped galvanized, temporary supports shall be designed and detailed not to damage galvanized surfaces during use and removal (e.g., bracing shall not be welded to subframe). Steel sub-frame shall be installed plumb and square. All sub-frames without adjustability shall be drilled and tapped in the field. All door sub-frames shall be pre-punched for technical security conduit.

   a. Post-installed Anchors: In addition to any restrictions or requirements indicated on the Construction Drawings, post-installed anchor systems proposed by the Contractor’s delegated design shall each have ICC-ES Evaluation Report indicating

conformance with current applicable ICC-ES Acceptance Criteria including, but not limited to, for cracked concrete for concrete substrates, seismic applications, and for the use in the specific substrate type and characteristics intended. Shop drawings and field sketches shall clearly indicate critical embedment, spacing, and edge distance requirements and placement tolerances determined by the design.

b. For New Concrete Substrates: Attach steel sub-frame to the concrete substrate with embedded anchors per the blast report, but not less than 12 mm diameter x 150 mm headed steel studs, spaced no greater than 300 mm on center. Provide mud box that incorporates floating anchor to allow minimum of 10-mm (3/8") adjustment in 360 degrees from centerline in each direction of the center of the mounting holes. Floating anchor plates shall be drilled and tapped steel plate, or commercial anchor system, no less than 12-mm thick Final sub-frame shop drawings, product data, and associated delegated design calculations shall be reviewed and approved, in accordance with the Part 1 Article on ACTION SUBMITTALS, prior to fabrication and shipment. Alternative to adjustable mud box system may be considered, but in all case they will need to provide same adjustable connection for the embed and shall take into account the slotted hole adjustability requirements for door frame. Alternative mud box require prior approval by OBO/CFSM/SM/SCD and OBO/PDCS/DE/CSE before door is tested for FE/BR and/or blast.

1) Exterior sub-frames and interior pre-fabricated sub-frames shall be constructed of mild steel 12 mm (1/2 inch) thick steel or greater as required to comply with engineer's report for blast resistance, if applicable, and shall be hot dipped galvanized for corrosion resistance.
2) Field fabricated interior sub-frames shall be prime painted with a high-grade zinc rich metal primer, in accordance with Section 055005 "Metal Fabrications."

c. [For Masonry Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has minimum 12-mm thickness for anchors and minimum width equal to depth of FE/BR product and as determined per blast design, when blast design is requirement. Post-installed chemical anchors in hollow masonry substrates shall use appropriate screen tubes provided by anchor system's manufacturer.]

d. [For Existing Concrete Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has minimum 12-mm thickness for anchors and minimum width equal to depth of FE/BR product and as determined per blast design, when blast design is requirement.]

e. **[Door replacement and retrofit conditions: When FE/BR door is being replaced in kind, existing embed or subframe may be used if visually assessed to be in good condition and determined by calculation to possess sufficient capacity to conform to specified performance requirements for door system. It does not need to be replaced solely because it does not meet one of above 12 mm thickness requirements for new sub-frames. Sub-frame and door hardware design shall provide accommodations for field adjustments to enable installation when verifications in the field prior to fabrication are limited or not feasible. Filling abandoned holes in steel elements with weld material to tap new hole overlapping prior hole is not permitted; drilling and tapping larger**

diameter hole fully encompassing smaller hole is permitted, such as in scenario where existing threads are damaged or determined to be inadequate for new connection design. New anchor holes shall satisfy minimum AISC 360 requirements for bolt hole spacing and edge distances. If subframe does require replacement, as determined by OBO/SM, or due to other conditions (e.g., corrosion or size of opening requires modification), then one of new subframe conditions above shall be used.]

5. Doors, windows and glazed panels in multi-unit elevations shall be designed and fabricated to separate head and jambs of each door frame from other door and/or window frames. Separation shall consist of steel tube, built up section, or bar not less than 25 mm thick, or as required by structural and blast performance requirements; wall thickness of steel tubes shall not be less than 12mm. Material specifications and post-installed anchor requirements as per sub-frame requirements in this Section. Through-bolting door frame through 25mm steel plate into window frame or in reverse order is prohibited.

B. Flashing: Contractor shall provide rigid through-wall flashing at all head locations of exterior doors. Counter flashing is required at locations where building finish materials interface with door systems. Coordinate flashing with FE/BR design at door jambs and sills (when required). Coordinate drip edges at all exterior door heads. Flashing material when it goes all the way through and terminates at interior edge or beyond may have actual thickness excluded when calculating gate/shim space, up to additional maximum of 3 mm beyond allowed shim space.

2.10 DOOR COMPONENTS

A. Glazing Panel: Comply with requirements in Section 088855 "Security Glazing" for performance indicated.

B. Frame to Subframe Attachment: Stainless steel, hot-dip, zinc-coated steel, or iron, complying with ASTM B 633 and ASTM F1941 for fasteners; provide sufficient mechanical properties to comply with the Part 2 Article on PERFORMANCE REQUIREMENTS.

1. All fasteners for doors or windows shall be socket head metric (Class 8.8) equivalent to SAE J429 Grade 5 or other appropriate high strength bolts and hardened nuts and washers as identified in blast report, or as needed to satisfy the Part 2 Article on PERFORMANCE REQUIREMENTS and comply with standard OBO specifications for FE/BR and Blast resistant products. If blast, or other requirements, result in changes to tested FE/BR design, including anchor or other material changes, FE/BR vendor shall contact DS/PSP/RD for to determine if technical review is required. Shop drawings shall include TR number, where applicable. Contractor’s design shall provide appropriate corrosion prevention where dissimilar metals are in close proximity, and to address atmospheric corrosion performance requirements as identified in Part 2 Article on MATERIALS, GENERAL REQUIREMENTS FOR FE/BR DOOR ASSEMBLIES.

2.11 CLADDING

A. Materials: Door cladding and glazing trims shall be fabricated from commercial grade, tension leveled stainless steel to ASTM A240, AISI Type 316, AISI No.4 (brushed) or AISI No. 8 (mirror) Finish as indicated by project specific requirements.

B. Adhesives: Heat resistant, single component, polyurethane reactive (water) hot melt, thermoset adhesive, UL/ULC/WH approved or equivalent industrial grade high-strength/bond double-sided acrylic foam tape.

C. Inter-locking Edge Seams: Resin reinforced polychloroprene (RRPC), fire resistant, high viscosity, sealant/adhesive or UL approved equivalent.

D. Construction: All exposed surfaces of door and frame shall be clad with 1.2 mm (18 gage) commercial grade, tension leveled stainless steel to ASTM A240, AISI Type 316.

1. Door faces shall be fabricated without visible seams, free of scale, pitting, coil brakes, buckles and waves.
2. Direction of grain shall be run with long dimension of piece.
3. Formed edges shall be true and straight with minimum radius for thickness of steel used.
4. Longitudinal edges of base doors clad in stainless steel shall be mechanically inter-locked, adhesive assisted. Edge seams shall be visible.
5. Cladding shall be securely attached to front, back and edges with visible hair-line butted joints at door edges.
6. Lock and hinge edges shall be beveled 3 mm in 50 mm (1/8 inch in 2 inches) unless hardware or door swing dictates otherwise.
7. Cladding installed around electromagnetic lock that is installed on door frame shall allow for lock position to be adjusted 3 mm in both directions.
8. Cladding installed around panic exit device strike plate shall allow for strike plate position to be adjusted 3 mm in both directions.

E. Removable Covers: Fabricate perimeter removable/snap in-place covers from 2.78 mm (0.109-inch) nominal-thickness commercial grade, tension leveled stainless steel to ASTM A167-92b, Type 316 sheet or extruded aluminum. If permanent covers are used provide access holes to all bolts, screws and hardware items. Provide covers for access holes with materials that match the covers/cladding. If covers are attached with screws, provide flush flat hex socket, phillips or torx screw to match cover color. For snap-in-place cover, provide any special tool required to release.

F. Glazing Panel: Where glazing panel is specified, doors shall receive 1.0 mm (20 gage) stainless steel trim and screw fixed glazing stops. Glazing panel trim and stops shall be accurately fitted, butted at corners, with removable stops located on the “push” side of door.

G. Finish Cladded Product Manufacturing Tolerances:

1. Plumbness tolerance, measured through a line from intersecting corner of vertical members and head to floor, shall be +/- 1.6 mm (0.063 inch).
2. Squareness tolerance, measured through a line 90° from one jamb at the upper corner of product, to opposite jamb, shall be +/- 1.6 mm (0.063 inch).

3. Alignment tolerance, measured on jambs, through a horizontal line parallel to plane of wall, shall be +/- 1.6 mm (0.063 inch).
4. Twist tolerance, measured at face corners of jambs, on parallel lines perpendicular to plane of wall, shall be +/- 1.6 mm (0.063 inch).

H. Aluminum Doors are an approved substitution for steel cladded doors, unless specified as "no substitution."

2.12 ALUMINUM FINISHES

A. Finish designations prefixed by AA comply with system established by the Aluminum Association for designating aluminum finishes.

B. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.

C. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: non-specular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.

1. Color: As selected by Project Director/COR with input from the Designer of Record.

D. High-Performance Organic Finish (Fluoropolymer): See Section 099602 "High-Performance FE/BR Coatings."

1. Color and Gloss: As selected by Project Director/COR with input from the Designer of Record.

2.13 METALLIC-COATED STEEL FINISHES

A. See Section 099602 "High-Performance FE/BR Coatings."

1. Color and Gloss: As selected by the Project Director/COR with input from the Designer of Record.

2.14 STAINLESS-STEEL FINISHES

A. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.

1. At all welds: Remove oxides, carbon precipitation, and weld splatter at or around welded joints and passivate surfaces in accordance with ASTM A380 and ASTM A967.

B. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1. Run grain of directional finishes with long dimension of each piece.
2. When polishing is completed, passivate and rinse surfaces in accordance with ASTM A380 and ASTM A967. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Install security door assemblies in accordance with approved shop drawings, manufacturer's data and instructions, OBO/SM FE/BR Program approved manufacturer's FE/BR Door Installation Instruction Manual, requirements of these specifications, and attached Certificate of Compliance.

B. Complete any assembly that was not accomplished in the shop. Refer to Part 2 Article on FABRICATION AND ASSEMBLY.

C. Anchorage: Door manufacturer shall provide anchors appropriate for substrate to which door frame and sub-frame is to be fastened. Door frames shall have pre-drilled horizontally slotted bolt hole patterns not to exceed 300 mm on center. Contractor shall verify substrates involved, and supply any special fastening tools (e.g., special drill, bit, tap) required by anchoring system and fully comply with Manufacturer's Printed Installation Instructions.

1. Avoid cutting rebar during concrete sub-frame installation.
2. Provide 1.5 mm (1/16 inch) thick plastic shims with break-off tabs, minimum one shim, per socket head cap screw, for subframe rough opening (RO) frame clearance.
3. Match finish of cap plugs used in frame with frame finish to the maximum extent possible. Do not install cap plugs until after 100 percent QA inspection, conducted by OBO/CFSM/SM/SCD/SEB or FE/BR Program representative, of doors has been completed.

D. Repair hot-dipped galvanized surfaces in accordance with ASTM A780, including appropriate surface preparations.

E. Finished Sizes Tolerances of Cladded Doors:

1. Widths of door openings shall be measured from inside of frame jamb rabbets. Allowable tolerances from shop drawings of +1.6 mm, -0.8 mm (+ 0.063 inch, -0.031 inch).
2. Heights of door openings shall be measured from finished floor (exclusive of floor coverings) to head rabbet of frame with tolerance of 1.2 mm (± 0.047 inch).
3. Unless hardware requirements dictate otherwise, finished cladded doors shall be sized to fit above openings and allow 3 mm (0.125 inch) clearance at jambs and head. Tolerances on door sizes shall be 1.2 mm (± 0.047 inch).

3.2 FIELD QUALITY CONTROL

A. Manufacturer's technical representative shall observe and advise the crew during their installation of first three FE/BR doors. Upon completion of installation of each of three initial FE/BR doors, Manufacturer's technical representative shall inspect the work, and direct the crew in any correction or modifications required for acceptable performance of the units.

B. For unique site conditions, Manufacturer's technical representative shall also be responsible for observing and inspecting installation of FE/BR doors, beyond initial three doors, as necessary to ensure that installation crew is adequately prepared for installation.

C. Any anchors or connections that have been stripped or otherwise damaged during installation shall be replaced by the contractor in kind with another larger anchor or an additional anchor provided. In either case, coordinate with the FE/BR vendor and blast designer for doors installed into building with blast protection and provide a plan to address for OBO/CFSM/CM, OBO/DE/CSE, and OBO/CFSM/SM/SEB approval (SEB will coordinate with DS/PSP/PSD/RD when changes could impact the certifications).

1. If alternative anchor locations have been provided for in the design and shown on the approved shop drawings, additional consultation may not be required, but in all cases shall be documented in the deviations portion of the Certificate of Compliance and OBO/CFSM/CM should be consulted.

D. Replace any damaged or defective glazing per the manufacturer’s instructions.

E. Repair any damage done to the door, or finishes, during installation, to include any damage caused by any nearby construction. Provide a plan that has been fully vetted by the manufacturer to repair the product for approval by OBO/CFSM/SM/SEB. OBO/CFSM/SM/SEB will coordinate with DS/PSP/PSD/RD when repair could impact the FE or FE/BR certifications.

3.3 ADJUST AND CLEAN

A. General: Upon request of Project Director/COR, remove protective coverings and clean exposed surfaces. Repair damaged elements, restore abraded surfaces, touch-up base-coat paint finish with air-drying primer, and remove imperfections from exposed natural metal finishes.

1. Check and readjust hardware, devices, and accessories with door-to-frame-and-sill/ threshold clearances set for proper operation of locks, door seals, and other operational units. Do not remove permanently applied performance labels.
2. Comply with Section 087155 "Security Door Hardware" requirements for protection and handling of keys, locking devices, and associated information.
3. Exercise extreme care in cleaning exposed surfaces of glazing; comply with manufacturer's directions.
4. Ensure all debris is removed from the threshold area.

B. Paint touch-up paint: See Section 099602 “High-Performance FE/BR Coatings.”

END OF SECTION 083454

Certificate of Compliance

FE/BR Door Assemblies
Door Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING & OTHER DUTIES OF TECHNICAL REPRESENTATIVE

1	The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing door assemblies has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.	**Representatives Name/ Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Verify no damage has occurred to crate during shipping, no 'tip-and-tell' devices are tripped, and BOM (Bill of Materials) is accurate.		
3	Each sub-frame has been installed level, plumb and square.		
4	All sub-frame assemblies were factory welded, and any large sections that exceed limits of standard shipping containers were clearly identified for field welds.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
5	All units with glazing panels were pre-glazed at the factory.		
6	Employees performing installation meet specified training and experience qualifications.		
7	Each door frame head was installed level, and side jamb installed plumb and square.		
8	All frame socket head cap screws and threaded openings in sub-frame were cleaned of all oil and debris, were dry-torqued to meet manufacturer's specifications, and were centered in slotted door frame holes so that slotted hole is visible on both sides of washer. Shims were inserted at all socket head cap screw locations.		
9	Frame screws are manufacturer supplied in accordance with approved shop drawings. Deviations from this shall be submitted through Project Director/COR to OBO/CFSM/SM FE/BR Coordination Board for their technical review and approval during shop drawing review phase. **a. [Existing Door Replacement: Whenever possible, same screw size and pattern may be used. When existing FE/BR door is being replaced, existing screw may be 12mm diameter screw, and washer grade 8 or equivalent class 10.9 or 12.9 historically used in past. In coordination with OBO/SM, replacement door may use this same attachment.]**		
10	All door frame shims are plastic or stainless steel, horseshoe shaped, and 1.5 mm (1/16") thick with break-away tabs.		
11	Shim: All door socket head cap screws were installed and fully shimmed, minimum one shim per screw. Shim gap may exclude through wall flashing and weather proofing up to an additional 3-mm beyond the 6.5 mm, or the as tested gap limits referenced in this section (i.e., gap at the head could be 6.5 mm, plus 3 mm for a drip edge and through wall flashing for a		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
	total gap of 9.5 mm, or as tested, at the head or if the weather proofing was thinner, the total allowable gap would need to reflect the weather proofing plus 6.5 mm, or as tested gap space)		
12	In no case shall the combined tested gap and weather proofing exceed 12-mm between subframe and the door frame.		
13	Doors may be mounted maximum of 6.5 mm proud of subframe on attack side.		
14	Door frame socket head cap screw horizontal slotted holes are 19 mm x 35 mm (3/4 inch x 1-1/4 inch) radiused access holes. Washers shall be 27 mm diameter. **a. [Existing Door Replacement: Slotted holes may match existing]**		
15	At each door assembly, there is continuous, plus or minus 1.5 mm (1/16 inch), gap between door leaf and door frames, as indicated in FE/BR manufacturer's shop drawings.		
16	Door does not bind on surrounding floor area and provides minimum of 6 mm of clearance between door leaf bottom and floor at any point in door swing after final floor finish has been applied.		
17	Aluminum threshold cover plates were installed, and do not exceed limits for accessibility in accordance with OBO Building Code Chapter 11, and as indicated in approved shop drawings.		
18	Weather proofing and flashing is installed through the frame and terminated as shown on the approved shop drawings.		
19	Door Under cuts: a. If there is a threshold, the undercut between the bottom of the door and the top of the threshold shall not exceed 6 mm. Distance between the bottom of the door and the floor slab should not exceed 19mm including threshold.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
	b. If there is no threshold, the undercut between the bottom of the door and the top of finish floor shall not exceed 6 mm and shall not exceed 12 mm for carpet (top of finish slab to bottom of the door).		
20	Ballistic trim bars have been screwed to sub-frame and not door frame, and as shown on approved shop drawings. Maximum gaps at shim space shall not exceed as tested. a. Ballistic trim shall be designed to take into account dimensional requirements of flashing or weather proofing. b. Ballistic trim shall be tight to the subframe. c. Ballistic trim shall be tight to the door frame and a construction tolerances of up to a maximum of 3 mm is acceptable between the frame and ballistic bar.		
21	The door is to be installed plumb and in accordance with approved tested assembly and shop drawings.		
22	All forced entry lock (FEL) strikes engage their strike plates with no binding.		
23	No part of FE/BR door has been altered. No part of FEL has been altered, including but not limited to grinding, bending, cutting or re-welding any part of FEL strike, strike plate (steel coupon with vertical slot welded or screwed to frame) and (if applicable) strike plate receiver (vertical slot in door leaf). The only acceptable fix for defective or altered parts is to unbolt altered piece and replace altered piece in its entirety.		
24	No finish materials including exterior cladding or interior trim overlaps door frame/subframe gap and ballistic trim bars unless finish materials can be easily removed and reinstalled. Any overlapping finish work (i.e., metal, wood, stone, gypsum board, etc.) must be capable of removal without damaging door frame and surrounding finish work. Door and frame were installed such that removal of door and frame is possible without demolishing		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
	finishes and trim, allowing door frame to be adjusted in future, 6 mm in or out of opening.		
25	Any cladding that covers door frame screw access holes has either access holes with cap plugs or is attached with screws for easy removal without damage for reinstallation. Cap plugs and cladding for each door have been bagged and will not be installed until after final QA inspection has been conducted by OBO/SEB or FE/BR representative.		
26	Manufacturer and installer ensures any decorative cladding around electromagnetic locks installed on door frame will allow lock position to be adjusted in both directions.		
27	All access plates for each door have been installed as indicated in approved shop drawings.		
28	Each lockset, deadbolt and panic exit device is able to fully engage and freely operate.		
29	On doors with panic hardware, panic exit device strike plate has been installed in location that will eliminate any door leaf bounce between door leaf and frame.		
30	Each door closer has been installed and closing speeds, latching speeds, and back-check has been adjusted in accordance with manufacturer's instructions. Doors shall close and latch in 5-7 seconds.		
31	Automatic door operators have been adjusted as appropriate in accordance with manufacturer's instructions to conform to accessibility and fire protection requirements of the OBO Building Code.		
32	Manufacturer has provided two embossed/ printed metal plate or metallic foil for each product using machine-applied letters and numbers with raised characters. Locate one label on door frame header so that it is not exposed when door is closed and is clearly visible and not obscured by hardware when door is open. Locate second label on top edge of door leaf.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
33	Inspect glazing for distortion, defects and/or damage. Defective units, including spall liner damage, do not meet DS certification requirements and must be replaced.

SECTION 083459 - VAULT DOORS AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section specifies proprietary, high-security, preassembled door-and-frame units, fabricated to recognized standards for burglar resistances, and including proprietary finishes and accessory items such as door hardware and devices.

1. Where indicated, units include manufacturer's standard day gates or day doors.

B. [Definitions and Roles for Projects Utilizing the GPE Program:

1. GPE Program: A program of the Overseas Buildings Operations (OBO) in which OBO procures security doors and windows in advance of and for the use of upcoming projects. All GPE windows and doors shall be designed and engineered prior to award of the project to the Contractor.
2. Fabricator: This entity is the fabricator/manufacturer of GPE items.
3. Manufacturer: This entity is the manufacturer/fabricator of GPE items.
4. **Contractor: The Contractor is responsible for the design incorporation, delivery and installation of the GPE products. The Contractor is also responsible for the design and construction of the overall facility, as well as the installation of the GPE items selected by the Contractor in conformance with the overall requirements of the project. The Contractor is responsible for development of a GPE product list and submission of the list to the government for approval, with the design development drawings.]**

C. Related Sections include the following:

1. Section 033000 "Cast-in-Place Concrete" for interfacing support floor/wall construction adjoining vault door assemblies.
2. Section 087155 "Security Door Hardware" for lock cylinders and other devices to be installed on units of this section.
3. Division 08 Sections for custom metal security doors rated for forced entry, ballistics and other security resistances.
4. Division 28 Sections on building control/security systems for required integration of vault door controls.
5. Other sections of these specifications for interface of door hardware and device units, with alarm/security/safety/access/monitoring systems; not work of this Section.

1.2 ACTION SUBMITTALS

A. General:

1. Action submittals should be accepted by the PD/COR (Government Project Director/ Contracting Officer Representative) prior to procurement of associated items by Contractor; premature procurement is at the risk of Contractor.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Product Data:

1. Product data, for each fabricated door unit and associated auxiliary equipment, hardware, devices, and trim; include fabrication/installation drawings, and details of required interfaces with other work and services.

C. Certificates and Approvals:

1. Provide a Certificate of Compliance with supporting data sheets demonstrating vault door assembly is in accordance with the Part 2 Article on PERFORMANCE REQUIREMENTS.
2. Letter from DOS indicating certification that the product has been certified by Bureau of Diplomatic Security (DS) in accordance with this article, as applicable.
3. Letter from manufacturer including a copy of the GSA listing approval on the GSA qualified Product List (QPL) for Class 5 security vault door per this article.

D. Shop Drawings:

1. General:

a. Show each dimensioned detail of each door assembly.
b. Indicate performance rating, swing, hardware set, and adjacent construction. Shop drawings must also clearly indicate all hardware sets.
c. Provide drawings on B-size (297 mm x 420 mm) sheets. All dimensions shall be indicated in metric. Show typical door exterior elevations at not less than 1:20 scale.
d. Submittals in PDF format: Provide Table of contents and bookmarks organizing by building and floor for each product using contract identification number.

2. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
3. General Notes and details sheet:

a. Terminal strip size, location, and height above bottom of door frame for the day door.
b. Fasteners and anchor at location and sizes per certified and tested condition.
c. Identify exact location on door and frame of two required ID plates; see the Part 1 Article on IDENTIFICATION SYSTEMS. Identify plate type and size, and type of information included on the plate about door.
d. TSS Wiring (Terminal #, Terminal Wire, Device Wire, Function, Device Model & Device Type) and Elevation and Detail Drawings (day Gate or Day Door).
e. Abbreviations used.
f. Provide a list of any special fastening tools for installation and maintenance.

4. Unit information:

a. Manufacturer's model number.
b. DOS Code number.
c. GSA Code and/or Model number.

1) Provide “Class” designation per GSA AA-D-600.
2) Provide “Type” designation per GSA AA-D-600.
3) Provide “Style” designation per GSA AA-D-600.
4) Provide “Design” designation per GSA AA-D-600.

d. Mark (door no.).
e. Door/frame finish.
f. Door type.

5. Elevation Drawings (Attack side):

a. Rough opening dimensions.
b. Door opening dimensions.
c. Frame opening dimensions.
d. Vision opening dimensions (per contract drawings for day doors/gates).
e. Door ballistic peep, as applicable.
f. Substrate/rough opening material.
g. Finished floor.
h. Sill condition.
i. Manufacturer's name and reference numbers for primer and finish paint, including number of coats applied.
j. Detail symbols.
k. Hardware and hardware symbols. Include part numbers, manufacturers, and description.
l. Electrical access, for day doors.
m. Location of conduit or cable entry into the door frame, as applicable, for day gate/door and location of any TSS (surface mounted) for the vault door.
n. Total weight of the door to include frame, and all hardware.

6. Plan Drawings:

a. Relate to elevation on drawing.
b. Identify "Attack" and "Protected" sides.
c. Provide AA-D-600 “type” (IR, IL, IIR, IIL).
d. In addition to AA-D-600 “type” identify door swing of all vault doors, day doors and day gates (i.e., RH, LH, RHRB, LHRB).
e. Provide key notes on drawings.
f. Indicate room space numbers taken from Contract Drawings.

7. Details: Show section at 1:5 scale of members indicating construction, size, and thickness of components. Details shall be on separate sheets from plan and elevations

a. Frame profile, anchorage.
b. Threshold configuration.

c. Day door glazing panel together with connections,
d. Section through the door that shows the vertical and horizontal rails, glazing, and glazing stops for day doors.
e. Fasteners.
f. Shims.
g. Flashing, sealant, backer rods, gaskets for exterior doors.
h. Undercut for carpet for day doors.
i. Acoustic gasketing (day door).
j. Door and frame thickness.
k. Detail shall include contract drawing information of "products by others" such as conduit location for TSS (door control for day gates or day doors and alarms).

8. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, finish/paint system, legend, and glazing specifications.
9. Installation Instruction Manual:
10. Manual shall cite all anchorage components, including complete description of anchors, as well as installation.
11. Manual shall be customized for each type of application.
12. Manual shall include installation steps of contract drawing information of "products by others" such as TSS component for the day door or day gate.
13. Develop instructions for unique conditions as they are identified.
14. Manual shall include step-by-step instructions for installing vault, day gate and day doors with supporting photos, illustrations and figures that also includes sections for General Requirements and manufacturer's recommendations for safety, personal protection equipment (PPE), List of Tools & Expendable Supplies, Door Removal from Crate, and Cleaning.

1.3 CLOSEOUT SUBMITTALS:

A. General:

1. Refer to Division 01 Sections on Submittals and on Closeout for general administrative requirements.

B. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

C. Maintenance Data.

1. Data shall include instructions for cleaning and maintenance.

D. Inspection Reports and Certificate of Compliance: See forms at end of this Section.

1. Provide Table of contents and/or bookmarks organizing by building and floor for each product using contract identification number.
2. Provide plan showing location of products (one plan may cover multiple products or whole floor if legible).

3. Provide completed certificates of compliance documenting that each vault door assembly has been installed in accordance with contract documents. Signed by certified factory trained installer.
4. Provide any additional QC documents used by Contractor during the installation.

1.4 QUALITY ASSURANCE

A. The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the Vault door products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager.

1. The Installer team leader trained the installation crew and supervised the installation of the vault door assembly.
2. GSA label is attached to exterior of the door.
3. Manufacturer Identification Label is attached to interior of the door.
4. Manufacturer Serial number plate is permanently attached to exterior (non-removable fasteners).
5. Spare parts list is attached to the inside face of the door frame.
6. All observable surface finish shall be free of cracking, flaking, rust, or scale.
7. The door and frame shall be in perfect alignment and operation of the locking mechanism, including the locking bolts, shall be smooth and positive without binding or jamming of parts.
8. Door shall be installed true, plumb, square, level, and balanced.
9. Door reveal shall be equal (within 1/8") on all sides and at least 1/8" wide
10. Door remains at any position set and does not move on its own when placed in any position.
11. Door is free of any on-site modifications or additions.
12. The door shall not stick or jam in its frame.
13. Dial ring is securely fastened without movement or side play.
14. Optical door viewer shall be firmly attached and free of cracks, scratches or blemishes.
15. Lock shall operate smoothly without binding or jamming.
16. Emergency escape mechanism shall operate properly.
17. All surfaces have manufacturers finish or have been rectified in accordance with federal specification AA-D-600.
18. The door handles shall be without burrs, nicks, scratches, and sharp edges.
19. The door pull shall be securely and firmly attached to both the door front and the door interior.
20. Throw bolt handles shall be firmly attached to the front of the door.
21. A door stop to prevent the door's face hardware from striking wall surfaces shall be installed. The stop shall be able to withstand hard usage. The stop shall not scratch or scar the door's painted finish when the door is swung open against it.
22. The fit of the door to the striker on both the front and hinged edges shall be such that there is not more than 1 mm play or shake in the door when the bolts are thrown to the locked position.
23. The back plates shall be firmly and securely fastened to the door. The plates shall not be sagging, bulging, or distorted. All fasteners attaching the plate shall be present.
24. All lock or door manufacturer recall or service bulletins have been addressed.

1.5 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide the Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory.

1. Provide labeling as required by Government Federal Specification AA-D-600-Latest Version.
2. Provide DOS identification labels for each door assembly. Labels shall be embossed/printed metal plate or metallic foil with adhesive backing for permanent identification. Locate one label on door frame and another adjacent to GSA label on the inside of the door. Labels shall cite:

   a. Manufacturer's name/city/state.
   b. Month/year of manufacture.
   c. Mark number.
   d. DOS government certification model number. (as applicable).
   e. DOS Code (i.e., 1123, 2123, etc.).
   f. SHW Hardware package number/Modification number (as applicable).

1.6 DELIVERY, STORAGE, AND HANDLING

A. To the extent practicable, deliver vault door units to the project as completely assembled doors, frames, hardware, devices, trim, and associated auxiliary equipment. Comply with Government criteria and manufacturer's recommendations for packaging, handling, protection, storage, and delivery. Disassemble and reassemble at project site only to the extent necessary for proper handling and installation.

1. Store doors, materials, other than fabricated steel, in weather tight containers until ready for use in work. Store containers in dry place.

1.7 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

   a. Failure to meet performance requirements.
   b. Structural failures including excessive deflection.
   c. Deterioration of metals, other materials, and metal finishes beyond normal weathering.
   d. Failure of hardware components.

2. Warranty Period:

   a. Doors: Manufacturer will warrant the doors for a period of five years from Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Vault doors used by the Department shall be GSA approved Class V and listed on GSA's Qualified Product List.

B. Vault doors may also require Department FE/BR Certification for use in Department facilities (depending on location and/or use). Vault doors requiring FE/BR Certification shall be listed on the FE/BR Approved Product List and a Certification Letter will be issued to the vault door manufacturer with a unique DOS Model Number specific to each vault door type.

DOS Door Codes: See Table 2.1 "Door Codes" below:

TABLE 2.1 – DOOR CODES

DOS CODE	1st DIGIT - TRANS-PARENCY	2nd DIGIT - FIRE RATING	3rd DIGIT - FORCED-ENTRY RATING	4th DIGIT - BALLISTIC-RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	1.5 hours (class D at exterior)	15 minutes	Note Used
3	*	3 hours (class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4	*	45 minutes (class C)	5 minutes	Armor-Piercing (.30-06)

Notes for above Table 2.1:

1. Composition - Column 1: Designated whether door has a transparency.
2. Fire Rating - Column 2: Fire-rated assemblies: Where indicated for fire resistance, provide flush steel doors-and-frame units; comply with NFPA 80, Standard for Fire Doors and Windows. Provide units that have been tested by recognized testing agency in accordance with NFPA No. 252 and ASTM E 152. Provide rated units where shown or scheduled.
3. Forced Entry Rating - Column 3: Forced-Entry (FE) resistant assemblies: Where door assembly is shown or scheduled as FE, provide door manufacturer's material and fabrication for panels, inserts, hardware, devices, and framing of units for the ratings as noted above.
4. Ballistic Resistance Rating - Column 4: Ballistic resistant (BR) assemblies: Where door assembly is shown or scheduled as BR, provide door manufacturer's materials and fabrication for panel, inserts, and framing of units for the ratings as noted above.

C. Vault door procurement shall comply with all applicable GSA requirements and DOS procurement and shipping requirements in accordance with Division 01 specifications.

1. Provide GSA Class 5-V or GSA Class 5-B security vault door meeting Government Federal Specification AA-D-600 most recent revision as required in the contract documents.

D. Certified Units: Provide units, including frames and sub-frames (if applicable) which meet the following requirements:

1. Have been certified by Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Revision H.
2. Have been approved by GSA as a GSA Class 5-V or Class 5-B security vault door meeting Government Federal Specification AA-D-600-Latest Version and listed on GSA's Qualified Product List (QPL), QPL-AA-D-600-Latest Addition.

2.2 MANUFACTURERS

A. Selection of fabricator/manufacturer for each type of security door assembly, and selection of manufactured elements, which are used in make-up of that assembly, are Contractor's options subject to the following requirements and limitations, and subject to general provisions of Construction Contract:

1. Pre-certified fabricators (by DS) of ballistic-resistant and forced-entry-resistant assemblies are identified in a separate Contract Attachment labeled "Government Certified FE/BR Products and Designs".

2.3 MATERIALS/PRODUCTS/FABRICATION

A. General: Provide manufacturer's standard vault door unit construction/fabrication as specified, including sizes, features, hardware, devices, trim, and associated auxiliary equipment as indicated, and as necessary to fulfill performance requirements of Part 1 of this Section.

1. Clear Door Opening: 1015 mm (40 inch) wide by 1980 mm (78 inch) high nominal clearance, with door swung 180 degrees open, except as otherwise indicated. Spreader: Provide steel spreader permanently attached to bottom of frame.
2. Types: Provided Type in compliance with GSA Specification AA-D-600 and the project door schedule.
3. Viewer: Provide manufacturer's standard viewing port at approximately 1525 mm above finished floor.
4. Styles: Provide Style E – Electromechanical combination in compliance with GSA Specification AA-D-600
5. Design: Provide Design in compliance with GSA Specification AA-D-600 and the project door schedule.
6. Threshold/Sill Arrangement: Manufacturer's standard operational, recessing floor plate or threshold, with vault door not more than 12.7 mm above finished floor outside of vault.
7. Vault hardware: Equip vault door to include day gate or day door (as applicable) unit with hardware as indicated on schedule and in project specifications for door hardware.

8. Day Gate: When in door schedule provide Day gate accessary with specified hardware. Provide inward swinging gate with minimum 11 gauge mesh and frame to accommodate hardware. Day gate shall be self-closing and not restrict the clear opening of vault door. Color to match vault door.
9. Day Door: When in door schedule provide Day door accessary with specified hardware. Provide an inward opening, gasketed, with two viewing windows that have a minimum size of 765 mm x 652 mm to view personnel attempting entry into the space. The door shall be a non-fire rated door assembly used for smoke control under NFPA 105. The gasketing of the day door is to ensure that there is minimal leakage from the inside of the door to the outside of the door. Day door shall be self-closing or have a closer and not restrict the clear opening of vault door.

    a. Acoustic day door: The door must conform to acoustic requirements of the wall and room door is installed in as shown on drawings. This is to include the door, frame and any connections or provide inner vestibule door and partition wall to meet requirements. If day door assembly can not meet acoustic requirement design must provide inner vestibule door and partition wall to match requirements if space is available.

10. Door/frame finish: Shop coat exposed surfaces of door and frame with one coat of gray color 26134 texture paint, AMS-STD 595 (Aerospace Material Specification Standard 595) in compliance with AA-D-600

2.4 ANCHORAGE PROVISIONS

A. General: Fabricate vault door assemblies with manufacturer's standard provisions for anchorage of units into wall and floor construction work as indicated and as required to maintain resistance ratings.

B. All anchorage, to include sub-frame, shall be in accordance with GSA Specification AA-D-600.

PART 3 - EXECUTION

3.1 INSTALLATION

A. General: Except as otherwise indicated, comply with approved shop drawings and vault door manufacturer's instructions for installation of door unit assemblies including handling, placing, temporary bracing, and protection. Comply with GSA requirements and recommendations for methods of achieving and maintaining overall vault resistance ratings through proper installation of work. Achieve required performance ratings where these may be dependent upon installation work.

1. Set vault door assemblies plumb and level, true to line and location as shown. Provide anchorage and other devices as indicated and as required.

2. Install combination locking mechanism, and test operate construction-phase combination at least three times to assure proper installation. Advise Project Director/COR that vault door assembly is ready for implementation of initial operational combination of locking mechanism.

B. Complete any assembly that was not accomplished in the shop. Refer to Part 2 Article on FABRICATION AND ASSEMBLY.

C. Operate and demonstrate to Project Director/COR the following: Vault door threshold/ sill/floor plate leveling arrangement, swing of door, and locking bar operation.

3.2 ADJUSTING AND CLEANING

A. General: Adjust vault door operating elements for ease of operation; lubricate in accordance with manufacturer's instructions. Remove protective covering from finished metal surfaces, and clean in accordance with manufacturer's instructions. Touch up minor imperfections and abrasions of finishes and coatings.

END OF SECTION 083459

Certificate of Compliance

Vault Door Assemblies
Vault Door Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

VERIFICATION – TRAINING & OTHER DUTIES

1	The Installer team leader trained the installation crew and supervised the installation of the vault door assembly.	**Installer Team Leader's Name/ Date:**

	VERIFICATION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	GSA label is attached to exterior of the door.		
3	Manufacturer Identification Label is attached to interior of the door.		
4	Manufacturer Serial number plate is permanently attached to exterior (non-removable fasteners).		
5	Spare parts list is attached to the inside face of the door frame.		
6	All observable surface finish shall be free of cracking, flaking, rust, or scale.		
7	The door and frame shall be in perfect alignment and operation of the locking mechanism, including the locking bolts, shall be smooth and positive without binding or jamming of parts.		

	VERIFICATION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
8	Door shall be installed true, plumb, square, level, and balanced.		
9	Door reveal shall be equal (within 3mm [1/8”]) on all sides and at least 3mm [1/8”] wide		
10	Door remains at any position set and does not move on its own when placed in any position.		
11	Door is free of any on-site modifications or additions.		
12	The door shall not stick or jam in its frame.		
13	Dial ring is securely fastened without movement or side play.		
14	Optical door viewer shall be firmly attached and free of cracks, scratches or blemishes.		
15	Lock shall operate smoothly without binding or jamming.		
16	Emergency escape mechanism shall operate properly.		
17	All surfaces have manufacturers finish or have been rectified in accordance with federal specification AA-D-600.		
18	The door handles shall be without burrs, nicks, scratches, and sharp edges.		
19	The door pull shall be securely and firmly attached to both the door front and the door interior.		
20	Throw bolt handles shall be firmly attached to the front of the door.		
21	A door stop to prevent the door's face hardware from striking wall surfaces shall be installed. The stop shall be able to withstand hard usage. The stop shall not scratch or scar the door's painted finish when the door is swung open against it.		
22	The fit of the door to the striker on both the front and hinged edges shall be such that there is not more than 1 mm play or shake in the door when the bolts are thrown to the locked position.		

	VERIFICATION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
23	The back plates shall be firmly and securely fastened to the door. The plates shall not be sagging, bulging, or distorted. All fasteners attaching the plate shall be present.		
24	All lock or door manufacturer recall or service bulletins have been addressed.

SECTION 084414 – STRUCTURALLY-FRAMED SECURITY CURTAIN WALL SYSTEM

GENERAL

1.1 SUMMARY

A. The extent of aluminum security curtain wall system is indicated on Construction Drawings by elevations/details/schedules/notations.

B. Related Sections include the following:

1. Division 01 Section "Secure Shipment."
2. Division 05 Section on structural steel framing.
3. Section 055005 "Metal Fabrications."
4. Division 07 Section on joint sealants.
5. Section 080001 "Blast Requirements."
6. Section 083454 "Forced Entry (FE)/Ballistic Resistant (BR) Door Assemblies" for Quality Control forms on FE/BR products.
7. Section 088855 "Security Glazing."
8. Section 099602 "High-Performance FE/BR Coatings."
9. Other sections of these specifications for interface of laminated glazing unit, framing, and other hardware with alarm/security/safety/access-monitoring systems, where required.

1.2 SUBMITTALS

A. General: Submit the following in accordance with Division 01 Contract Specification Sections:

B. Product data for curtain wall system. Include high-performance laminated plastic glazing, structural steel framing and supports, metal floor plates and gratings, miscellaneous steel attachments and anchors, and aluminum trim. Include Project Director/COR's detailed instructions for assembly, protection, installation, and maintenance.

C. Completed certificates of compliance documenting that all assemblies have been installed per the contract documents. Complete and submit to the Project Director/COR the form referenced in the Part 1 Article on QUALITY ASSURANCE. Certificate of Compliance form is found at end of this Section.

D. Shop drawings showing dimensioned detail of curtain wall system, including performance rating and adjacent construction. Show application of intended glazing materials. Show interior and exterior elevations of curtain wall system at not less than 1:20 scale. Indicate how curtain wall system, not necessarily including basic sub-frames, may be subsequently removed/replaced; and how laminated glazing removal/ replacement is to be accomplished. After final modifications and corrections have been incorporated, submit drawings as AutoCAD files with .DWG extension. Show the following:

1. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
2. Unit information:

    a. Manufacturer's product identification
    b. Government code.
    c. Trim/frame finish.
    d. Laminated glazing unit number
    e. Government certification number.

3. Elevation Drawing: Show fabrication and installation details for the entire shielding assembly. Include plans, elevations, sections, and details of laminated glazing units, support, and connections. Show anchorage and accessory items.
4. Plan Drawings:

    a. Relate to elevation on drawing.
    b. Identify "Attack" and "Protected" sides.
    c. Provide key notes on drawings including room space numbers where appropriate.

5. Details: Show sections at 1:5 scale of members indicating construction, size, and thickness of high-performance laminated glazing, structural steel framing and supports, metal floor plates and gratings, miscellaneous steel attachments and anchors, and aluminum trim. Details shall be on separate sheets from plan and elevation drawings. Clearly illustrate all aspects of curtain wall system including:

    a. Relationship of curtain wall to the building structure, roofing and waterproofing systems, interior finishes, and other adjacent construction.
    b. Arrangement of components.
    c. Sequence and details of fabrication, assembly, and erection.
    d. Full size details, indicating: sealing, flashing, weeping, and jointing; all dimensions and thicknesses; materials and finishes; material, type, size, location, and spacing of screws, bolts, welds, anchoring devices, and glazing accessories; locations of conduit entry into both subframe and window frame (where applicable).
    e. Details shall include all components, fully coordinated and integrated, regardless of the component provider.
    f. Include details of all connections and seals to contiguous work as approved by Subcontractor for the work adjacent, and include all assumptions regarding tolerances of that work.
    g. Details shall be on separate sheets from plan and elevation drawings.
    h. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, finish/paint system, legend, and glazing specifications.
    i. Breakdown of Product Line Items:
    j. If Manufacturer produces one contract line item as several parts, they shall break out items on drawings. Each item shall be a subdivision of that product line item number. Indicate manufacturer’s part numbers for all components,

E. Blast Report: See Section 080001 "Blast Requirements."

F. Test Reports: Curtain wall manufacturer shall submit two copies of all ASTM and UL test reports for each product.

G. Installation Manuals: Curtain wall manufacturer shall submit two copies of the installation instruction manuals for each product.

H. Delegated-Design Submittal: For aluminum curtain wall system indicated to comply with performance requirements and design criteria, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Detail fabrication and assembly of curtain wall and structural frame.
2. Include design calculations.

I. Sequence of Construction: Outline proposed method and sequence of construction for the system, including both structural steel framing and associated window units. Obtain acceptance by the Project Director/COR prior to delivering material to jobsite.

J. Coordinate construction submittals of this Section with those for associated structural framing. The structural framing submittals shall:

1. Welding certificates.
2. Fabrication drawings, including details.
3. Structural Steel Quality Control Procedures: Structural Steel Fabricator/Erector shall submit quality control procedures. Include minimum procedures identified in the Part 1 Article on QUALITY ASSURANCE, along with other procedures necessary to assure that fabrication work being performed and material or products being furnished, conform to Contract Documents.

1.3 QUALITY CONTROL

A. Testing Laboratory Qualifications: For testing compliance with non-security performance requirements on curtain wall system, use only those testing laboratories which have successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

B. Quality Control for Products: Certificates for fabricated and assembled products specified in this Section shall follow quality control procedures established by the Government; see the QA for assemblies within Section 084414, "Structurally-framed security curtain wall system."

C. Professional Engineer Qualifications: A professional engineer who is legally qualified to practice and licensed within any of the States in the United States, and who is experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of the system, assembly, or products that are similar in material, design, and extent to those indicated for this Project.

D. Laminated glazing shall be certified by manufacturer for conformance with special quality and performance requirements.

E. Installers: Installers shall be certified by the manufacturer to ensure conformance to special requirements for product installation.

F. Preconstruction Mockup: The pre-construction mockup shall be constructed at the test facility. In addition to testing all required tests, the mockup shall also provide fabricator an opportunity to demonstrate to DOS how curtain wall system is constructed on site, and complies with requirement that the system is glazed in the factory and the windows, with frames, are delivered as sealed units.

G. Construct mockup of curtain wall system at project site. Mockup shall be minimum 3 meters by 3 meters (10 ft. by 10 ft.), or to mockup configuration and dimensions indicated in Drawings. Mockup will be used as basis of design for installation and acceptance, and must demonstrate full constructability of system and all surrounding building components for curtain wall system.

H. Manufacturer's Technical Representative: Manufacturer's technical representative shall have the following responsibilities, and their services as identified below shall be provided by Contractor at no cost to Government:

1. Pre-Installation Conference: Before beginning installation of curtain wall system, Manufacturer's Technical Representative shall conduct pre-installation conference at Project site with installation sub-contractor, electrical sub-contractor, Project Director/COR, and other interested parties, as identified by the Contractor and by the Project Director/COR, to review installation procedures and manuals, schedules, and coordination of curtain wall system installation with other elements of the Work

2. Inspection: Manufacturer's Technical Representative shall observe and advise crew during initial installation of first three laminated glazing units of curtain wall system. Upon completion of initial installation, Manufacturer's Technical Representative shall inspect the work and direct crew in any correction or modifications required for acceptable performance of system. For unique site conditions, Manufacturer's Technical Representative is responsible for observing and inspecting installation of curtain wall system beyond initial installation, as necessary to ensure that installation crew is adequately prepared for installation.

3. Additional Assistance: Manufacturer's Technical Representative shall provide the Contractor any additional advice, instruction, training, supervision, or inspection required to enable Contractor to complete installation certification described below, and to fully train Embassy staff in proper maintenance of curtain wall system.

I. The Contractor shall complete Certificates of Compliance in full prior to acceptance of the Blast products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by Installer Team Lead and Contractor's Quality Control Manager. The following requirements associated with CERTIFICATION BY GENERAL CONTRACTOR are part of this Section.

1. The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing door assemblies has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.
2. Employees performing the installation meet the specified training and experience qualifications.
3. Each sub-frame has been installed level, plumb and square.
4. All sub-frame assemblies must have been factory welded together.
5. All temporary bolts have been replaced with permanent bolts.
6. All frame bolts and threaded openings in subframe have been cleaned of all oil and debris. All frame bolts have been torqued to manufacturer’s specifications. Shims have been inserted at all bolt locations.
7. All product bolts, screws and anchors are metric products.
8. No finish materials overlap the window frame/sub-frame shim space and ballistic trim bars unless the finish materials can be easily removed and reinstalled. Any overlapping finish work (i.e., metal, wood, stone, etc.) must be capable of removal without damaging the window and finish.
9. Any removable trim covers that cover window glazing stops (angles or tubes) is attached to the frames with screws or clips for easy removal.
10. Any removable trim covers that cover the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cladding for each window won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SM/SCD/SEB representative.
11. The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers.

1.4 COORDINATION

A. Steel Fabricator/Erector:

1. AISC Quality Certified with 10-years of experience.
2. Personnel for non-destructive testing shall have NDT Certification.
3. Minimum Quality Assurance Procedures:

    a. Visually inspect material.
    b. Materials and products being furnished by Fabricator/Erector shall be received and identified in fabrication plant in such manner that materials or products can be identified as being represented by mill test reports or manufacturer’s certificates. Identification marks of materials shall remain on structural steel members through fabrication and erection.
    c. Inspect materials for compliance to ASTM A6, prior to fabrication.
    d. Inspect installation of slip-critical High Strength Bolts and proper bolt tension, as follows:

1) When direct tension indicator method is used, observe installation of bolts to determine that bolt manufacturer's procedure is properly used and determine that correct indication of tension has been achieved.
2) Visually inspect to confirm that plies of connected elements have been brought into firm contact.
3) Visually inspect welds as specified in AWS Code, Section 6.
4) Product Manufacturer/Supplier of structural items shall inspect and test products as specified in designated ASTM Specifications; reference Submittals, this Section.

B. Adjustments necessary in steel frame because of fabrication, construction or erection discrepancies in elevations and alignment shall be responsibility of Contractor.

C. Structural Steel Material for Curtain Wall Assembly:

1. Metal Surfaces, General: For fabrication of work that will be exposed to view, use only materials that are smooth and free of surface blemishes including pitting, rust and scale seam marks, roller marks, rolled trade names, and roughness. Remove such blemishes by grinding, or by welding and grinding, prior to cleaning, treating, and applying surface finishes.
2. Structural Steel: Shapes, bars, plates, structural pipe, bolts, washers, or other connecting hardware as indicated on Structural Construction Drawings according to appropriate ASTM standards determined by system design.

D. Survey Work:

1. Contractor shall employ at his expense registered professional engineer or surveyor to establish control points and layout work for Building Control Lines. Steel framing subcontractor shall conduct layout work and elevations for erection of structural steel.
2. Check elevations of concrete and masonry bearing surfaces and anchor bolt locations prior to erection and submit discrepancies to Project Director/COR prior to start of erection. Corrections or adjustments to structural steel shall be made and submitted for approval prior to start of erection.

E. Contractor alone is responsible for correct fitting of structural members and for elevation and alignment of finished steel structure. Contractor is responsible for establishing, setting, and maintaining control points and building lines to be used in plumbing structural steel frame in accordance with AISC Code of Standard Practice, Section 7.11, and shall verify the following:

1. That anchor bolts are located as identified on Construction Drawings and are in proper relation to control points and building lines, prior to setting of structural steel.
2. That structural steel members have been located, elevated, plumbed, and aligned in relation to control points and building lines, within tolerance permitted by AISC Code of Standard Practice, Sec. 7.11. Any adjustments necessary in steel frame because of fabrication, construction or erection discrepancies in elevations and alignment is responsibility of Contractor.

F. Upon completion of erection of steel frame and before start of work by other trades that are supported, attached or applied to frame, General Contractor shall make final survey of frame and submit report certifying compliance with specified tolerances.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, embeds/sub-frames, and frames completed and prepared for installation and connection with security systems. Store products in manufacturer's unopened packaging until ready for installation. Store in dry, well-ventilated and covered areas at temperatures below 27 degrees C (80 degrees F).

B. Pack laminated glazing assemblies and accessories; One crate for laminated glazing on enclosed pallet, and one crate for all framing components, anchors, bolts, screws, shims, ballistic trim, shop drawings, and similar items. Provide separate compartment in each crate for each type of component. Removable covers/trim shall be shipped separately.

C. Provide protection of pre-finished units or laminated glazing, such as pre-finished with baked enamel or stainless steel, using self-adhesive paper.

D. Treat laminated glazing assemblies as fragile merchandise, and packaged and shipped in export wood cases with width end in upright position and blocked together in a mass. Comply with Manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents. Clearly mark crates to indicate which side should be opened first.

E. Handle laminated panels carefully to prevent damage; do not drop, slide, or drag.

F. Deliver materials to site at such intervals to ensure uninterrupted progress of work.

G. Store materials to permit easy access for inspection and identification. Keep steel members off ground by using pallets, platforms, or other supports. Protect steel members and packaged materials from corrosion and deterioration. If bolts and nuts become dry or rusty, clean and re-lubricate before use with lubricants that are compatible with laminated-glazing.

H. Do not store materials on structure in a manner that might cause distortion or damage to members or supporting structures. Repair or replace damaged materials or structures as directed.

I. Store materials, other than fabricated steel, in weather tight containers until ready for use in work. Store containers in dry place.

J. Store electrodes in rod ovens and heat in accordance with AWS Code, Section 4.5 prior to use in welding.

1.6 WARRANTY

A. Warranty: Manufacturer agrees to repair or replace curtain wall components that fail in materials or workmanship within specified warranty period for non-conformance with manufacturer's performance specifications. Failures include, but are not limited to, the following:

1. Failure to meet performance requirements.
2. Deterioration of metals, other materials, and metal finishes beyond normal weathering.
3. Delamination of glazing layup, protective coating failure, loss of light transmission, and yellowing.

B. Warranty Period: 5-years from substantial completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General:

1. System Description: Exterior wall assembly of custom grade transparent polycarbonate or custom grade glass-clad polycarbonate laminate affixed to custom designed structural frame, with frame attached structurally at each floor level of building structure.

a. Mullions: Provide mullions between window units that are designed to produce thermal isolation and performance equal to performance of adjacent window unit frames. Mullions must conform to FE/BR and blast requirements identified in this Section.

2. Delegated Design: Design of curtain wall system, with associated structural frame, steel structure, including comprehensive engineering analysis by qualified professional engineer, using performance requirements and design criteria identified in this Section.
3. British Standards: References to British Standards do not preclude the use of comparable United States standards.

B. Climb Resistance: Conform to the climb-resistance requirements and criteria in the OBO Building Code.

C. Structural Performance:

1. Blast Resistance: Curtain wall system shall produce resistance to blast; see Section 080001 "Blast Requirements."

a. Curtain wall system framing may include, with approval of Project Director/COR, structural elements which will dampen lateral forces transmitted to protected structure both in positive and negative phases of blast event.

2. Wind Load: Curtain wall system shall withstand the effects of wind loads determined as follows, with no permanent deformation or breakage within curtain wall system when tested according to ASTM E 330.

   a. Basic Wind Speed: Refer to OBO-ICS IBC Chapter 16 for speeds in area this project is located.

D. Air Infiltration for Curtain Walls: Not more than 0.015 L/s per m (0.010 cfm/ft.) of crack length at inward test pressure of 75 Pa (1.56 lbf/sq. ft.) when tested according to ASTM E 283.

E. Water Penetration under Static Pressure: No evidence of water penetration through fixed glazing when tested according to ASTM E 331 at minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).

F. Water Penetration under Dynamic Pressure: No evidence of water penetration through fixed glazing when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).

   1. Maximum Water Leakage: No uncontrolled water penetrating assemblies or water appearing on assemblies' normally exposed interior surfaces from sources other than condensation. Water leakage does not include water controlled by flashing and gutters that is drained to exterior.

G. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:

   1. Temperature Change (Range): 67 deg C (120 deg F), ambient; 100 deg C (180 deg F), material surfaces.
   2. Test Interior Ambient-Air Temperature: 24 deg C (75 deg F).
   3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

H. Energy Performance: Aluminum curtain walls shall have certified and labeled energy performance ratings in accordance with NFRC.

   1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than 1.5 W/sq. m x K (0.40 Btu/sq. ft. x h x deg F) as determined according to NFRC 100.
   2. Solar Heat Gain Coefficient: In general, fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than 0.44 as determined according to NFRC 200. Refer to Section 088855 “Security Glazing” for limitations of solar heat gain coefficient at certain locations.
   3. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC- certified condensation resistance rating of no less than 65 as determined according to NFRC 500.

I. Sound Transmission: Provide aluminum windows with fixed glazing and framing areas having the following sound-transmission characteristics:

J. Outdoor-Indoor Transmission Class: Minimum 34 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.

K. [Structural performance criteria for "Air Infiltration for Curtain Walls", Water-Penetration under Static Pressure", "Water Penetration under Dynamic Pressure", and "Energy Requirements" may not be required in retrofit applications where the existing building envelope (protected by exterior security curtain wall system conforming to these performance parameters and is not compromised by the retrofit.]

2.2 MANUFACTURER/FABRICATOR

A. Laminated Glazing and Frames: Provide components, including laminated glazing and frames, which conform to one of the following:

2.3 COMPONENTS

A. Laminated Panels Glazing: Design, materials, construction and finish specified is minimum acceptable standard of quality.

1. Comply with Section 088855 "Security Glazing."

B. General Glazing Accessories:

1. Glazing Accessories: As recommended by manufacturer of plastic glazing sheet for wet or dry glazing installations.

2. Sealants: In accordance with Division 07 Section on joint sealants.

C. Metals – General:

1. Metal Surfaces: Provide materials with smooth, flat surfaces without blemishes.

D. Aluminum Extrusions:

1. General:

a. Aluminum shall have chemical composition and temper appropriate for its function, exposure and applied finish.
b. Use Grade 6061 T5 of BS EN 12020 for exposed anodized aluminum extrusions.
c. Use Grade 6061, 6063 or 6106 of temper class T5 or T6 of BS EN 12020 for other locations.
d. Extrusions shall have webs, walls, and flanges of sufficient thickness and eliminate distortion of elements in finished Works.
e. Structural design of aluminum extrusions shall comply with BS 8118 or AS 1664.
f. Comply with BS EN 486, BS EN 573-3, BS EN 755 AND BS 1161.
g. Minimum wall thickness in structural parts to be 2.5mm (1/10 inch).
h. Minimum wall thickness for extruded mullion caps shall be 2.4 mm.

i. Minimum wall thickness for covers, trims and other visible elements shall be of a gauge capable of retaining flatness and consistency with no oil-canning or other distortion when subjected to the design wind pressures required for the project, but not less than .9 mm thick for continuous snap on trim.
j. Platforms, webs, flanges, races and screw flutes shall be of sufficient size to satisfy all structural requirements and eliminate distortion to finished surfaces.
k. Steel reinforcing sections incorporated within aluminum extrusions to provide additional stiffness or strength shall be hot-dip galvanized, and conform to BS5950.
l. Connections shall be consistent with assumed structural engineering assumptions. Reinforcement can be considered to act compositely or as load sharing.
m. Dissimilar metals shall be separated by approved isolator to prevent corrosion due to galvanic action. Isolation is required for connections.

2. Sheet, strip and plate:

a. Alloys shall comply with BS EN 485-3.
b. Hidden Flashings: Not less than 1.6mm (63/1000 inch) thick.
c. Components Exposed to View or Impact: Not less than 3mm (118/1000 inch).
d. Chemical composition and temper shall be suitable for application and anticipated exposure and loading.

3. Finish of Aluminum:

a. Coat aluminum extrusions, pressings and similar items prior to assembly.
b. Finish, including color and gloss level, shall be as identified in Construction Drawings and in accordance with Section 099602 “High-Performance FE/BR Coatings.”

E. Weather and Air Seals:

1. Performance Requirements:

a. Sealants used as weather seal and structural glazing must not degrade and or fail under all design conditions including thermal movement, wind load, UV exposure, and seasonal weathering. Sealants and primers shall be compatible with polycarbonate (PC) and thermoplastic polyurethane (TPU). Sealants shall be capable of withstanding movements up to limits identified by manufacturer. Exposed sealant surface shall not crack or bubble. Sealants and primers shall not stain adjacent materials.
b. Select and install in accordance with BS 6213. Sealants shall be compatible, and fit for their intended purpose.
c. Design sealant geometry (and cross section) to accommodate the anticipated substrate movement. Use in accordance with manufacturer’s instructions, particularly relating to use of primers.

2. Weather Seals:

   a. Coordination: Design of seals and selection of glazing materials (e.g., backing rod, glazing tapes) shall be reviewed and accepted by both sealant and laminated glazing suppliers.
   b. Performance Characteristics of Weather Seals:
      1) Low modulus – E less than 0.4Mpa (58 psi) at 100 percent elongation.
      2) Elongation Capacity: +/- 50 percent.
      3) Seals between glass units and steel framing shall be as recommended by curtain wall manufacturer for use with laminated glazing type. Selection shall be based on proposed glazing and curing procedures, as well as compatibility with laminated glazing panels.
      4) Backing rod to be 25 percent wider than joint width
      5) Primers and joint preparation materials as recommended by sealant manufacturer.
      6) Color selection of any visibly exposed sealants as identified in Construction Drawings, or if not, as selected by Project Director/COR.
      7) Acrylic sealants are not acceptable for frame seals or smoke flashings.
      8) Acid curing sealants are not acceptable.

3. Frame and Small Joint Sealant:

   a. Sealants for all other locations, unless otherwise specified, shall conform to ASTM C920 class 25 specifications; see Division 07 Section on joint sealants.
   b. Sealants used between aluminum frame elements:
      1) Compatible with aluminum surfaces and finishes.
      2) Able to accommodate predicted frame movements and distortions of at least 25 percent.
      3) Color selection of any visibly exposed sealants as identified in the Construction Drawings, or if not, as selected by Project Director/COR.

4. Gaskets and Spacer:

   a. Gaskets shall be extruded EPDM complying with provisions of BS-4255-1, or cellular profiled rubber to ASTM-C509.
   b. Inner gaskets of drained and ventilated or pressure equalized sky lighting systems must be formed in a complete frame with scaled joints. Vulcanized rubber gaskets to have factory molded corner joints.
   c. Gaskets shall be resistant to oxidation, ozone and UV degradation.
   d. Gaskets in contact with silicone sealants shall be of heat curved silicone rubber, chemically compatible with silicone sealant, and suitable for specific purpose intended.
   e. Gaskets, weather seals, and spacers shall have continuous mechanical attachment to framing members. Adhesive attachment is not acceptable.
   f. Sponge gaskets, weather seals, and spacers shall to be extruded black neoprene or silicone rubber, and shall conform to ASTM C509 for neoprene products.

5. Separating and Isolating Materials: Separating material shall be compatible with any material with which it comes into contact and isolating material should be non-conducting, non-compressible, and non-water absorbing

F. Fasteners:

1. General: Unless otherwise indicated, provide Type 304 stainless-steel fasteners for exterior use and zinc-plated fasteners with coating complying with ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, at exterior walls.

   a. Stainless-steel fasteners for fastening aluminum.
   b. Stainless-steel fasteners for fastening stainless steel.
   c. Stainless-steel fasteners for fastening nickel silver.
   d. Bronze fasteners for fastening bronze.

2. Cast-in-Place Anchors in Concrete: Either threaded type or wedge type unless otherwise indicated; galvanized ferrous castings, either ASTM A 47/A 47M malleable iron or ASTM A 27/A 27M cast steel. Provide bolts, washers, and shims as needed; these shall be hot-dip galvanized in accordance with ASTM F 2329.

3. Post-Installed Anchors: Torque-controlled expansion anchors or chemical anchors.

   a. Material for Interior Locations: Carbon-steel components zinc plated conforming to ASTM B 633 or ASTM F 1941 (ASTM F 1941M), Class Fe/Zn 5, unless otherwise indicated.
   b. Material for Exterior Locations and Where Stainless Steel is Indicated: Alloy Group 1 (A1) or Group 2 (A4) stainless-steel bolts, ASTM F 593 (ASTM F 738M), and nuts, ASTM F 594 (ASTM F 836M).

4. Slotted-Channel Inserts: Cold-formed, hot-dip galvanized-steel box channels (struts) complying with MFMA-4, 41 by 22 mm (1-5/8 by 7/8 inches) by length indicated with anchor straps or studs not less than 75 mm (3 inches) long at not more than 200 mm (8 inches) o.c. Provide with temporary filler and tee-head bolts, complete with washers and nuts, as needed for fastening to inserts; these shall be zinc-plated conforming to comply ASTM B 633, Class Fe/Zn 5.

G. Miscellaneous Materials:

1. Concrete: Comply with requirements in Section 033000, "Cast-in-Place Concrete" for normal-weight, air-entrained, concrete with a minimum 28-day compressive strength of 20 MPa (3000 psi).

2.4 FABRICATION

A. General:

1. Fabricate curtain wall system in accordance with manufacturer's instructions and accepted shop drawings.

2. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners or welds where possible. Locate joints where least conspicuous.

3. Fabricate seams and other connections that will be exposed to weather in manner to exclude water. Incorporate weep holes where water may accumulate.

B. Curtain Wall Window System:

1. Multi-frame units (unitized construction) or single frame windows shall be complete window units assembled in the factory with windows glazed in the factory.

2.5 FINISHES

A. See Section 099602 "High-Performance FE/BR Coatings."

PART 3 - EXECUTION

3.1 INSTALLATION, PREPARATION

A. Securely place templates to preclude misplacements of anchor bolts, and install bolts at locations and with projections established by accepted structural steel shop drawings.

B. General Contractor and Structural Erection Subcontractor shall separately check and agree upon correct positioning before concrete is placed.

C. Subsequent displacement of anchor bolts is responsibility of Contractor.

3.2 INSTALLATION, GENERAL

A. Cutting, Fitting, and Placement: Perform cutting, drilling, and fitting required for installing metal fabrications. Set metal fabrications accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

B. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop welded because of shipping size limitations. Do not weld, cut, or abrade surfaces of exterior units that have been hot-dip galvanized after fabrication and are for bolted or screwed field connections.

C. Cladding and Trim tolerances: Cladding profiles and fastening shall be designed to remain in place. Maintain hairline joint alignment without deformation under positive and negative wind loads indicated in the drawings.

1. Maximum misalignment of two adjoining members abutting in plane: 70 mm,

D. Field Welding: Comply with the following requirements:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.

2. Obtain fusion without undercut or overlap.

3. Remove welding flux immediately.

4. At exposed connections, finish exposed welds and surfaces smooth and blended.

E. Fastening to In-Place Construction: Provide anchorage devices and fasteners where metal fabrications are required to be fastened to in-place construction.

F. Provide temporary bracing or anchors in formwork for items that are to be built into concrete, masonry, or similar construction.

3.3 FIELD QUALITY CONTROL FOR THE GENERAL CONTRACTOR/INSTALLATION CONTRACTOR:

A. Inspection: The manufacturer's technical representative shall observe and advise the crew during their installation of the first three FE/BR windows. Upon completion of the installation of each of the three initial FE/BR windows, the manufacturer's technical representative shall inspect the work and direct the crew in any correction or modifications required for acceptable performance of the units.

B. For unique site and design conditions, such as sloped glazing or atrium windows, the manufacturer's technical representative shall also be responsible for observing and inspecting the installation of FE/BR windows, beyond the initial three windows, as necessary to ensure that the installation crew is adequately prepared for installation.

C. Water Leakage Testing:

1. Representative windows shall be field tested for water leakage in accordance with ASTM E1105 (Procedure A):

2. Initial testing shall be performed on each window type shown on the window schedule immediately following approval of the trial installation. Subsequent tests shall be carried out

at 30 percent and 60 percent completion of each system. Static pressure differential shall be as specified in the Part 2 Article on PERFORMANCE REQUIREMENTS.

3. At least [three] <insert number> initially successful tests shall be performed on each window type.

4. Test areas shall include perimeter seals to adjacent construction.

5. Test area locations will be designated by the Project Director/COR.

6. An initially successful test shall be defined as one wherein no leakage is observed. If leakage occurs at any point in the test area, the test shall be immediately declared "not initially successful."

7. For each failure condition discovered, make corrective repairs approved by the Project Director/COR and retest until the leakage is eliminated. All failures shall be considered systemic failures requiring corrective work at all similar conditions. Remedial measures shall maintain standards of aesthetics, quality, and durability, and are subject to approval by the Project Director/COR.

8. For each "not initially successful" test, test an additional [two] location(s) until an initially successful test is achieved. Additional tests required as a result of initially non-successful tests shall be performed at no cost to the Owner

9. Engage an Independent Testing Agency to perform the tests. Approval of all test areas, test procedures, remediation measures, and test results rests with the Project Director/COR.

D. Sealant Adhesion Testing:

1. Test sealant according to recommendations in ASTM C1521, Destructive Procedure, Method A.

2. Test a minimum of [four] locations on each façade.

3. Repair locations damaged by testing.

4. Where Project Director/COR determines that sealant has failed adhesively from testing or does not comply with requirements, additional testing shall be performed to determine extent of non-conforming sealant. Neatly cut out and remove non-conforming sealant, prepare and prime surfaces, and install new sealant. Perform field adhesion tests on new sealant.

Additional testing and replacement of non-conforming sealant shall be at Contractor's expense.

5. Document testing with photographs and record result

3.4 ADJUSTING AND CLEANING

A. Touchup Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas. After covering laminated glazing, paint uncoated and abraded areas with the same material as used for shop painting to comply with SSPC-PA 1 for touching up shop-painted surfaces.

B. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

C. Re-glazing of laminated panels: Re-glaze damaged laminated glazing units in accordance with direction of Project Director/COR.

END OF SECTION 084414

Certificate of Compliance

Framed Security Curtain Wall Assembly
Curtain Wall Assembly Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING & OTHER DUTIES OF TECHNICAL REPRESENTATIVE

1	The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing curtain wall assemblies has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.	**Representatives Name/Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Employees performing the installation meet the specified training and experience qualifications.		
3	Each sub-frame has been installed level, plumb and square.		
4	All sub-frame assemblies must have been factory welded together.		
5	All temporary bolts have been replaced with permanent bolts.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
6	All frame bolts and threaded openings in subframe have been cleaned of all oil and debris. All frame bolts have been torqued to manufacturer's specifications. Shims have been inserted all bolt locations.		
7	All product bolts, screws and anchors are metric products		
8	No finish materials overlap the window frame/sub-frame shim space and ballistic trim bars unless the finish materials can be easily removed and reinstalled. Any overlapping finish work (i.e., metal, wood, stone, etc.) must be capable of removal without damaging the window and finish.		
9	Any removable trim covers that cover window glazing stops (angles or tubes) is attached to the frames with screws or clips for easy removal.		
10	Any removable trim covers that cover the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cladding for each window won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SM/SCD/SEB representative.		
11	The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers.		

DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
Installer Team Lead: Printed Name: _____ Signature: _____ Initials: _____	**Contractor's QC Manager:** Printed Name: _____ Signature: _____ Initials: _____

[1] [2] DOS Approving Official: _____ Date: _____

Office: _____ Name: _____ Position: _____

[1] DOS Official acknowledgment does NOT relieve the contractor, or his subcontractor, from any requirement within the contract documents or represent approval of any hidden work.

[2] Certificate of Compliance is required to be included in the close out submittal.

SECTION 085651 – ALUMINUM SECURITY WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. The extent of exterior aluminum window units required to provide specified resistances is indicated on Contract Drawings by elevations/details/schedules/notations.

1. Principal work of this Section can be summarized to include, but not necessarily by way of limitation, aluminum window units in exterior walls of building occurring within 5 meters above grade or accessible platform and blast windows at any location.

B. The descriptions of window units required as work of this Section include custom grade architectural or heavy commercial, fixed (non-operating) extruded aluminum frame type units, except as otherwise indicated.

C. Work of this Section includes all materials, labor, equipment, and services necessary to design, engineer, test, fabricate, deliver, install, and warranty the security windows. These security windows shall provide an airtight and watertight enclosure, complete in every respect, notwithstanding any omissions or inadequacies of Drawings and/or Specifications.

1. This Section includes a continuous and uninterrupted exterior weatherseal, interior airseal, and a pressure-equalized drainage system.
2. This Section includes connections to adjacent construction.

D. [Definitions and Roles for Projects Utilizing the GPE Program:

1. Government Procured Equipment (GPE) Program: A program of the Overseas Buildings Operations (OBO) in which OBO procures security doors and windows in advance of and for the use of upcoming projects. All GPE windows and doors shall be designed and engineered prior to award of the project to the Contractor.
2. Fabricator: This entity is the fabricator/manufacturer of Aluminum Security windows.
3. Manufacturer: This entity is the manufacturer/fabricator of Aluminum Security windows.
4. Contractor: The Contractor is responsible for the design incorporation, delivery and installation of the GPE products. The Contractor is also responsible for the design and construction of the overall facility, as well as the installation of the GPE items selected by the Contractor in conformance with the overall requirements of the project. The Contractor is responsible for development of a GPE product list and submission of the list to the government for approval, with the design development drawings.]

E. Related Sections include the following:

1. Division 01 Section "Secure Shipment."
2. Section 033000 “Cast-In-Place Concrete”; for movements and tolerances of concrete building structure elements.
3. **[Division 05 Section “Structural Steel”; for movements and tolerances of steel building structure elements.]**
4. Division 07 Section(s) on “Flashing and Sheet Metal.”
5. Division 07 Section “Joint Sealants and Caulking.”
6. Section 080001 “Blast Requirements.”
7. Section 083454 “FE/BR Door Assemblies.”
8. **[Section 084414 “Structurally-Framed Security Curtain Wall System”]**
9. Section 085652 “Aluminum Security Teller Windows”
10. Division 08 Section on general glazing requirements.
11. Section 088855 “Security Glazing.”
12. Section 099602 “High Performance FE/BR Coatings”
13. Other sections of these specifications for interface of door hardware and device units, with alarm/security/safety/access/monitoring systems.

14. **[Division 01 Section on Building Enclosure (FE/BR Windows and Doors) Commissioning.]**

15. **[Division 08 Section “GPE Window and Door Requirements.”]**

1.2 PRE-INSTALLATION MEETINGS

A. Before beginning installation of the FE/BR assemblies, the manufacturer's technical representative shall conduct a pre-installation conference at the Project site with the installation sub-contractor, the electrical sub-contractor, the Project Director/COR, and other interested parties to review installation procedures and manuals, schedules, and coordination of the FE/BR-assembly installation with other elements of the Work.

1.3 REGULATIONS AND STANDARDS

A. Standards and codes referenced in this Specification shall be those editions, including amendments, current at the date of this Specification.

B. In the event of a conflict between referenced codes and standards and/or the Drawings and Specifications, the code or standard having the more stringent requirements shall govern.

C. Comply with the following industry Standards, unless more stringent requirements are indicated or are required by an approved product manufacturer, use metric versions of the standards if available:

1. American Institute of Steel Construction (AISC): 303 “Code of Standard Practice for Steel Buildings and Bridges,” 341 “Seismic Provisions for Structural Steel Buildings,” and 360 “Specification for Structural Steel Buildings.”
2. American Iron and Steel Institute (AISI): Steel designations.
3. American Welding Society (AWS): D1.1 “Structural Welding Code - Steel,” D1.2 “Structural Welding Code - Aluminum,” D1.3 “Structural Welding Code - Sheet Steel,” D1.6 “Structural Welding Code - Stainless Steel.”
4. Aluminum Association (AA): “Aluminum Design Manual,” and “Aluminum Standards and Data.”
5. American Society for Testing and Materials (ASTM): Documents specified herein.
6. American National Standards Institute (ANSI): Documents specified herein.
7. American Architectural Manufacturers Association (AAMA): Documents specified herein.
8. Building Hardware Manufacturers Association (BHMA): Hardware finish designations.
9. Consumer Products Safety Commission (CPSC): Documents specified herein.
10. Glass Association of North America (GANA): “Glazing Manual,” “Laminated Glazing Reference Manual,” and “Tempering Division Engineering Standards Manual.”
11. National Association of Architectural Metal Manufacturers (NAAMM): “Metal Finishes Manual.”
12. Research Council on Structural Connections (RCSC): “Specification for Structural Joints Using High-Strength Bolts.”
13. Sheet Metal and Air Conditioning Contractors National Association (SMACNA): “Architectural Sheet Metal Manual.”
14. Steel Structures Painting Council (SSPC): “Steel Structures Painting Manual, Vols. 1 & 2.”

1.4 ACTION SUBMITTALS

A. General:

1. All submissions must be in accordance with Division 01 Specifications.
2. Submit shop drawings, samples, data, reports, and engineering calculations for the Project Director/COR 's approval before proceeding with the Work of this Section. Upon award of contract, provide a submittal log which indicates submittal packages and sequence, as well as a list of major products proposed to be furnished. Submissions shall be made according to a schedule that allows adequate time for review and approval by the Project Director/COR as stated in the General Conditions.
3. Submissions shall be complete and comprehensive and include all shop drawings, samples, material data submissions, and engineering calculations for the part of the window addressed. All work shall be coordinated by the Contractor prior to submission. Incomplete, non-conforming, or uncoordinated submissions shall be subject to rejection or return without action by the Project Director/COR. Any work executed which deviates from the approved shop drawings and submittals shall be subject to rejection.

B. Product data for manufactured fabricated aluminum window units. Include information for metals and alloys, fasteners, welding, applied finishes, hardware, and accessories. Include producer's detailed instructions for assembly, protection, installation, and maintenance. Note any

maintenance information that may adversely affect the glazing according to section 088855 “Security Glazing.”

1. Manufacturer’s standard color chart.

C. Shop drawings:

1. All shop drawings showing blast resistant window assemblies shall be signed and stamped by window vendor’s blast consultant. All sheets shall be of one size and shall bear the seal of an engineer licensed in the appropriate jurisdiction.
2. Show dimensioned detail of aluminum window units and adjacent construction.
3. Show application of intended glazing materials.
4. Show typical window unit interior and exterior elevations at not less than 1:20 scale.
5. Submit shop drawings in PDF format. After final modifications and corrections have been incorporated, submit drawings as AutoCAD files with .DWG extension as well as in PDF format.
6. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
7. Unit Information:

    a. Manufacturer's model number
    b. Government certification number.
    c. 4-Digit DOS Code.
    d. Mark (window no.).
    e. Window/frame finish.
    f. Window type.
    g. Performance ratings.
    h. Structural wind loading.
    i. Air infiltration.
    j. Water penetration rating.
    k. Thermal movements.
    l. Energy performance.
    m. Sound transmission.
    n. Fire rating.
    o. Glazing panel weights.

8. Elevation Drawings:

    a. Rough opening dimensions.
    b. Frame opening dimensions.
    c. Vision opening dimensions.
    d. Substrate/rough opening material.
    e. Manufacturer's name and reference numbers for primer and finish paint, including number of coats applied and thickness of each coat in accordance with Section 099602 “High-Performance FE/BR Coatings.”
    f. Separate steel sub-frames (number and list).
    g. Detail symbols.

h. Glazing panel dimensions.

9. Plan Drawings:

a. Relate to elevation on drawing.
b. Identify "Attack" and "Protected" sides.
c. Provide key notes on drawings.
d. Indicate room space numbers taken from Contract Drawings.

10. Details:

a. Clearly illustrate all aspects of the windows including:

1) The relationship of the windows to the building structure, roofing and waterproofing systems, interior finishes, and other adjacent construction.
2) The arrangement of components.
3) Full size details indicating: sealing, flashing, weeping, and jointing; all dimensions and thicknesses; materials and finishes; material, type, size, location, and spacing of screws, bolts, welds, anchoring devices, and glazing accessories; locations of conduit entry into both subframe and window frame (where applicable).
4) Steel frames and subframes including plan and section details and corner conditions.
5) Details shall include all components, fully coordinated and integrated, regardless of the component provider.
6) Include sizes and strength of anchor, fasteners and washers.
7) Window and frame gauge thickness.
8) Covers (snap-on or mechanically attached) thickness and profiles.
9) Electrical access, where applicable.
10) Torque (nm) for anchor bolts.

b. Include details of all connections and seals to contiguous work as approved by the Subcontractor for the work adjacent and include all assumptions regarding the tolerances of that work.
c. Details shall be on separate sheets from plan and elevation drawings.

11. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, glazing layup sheet, finish/paint system, legend, and glazing specifications.
12. Breakdown of Product Line Items:

a. If Manufacturer produces one contract line item as several parts, they shall break out items on drawings. Each item shall be a subdivision of that product line item number. Indicate manufacturer's part numbers for all components.

D. Engineering Calculations:

1. Submit project-specific engineering calculations as described in the Part 2 Article on PERFORMANCE REQUIREMENTS.
2. Submit engineering calculations concurrently with corresponding shop drawings.

3. Insert appropriate location.
4. Calculations shall bear the seal of a Professional Engineer licensed in the appropriate jurisdiction.

E. Blast Report: See Section 080001 "Blast Requirements."

F. LEED Submittal:

1. Product Data for Credit MRc2: Environmental Product Declarations
2. Product Data for Credit MRc3: Recycled Content
3. Product Data for Credit MRc4: Health Product Declarations
4. Product Data for Credit IEQc2, Low Emitting Materials: For glazing sealants used inside of the weatherproofing system, including certificate of VOC emissions and content.

G. Samples for Verification: For windows and components required, prepared on Samples of size indicated below. Submit samples to Project Director/COR at project site.

1. Submit samples of all materials and finishes, including:

a. Samples matching the appearance, color, texture, and other characteristics of each finish required; Samples may be of a standard extrusion with similar properties and will be reviewed visually by the Project Director/COR for color and texture/sheen.
b. Range samples showing the complete range of variation in color, texture, and other characteristics resulting from the carefully controlled manufacture, finishing, fabricating, delivery, assembly, installation and cleaning processes;
c. Finished samples of major extrusions;
d. Finished samples of each sheet in thickness and type required;
e. Samples showing finishes over welds and over materials welded.

2. Submit four identical pieces of each sample required.
3. The Manufacturer and Contractor shall provide samples of production materials shall be provided by the following sizes:

a. Fastening devices: Each type.
b. Finish hardware: Each type.
c. Finish samples: 30 cm x 30 cm, each type and finish.
d. Finished extrusions: 30 cm in length.
e. Finished sheet: 30 cm x 30 cm, each type.
f. Flashing: 30 cm long, each type. Include lap or splice jointing.
g. Glass: 30 cm x 30 cm, each type and edge finish.
h. For insulating glass units provide assemblies representative of units to be used in the finished work, including scheduled glass, coatings, spacers, edge seals, and edge deletion.
i. Sealants: Cured sample, 30 cm long, each type.

4. [Window Corner Fabrication: Provide one 300-by-300-mm (12-by-12-inch) sample for record to OBO. Sample shall include a full-size sections of extrusions with factory-applied color finish, cladding and removable covers, weatherstripping, and glazing. If directed by OBO, when a current sample is available at OBO headquarters, an additional sample is not required.]

H. Condensation Resistance Simulations:

1. Submit computer simulation results confirming conformance with specified condensation resistance performance criteria.

1.5 INFORMATIONAL SUBMITTALS

A. Installer Qualifications:

1. For FE/BR/Blast installations, submit crew leader resumes documenting the lead installers have installed FE/BR/blast assemblies for a DOS project within the last 5 years.
2. Submit list of installer's personnel who have received the manufacturer's training according to the requirements in the Part 1 Article on QUALITY ASSURANCE.

B. Copy of DOS Certification Letter: Copy of DOS Certification letter indicating that products have been certified by the Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Rev H.

C. Certificates of Compliance:

1. Completed certificates of compliance documenting that all FE/BR assemblies have been installed per the contract documents. Complete and submit to the Project Director/COR the form referenced in the Part 1 Article on QUALITY ASSURANCE. Certificate of Compliance form is found at end of this Section.

D. [Energy Performance Certificates: NFRC certified energy performance values for each glazed wall system.]

E. Test Reports:

1. General: Submit test reports in a timely manner and well before execution of any related component of the windows.
2. Submit laboratory test reports, showing compliance with performances required for air infiltration and water penetration.

F. Installation Instructions:

1. Provide standard window installation and glazing panel replacement instructions and customized supplement for each type of application that varies from the standard window

installations. Installation manual and supplement shall be approved by the OBO/CFSM/SM/SOD/PSO/FE/BR Program Section.

2. Manual shall be customized for each type of application.
3. Manual shall identify in the installation steps where "products by others" such as flashing and finishes surrounding the product are to inface/take place. Installations steps for "products by others" is not required.
4. Develop instructions for unique conditions as they are identified.
5. Manual shall include step-by-step instructions for installing FE/BR doors with supporting photos, illustrations and figures that also includes sections for General Requirements, List of Tools & Expendable Supplies, Window Removal from Crate, and Cleaning.
6. Manufacturer's Technical Representative shall submit list of unique project specific site conditions that require special manufacturer representative inspection and/or installation training.

G. Quality Control Program: Submit prior to start of fabrication. See Part 1 Article on QUALITY ASSURANCE.

1.6 CLOSEOUT SUBMITTALS

A. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

B. Maintenance Manuals:

1. At the completion of the Project, **[submit four bound copies of][digitally submit]** a maintenance manual for all window components. Include instructions for cleaning, repair, and maintenance of the work, including re-glazing procedures within the manual or as a separate manual. Include warranties, manufacturer's data and contact information for all components.

C. Installation and Maintenance Instructions: At the completion of the project, digitally submit a maintenance manual for all security glazing components. Include the following information:

1. Glazing replacement instruction or manual which includes step-by-step instructions with photographs and illustrations for all window conditions on the project and includes the following information:

a. List of tools and expendable supplies.
b. Removal of the damaged glazing.
c. Cleaning the window frame.
d. Removal of the replacement glazing from the crate.
e. Transporting the glazing on a heavy-duty glass cart from the loading dock to window location.
f. Positioning the new replacement setting blocks and any glazing tape or foam on the frame and/or glazing pocket as appropriate.
g. Lifting the glazing from the cart with a glazing robot into the window frame
h. Installing the glazing stops.

i. Inserting any gaskets or applying any sealant as appropriate.
j. Best practices recommendations for glazing replacement:
k. Removal of the replacement glazing from the crate.
l. Transporting the glazing on a heavy-duty glass cart from the loading dock to window location.

2. Instructions for cleaning.
3. Copies of Warranties.
4. Copies of Manufacturer's product data.
5. Contact information for manufacturers and suppliers of all components.

D. Record Shop Drawings: At the completion of the Project, **[submit four bound sets of half-size prints of] [digitally submit]** all final approved shop drawings.

1.7 QUALITY ASSURANCE

A. Testing Laboratory Qualifications: For compliance with non-security performance requirements on security window assemblies of this Section, use only those testing laboratories which have successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

B. Delegated Design Responsibility: Contractor shall retain an experienced Professional Engineer, registered in the U.S. or in country with significant experience with windows of similar complex performance requirements, and acceptable to the Project Director/COR, to perform responsibilities of Delegated Design.

C. Quality Control for Forced-Entry/Ballistic Resistant (FE/BR) Products: Certify compliance of fabricated and assembled FE/BR products specified in this Section with each quality control procedure established by the Government; these procedures are identified in Compliance Form found at end of this Section. Other quality control forms are found at end of Section 083454 "Forced Entry (FE) / Ballistic Resistant (BR) Door Assemblies."

D. Installer Qualification Data: The installer's qualifications must be approved by the Office of Overseas Buildings Operations, Construction Facilities Security Management, Security Management, Security Countermeasures Division, Security Engineering Branch (OBO/CFSM/SM/SCD/SEB). Submit resumes of all team lead installer (present and responsible for each install), documenting that installer has installed FE/BR window assemblies for DOS projects with last five years. Resume shall include at least three references (including contract information) that can provide verification that the installer has expertise required to perform successful installation. Each installer or installation team must be certified by the manufacturer as being capable of properly installing the FE/BR products. The installer must provide written documentation to the Project Director/COR that the installation team is certified in the manufacturer's product installation.

E. Manufacturer's Technical Representative: **[The manufacturer shall appoint a manufacturer's technical representative to the project.] [For GPE projects the contractor will hire from the**

manufacturer a technical representative.] The manufacturer's technical representative shall be an employee of the manufacturer and have the following responsibilities:

1. Pre-Installation Conference: See Part 1 Article on PRE-INSTALLATION MEETINGS for the representative's responsibilities.
2. Training: The manufacturer's technical representative (at no cost to the U.S. Government) shall provide the crew, which is to actually perform the installations of the FE/BR assemblies with a minimum of 16 hours of on-site, hands-on training which shall include the complete installation of at least three FE/BR windows, with the exception of the snap on trim, and training on glazing replacement and completion of the Certificate of Completion for each of the three windows. The manufacturer's technical representative shall also instruct the crew on preventive measures which must be taken to protect the FE/BR assemblies from damage during construction.
3. Inspection: See Part 3 Article on FIELD QUALITY CONTROL FOR THE GENERAL CONTRACTOR/INSTALLATION CONTRACTOR for the representative's responsibilities.
4. Additional Assistance to the Government: The manufacturer's technical representative (at no cost to the U.S. Government) shall provide the Contractor any additional advice, instruction, training, supervision, or inspection required to enable the Contractor to complete the installation certification described below, and to fully train the Embassy staff in the proper operation and maintenance of the FE/BR assemblies while on site before turn over to the DOS.

F. Certification by General Contractor: Prior to final completion, the General Contractor shall provide to the Project Director/COR a certification that the FE/BR materials have been installed in accordance with the manufacturer's instructions, these specifications and are operational. Sample Certificates of Compliance are attached to the end of this specification. Deviation from these requirements is only permitted with the written approval of OBO/CFSM/SM/SCD/SEB or OBO/CFCM/SM/SOD/PSO/FE/BR. The General Contractor shall provide certification that the requirements in these specifications have been included in the work. The following requirements are part of this Certification.

1. The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security windows has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.
2. Employees performing the installation meet the specified training and experience qualifications.
3. Each sub-frame has been installed level, plumb and square.
4. All sub-frame assemblies shall be factory welded together. Any large sections that exceed the limits of a standard shipping container shall be clearly identified for field welds.
5. All units have been pre-glazed at the factory.
6. All temporary fasteners have been replaced with permanent fasteners.
7. All frame fasteners and threaded openings in subframe have been cleaned of all oil and debris, and have been dry-torqued to meet the manufacturer's specifications. Shims have been inserted at all bolt locations, minimum 1 shim per bolt and maximum as tested condition.
8. Frame bolts/screws are as shown on the approved shop drawings.

9. Finish materials do not overlap the window frame/sub-frame or shim space and ballistic trim bars in such a way that the window cannot be re-glazed unless the surrounding finishes and trim are demolished; unless the finish materials can be easily removed and reinstalled. All overlapping finish work (e.g., metal, wood, stone) can be removed without damaging the window and finish.
10. Any cladding that covers window glazing stops (angles or tubes) is attached to the frames with hidden fasteners or snap on covers for easy removal.
11. Any cladding that covers the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs and cladding for each window have been bagged and won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SMSCD/SEB representative.
12. Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.
13. Ballistic trim bars have been secured/screwed to the sub-frame and not the window frame.
14. Ballistic trim bars have been installed tight against the window frame, or sill flashing, and gap shall not exceed 2 mm or as tested by the manufacturer.
15. Maximum gap at shim space shall be no more than then the tested and DS certified assembly, except as noted in the requirements for “Window Flashings” within the Part 3 Article on INSTALLATION.
16. The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers (see Part 1 Article on IDENTIFICATION SYSTEMS below).

G. Quality Control inspection documents shall incorporate:

1. Security Glazing Requirements including the following:

   a. Whether internal channels are used to separate glass from polycarbonate or otherwise framed for solid laminated glazing, minimum glazing depth in openings (bite) for attack and protected sides which shall not be less than 20 mm and 6 mm cushion clearance to fixed stop on glazing edges.

H. Quality Control Program:

1. Quality Control Program shall cover all phases of the window Work including, but not necessarily limited to, the following:

   a. Procurement of materials, including quality assurance programs of major suppliers.
   b. Fabrication of components.
   c. Production testing.
   d. Final assembly of components.
   e. Installation and site quality control.

2. Quality Control Program shall indicate the following for each quality control measure/activity:

   a. Item/property being inspected/tested
   b. Control point in process and frequency of inspection/testing
   c. Inspection/test method

d. Acceptance criteria and reference standards/specifications
e. Method of documentation
f. Action to address deficiencies

3. Quality Control Program shall include detailed descriptions of inspection and production testing programs and inspection reports for:

   a. Coatings of metal. Coordinate and include controls by metal fabricator and finisher, as well as by Contractor to provide independent checks of metal quality and finish at point of fabrication, finishing, and during installation
   b. Structural glazing.

4. At the request of the Project Director/COR, a Government representative shall be allowed access to Contractor's facilities and those of major suppliers at with advance notice to monitor QC procedures. Make available all QC Program records upon request.

1.8 TESTING AND MOCK-UPS

A. [NFRC Testing:

1. Provide, install, and test specimens of the vision-glazed window systems at an NFRC-accredited laboratory as necessary to obtain NFRC certification and labeling.
2. The Contractor or their designee shall be the "Responsible Party" as defined in the NFRC procedures.
3. Obtain certification and "NFRC Label Certificates" prior to installation.]

B. Trial Installations:

1. Refer to the crew training responsibilities in the requirements for "Manufacturer's Technical Representative" in the Part 1 Article on QUALITY ASSURANCE.
2. Prior to general installation of windows, erect on the building a representative trial installation of each window type for the Project Director/COR's approval.
3. Propose the scope and location of trial installations for the Project Director/COR's approval.
4. Notify the Project Director/COR well in advance of each such trial installation. If approved, this portion of the work shall become part of the final installation.
5. Provide a demonstration at the job site where the windows will be installed simulating replacement of a glazing panel at different floor levels using technology (,e.g., roof mounted davit & winch systems from the exterior or glazing robot from the interior along with two workers on each side, exterior and interior, accessing the window head, jambs and sill).

C. Pre-Construction Sealant Testing:

1. Test proposed field applied sealants for adhesion and compatibility with each type and color of substrate or material coming into contact with them.

2. Test proposed sealants for staining of each type and color of porous substrate or material coming into contact with them, including other sealants.
3. Test specimens shall be of the size required by the manufacturer's testing laboratory and shall be composed of the specified materials, colors and finishes.
4. Adhesion testing: ASTM C794.
5. Compatibility testing: ASTM C1087.
6. Stain testing: ASTM C1248.
7. Tests shall be performed by the sealant manufacturer whose products are being considered.

D. Structural Silicone Testing:

1. Test silicone joints proposed for structural glazing for performance in tension, shear, and tension and shear combined, in accordance with ASTM C1135.
2. Test specimens: approximately 5 cm in length, full dimension in width and depth, and be composed of the specified materials, colors and finishes.
3. Ten specimens for each condition shall be tested and the values for elongation-to-failure vs stress recorded for each specimen, and the mean and standard deviation calculated for each condition.
4. Tests shall be performed by the structural silicone sealant manufacturer whose products are being considered.
5. In addition to the above, production testing shall be performed at regular intervals during assembly of the window, as specified.

1.9 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. Provide a steel stamped ID plate. Locate one plate on the lower right corner (hidden) of the secure side of the window frame. Locate one plate on lower right of the interior window frame snap on trim or cladding (visible). The plate shall be approximately 40 x 75 mm, must be easily accessible and shall cite:

1. Manufacturer's name/city/state.
2. Government certification DOS model number.
3. Contract number.
4. Month/year of manufacture.
5. Mark number.
6. Four digit DOS CODE

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, sub-frames, and frames completed and prepared for installation and connection with security systems. Refer to Division 01 Section "Secure Shipment" for additional requirements.

B. Deliver window assemblies as factory glazed unless otherwise directed by Government.

C. Pack window assemblies and accessories; One crate for the window and frame, including installation accessories: All anchors, bolts, screws, shims, ballistic trim, shop drawings, etc. Provide a separate compartment, and clearly label each crate for each type of component. Removable covers/trim and sub-frames may be shipped separately. Multi-unit elevations may separate the ballistic bolts, ballistic bars and trims which span, or are shared, by several unites into separate crates. With OBO/CFSM/CM approval bulk packaging of like materials, may be approved on a case-by-case basis.

D. Provide protection of frame exposed finishes using surface protection film.

E. Treat security window assemblies as fragile merchandise, and packaged and shipped in export wood crates, not constructed of Oriented Strand Board (OSB), with width end in upright position and blocked together in a mass, except as noted below. Do not use plastic or polyethylene sheeting, or extruded polystyrene. Comply with Manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents, and ground contaminants. Clearly mark crates to indicate which side should be opened first.

1. If the window is designed to be shipped on the jamb side, to include setting blocks on the jamb side, and label jamb and crate “ALTERNATE SILL” and indicated orientation.

F. Clearly mark sub-frames with window mark number and identify attack side, head, sill, and left and right jambs. Package sub-frames separately and ship in export wood crates separate from the window assemblies. Protect each sub-frame piece to minimize damage to finished surfaces.

G. Conduct thorough visual inspections of the glazing prior to packaging.

H. Include a complete list of non-compatible materials for temporary protection during construction and cleaning.

I. Include tip-and-tell, temperature, and humidity indicators with packaging, one for each crate, located on exterior of the crates and one of each on interior of crates. Manufacturer shall provide one crate label, located next to exterior tip and tell and one fly sheet with the packing material indicating the humidity maximum limits allowed for the glazing.

J. Store materials in a dry, well-ventilated location. Keep handling of materials to a minimum, and carefully protect materials from soiling and from condensation and other harmful moisture. Provide vapor-permeable materials for protection during shipping. Do not trap moisture within or adjacent to windows.

K. Conduct thorough visual inspections of glazing before installation. Inspections should include removal of glazing stops, if applicable. Do not install glazing with any cracks in the polycarbonate. Contractor shall remove film after doors and windows are installed on project site.

1.11 WARRANTY

A. Special Warranty: Written warranty in which Contractor agrees to repair or replace components of the windows that do not comply with requirements or that fail in materials or workmanship within the specified warranty period.

1. Failures include, but are not limited to, the following:

a. Abnormal deterioration, aging and weathering of the windows;
b. Leakage of water or air exceeding specified limits;
c. Structural failure of components resulting from exposure to pressures and forces within specified limits;
d. Failure of operating parts to function normally;
e. Deterioration/discoloration of finishes in excess of normal weathering and aging;
f. Glass breakage due to defective design, manufacture, or installation;
g. Edge separation or any other deterioration whatsoever of laminated glass;
h. Cracking or crazing of polycarbonate glazing;
i. Failure of the windows to meet any other specified performance requirements.
j. Warranty Period: Five years from date of Substantial Completion.

B. Warranty, Organic Coatings: See Section 099602 “High-Performance FE/BR Coatings.”

C. Manufacturer’s Special Warranties for Structural and Weatherseal Sealants:

1. Written warranties in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that fail to provide airtight and watertight joints, or fail in adhesion, cohesion, abrasion resistance, stain resistance, weather resistance, or general durability or appear to deteriorate in any other manner not clearly specified in the manufacturers data as an inherent quality of the material.
2. Warranty Period: 10 years from date of Substantial Completion
3. Glazing Period: See requirements for special product warranties in Section 88855, “Security Glazing.”

1.12 EXTRA MATERIALS

A. Furnish extra materials identified below. Package extra materials with protective coating for storage and identification labels describing contents.

1. Glazing panels: Two vision and two spandrel units for each module, glazing type and size.
2. Frame retention set screws and other non-perishable parts required for re-glazing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design of the windows (including comprehensive structural analysis) shall be performed by a professional engineer. Refer to the Part 1 Article on QUALITY ASSURANCE for required qualifications. Responsibilities also include design and integration of associated security glazing, and ensuring conformance to performance requirements for security glazing; see Section 088855 "Security Glazing."

1. Applicable Criteria: Utilize criteria identified below, including criteria such as seismic and other loads. Engineering design development, materials and methods of construction other than that indicated or implied by the Contract Documents may be employed when such materials and methods when they are consistent with these criteria. Any deviations from these, or clarification where there are apparent conflicts with these, must be obtained from the Project Director/COR.

a. Performance requirements identified in this Article.
b. Other applicable criteria included within the OBO Design Standards (e.g., OBO Codes, reference documents).
c. Design intent documents prepared by the A/E involved with RFP documentation, and consistent with these performance requirements and other criteria in the OBO Design Standards.

2. Contractor's Professional Engineer's Responsibilities:

a. The Contractor's Professional Engineer shall prepare and endorse complete engineering design and calculations and shall check and monitor the preparation of all shop drawings for conformance with the engineering design and calculations, and for compliance with the Contract Documents.
b. Engineer shall submit structural calculations for all components of the windows and indicate ultimate factors of safety.
c. As evidence of conformance to these requirements, each shop drawing and calculation sheet shall bear the seal and self-written signature of the Engineer.

B. General: Fabricate and install aluminum framed window units anchored to steel subframes to achieve the following security-related resistances, along with other indicated performances. Extend resistance to include anchorages and interfaces with adjoining substrates. Provide window rating as listed on the window schedule.

1. Forced-Entry (FE) resistance rating for attack with ordinary hand tools for the following ratings of the Physical Security Division of the Bureau of Diplomatic Security (DS/PSP/PSD).

a. Government Code 1: No FE resistance rating.
b. Government Code 2: 15 minutes.
c. Government Code 3: 60 minutes.
d. Government Code 4: 5 minutes.

2. Ballistic Resistance (BR) assemblies: Where window assembly is shown or scheduled as BR, provide the following ratings:

   a. Government Code 1: No BR resistance rating.
   b. Government Code 2: Submachine gun, 9 mm.
   c. Government Code 3: Rifle, 5.56 & 7.62 NATO.
   d. Government Code 4: Armor piercing, 0.30-06.

TABLE 2.1 - WINDOW CODES

DOS CODE	1ST DIGIT – WINDOW COMPOSITION	2ND DIGIT FIRE RATING	3RD DIGIT – FORCED-ENTRY RATING	4TH DIGIT – BALLISTIC RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	1.5 hours (Class D at exterior)	15 minutes	Not Used
3	Not Used	3 hours (Class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4	Not Used	45 minutes (Class C)	5 minutes	Armor-Piercing (.30-06)

3. Provide combined performances for indicated requirements, with each performance surviving combined attacks within rating limitations of performance, but recognizing that certain forms of attack may result in severe damage to units, even though repelled successfully, leading to need for replacement of units, or of damaged elements of units.

C. Blast Resistance: See Section 080001 “Blast Requirements.”

D. Ballistics-Resistance Performance: Provide units identical to those tested for compliance with the following requirements:

1. Certified as complying with SD-STD-01.01, Revision H, by the U.S. State Department, for ballistics resistance when tested by a qualified testing agency.

E. Forced-Entry-Resistance Performance: Provide units identical to those tested for compliance with the following requirements:

1. Certified as complying with SD-STD-01.01, Revision H, by the U.S. State Department, for forced-entry resistance when tested by a qualified testing agency.
2. If blast, or other requirements, result in changes to the tested FE/BR design, to include anchor or other material changes, the FE/BR vendor shall contact DS/PSP/PSD/RD to determine if a technical review is required.

   a. Shop drawings should include the TR model number, where applicable.

F. Climb Resistance: Conform to the climb-resistance requirements and criteria in the OBO Building Code.

G. Structural Performance: Aluminum security windows shall withstand the effects of wind loads determined as follows, with no permanent deformation or breakage within window assembly when designed in according to ASCE 7-16, as adopted and amended by the OBO Building Code, and tested according to ASTM E 330:

1. Basic Wind Speed: Shall be as indicated in the Structural Drawings.

H. Structural Glazing Sealant Bite: Sealant bite shall be adequate to resist specified loads.

I. Snap-on Components: Concentrated load of 4.5 kg (10 lbs.) at any point.

J. Air Infiltration for Fixed Windows: Not more than 0.2 L/s per sq. m (0.04 cfm/sq. ft.) at an inward test pressure of 300 Pa (6.27 lbf/sq. ft.) when tested according to ASTM E 283.

K. Water Penetration:

1. Under Static Pressure: No evidence of water penetration through fixed glazing when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).
2. Under Dynamic Pressure: No evidence of water penetration through fixed glazing when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).
3. Maximum Water Leakage: Water penetration shall be defined as any water, other than condensation, that appears on any interior surface of the window, or on any surface inside the concealed spaces of the window or adjacent construction not designed specifically to function as part of the rainwater management system for the building enclosure. This definition of water penetration governs over those found in referenced documents.

L. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:

1. Temperature Change (Range): **[67 deg C (120 deg F)], ambient; [100 deg C (180 deg F)]**, material surfaces **<Edit for local conditions>**.
2. Test Interior Ambient-Air Temperature: 24 deg C (75 deg F).
3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

M. Energy Performance: **[Aluminum security windows shall have certified and labeled energy performance ratings in accordance with NFRC.]**

1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than **[1.5]** W/sq. m x K (**[0.40]** Btu/sq. ft. x h x deg F) as determined according to NFRC 100.
2. Solar Heat Gain Coefficient (SHGC): Refer to Section 088855 "Security Glazing" for limitations on performance requirements for certain glazed assemblies.
3. In general, fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than **[0.47]** as determined according to NFRC 200, or as identified in the specified glazing type in the 088855 Security Glazing Specification.

    a. Fixed glazing and framing in locations where special coatings using approved coating products are used, a solar heat gain coefficient of no great than **[0.XX] [as determined according to NFRC 200]**.

4. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC- certified condensation resistance rating of no less than **[55]** as determined according to NFRC 500.

N. Visible Light Transmittance (VLT): Refer to Section 088855 "Security Glazing" for limitations on performance requirements for certain glazed assemblies.

O. Sound Transmission: Provide aluminum windows with fixed glazing and framing areas having the following sound-transmission characteristics:

1. Outdoor-Indoor Transmission Class (OITC): Minimum 35 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.

P. Facilitation of Glazing Replacement: Install aluminum security window assemblies only into a steel substrate in such a manner that allows for future glazing panel replacement. This may be either a structural steel wall or other structural steel assembly, a steel sub-frame in concrete, or a steel sub-frame attached to concrete**[or masonry]**.

Q. Mullions: Provide mullions between window units that are designed to provide thermal isolation and performance equal to the performance of the adjacent window unit frames. Mullions must meet all applicable FE/BR and/or blast requirements.

R. Building Structure Movements and Tolerances:

1. The windows shall accommodate differential structural movements, deflections, interstory drift, and thermal movement of the building structure due to gravity loads, wind loads, seismic loads and temperature.
2. The windows shall accommodate the following without distress, disengagement, or damage:

    a. Slab or Perimeter beam deflection due to service live load, column shortening, and differential long term creep.
    b. Interstory lateral drift (serviceability).

3. The windows shall accommodate the following without detachment of components from the building or glass fallout:

a. Inter-story lateral drift (ultimate).

4. The windows, including its connections to the building structure, shall accommodate the fabrication and erection tolerances allowed for the building structure.

a. Slabs, beams, and columns; left/right and up/down.

5. It is the responsibility of the Contractor to refer to the appropriate specifications of Cast-In-Place Concrete, Structural Steel, or Metal Framing for the full description of structural movements and tolerances.

S. Animal Nuisance Control:

1. The windows shall inhibit the entry of insects or other small animals which would constitute a nuisance by their presence.

T. [Fire Safety:

1. Provide fire-resistance rated assemblies, as indicated in Contract Documents, and as required to conform to OBO Codes (OBO-adopted model codes as amended by OBO Code Supplements).]

2.2 MANUFACTURER/FABRICATOR

A. Selection of fabricator/manufacturer for each type of security window assembly, and selection of manufactured elements which are used in make-up of that assembly, are Contractor's options subject to the following requirements and limitations, approval by the Project Director/COR and subject to general provisions of Construction Contract:

1. Pre-certified fabricators of ballistic--resistant and forced-entry-resistant assemblies are identified in a separate Contract attachment labeled “Government Certified FE/BR Products and Designs".

2.3 METALS

A. Select the alloy, degree of alloy control, homogeneity, temper, metallurgical quality, degree of hardness or softness, mill tolerances, cutting tolerances and flatness, required to achieve the requirements of design, quality, and color matching of finish set forth in Drawings and Specifications.

B. Aluminum:

1. Flat sheet: AA [**3003 for painted finish] [5005 for anodized finish]** H14, ASTM B209, stretcher-leveled and stress-relieved.
2. Extrusions: AA 6061-T6 or AA 6063-T5 or T6; ASTM B221.
3. Other flat sheets and extrusion grades and selection may be allowed with the approval of OBO/CFSM/SM/SCD/SEB, but in all cases, they should not only meet the physical requirements, but ability to finish the material shall be similar.

    a. Extruded aluminum cladding for mullion caps shall be minimum 2.4 mm thick.
    b. Cladding for other exterior applications shall be of a gauge capable of retaining flatness and consistency with no oil-canning or other distortion when subjected to the design wind pressures required for the project, but not less than 1.2 mm thick.

C. Carbon Steel:

1. Rolled shapes, plates and bars: ASTM A36, A572, A992.
2. Hollow steel sections (HSS): ASTM A500
3. Cold rolled sheet and strip: ASTM A1008.
4. Hot rolled sheet and strip: ASTM A1011.
5. Fasteners:

    a. Bolts and Screws: ASTM A307 or F3125 Grade A325 or A490.
    b. Socket Head Cap Screws: M12, Zinc-plated.

        1) For non-blast rated windows: Class 10.9 (Grade 8) or Class 12.9.
        2) For blast rated windows: As required by blast analysis report; see Section 080001 “Blast Requirements.”

    c. Washers: Zinc-plated.

        1) For non-blast rated windows: Class 10.9 (Grade 8) or Class 12.9.
        2) For blast rated windows: As required by blast analysis report; see Section 080001 “Blast Requirements.”

    d. Nuts: ASTM A563 or ISO 4032/8673.

D. Stainless Steel:

1. Sheet, plate, bars and strip: ASTM A240, sulfur not to exceed 0.005 percent; ASTM A480, stretcher-leveled and stress-relieved.

    a. Exposed: AISI Type 316
    b. Concealed: AISI Type 304

2. Fasteners: AISI Type 303, 304 or 316 (exterior).

    a. Bolts and screws: ASTM F593.
    b. Nuts: ASTM F594.
    c. Button and countersunk head screws: ASTM F879.

2.4 FABRICATION AND ASSEMBLY

A. General:

1. To the fullest extent practicable, all fabrication and most assembly shall be executed in the shop. Work not shop-assembled shall be shop-fitted to ensure fit. Refer to Part 3 Article on INSTALLATION; any remaining assembly work is part of that activity.
2. Use no materials, equipment or practices that may adversely affect the function, appearance, performance, or long-term durability of the completed windows or adjacent construction.
3. The windows shall be accomplished in compliance with the specified criteria without buckling, opening of joints, undue stress on fasteners, sealants and gaskets, opening of welds, cracking of glass, leakage, noises or other harmful effects.
4. Conform strictly to the materials, finishes, shapes, profiles, sizes, thicknesses, and joint locations required by the Drawings and Specifications.
5. Match all materials to produce continuity of line, texture and color.
6. Work shall be of the highest quality, in accordance with the best trade practices, and performed by skilled workmen. All work shall be accomplished to the satisfaction of the Project Director/COR.
7. All components exposed in the finished work shall be free from warping, oil-canning effects; the telegraphing of welds, studs, and other fasteners; streaks, tool and die marks.
8. Finish exposed metal edges to match adjacent finished surfaces.

B. Reduce exposure to non-compatible chemical substances including, but not limited to, the following:

1. Phenols.
2. Silicone-based sealants (non-neutral cure agents).
3. Cutting oils.
4. Common cleaning chemicals known to contribute to polycarbonate environmental stress cracking such as ammonia.
5. Isopropyl not allowed unless rinsed with water.
6. Ethylene-propylene rubber (EPDM) setting block and gasket off-gassing compounds.

C. Manufacturer’s Standards:

1. Materials, components and systems incorporated in the Work shall be mixed, applied, installed and otherwise used in strict accordance with the recommended standards and procedures of the respective manufacturers.

D. Storage and Handling at Manufacturing and Fabricating Facilities:

1. Refer to Part 1 Article on DELIVERY, STORAGE, AND HANDLING. Those requirements also apply during the fabrication portion of this Section.

E. Jointing and Reinforcing:

1. Accurately fit and firmly secure all exposed metal joints with metal to metal hairline contacts.

2. Install fastenings at an approved spacing.
3. Fasteners shall not penetrate gutters and drainage systems.
4. Screws and fasteners up to and including 8 mm (5/16 inch) diameter and all that are drilled and/or tapped into aluminum shall be 300 series stainless steel.
5. Fasteners 9.5 mm (3/8 inch) diameter and heavier shall be stainless steel or hot-dip galvanized.
6. Jointing and splicing of members shall be concealed. Exposed fasteners shall occur only where expressly permitted by the Project Director/COR. Where exposed in finished surfaces, screw heads shall be Phillips oval-head countersunk type, finish to match adjacent surfaces.
7. Conceal all joint sealants except as noted on the Drawings.

F. Anchors and Connections:

1. Reinforce elements to resist loads imposed upon them by doors, hardware, anchors, and other attachments. The window manufacturer shall provide anchors appropriate for substrate to which window frame and sub-frame is to be fastened.
2. Anchors and connections shall be provided to fully satisfy their required purpose of adjustability, movement and load transfer.
3. Design connections between different materials shall allow for the differential thermal movement of the respective materials.
4. Anchors and connections that do not provide for movement shall prevent such movement by appropriate means.
5. Anchors and connections that are designed for movement shall be of such construction that friction is low enough to allow for such movement without buckling and other damage and without causing binding and noises.
6. Self-drilling, self-threading fasteners shall not be permitted for use into concrete or masonry for the window frame, but is allowed for ballistic trim.
7. Separate metal surfaces shall be designed such that metal does not move on metal. Materials used for this purpose shall be low friction components, sealants or gaskets as applicable.
8. Anchorages to Structural Steel shall not induce rotational forces in supporting members.
9. All anchors and fasteners outboard of the air-seal shall be 300 series stainless steel. All other fasteners shall be stainless steel or zinc-plated steel. Fastener and anchor assemblies shall be detailed to prevent galvanic corrosion.
10. Shim packs that resist compressive forces only may be solid high-impact plastic, Korolath type or equal. Shim packs subject to bending or shear forces shall be stainless steel or HDG steel plates pinned together to form a monolithic shim.
11. Window frames shall have pre-drilled, vertically slotted bolt hole patterns at the jambs and left/right slotted bolt hole patterns at the head and sill, not to exceed as tested on center spacing.
12. The manufacturer shall verify substrates involved, and supply any special fastening tools (e.g., special drill or bit) required by anchoring system.
13. The anchor shall be acceptable for shock/short duration loading, and have potential for removal and re-installation during life of building.

G. Welding:

1. Weld steel in accordance with the recommendations of the American Welding Society.
2. Welding shall be done by skilled mechanics qualified by test in the last 12 months as prescribed in the American Welding Society Code and as applicable to the material thickness and type of welded joint on which the welders will be employed.
3. Welding shall be done with electrodes and/or methods recommended by the suppliers of the metals being welded. The type, size, and spacing of welds shall be as shown on the approved shop drawings. Welding materials and methods shall be such as not to cause distortion, discoloration, or result in any other adverse effect on the required profiles and finishes of visible surfaces of the windows.
4. Welding of aluminum alloys and the qualifications of aluminum welders shall conform to the requirements of the Aluminum Association "Specifications for Structures of Aluminum Alloys, Aluminum Construction Manual".
5. Welding of stainless steel shall be by TIG welding or other methods subject to approval. Use double bevel butt welds, backing bars to remove heat, jigging, tack welds and any other measures necessary to minimize distortion.
6. Remove weld spatter and welding oxides on exposed surfaces. Finish exposed welds to match and blend with adjacent parent metal prior to final finish application.
7. Stud welding shall be done by mechanics trained by the manufacturer of the stud setting system. The manufacturer shall develop specific programs and instructions in cooperation with the fabricator to suit the needs of the specific details. The fabricator shall exercise particular care that all recommendations of the manufacturer are closely followed. Visible marks (telegraphing) on finished surfaces due to welding of studs shall not be acceptable.

H. Sealant and Gasket Applications:

1. Provide sealing mechanisms (sealants and gaskets) where shown on the drawings or required for a permanently weathertight installation. The sealing mechanism for each location and use shall be as indicated on drawings. In those locations where a mechanism is necessary but is not indicated, it shall be of a type recommended by the Contractor and approved by the Project Director/COR.
2. Design all sealed joints in accordance with the recommendations of the sealant and/or gasket manufacturer.
3. Gasket materials shall be appropriate for the function intended and are subject to approval by the Project Director/COR.
4. Submit test samples of all substrate materials to the sealant manufacturer for compatibility and peel adhesion testing.
5. Protect adjoining surfaces not to receive sealants against staining by masking and/or other methods. Conceal sealant joints from view to the extent possible. Do not allow sealants to contact interlayers of laminated glass.
6. Joints and joint surfaces shall be clean, dry, and free of any materials that may have an adverse effect on the performance of the sealant and gasket materials.
7. Sealant application: ASTM C1193.
8. Apply sealants and gaskets under the climatic conditions recommended by the manufacturer(s). Sealant shall not be installed when substrates are wet or when ambient or surface temperature is below 40 deg F. All surfaces to receive sealants shall be treated (cleaned, primed or unprimed) in accordance with the recommendations of the sealant manufacturer. Use no sealant that has started to set in its container or a sealant that has exceeded the shelf life published by the manufacturer.

9. Glazing gaskets shall be vulcanized, injection molded or heat-welded at the corners to form a continuous closure.
10. Fill all joints continuously and completely with sealant, forming a neat uniform, concave bead. Finish the material flush with adjoining surface unless otherwise shown on the Drawings. All sealant surfaces shall be tooled smooth. Upon completion of tooling, immediately remove masking tape from adjacent surfaces.

I. Glass and Glazing:

1. Comply with the GANA "Glazing Manual."
2. Glazing shall be performed without springing or forcing. Follow all instructions of the glass and glazing materials manufacturers.
3. Glass and glazing materials shall be compatible with each other and adequate for their intended purpose. Each material type shall be as per details and approved Shop Drawings.
4. Protect all adjoining surfaces not to receive glazing materials against staining or damage of any kind.
5. Glazing pockets shall be clean, dry, and free of any materials that might adversely affect the bond and seal of the glazing materials or the drainage of the pockets.
6. Install glass and glazing materials under the climatological conditions recommended by the fabricator.
7. Prime all surfaces to receive glazing materials unless recommended otherwise, in writing, by the manufacturers and approved by the Project Director/COR.
8. Use no sealant that has started to set in its container, nor a sealant that has exceeded the shelf life published by the manufacturer.
9. Do not install sealant unless the ambient and joint surface temperature is at least 40°F and rising.
10. Install exposed sealants so that the top surfaces of the sealant beads are sloped to drain water away from the glass. Exposed sealant surfaces shall be tooled smooth.
11. Setting blocks shall be at least 6 mm (1/4 inch) in thickness, full width of the pocket, and placed at the glass quarter points. They shall be of a length recommended by the glass manufacturer and be configured in such a way as not to impede water drainage of the glazing pocket.
12. Provide jamb blocks on each glass unit supported on four sides. Place and glue blocks at the top and bottom of the glazing pocket 3 mm (1/8 inch) clear of the glass edge.
13. Glass shall be centered in each opening to provide the bite and clearances recommended by the glass manufacturer and approved by the Project Director/COR.
14. Apply no tapes, ribbons or markings to the glass.

J. Structural Glazing:

1. Comply with ASTM C 1401.
2. Wherever possible, silicone glazing design shall permit glazing to the major framing members in the factory.
3. Provide test samples of all substrate materials to the sealant manufacturer for peel adhesion and accelerated weathering testing. Conduct testing with materials and finishes identical in every respect to approved production materials and finishes.
4. Prior to undertaking any structural glazing, submit complete structural glazing procedures, including permissible conditions, temperatures, cure times, temporary restraint design,

surface preparation and all other procedures, including quality control inspection program that may be employed.

5. Perform periodic deglazing of structural silicone glazed lites per ASTM C1401 Paragraph 34.4 and the sealant manufacturer's recommendations, at a rate of one unit in the first 10 produced, one in the next 40, one in the next 50, and one every 100 thereafter.
6. Clearance and bite dimensions shall match approved shop drawings.

K. Thermally Improved Construction: Fabricate aluminum windows with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.

1. Provide thermal-break construction that has been tested to demonstrate resistance to thermal conductance and condensation and to show adequate strength and security of glass retention.
2. Provide thermal barriers tested according to AAMA 505; determine the allowable design shear flow per the appendix in AAMA 505.

L. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior for dry glazed units:

M. Mullions with Strong-backs or Steel Connections: Provide thermally improved mullions and cover plates matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design loads of window units.

N. Sub-Frames: Provide steel sub-frames/embeds for all FE or FE/BR windows for installation at concrete, masonry, and other non-steel rough openings and for structural steel openings where depth is less than door frame depth. Steel subframe material shall conform to ASTM A36 or ASTM A529 or ASTM A572 for plates, bars, and shapes; and ASTM A500 or ASTM A1085 for hollow structural sections ("steel tubes"). No steel element to receive a threaded fastener shall be less than 12 mm (1/2 inch) thick. For individual openings, sub-frames shall be provided by window supplier. For larger, multi-panel openings, sub-frames may be provided by either window supplier or Contractor; in either case they shall be designed by window supplier and shown with window shop drawings. For larger elevations that require knock-down subframe, provide hot-dipped embeds. Sub-frame depths shall be no less than the window frame depth on side of sub-frame that window is bolted. Steel sub-frame shall be assembled and braced by manufacturer prior to shipping to ensure deformations during transportation. Ensure steel sub-frame is braced so that deformation tolerances are not exceeded during installation and concrete placement. Where sub-frames are hot-dipped galvanized, temporary supports shall be designed and detailed not to damage to the galvanized surfaces during use and removal. Steel sub-frame shall be installed plumb and square. All sub-frames without adjustability shall be drilled and tapped in the field.

1. Exterior sub-frames/embeds and shall be hot-dipped galvanized for corrosion resistance.
2. Interior sub-frames/embeds shall be prime painted with a high-grade metal primer or may be hot dipped galvanized.

O. Post-installed Anchors: In addition to any restrictions or requirements indicated on the Construction Drawings, post-installed anchor systems proposed by the Contractor's delegated design shall each have ICC-ES Evaluation Report indicating conformance with current applicable ICC-ES Acceptance Criteria including, but not limited to, for cracked concrete for concrete substrates, seismic applications, and for the use in the specific substrate type and characteristics intended. Shop drawings and field sketches shall clearly indicate critical embedment, spacing, and edge distance requirements and placement tolerances determined by the design.

1. For New Concrete Substrates: Attach steel sub-frame to the concrete substrate with embedded anchors per the blast report, but not less than 12 mm diameter x 150 mm headed steel studs, spaced no greater than 300 mm on center. Final sub-frame shop drawings, product data, and associated delegated design calculations shall be reviewed and approved prior to fabrication and shipment.
2. **[For Masonry Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has a minimum 12-mm thickness for the anchors and a minimum 300 mm width and as determined per the blast design, when blast is a requirement. Post-installed chemical anchors in hollow masonry substrates shall use appropriate screen tubes provided by the anchor system's manufacturer.]**
3. **[For Existing Concrete Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has a minimum 12-mm thickness for the anchors and a minimum depth of the product and as determined per the blast design, when blast is a requirement and in all cases should take into account the existing reinforcing blast.]**

P. [Window replacement and retrofit conditions: When FE/BR window is being replaced in kind, existing embed or subframe may be used if visually assessed to be in good condition and determined by calculation to possess sufficient capacity to meet the specified performance requirements for the window system. It does not need to be replaced solely because it does not meet one of above 12 mm thickness requirements for new sub-frames. Sub-frame design shall provide accommodations for field adjustments to enable installation when verifications in the field prior to fabrication for reinforcing steel or other elements are limited or not feasible. Filling abandoned holes in steel elements with weld material to tap a new hole overlapping the prior hole is not permitted; drilling and tapping a larger diameter hole fully encompassing the smaller hole is permitted, such as in a scenario where the existing threads are damaged or determined to be inadequate for the new connection design. New anchor holes shall satisfy minimum AISC 360 requirements for bolt hole spacing and edge distances. If subframe does require replacement, as determined by OBO/SM, or due to other conditions (e.g., corrosion or size of opening requires modification), then one of new subframe conditions above must be used.]

Q. Factory-Glazed Fabrication: Glaze aluminum windows in the factory. Comply with requirements in Section 088855 "Security Glazing" and with AAMA/WDMA 101/I.S.2/NAFS.

R. Glazing Stops: Provide snap-on or bolted glazing stops coordinated with Section 088855 "Glazing" and glazing system indicated. Provide glazing stops to match frames.

S. Cladding: Cladding shall include any extruded, break metal or otherwise formed component or trim that is applied as a decorative or finish covering of the window frame, mullion, steel frame, trim bars or other components integral to the functional security glazing system.

1. Exterior cladding material: shall be aluminum, stainless steel, or pre-approved composite compatible with the functional security window system.
2. Interior metal cladding or trim: Interior metal cladding shall be aluminum, stainless steel, or pre-approved composite compatible with the functional security window system.
3. Cladding or trim of any type that overlaps security window frame, sub-frame, shim space or ballistic trim bars shall be installed such that the window can be re-glazed without damage to any component or finish of the window system or to the Trim or cladding component, when trim is reinstalled.
4. If overlapping material must be removed to re-glaze a window, the material fastening system shall be designed to allow for easy removal and reinstallation without damage to the original overlapping material.

2.5 PROTECTIVE TREATMENT FOR METALS

A. Galvanizing Carbon Steel (hot dip):

1. For shapes, plates, bars and strip: ASTM A123 (2 oz/ft2 minimum coating thickness).
2. For fasteners and hardware: ASTM A153.
3. For sheet: ASTM A653 (G90).
4. For protection against hydrogen embrittlement: ASTM A143.
5. For repair of damage to HDG coatings: ASTM A780.

   a. Acceptable product: ZRC Cold Galvanizing Compound, ZRC Worldwide.

B. Bituminous Paint: SSPC-Paint 12 or ASTM D1187, 762 microns (30 mils) minimum thickness.

C. Surface Protection Film:

1. Colored, strippable PVC film specifically intended for the temporary protection of metal.
2. Film thickness: 76.2 microns (3 mils) minimum

2.6 ALUMINUM FINISHES

A. Coat aluminum extrusions, pressings and similar items prior to assembly.

B. Finish, including color and gloss level, shall be as identified in Construction Drawings. Except where anodic finishes are identified, refer to Section 099602 “High-Performance FE/BR Coatings”

1. Non-visible components shall be painted per the FE/BR Performance Coating required or may be anodized.

C. [Anodic Finishes:

1. **Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.**
2. **Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.**
3. **Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.]**

D. No mill finish aluminum is permitted on visible and non-visible components.

E. Match the appearance, color and texture of samples submitted to and approved by the Project Director/COR.

2.7 STEEL FINISHES

A. Carbon Steel: For strong-backs and other exposed subframes, connectors, and ballistic trim, and similar applications.

1. Coat carbon steel shapes and similar items prior to assembly to the maximum extent feasible.
2. Finish, including color and gloss level, shall be as identified in Construction Drawings and Section 099602 “High-Performance FE/BR Coatings.
3. All surfaces of steel members incorporated in the windows shall be finished.
4. If concealed from view, individual and aggregate members shall be hot-dip galvanized in accordance with the Part 2 Article on PROTECTIVE TREATMENT FOR METALS.

5. If exposed to view and connected to exterior elements, individual and aggregate steel members shall be hot-dip galvanized and receive the coating systems as indicated in Construction Drawings and specified in Section 099602 “High-Performance FE/BR Coatings.”

B. Stainless Steel:

1. Finish: uniform and free from blemishes, scratches, and other defects.
2. If exposed to view, finish shall be as follows:

   a. [Finish Type SS-1: AISI No. 4 satin directional finish]
   b. [Finish Type SS-2: AISI No. 4 satin non-directional finish]

3. If concealed from view, finish shall be AISI No. 2D.
4. Clean and passivate as per the recommendations of ASTM A 380.

5. The grain of all stainless steel and brushed finishes shall run in the long direction for contiguous or adjacent components except where noted on drawings.
6. Touch-up finish in field as required.

2.8 LOW-FRICTION MATERIALS

A. Wherever materials are subject by design to relative movement, provide suitable low friction material(s), such as:

1. Teflon strip, 0.762 mm (0.030 inch) thick; and Teflon tape, 0.127 mm (0.005 inch) thick.
2. High-impact polystyrene or Nylatron equal to Eel-Slip pads as manufactured by Scan-Pac.

B. Low friction materials shall be impervious to moisture.

2.9 SEALANTS AND SEALANT BACKING MATERIAL

A. Structural Glazing Sealant: The following sealants have been shown to be compatible with laminated glazings that include polycarbonates.

1. Neutral cure silicone, medium or high modulus, non-staining, matte finish, color to match the approved sample, and specifically intended for use specified.
2. Multi-component: ASTM C1184; ASTM C920, Type M, Grade NS, Class 12.5.

   a. Acceptable products:

      1) Dowsil 983, Dow Chemical Co.
      2) GE Ultraglaze 4400 or 4600, Momentive Performance Materials.

3. Single-component: ASTM C1184; ASTM C920, Type S, Grade NS, Class 25.

   a. Acceptable products:

      1) Dowsil 995, Dow Chemical Co.
      2) GE Ultraglaze 4000/4000AC, Momentive Performance Materials.

B. Weatherseal Sealant:

1. Neutral cure silicone, low or medium modulus, non-staining, matte finish, custom color to match the approved sample, and specifically intended for use specified.
2. Single-component: ASTM C920, Type S, Grade NS, Class 50, Use A,G, and O.
3. Acceptable products:

   a. Dowsil 795, Dow Chemical Co.
   b. GE Silpruf SCS2000, Momentive Performance Materials.

C. Sealant Backing Materials:

1. Preformed foam plastics and synthetic rubbers, compressible, non-gassing, non-staining, and compatible with sealants and as recommended by sealant manufacturers. Backing shall be of the sizes and shapes to suit the various conditions and shall be a color different than the sealant color. Backer rods shall be 25 percent wider than the joint width.
2. Open/closed cell extruded polyolefin backer rod: ASTM C1330, Type B.
3. Acceptable product: SOF-ROD, Nomaco Inc.
4. Extruded silicone rubber: As specified in the Part 2 Article on PRE-FORMED SYNTHETICS.
5. Cellular glazing tape: As specified in the Part 2 Article on PRE-FORMED SYNTHETICS.
6. Bond Breaker Tape: Lithographer Tape, 3M Company.

2.10 PRE-FORMED SYNTHETICS

A. The particular compound shall be appropriate to the intended function of the preformed synthetic and is subject to approval by the Project Director/COR.

B. Base gasket material manufacturers and gasket extruders are subject to approval by the Project Director/COR.

C. All material shall be non-staining, non-off-gassing, UV stabilized, ozone-resistant, and compatible with glazing edge sealants and polycarbonate.

D. All corners of weatherstripping shall be vulcanized, heat-welded, injection-molded, or otherwise required to form a continuous seal around the panel.

E. Gaskets:

1. Interior closed cell sponge gaskets: silicone gaskets: ASTM C 509, 60 ±5 Shore A durometer.
2. Exterior non-cellular dense wedge gaskets: Non-cellular silicone gaskets: ASTM C 864, 70 ±5 Shore A durometer.
3. Setting blocks:
4. Non-cellular (dense) extruded silicone: ASTM C 1115 Type C, 85 ±5 Shore A durometer, not less than 6mm thick.
5. Spacers, edge blocks, and other profiles:
6. Non-cellular (dense) extruded silicone: ASTM C 1115, 50 to 70 Shore A durometer.

F. Cellular Glazing Tapes:

1. Open cell, semi-rigid, adhesive-backed foam tape.

   a. Acceptable products: Norton Thermalbond V2100, V2200, or Xpress.

2. Closed cell, semi-rigid, adhesive-backed foam tape.

   a. Acceptable products: Norton Norseal V780 or V980.

G. Thermal isolators:

1. Clamped between metal components:

   a. Rigid polyvinylchloride: ASTM D 4216.

2. Integral to extruded aluminum framing: AAMA TIR-A8.

   a. Continuous extruded polyamide 6/6 (Nylon) with 25% glass fiber reinforcement, mechanically crimped to extrusions with knurled cavities. Comply with AAMA QAG-2-12.

      1) Perform shear tests per QAG-2-12. Shear value: Greater than 200 lb/in.

   b. Polyurethane poured into a cavity of a single extrusion; dibridged after polyurethane hardens. Polyurethane thermal break systems shall utilize the thermal cavity in accordance with the material manufacturer's recommendations.

3. Provide a continuous thermal break with separation distance as required to comply with specified thermal performance requirements.

H. Weep Hole Filter: PVC-coated reticulated open cell polyurethane foam, 30 to 40 pores per 25.mm (1 inch) in length.

I. Shims: Provide compatible shim material for window frames and adjacent enclosure systems using one of the following:

1. Concealed: Solid PVC, polystyrene, or Nylon
2. Exposed to weather: Stainless steel.

2.11 FLASHING MATERIALS:

A. While General Contractor has overall responsibility for installation of all flashing materials, Manufacturer shall coordinate shop drawings and adjust rough opening and dimensions to accommodate specified flashing below:

B. Metal: Min. 0.607 mm (24 ga.) stainless steel, dead-soft.

C. Pre-Formed Silicone Sheet: ASTM C1518, Movement Class 200, Tear Class PT.

1. Dowsil 123 Silicone Seal, Dow Chemical Co.
2. Ultraspan, Momentive Performance Materials

D. Foil-Faced Polyethylene-Reinforced Self-Adhering Flashing (SAF):

1. Perm-A-Barrier Aluminum, Grace Construction Products
2. HE200AM Metal Clad Weather Barrier, Henry Company
3. Aluma-Flash, Polyguard Products, Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine prepared substrate openings to receive framed fenestration units of this Section. Check anchorages for location and coordination of face plans between walls and fenestration units.

B. Prior to start of installation, inspect the building and verify all conditions and dimensions as being acceptable to receive the Work of this Section.

C. Coat substrate surfaces of concrete, masonry, or steel where they will be in contact or close proximity with aluminum or stainless steel framing of fenestration units. Apply membrane and weather proofing, or a minimum to confined to surfaces which will be concealed.

D. If any conditions are found that may inhibit proper execution of the Work, immediately notify the Project Director/COR in writing. Installation shall not proceed until remedial action, acceptable to the Project Director/COR, has been executed.

3.2 INSTALLATION:

A. Sequencing and Timing Requirements: At the time agreed upon with Project Director/COR, proceed with installation of fabricated aluminum window units in accordance with approved shop drawings, manufacturer's data and instructions, requirements of these specifications and attached Certificate of Compliance. Sequence installation work to achieve proper application for each element indicated, in manner which will produce maximum resistance to indicated forms of attack and weather.

B. Complete any assembly that was not accomplished in the shop. Refer to Part 2 Article on FABRICATION AND ASSEMBLY.

C. Erect the windows, including all snap-on components and accessories, plumb, square, level, and correctly aligned within the following limitations:

1. Offset from true horizontal, vertical, and design location shall not exceed 3.2 mm (1/8 inch) per 3.7 meters (12 feet) nor 12 mm (1/2 inch) over any one length or part thereof the building.
2. Offset from true alignment between abutting components or components separated by less than 75 mm (3 inches) shall not exceed 1.6 mm (1/16 inch).
3. Maximum offset of framing members intersecting at the corner of a glazing cavity shall not exceed 0.80 mm (1/32 inch).
4. Rotation shall not exceed one degree.

D. Joint widths as noted in the Contract Documents are the design joint width at an ambient temperature of 21 deg C (70 deg F). Adjust installation procedures to take into account the ambient temperature at the time of installation.

E. Exercise care to properly brace and reinforce units against racking during hoisting and installation.

F. Anchors and Connections:

1. Avoid cutting rebar during concrete sub-frame installation.
2. Provide 1.6 mm (1/16 inch) thick shims with break-off tabs for rough opening (RO) frame clearance.
3. Match finish of cap plugs used in frame with frame finish to the maximum extent possible. Do not install cap plugs until after the final QA inspection has been completed by either the OBO/CFSM/SM/SCD/SEB or OBO/CFSM/SM FE/BR Program representative

G. Metal Cladding Fastening and Connections shall be mechanically fastened with concealed fasteners or snap-on attachment.

1. Exposed fasteners shall not be permitted. Special cladding attachment conditions that cannot be achieved with concealed fasters may be considered only after formal written application for a specification exception, to include documented engineering proof that concealed fasteners are not achievable, and to include finish detailing of the exception condition.
2. Adhesive fastening of window cladding (trim) in absence of mechanical fastening shall not be permitted.
3. Cladding fastening shall allow for easy removal and re-installation after re-glazing, without damage to any part of the security window system or adjacent construction.
4. Cladding and Trim tolerances: Cladding profiles and fastening shall be designed to remain in place and maintain hairline joint alignment without deformation under positive and negative wind loads indicated in the drawings.

a. Maximum misalignment of two adjoining members abutting in plane; 79 mm (1/32”).

H. Window Flashing:

1. Sill flashing: Provide stainless steel flashing bedded over membrane water/vapor barrier installed over steel embed. Note that shims shall be placed over stainless steel flashing; do not damage flashing with shim installation.

a. Sill flashing shall be turned up min. 6 mm (1/4”) on interior side.
b. Bolt penetrations through flashing, and female receptor nuts, shall be filled with non-hardening liquid sealant or water/vapor barrier compatible to flashing and barrier materials.
c. Maximum gap (shim space) between top of stainless steel sill flashing and Window frame shall be 6.5 mm (¼”).

1) The flashing and weather proofing, up to 3 mm, is excluded from calculating the allowable shim space between the embed/subframe and with window frame (i.e. if the flashing and weather proofing combined thickness is equal

to 3 mm and the tested shim space was 6 mm, then the allowable space between the embed/subframe would be 9 mm).

d. Provide weeps in shim space, over stainless steel flashing to allow any water infiltration to drain to the exterior.

2. Jamb and head flashing: Provide liquid or membrane flashing at heads and jambs, providing full cover and protection of steel or concrete window frame/opening. Overlap minimum 4” and seal to top of stainless steel sill flashing to provide continuous flashing around window opening.

I. Corrosion Protection:

1. Ensure by design that no metals, including alloys of the same base metal, are placed together in a manner, combination or location likely to give rise to damage by electrolytic action or other corrosion. Prevent metal to metal contact between aluminum and metals other than an appropriate grade and composition of stainless steel as per the recommendations of the material manufacturer and to the approval of the COR. Ensure that dissimilar aluminum alloys in contact with each other are compatible with each other or isolated. Any other dissimilar materials are to be treated or protected in such a manner as necessary to prevent corrosive action.
2. Isolation of dissimilar metal surfaces to prevent electrolytic action shall be accomplished by materials which are impervious to moisture and non-absorptive.
3. All steel parts shall receive a protective treatment commensurate with their respective functions and locations. The treatment shall be one or more of those described above, and as approved by the COR.
4. Where used to the exterior of air-seals, or in any location vulnerable to moisture, steel shall be hot-dip galvanized after fabrication.
5. Field welds on galvanized steel shall be treated with an approved field cold galvanizing process. Remediation of finish of galvanized steel shall be as per the requirements of ASTM A780 and division 055005.
6. Aluminum surfaces in contact with mortar, concrete, fireproofing, plaster, masonry, or absorptive materials of any kind shall be coated with an anti-galvanic material, impervious to moisture.

3.3 FIELD QUALITY CONTROL FOR THE GENERAL CONTRACTOR/INSTALLATION CONTRACTOR:

A. Inspection: The manufacturer's technical representative shall observe and advise the crew during their installation of the first three FE/BR windows. Upon completion of the installation of each of the three initial FE/BR windows, the manufacturer's technical representative shall inspect the work and direct the crew in any correction or modifications required for acceptable performance of the units.

B. For unique site and design conditions, such as sloped glazing or atrium windows, the manufacturer's technical representative shall also be responsible for observing and inspecting the installation of FE/BR windows, beyond the initial three windows, as necessary to ensure that the installation crew is adequately prepared for installation.

C. Water Leakage Testing:

1. Representative windows shall be field tested for water leakage in accordance with ASTM E1105 (Procedure A):
2. Initial testing shall be performed on each window type shown on the window schedule immediately following approval of the trial installation. Subsequent tests shall be carried out at 30 percent and 60 percent completion of each system. Static pressure differential shall be as specified in the Part 2 Article on PERFORMANCE REQUIREMENTS.
3. At least **[three]** ***<insert number>*** initially successful tests shall be performed on each window type.
4. Test areas shall include perimeter seals to adjacent construction.
5. Test area locations will be designated by the Project Director/COR.
6. An initially successful test shall be defined as one wherein no leakage is observed. If leakage occurs at any point in the test area, the test shall be immediately declared “not initially successful.”
7. For each failure condition discovered, make corrective repairs approved by the Project Director/COR and retest until the leakage is eliminated. All failures shall be considered systemic failures requiring corrective work at all similar conditions. Remedial measures shall maintain standards of aesthetics, quality, and durability, and are subject to approval by the Project Director/COR.
8. For each “not initially successful” test, test an additional **[two]** location(s) until an initially successful test is achieved. Additional tests required as a result of initially non-successful tests shall be performed at no cost to the Owner
9. Engage an Independent Testing Agency to perform the tests. Approval of all test areas, test procedures, remediation measures, and test results rests with the Project Director/COR.

D. Sealant Adhesion Testing:

1. Test sealant according to recommendations in ASTM C1521, Destructive Procedure, Method A.
2. Test a minimum of **[four]** locations on each façade.
3. Repair locations damaged by testing.
4. Where Project Director/COR determines that sealant has failed adhesively from testing or does not comply with requirements, additional testing shall be performed to determine extent of non-conforming sealant. Neatly cut out and remove non-conforming sealant,

prepare and prime surfaces, and install new sealant. Perform field adhesion tests on new sealant. Additional testing and replacement of non-conforming sealant shall be at Contractor's expense.

5. Document testing with photographs and record results.

3.4 PROTECTION, CLEANING, AND ACCEPTANCE:

A. Protect the windows from any material, equipment or practices that may impair the functioning, appearance or durability of the windows or other construction.

B. Package and store materials in a manner that shall prevent damage, contamination, distortion, breakage or structural weakening.

C. Store pre-glazed units upright or crated and packaged with a rigid protection board on top to prevent damage from ponding of water or by the work of other trades.

D. Do not stage units and related components more than one week in advance of installation in order to avoid damage by other trades. Do not uncrate units more than one day in advance of installation.

E. Replace any material damaged during manufacture, shipping, storage or erection.

F. Protect the installed windows from damage by other trades.

G. Protection materials shall be suitable for the intended protection application and protection period. Do not use materials known to contribute to environmental stress cracking of polycarbonate.

H. Install protection materials in a manner that will not trap harmful moisture or otherwise contaminate the Work in any way.

I. Remove and replace any portion of the windows that has been damaged by other trades. Remove rejected or damaged material promptly from the site.

1. Re-glaze all damaged units per manufacturer's instructions. Install manufacturer provided set screws, 4 per window unit prior to removal of the glazing. Set screws shall be standard socket flat point, ISO 4026, DIN 913. After glass is replaced remove set screws and reinstall all permanent frame anchoring bolts in their original positions.

J. Acceptance of the completed installation of the windows requires the installation be sound, watertight and free from defects of materials and workmanship.

K. Immediately prior to completion of the Work, completely clean the entirety of all windows as follows:

1. Clean all components of the Work as per the recommendations of the specific product manufacturer.
2. Clean the windows from the top most levels down in order to avoid staining of cleaned surfaces from cleaning solution residue and run-off.

3. Clean glass with approved glass cleaning solutions only and ensure that cleaning solution is completely removed from the surface after cleaning. Do not clean glass when it is exposed to direct sunlight.

END OF SECTION 085651

Certificate of Compliance

Aluminum Security Window Assemblies
Window Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING & OTHER DUTIES OF TECHNICAL REPRESENTATIVE

1	The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security windows has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.	**Representatives Name/Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Employees performing the installation meet the specified training and experience qualifications.		
3	Each sub-frame has been installed level, plumb and square.		
4	All sub-frame assemblies shall be factory welded together. Any large sections that exceed the limits of a standard shipping container shall be clearly identified for field welds.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
5	All units have been pre-glazed at the factory.		
6	All temporary fasteners have been replaced with permanent fasteners.		
7	All frame fasteners and threaded openings in subframe have been cleaned of all oil and debris, and have been dry-torqued to meet the manufacturer's specifications. Shims have been inserted at all bolt locations, minimum 1 shim per bolt and maximum as tested condition.		
8	Frame bolts/screws are as shown on the approved shop drawings.		
9	Finish materials do not overlap the window frame/sub-frame or shim space and ballistic trim bars in such a way that the window cannot be re-glazed unless the surrounding finishes and trim are demolished; unless the finish materials can be easily removed and reinstalled. All overlapping finish work (i.e. metal, wood, stone, etc.) can be removed without damaging the window and finish.		
10	Any cladding that covers window glazing stops (angles or tubes) is attached to the frames with hidden fasteners or snap on covers for easy removal.		
11	Any cladding that covers the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs and cladding for each window have been bagged and won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SMSCD/SEB representative.		
12	Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.		
13	Ballistic trim bars have been secured/screwed to the sub-frame and not the window frame		
14	Ballistic trim bars have been installed tight against the window frame, or sill flashing, and gap shall not exceed 2 mm or as tested by the manufacturer.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
15	Maximum gap at shim space shall be no more than then the tested and DS certified assembly, except as noted in the requirements for "Window Flashings" within the Part 3 Article on INSTALLATION.		
16	The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers (see Part 1 Article on IDENTIFICATION SYSTEMS below).		
17	Inspect glazing for distortion, defects and/or damage. Defective units, including spall liner damage, do not meet DS certification requirements and must be replaced.

SECTION 085652 – ALUMINUM SECURITY TELLER WINDOWS

PART 1 - GENERAL

1.1 SUMMARY

A. The extent of exterior aluminum window units required to provide specified resistances is indicated on Contract Drawings by elevations/details/schedules/notations.

1. Principal work of this Section can be summarized to include, but not necessarily by way of limitation, aluminum window units in exterior walls of building occurring within 5 meters above grade or accessible platform and blast windows at any location.

B. The descriptions of window units required as work of this Section include custom grade architectural or heavy commercial, fixed (non-operating) extruded aluminum frame type units, except as otherwise indicated.

C. Work of this Section includes all materials, labor, equipment, and services necessary to design, engineer, test, fabricate, deliver, install, and warranty the security windows. These security windows shall provide an airtight and watertight enclosure, complete in every respect, notwithstanding any omissions or inadequacies of Drawings and/or Specifications.

1. This Section includes a continuous and uninterrupted exterior weatherseal, interior airseal, and a pressure-equalized drainage system.
2. This Section includes connections to adjacent construction.

D. [Definitions and Roles for Projects Utilizing the GPE Program:

1. Government Procured Equipment (GPE) Program: A program of the Overseas Buildings Operations (OBO) in which OBO procures security doors and windows in advance of and for the use of upcoming projects. All GPE windows and doors shall be designed and engineered prior to award of the project to the Contractor.
2. Fabricator: This entity is the fabricator/manufacturer of Aluminum Security windows.
3. Manufacturer: This entity is the manufacturer/fabricator of Aluminum Security windows.
4. **Contractor: The Contractor is responsible for the design incorporation, delivery and installation of the GPE products. The Contractor is also responsible for the design and construction of the overall facility, as well as the installation of the GPE items selected by the Contractor in conformance with the overall requirements of the project. The Contractor is responsible for development of a GPE product list and submission of the list to the government for approval, with the design development drawings.]**

E. Related Sections include the following:

1. Division 01 Section "Secure Shipment."
2. Section 033000 “Cast-In-Place Concrete”; for movements and tolerances of concrete building structure elements.
3. Section 055005 “Metal Fabrications.”
4. **[Division 05 Section “Structural Steel”; for movements and tolerances of steel building structure elements.]**
5. Division 07 Section(s) on “Flashing and Sheet Metal.”
6. Division 07 Section “Joint Sealants and Caulking.”
7. Section 080001 “Blast Requirements.”
8. Section 083454 “FE/BR Door Assemblies.”
9. **[Section 084414 “Structurally-Framed Security Curtain Wall System”]**
10. Section 085651 “Aluminum Security Windows”
11. Division 08 Section on general glazing requirements.
12. Section 088855 “Security Glazing.”
13. Section 099602 “High Performance FE/BR Coatings”
14. Other sections of these specifications for interface of door hardware and device units, with alarm/security/safety/access/monitoring systems.

15. **[Division 01 Section on Building Enclosure (FE/BR Windows and Doors) Commissioning.]**

16. **[Division 08 Section “GPE Window and Door Requirements.”]**

1.2 PRE-INSTALLATION MEETINGS

A. Before beginning installation of the FE/BR assemblies, the manufacturer's technical representative shall conduct a pre-installation conference at the Project site with the installation sub-contractor, the electrical sub-contractor, the Project Director/COR, and other interested parties to review installation procedures and manuals, schedules, and coordination of the FE/BR-assembly installation with other elements of the Work.

1.3 REGULATIONS AND STANDARDS

A. Standards and codes referenced in this Specification shall be those editions, including amendments, current at the date of this Specification.

B. In the event of a conflict between referenced codes and standards and/or the Drawings and Specifications, the code or standard having the more stringent requirements shall govern.

C. Comply with the following industry Standards, unless more stringent requirements are indicated or are required by an approved product manufacturer, use metric versions of the standards if available:

1. American Institute of Steel Construction (AISC): 303 “Code of Standard Practice for Steel Buildings and Bridges,” 341 “Seismic Provisions for Structural Steel Buildings,” and 360 “Specification for Structural Steel Buildings.”
2. American Iron and Steel Institute (AISI): Steel designations.
3. American Welding Society (AWS): D1.1 “Structural Welding Code - Steel,” D1.2 “Structural Welding Code - Aluminum,” D1.3 “Structural Welding Code - Sheet Steel,” D1.6 “Structural Welding Code - Stainless Steel.”
4. Aluminum Association (AA): “Aluminum Design Manual,” and “Aluminum Standards and Data.”
5. American Society for Testing and Materials (ASTM): Documents specified herein.
6. American National Standards Institute (ANSI): Documents specified herein.
7. American Architectural Manufacturers Association (AAMA): Documents specified herein.
8. Building Hardware Manufacturers Association (BHMA): Hardware finish designations.
9. Consumer Products Safety Commission (CPSC): Documents specified herein.
10. Glass Association of North America (GANA): “Glazing Manual,” “Laminated Glazing Reference Manual,” and “Tempering Division Engineering Standards Manual.”
11. National Association of Architectural Metal Manufacturers (NAAMM): “Metal Finishes Manual.”
12. Research Council on Structural Connections (RCSC): “Specification for Structural Joints Using High-Strength Bolts.”
13. Sheet Metal and Air Conditioning Contractors National Association (SMACNA): “Architectural Sheet Metal Manual.”
14. Steel Structures Painting Council (SSPC): “Steel Structures Painting Manual, Vols. 1 & 2.”

1.4 ACTION SUBMITTALS

A. General:

1. All submissions must be in accordance with Division 01 Specifications.
2. Submit shop drawings, samples, data, reports, and engineering calculations for the Project Director/COR 's approval before proceeding with the Work of this Section. Upon award of contract, provide a submittal log which indicates submittal packages and sequence, as well as a list of major products proposed to be furnished. Submissions shall be made according to a schedule that allows adequate time for review and approval by the Project Director/COR as stated in the General Conditions.
3. Submissions shall be complete and comprehensive and include all shop drawings, samples, material data submissions, and engineering calculations for the part of the window addressed. All work shall be coordinated by the Contractor prior to submission. Incomplete, non-conforming, or uncoordinated submissions shall be subject to rejection or return without action by the Project Director/COR. Any work executed which deviates from the approved shop drawings and submittals shall be subject to rejection.

B. Product data for manufactured fabricated aluminum window units. Include information for metals and alloys, fasteners, welding, applied finishes, hardware, and accessories. Include producer's detailed instructions for assembly, protection, installation, and maintenance. Note any maintenance information that may adversely affect the glazing according to section 088855 “Security Glazing.”

1. Manufacturer’s standard color chart.

C. Shop drawings:

1. All shop drawings showing blast resistant window assemblies shall be signed and stamped by window vendor’s blast consultant. All sheets shall be of one size and shall bear the seal of an engineer licensed in the appropriate jurisdiction.
2. Show dimensioned detail of aluminum window units and adjacent construction.
3. Show application of intended glazing materials.
4. Show typical window unit interior and exterior elevations at not less than 1:20 scale.
5. Submit shop drawings in PDF format. After final modifications and corrections have been incorporated, submit drawings as AutoCAD files with .DWG extension as well as in PDF format.
6. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
7. Unit Information:

    a. Manufacturer's model number
    b. Government certification number.
    c. 4-Digit DOS Code.
    d. Mark (window no.).
    e. Window/frame finish.
    f. Window type.
    g. Performance ratings.
    h. Structural wind loading.
    i. Air infiltration.
    j. Water penetration rating.
    k. Thermal movements.
    l. Energy performance.
    m. Sound transmission.
    n. Fire rating.
    o. Glazing panel weights.

8. Elevation Drawings:

    a. Rough opening dimensions.
    b. Frame opening dimensions.
    c. Vision opening dimensions.
    d. Substrate/rough opening material.

e. Manufacturer's name and reference numbers for primer and finish paint, including number of coats applied and thickness of each coat in accordance with Section 099602 “High-Performance FE/BR Coatings.”
f. Separate steel sub-frames (number and list).
g. Detail symbols.
h. Glazing panel dimensions.

9. Plan Drawings:

a. Relate to elevation on drawing.
b. Identify "Attack" and "Protected" sides.
c. Provide key notes on drawings.
d. Indicate room space numbers taken from Contract Drawings.

10. Details:

a. Clearly illustrate all aspects of the windows including:

1) The relationship of the windows to the building structure, roofing and waterproofing systems, interior finishes, and other adjacent construction.
2) The arrangement of components.
3) Full size details indicating: sealing, flashing, weeping, and jointing; all dimensions and thicknesses; materials and finishes; material, type, size, location, and spacing of screws, bolts, welds, anchoring devices, and glazing accessories; locations of conduit entry into both subframe and window frame (where applicable).
4) Steel frames and subframes including plan and section details and corner conditions.
5) Details shall include all components, fully coordinated and integrated, regardless of the component provider.
6) Include sizes and strength of anchor, fasteners and washers.
7) Window and frame gauge thickness.
8) Covers (snap-on or mechanically attached) thickness and profiles.
9) Electrical access, where applicable.
10) Torque (nm) for anchor bolts.

b. Include details of all connections and seals to contiguous work as approved by the Subcontractor for the work adjacent and include all assumptions regarding the tolerances of that work.
c. Details shall be on separate sheets from plan and elevation drawings.

11. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, glazing layup sheet, finish/paint system, legend, and glazing specifications.
12. Breakdown of Product Line Items:

a. If Manufacturer produces one contract line item as several parts, they shall break out items on drawings. Each item shall be a subdivision of that product line item number. Indicate manufacturer’s part numbers for all components.

D. Engineering Calculations:

1. Submit project-specific engineering calculations as described in the Part 2 Article on PERFORMANCE REQUIREMENTS.
2. Submit engineering calculations concurrently with corresponding shop drawings.
3. Insert appropriate location.
4. Calculations shall bear the seal of a Professional Engineer licensed in the appropriate jurisdiction.

E. Blast Report: Refer to Section 080001 “Blast Requirements” for blast report.

F. LEED Submittal:

1. Product Data for Credit MRc2: Environmental Product Declarations
2. Product Data for Credit MRc3: Recycled Content
3. Product Data for Credit MRc4: Health Product Declarations
4. Product Data for Credit IEQc2, Low Emitting Materials: For glazing sealants used inside of the weatherproofing system, including certificate of VOC emissions and content.

G. Samples for Verification: For windows and components required, prepared on Samples of size indicated below. Submit samples to Project Director/COR at project site.

1. Submit samples of all materials and finishes, including:

   a. Samples matching the appearance, color, texture, and other characteristics of each finish required; Samples may be of a standard extrusion with similar properties and will be reviewed visually by the Project Director/COR for color and texture/sheen.
   b. Range samples showing the complete range of variation in color, texture, and other characteristics resulting from the carefully controlled manufacture, finishing, fabricating, delivery, assembly, installation and cleaning processes;
   c. Finished samples of major extrusions;
   d. Finished samples of each sheet in thickness and type required;
   e. Samples showing finishes over welds and over materials welded.

2. Submit four identical pieces of each sample required.
3. The Manufacturer and Contractor shall provide samples of production materials shall be provided by the following sizes:

   a. Fastening devices: Each type.
   b. Finish hardware: Each type.
   c. Finish samples: 30 cm x 30 cm, each type and finish.
   d. Finished extrusions: 30 cm in length.
   e. Finished sheet: 30 cm x 30 cm, each type.
   f. Flashing: 30 cm long, each type. Include lap or splice jointing.
   g. Glass: 30 cm x 30 cm, each type and edge finish.

h. For insulating glass units provide assemblies representative of units to be used in the finished work, including scheduled glass, coatings, spacers, edge seals, and edge deletion.
i. Sealants: Cured sample, 30 cm long, each type.

4. [Window Corner Fabrication: Provide one 300-by-300-mm (12-by-12-inch) sample for record to OBO. Sample shall include a full-size sections of extrusions with factory-applied color finish, cladding and removable covers, weatherstripping, and glazing. If directed by OBO, when a current sample is available at OBO headquarters, an additional sample is not required]

H. Condensation Resistance Simulations:

1. Submit computer simulation results confirming conformance with specified condensation resistance performance criteria.

1.5 INFORMATIONAL SUBMITTALS

A. Installer Qualifications:

1. For FE/BR/Blast installations, submit crew leader resumes documenting the lead installers have installed FE/BR/blast assemblies for a DOS project within the last 5 years.
2. Submit list of installer's personnel who have received the manufacturer's training according to the requirements in the Part 1 Article on QUALITY ASSURANCE.

B. Copy of DOS Certification Letter: Copy of DOS Certification letter indicating that products have been certified by the Bureau of Diplomatic Security (DS) in accordance with DS/PSP/PSD SD-STD-01.01, Rev H.

C. Certificates of Compliance:

1. Completed certificates of compliance documenting that all FE/BR assemblies have been installed per the contract documents. Complete and submit to the Project Director/COR the form referenced in the Part 1 Article on QUALITY ASSURANCE. Certificate of Compliance form is found at end of this Section.

D. [Energy Performance Certificates: NFRC certified energy performance values for each glazed wall system.]

E. Test Reports:

1. General: Submit test reports in a timely manner and well before execution of any related component of the windows.

2. Submit laboratory test reports, showing compliance with performances required for air infiltration and water penetration.

F. Installation Instructions:

1. Provide standard window installation and glazing panel replacement instructions and customized supplement for each type of application that varies from the standard window installations. Installation manual and supplement shall be approved by the OBO/CFSM/SM/SOD/PSO/FE/BR Program Section.
2. Manual shall be customized for each type of application.
3. Manual shall identify in the installation steps where “products by others” such as flashing and finishes surrounding the product are to inface/take place. Installations steps for “products by others” is not required.
4. Develop instructions for unique conditions as they are identified.
5. Manual shall include step-by-step instructions for installing FE/BR doors with supporting photos, illustrations and figures that also includes sections for General Requirements, List of Tools & Expendable Supplies, Window Removal from Crate, and Cleaning.
6. Manufacturer’s Technical Representative shall submit list of unique project specific site conditions that require special manufacturer representative inspection and/or installation training.

G. Quality Control Program: Submit prior to start of fabrication. See Part 1 Article on QUALITY ASSURANCE.

1.6 CLOSEOUT SUBMITTALS

A. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

B. Maintenance Manuals:

1. At the completion of the Project, **[submit four bound copies of][digitally submit]** a maintenance manual for all window components. Include instructions for cleaning, repair, and maintenance of the work, including re-glazing procedures within the manual or as a separate manual. Include warranties, manufacturer’s data and contact information for all components.

C. Installation and Maintenance Instructions: At the completion of the project, digitally submit a maintenance manual for all security glazing components. Include the following information:

1. Glazing replacement instruction or manual which includes step-by-step instructions with photographs and illustrations for all window conditions on the project and includes the following information:

a. List of tools and expendable supplies.
b. Removal of the damaged glazing.
c. Cleaning the window frame.
d. Removal of the replacement glazing from the crate.

e. Transporting the glazing on a heavy-duty glass cart from the loading dock to window location.
f. Positioning the new replacement setting blocks and any glazing tape or foam on the frame and/or glazing pocket as appropriate.
g. Lifting the glazing from the cart with a glazing robot into the window frame
h. Installing the glazing stops.
i. Inserting any gaskets or applying any sealant as appropriate.
j. Best practices recommendations for glazing replacement:
k. Removal of the replacement glazing from the crate.
l. Transporting the glazing on a heavy-duty glass cart from the loading dock to window location.

2. Instructions for cleaning.
3. Copies of Warranties.
4. Copies of Manufacturer's product data.
5. Contact information for manufacturers and suppliers of all components.

D. Record Shop Drawings: At the completion of the Project, **[submit four bound sets of half-size prints of] [digitally submit]** all final approved shop drawings.

1.7 QUALITY ASSURANCE

A. Testing Laboratory Qualifications: For compliance with non-security performance requirements on security window assemblies of this Section, use only those testing laboratories which have successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

B. Delegated Design Responsibility: Contractor shall retain an experienced Professional Engineer, registered in the U.S. or in country with significant experience with windows of similar complex performance requirements, and acceptable to the Project Director/COR, to perform responsibilities of Delegated Design.

C. Quality Control for Forced-Entry/Ballistic Resistant (FE/BR) Products: Certify compliance of fabricated and assembled FE/BR products specified in this Section with each quality control procedure established by the Government; these procedures are identified in Compliance Form found at end of this Section. Other quality control forms are found at end of Section 083454 "Forced Entry (FE) / Ballistic Resistant (BR) Door Assemblies."

D. Installer Qualification Data: The installer's qualifications must be approved by the Office of Overseas Buildings Operations, Construction Facilities Security Management, Security Management, Security Countermeasures Division, Security Engineering Branch (OBO/CFSM/SM/SCD/SEB). Submit resumes of all team lead installer (present and responsible for each install), documenting that installer has installed FE/BR window assemblies for DOS projects with last five years. Resume shall include at least three references (including contract information) that can provide verification that the installer has expertise required to perform successful installation. Each installer or installation team must be certified by the manufacturer as being capable of properly installing the FE/BR products. The installer must provide written

documentation to the Project Director/COR that the installation team is certified in the manufacturer's product installation.

E. Manufacturer's Technical Representative: **[The manufacturer shall appoint a manufacturer's technical representative to the project.] [For GPE projects the contractor will hire from the manufacturer a technical representative.]** The manufacturer's technical representative shall be an employee of the manufacturer and have the following responsibilities:

1. Pre-Installation Conference: See Part 1 Article on PRE-INSTALLATION MEETINGS for the representative's responsibilities.
2. Training: The manufacturer's technical representative (at no cost to the U.S. Government) shall provide the crew, which is to actually perform the installations of the FE/BR assemblies with a minimum of 16 hours of on-site, hands-on training which shall include the complete installation of at least three FE/BR windows, with the exception of the snap on trim, and training on glazing replacement and completion of the Certificate of Completion for each of the three windows. The manufacturer's technical representative shall also instruct the crew on preventive measures which must be taken to protect the FE/BR assemblies from damage during construction.
3. Inspection: See Part 3 Article on FIELD QUALITY CONTROL FOR THE GENERAL CONTRACTOR/INSTALLATION CONTRACTOR for the representative's responsibilities.
4. Additional Assistance to the Government: The manufacturer's technical representative (at no cost to the U.S. Government) shall provide the Contractor any additional advice, instruction, training, supervision, or inspection required to enable the Contractor to complete the installation certification described below, and to fully train the Embassy staff in the proper operation and maintenance of the FE/BR assemblies while on site before turn over to the DOS.

F. Certification by General Contractor: Prior to final completion, the General Contractor shall provide to the Project Director/COR a certification that the FE/BR materials have been installed in accordance with the manufacturer's instructions, these specifications and are operational. Sample Certificates of Compliance are attached to the end of this specification. Deviation from these requirements is only permitted with the written approval of OBO/CFSM/SM/SCD/SEB or OBO/CFCM/SM/SOD/PSO/FE/BR. The General Contractor shall provide certification that the requirements in these specifications have been included in the work. The following requirements are part of this Certification.

1. The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security teller windows has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.
2. Employees performing the installation meet the specified training and experience qualifications.
3. Each sub-frame has been installed level, plumb and square.
4. All sub-frame assemblies shall be factory welded together. Any large sections that exceed the limits of a standard shipping container shall be clearly identified for field welds.
5. All units have been pre-glazed at the factory.
6. All temporary fasteners have been replaced with permanent fasteners.

7. All frame fasteners and threaded openings in subframe have been cleaned of all oil and debris, and have been dry-torqued to meet the manufacturer's specifications. Shims have been inserted at all bolt locations, minimum 1 shim per bolt and maximum as tested condition.
8. Frame bolts/screws are as shown on the approved shop drawings.
9. Finish materials do not overlap the window frame/sub-frame or shim space and ballistic trim bars in such a way that the window cannot be re-glazed unless the surrounding finishes and trim are demolished; unless the finish materials can be easily removed and reinstalled. All overlapping finish work (i.e. metal, wood, stone, etc.) can be removed without damaging the window and finish.
10. Any cladding that covers window glazing stops (angles or tubes) is attached to the frames with hidden fasteners or snap on covers for easy removal.
11. Any cladding that covers the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs and cladding for each window have been bagged and won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SMSCD/SEB representative.
12. Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.
13. Ballistic trim bars have been secured/screwed to the sub-frame and not the window frame.
14. Ballistic trim bars have been installed tight against the window frame, or sill flashing, and gap shall not exceed 2 mm or as tested by the manufacturer.
15. Maximum gap at shim space shall be no more than then the tested and DS certified assembly, except as noted in the requirements for "Window Flashings" within the Part 3 Article on INSTALLATION.
16. The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers (see Part 1 Article on IDENTIFICATION SYSTEMS below).
17. Deal Tray: Ensure deal tray cover is installed. Ensure no sharp edges.
18. Deal Drawer: Ensure drawer opens and closes without binding or scraping. Ensure not sharp edges.

G. Quality Control inspection documents shall incorporate:

1. Security Glazing Requirements including the following:

   a. Whether internal channels are used to separate glass from polycarbonate or otherwise framed for solid laminated glazing, minimum glazing depth in openings (bite) for attack and protected sides which shall not be less than 20 mm and 6 mm cushion clearance to fixed stop on glazing edges.

H. Quality Control Program:

1. Quality Control Program shall cover all phases of the window Work including, but not necessarily limited to, the following:

   a. Procurement of materials, including quality assurance programs of major suppliers.
   b. Fabrication of components.
   c. Production testing.
   d. Final assembly of components.

e. Installation and site quality control.

2. Quality Control Program shall indicate the following for each quality control measure/activity:

   a. Item/property being inspected/tested
   b. Control point in process and frequency of inspection/testing
   c. Inspection/test method
   d. Acceptance criteria and reference standards/specifications
   e. Method of documentation
   f. Action to address deficiencies

3. Quality Control Program shall include detailed descriptions of inspection and production testing programs and inspection reports for:

   a. Coatings of metal. Coordinate and include controls by metal fabricator and finisher, as well as by Contractor to provide independent checks of metal quality and finish at point of fabrication, finishing, and during installation
   b. Structural glazing.

4. At the request of the Project Director/COR, a Government representative shall be allowed access to Contractor's facilities and those of major suppliers at with advance notice to monitor QC procedures. Make available all QC Program records upon request.

1.8 TESTING AND MOCK-UPS

A. [NFRC Testing:

1. Provide, install, and test specimens of the vision-glazed window systems at an NFRC-accredited laboratory as necessary to obtain NFRC certification and labeling.
2. The Contractor or their designee shall be the "Responsible Party" as defined in the NFRC procedures.
3. Obtain certification and "NFRC Label Certificates" prior to installation.]

B. Trial Installations:

1. Refer to the crew training responsibilities in the requirements for "Manufacturer's Technical Representative" in the Part 1 Article on QUALITY ASSURANCE.
2. Prior to general installation of windows, erect on the building a representative trial installation of each window type for the Project Director/COR's approval.
3. Propose the scope and location of trial installations for the Project Director/COR's approval.
4. Notify the Project Director/COR well in advance of each such trial installation. If approved, this portion of the work shall become part of the final installation.
5. Provide a demonstration at the job site where the windows will be installed simulating replacement of a glazing panel at different floor levels using technology (,e.g., roof

mounted davit & winch systems from the exterior or glazing robot from the interior along with two workers on each side, exterior and interior, accessing the window head, jambs and sill).

C. Pre-Construction Sealant Testing:

1. Test proposed field applied sealants for adhesion and compatibility with each type and color of substrate or material coming into contact with them.
2. Test proposed sealants for staining of each type and color of porous substrate or material coming into contact with them, including other sealants.
3. Test specimens shall be of the size required by the manufacturer's testing laboratory and shall be composed of the specified materials, colors and finishes.
4. Adhesion testing: ASTM C794.
5. Compatibility testing: ASTM C1087.
6. Stain testing: ASTM C1248.
7. Tests shall be performed by the sealant manufacturer whose products are being considered.

D. Structural Silicone Testing:

1. Test silicone joints proposed for structural glazing for performance in tension, shear, and tension and shear combined, in accordance with ASTM C1135.
2. Test specimens: approximately 5 cm in length, full dimension in width and depth, and be composed of the specified materials, colors and finishes.
3. Ten specimens for each condition shall be tested and the values for elongation-to-failure vs stress recorded for each specimen, and the mean and standard deviation calculated for each condition.
4. Tests shall be performed by the structural silicone sealant manufacturer whose products are being considered.
5. In addition to the above, production testing shall be performed at regular intervals during assembly of the window, as specified.

E. Acoustical Testing

1. Test window and deal tray and/or transaction drawer combination in the project configuration in accordance with ASTM E90, "Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements."

1.9 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. Provide a steel stamped ID plate. Locate one plate on the lower right corner (hidden) of the secure side of the window frame. Locate one plate on lower right of the interior window frame snap on trim or cladding (visible). The plate shall be approximately 40 x 75 mm, must be easily accessible and shall cite:

1. Manufacturer's name/city/state.
2. Government certification DOS model number.

3. Contract number.
4. Month/year of manufacture.
5. Mark number.
6. 4-digit DOS CODE

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, sub-frames, and frames completed and prepared for installation and connection with security systems. Refer to Division 01 Section “Secure Shipment” for additional requirements.

B. Deliver window assemblies as factory glazed unless otherwise directed by Government.

C. Pack window assemblies and accessories; One crate for the window and frame, including installation accessories: All anchors, bolts, screws, shims, ballistic trim, shop drawings, etc. Provide a separate compartment, and clearly label each crate for each type of component. Removable covers/trim and sub-frames may be shipped separately. Multi-unit elevations may separate the ballistic bolts, ballistic bars and trims which span, or are shared, by several unites into separate crates. With OBO/CFSM/CM approval bulk packaging of like materials, may be approved on a case-by-case basis.

D. Provide protection of frame exposed finishes using surface protection film.

E. Treat security window assemblies as fragile merchandise, and packaged and shipped in export wood crates, not constructed of Oriented Strand Board (OSB), with width end in upright position and blocked together in a mass, except as noted below. Do not use plastic or polyethylene sheeting, or extruded polystyrene. Comply with Manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents, and ground contaminants. Clearly mark crates to indicate which side should be opened first.

1. If the window is designed to be shipped on the jamb side, to include setting blocks on the jamb side, and label jamb and crate “ALTERNATE SILL” and indicated orientation.

F. Clearly mark sub-frames with window mark number and identify attack side, head, sill, and left and right jambs. Package sub-frames separately and ship in export wood crates separate from the window assemblies. Protect each sub-frame piece to minimize damage to finished surfaces.

G. Conduct thorough visual inspections of the glazing prior to packaging.

H. Include a complete list of non-compatible materials for temporary protection during construction and cleaning.

I. Include tip and tell, temperature, and humidity indicators with packaging, one for each crate, located on exterior of the crates and one of each on interior of crates. Manufacturer shall provide one crate label, located next to exterior tip and tell and one fly sheet with the packing material indicating the humidity maximum limits allowed for the glazing.

J. Store materials in a dry, well-ventilated location. Keep handling of materials to a minimum, and carefully protect materials from soiling and from condensation and other harmful moisture. Provide vapor-permeable materials for protection during shipping. Do not trap moisture within or adjacent to windows.

K. Conduct thorough visual inspections of glazing before installation. Inspections should include removal of glazing stops, if applicable. Do not install glazing with any cracks in the polycarbonate. Contractor shall remove film after doors and windows are installed on project site.

1.11 WARRANTY

A. Special Warranty: Written warranty in which Contractor agrees to repair or replace components of the windows that do not comply with requirements or that fail in materials or workmanship within the specified warranty period.

1. Failures include, but are not limited to, the following:

a. Abnormal deterioration, aging and weathering of the windows;
b. Leakage of water or air exceeding specified limits;
c. Structural failure of components resulting from exposure to pressures and forces within specified limits;
d. Failure of operating parts to function normally;
e. Deterioration/discoloration of finishes in excess of normal weathering and aging;
f. Glass breakage due to defective design, manufacture, or installation;
g. Edge separation or any other deterioration whatsoever of laminated glass;
h. Cracking or crazing of polycarbonate glazing;
i. Failure of the windows to meet any other specified performance requirements.
j. Warranty Period: Five years from date of Substantial Completion.

B. Warranty, Organic Coatings: See Section 099602 “High-Performance FE/BR Coatings.”

C. Manufacturer’s Special Warranties for Structural and Weatherseal Sealants:

1. Written warranties in which elastomeric sealant manufacturer agrees to furnish elastomeric joint sealants to repair or replace those that fail to provide airtight and watertight joints, or fail in adhesion, cohesion, abrasion resistance, stain resistance, weather resistance, or general durability or appear to deteriorate in any other manner not clearly specified in the manufacturers data as an inherent quality of the material.
2. Warranty Period: 10 years from date of Substantial Completion
3. Glazing Period: See requirements for special product warranties in Section 88855, “Security Glazing.”

1.12 EXTRA MATERIALS

A. Furnish extra materials identified below. Package extra materials with protective coating for storage and identification labels describing contents.

1. Glazing panels: Two vision and two spandrel units for each module, glazing type and size.
2. Frame retention set screws and other non-perishable parts required for re-glazing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Design of the windows (including comprehensive structural analysis) shall be performed by a professional engineer. Refer to the Part 1 Article on QUALITY ASSURANCE for required qualifications. Responsibilities also include design and integration of associated security glazing and ensuring conformance to performance requirements for security glazing; see Section 088855 “Security Glazing.”

1. Applicable Criteria: Utilize criteria identified below, including criteria such as seismic and other loads. Engineering design development, materials and methods of construction other than that indicated or implied by the Contract Documents may be employed when such materials and methods when they are consistent with these criteria. Any deviations from these, or clarification where there are apparent conflicts with these, must be obtained from the Project Director/COR.

a. Performance requirements identified in this Article.
b. Other applicable criteria included within the OBO Design Standards (e.g., OBO Codes, reference documents).
c. Design intent documents prepared by the A/E involved with RFP documentation, and consistent with these performance requirements and other criteria in the OBO Design Standards.

2. Contractor’s Professional Engineer’s Responsibilities:

a. The Contractor’s Professional Engineer shall prepare and endorse complete engineering design and calculations and shall check and monitor the preparation of all shop drawings for conformance with the engineering design and calculations, and for compliance with the Contract Documents.
b. Engineer shall submit structural calculations for all components of the windows and indicate ultimate factors of safety.
c. As evidence of conformance to these requirements, each shop drawing and calculation sheet shall bear the seal and self-written signature of the Engineer.

B. General: Fabricate and install aluminum framed window units anchored to steel subframes to achieve the following security-related resistances, along with other indicated performances. Extend resistance to include anchorages and interfaces with adjoining substrates. Provide window rating as listed on the window schedule.

1. Forced-Entry (FE) resistance rating for attack with ordinary hand tools for the following ratings of the Physical Security Division of the Bureau of Diplomatic Security (DS/PSP/PSD).

   a. Government Code 1: No FE resistance rating.
   b. Government Code 2: 15 minutes.
   c. Government Code 3: 60 minutes.
   d. Government Code 4: 5 minutes.

2. Ballistic Resistance (BR) assemblies: Where window assembly is shown or scheduled as BR, provide the following ratings:

   a. Government Code 1: No BR resistance rating.
   b. Government Code 2: Submachine gun, 9 mm.
   c. Government Code 3: Rifle, 5.56 & 7.62 NATO.
   d. Government Code 4: Armor piercing, 0.30-06.

TABLE 2.1 - WINDOW CODES

DOS CODE	1ST DIGIT – TELLER WINDOW COMPOSITION	2ND DIGIT FIRE RATING	3RD DIGIT – FORCED-ENTRY RATING	4TH DIGIT – BALLISTIC RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	1.5 hours (Class D at exterior)	15 minutes	Not Used
3	Not Used	3 hours (Class A)	60 minutes	Rifle 5.56 & 7.62 NATO
4	Not Used	45 minutes (Class C)	5 minutes	Armor-Piercing (.30-06)

3. Provide combined performances for indicated requirements, with each performance surviving combined attacks within rating limitations of performance, but recognizing that certain forms of attack may result in severe damage to units, even though repelled successfully, leading to need for replacement of units, or of damaged elements of units.

C. Blast Resistance: See Section 080001 “Blast Requirements.”

D. Ballistics-Resistance Performance: Provide units identical to those tested for compliance with the following requirements:

1. Certified as complying with SD-STD-01.01, Revision H, by the U.S. State Department, for ballistics resistance when tested by a qualified testing agency.

E. Forced-Entry-Resistance Performance: Provide units identical to those tested for compliance with the following requirements:

1. Certified as complying with SD-STD-01.01, Revision H, by the U.S. State Department, for forced-entry resistance when tested by a qualified testing agency.
2. If blast, or other requirements, result in changes to the tested FE/BR design, including anchor or other material changes, the FE/BR vendor shall contact DS/PSP/PSD/RD to determine if a technical review is required.

    a. Shop drawings shall include the TR model number, where applicable.

F. Climb Resistance: Where applicable, conform to the climb-resistance requirements and criteria in the OBO Building Code.

G. Deal Trays: Provide deal trays for teller windows that are designed to prevent ricochet of projectiles towards protected side of window assembly. Deal trays shall provide minimum clear openings of 500 mm in width, 350 mm in depth and 50 mm height. Deal trays shall also be capable of allowing easy passage of a 325 mm by 380 mm envelope containing 100 sheets of legal size documents. All deal tray designs are subject to OBO approval by OBO/CFSM/SM/SCD/SEB or OBO/CFCM/SM/SOD/PSO/FE/BR. At teller windows, provide manufacturer's standard cover for pass-through, operable only from secure side, with nominal closure door or feature, which will obstruct passage of paper and other objects, the flow of moisture and gas through unit, and gasket to minimize sound transfer. Deal tray assembly shall be free from sharp edges or projections.

H. Transaction Drawers: Provide FE/BR transaction drawers in lieu of deal trays for exterior applications and where indicated in the construction documents. Transaction drawers shall also be capable of allowing easy passage of a 325 mm by 380 mm envelope containing 100 sheets of legal size documents. Drawer shall provide positive closing device to keep drawer closed unless unengaged to open. Provide handle to open and close drawer. Provide concealed drain feature to drain unit to threat side. All transaction drawer designs are subject to OBO approval by OBO/CFSM/SM/SCD/SEB or OBO/CFCM/SM/SOD/PSO/FE/BR. Drawer assembly shall be free of sharp edges or projections, or pinch points around handle.

I. Transaction window communication: Provide path for communication wiring through window unit from the protected side to the attack side. Path should provide a protected path that maintains ballistic protection performance and allows for easy installation and maintenance of electronic communication at the transaction window. Type of communication is determined by the location and the design.

J. Structural Performance: Aluminum security windows shall withstand the effects of wind loads determined as follows, with no permanent deformation or breakage within window assembly when designed in according to ASCE 7-16, as adopted and amended by the OBO Building Code, and tested according to ASTM E 330:

1. Basic Wind Speed: Shall be as indicated in the Structural Drawings.

K. Structural Glazing Sealant Bite: Sealant bite shall be adequate to resist specified loads.

L. Snap-on Components: Concentrated load of 4.5 kg (10 lbs.) at any point.

M. Air Infiltration for Fixed Windows: Not more than 0.2 L/s per sq. m (0.04 cfm/sq. ft.) at an inward test pressure of 300 Pa (6.27 lbf/sq. ft.) when tested according to ASTM E 283.

N. Water Penetration:

1. Under Static Pressure: No evidence of water penetration through fixed glazing when tested according to ASTM E 331 at a minimum static-air-pressure differential of 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).
2. Under Dynamic Pressure: No evidence of water penetration through fixed glazing when tested according to AAMA 501.1 at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 480 Pa (10 lbf/sq. ft.).
3. Maximum Water Leakage: Water penetration shall be defined as any water, other than condensation, that appears on any interior surface of the window, or on any surface inside the concealed spaces of the window or adjacent construction not designed specifically to function as part of the rainwater management system for the building enclosure. This definition of water penetration governs over those found in referenced documents.

O. Thermal Movements: Allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures:

1. Temperature Change (Range): **[67 deg C (120 deg F)]**, ambient; **[100 deg C (180 deg F)]**, material surfaces **<Edit for local conditions>**
2. Test Interior Ambient-Air Temperature: 24 deg C (75 deg F).
3. Test Performance: No buckling; stress on glass; sealant failure; excess stress on framing, anchors, and fasteners; or reduction of performance when tested according to AAMA 501.5.

P. Energy Performance: **[Exterior security teller windows shall have certified and labeled energy performance ratings in accordance with NFRC.]**

1. Thermal Transmittance (U-factor): Fixed glazing and framing areas shall have U-factor of not more than **[1.5]** W/sq. m x K (**[0.40]** Btu/sq. ft. x h x deg F) as determined according to NFRC 100.
2. Solar Heat Gain Coefficient (SHGC): Refer to Section 088855 “Security Glazing” for limitations on performance requirements for certain glazing.
3. Fixed glazing and framing areas shall have a solar heat gain coefficient of no greater than **[0.47]** as determined according to NFRC 200, or as identified in the specified glazing type in Section 088855 “Security Glazing.”

   a. Fixed glazing and framing in locations where special coatings using approved coating products are used, a solar heat gain coefficient of no great than **[0.XX] [as determined according to NFRC 200]**.

4. Condensation Resistance: Fixed glazing and framing areas shall have an NFRC- certified condensation resistance rating of no less than **[55]** as determined according to NFRC 500.

Q. Visible Light Transmittance (VLT): Refer to Section 088855 “Security Glazing” for limitations on performance requirements for certain glazed assemblies.

R. Sound Transmission: Provide aluminum windows with fixed glazing and framing areas and associated deal trays and/or transaction drawers having the following sound-transmission characteristics:

1. Outdoor-Indoor Transmission Class (OITC): Minimum 35 when tested for laboratory sound transmission loss according to ASTM E 90 and determined by ASTM E 1332.
2. Acoustical performance shall be minimum STC 40 for interior teller window and deal tray with deal tray cover in the closed position.

S. Facilitation of Glazing Replacement: Install aluminum security window assemblies only into a steel substrate in such a manner that allows for future glazing panel replacement. This may be either a structural steel wall or other structural steel assembly, a steel sub-frame in concrete, or a steel sub-frame attached to concrete**[or masonry]**.

T. Mullions: Provide mullions between window units that are designed to provide thermal isolation and performance equal to the performance of the adjacent window unit frames. Mullions must meet all applicable FE/BR and/or blast requirements, and shall not degrade acoustical performance

U. Building Structure Movements and Tolerances:

1. The windows shall accommodate differential structural movements, deflections, interstory drift, and thermal movement of the building structure due to gravity loads, wind loads, seismic loads and temperature.
2. The windows shall accommodate the following without distress, disengagement, or damage:

   a. Slab or Perimeter beam deflection due to service live load, column shortening, and differential long term creep.
   b. Interstory lateral drift (serviceability).

3. The windows shall accommodate the following without detachment of components from the building or glass fallout:

   a. Inter-story lateral drift (ultimate).

4. The windows, including its connections to the building structure, shall accommodate the fabrication and erection tolerances allowed for the building structure.

   a. Slabs, beams, and columns; left/right and up/down.

5. It is the responsibility of the Contractor to refer to the appropriate specifications of Cast-In-Place Concrete, Structural Steel, or Metal Framing for the full description of structural movements and tolerances.

V. Animal Nuisance Control:

1. The windows shall inhibit the entry of insects or other small animals which would constitute a nuisance by their presence.

W. [Fire Safety:

1. Provide fire-resistance rated assemblies, as indicated in Contract Documents, and as required to conform to OBO Codes (OBO-adopted model codes as amended by OBO Code Supplements).]

2.2 MANUFACTURER/FABRICATOR

A. Selection of fabricator/manufacturer for each type of security window assembly, and selection of manufactured elements which are used in make-up of that assembly, are Contractor's options subject to the following requirements and limitations, approval by the Project Director/COR and subject to general provisions of Construction Contract:

1. Pre-certified fabricators of ballistic--resistant and forced-entry-resistant assemblies are identified in a separate Contract attachment labeled “Government Certified FE/BR Products and Designs".

2.3 METALS

A. Select the alloy, degree of alloy control, homogeneity, temper, metallurgical quality, degree of hardness or softness, mill tolerances, cutting tolerances and flatness, required to achieve the requirements of design, quality, and color matching of finish set forth in Drawings and Specifications.

B. Aluminum:

1. Flat sheet: AA **[3003 for painted finish] [5005 for anodized finish]** H14, ASTM B209, stretcher-leveled and stress-relieved.
2. Extrusions: AA 6061-T6 or AA 6063-T5 or T6; ASTM B221.
3. Other flat sheets and extrusion grades and selection may be allowed with the approval of OBO/CFSM/SM/SCD/SEB, but in all cases, they should not only meet the physical requirements, but ability to finish the material shall be similar.

   a. Extruded aluminum cladding for mullion caps shall be minimum 2.4 mm thick.
   b. Cladding for other exterior applications shall be of a gauge capable of retaining flatness and consistency with no oil-canning or other distortion when subjected to the design wind pressures required for the project, but not less than 1.2 mm thick.

C. Carbon Steel:

1. Rolled shapes, plates and bars: ASTM A36, A572, A992.
2. Hollow steel sections (HSS): ASTM A500
3. Cold rolled sheet and strip: ASTM A1008.
4. Hot rolled sheet and strip: ASTM A1011.
5. Fasteners:

    a. Bolts and Screws: ASTM A307 or F3125 Grade A325 or A490.
    b. Socket Head Cap Screws: M12, Zinc-plated.

        1) For non-blast rated windows: Class 10.9 (Grade 8) or Class 12.9.
        2) For blast rated windows: As required by blast analysis report; see Section 080001 “Blast Requirements.”

    c. Washers: Zinc-plated.

        1) For non-blast rated windows: Class 10.9 (Grade 8) or Class 12.9.
        2) For blast rated windows: As required by blast analysis report; see Section 080001 “Blast Requirements.”

    d. Nuts: ASTM A563 or ISO 4032/8673.

D. Stainless Steel:

1. Sheet, plate, bars and strip: ASTM A240, sulfur not to exceed 0.005 percent; ASTM A480, stretcher-leveled and stress-relieved.

    a. Exposed: AISI Type 316
    b. Concealed: AISI Type 304

2. Fasteners: AISI Type 303, 304 or 316 (exterior).

    a. Bolts and screws: ASTM F593.
    b. Nuts: ASTM F594.
    c. Button and countersunk head screws: ASTM F879.

2.4 FABRICATION AND ASSEMBLY

A. General:

1. To the fullest extent practicable, all fabrication and most assembly shall be executed in the shop. Work not shop-assembled shall be shop-fitted to ensure fit. Refer to Part 3 Article on INSTALLATION; any remaining assembly work is part of that activity.
2. Use no materials, equipment or practices that may adversely affect the function, appearance, performance, or long-term durability of the completed windows or adjacent construction.
3. The windows shall be accomplished in compliance with the specified criteria without buckling, opening of joints, undue stress on fasteners, sealants and gaskets, opening of welds, cracking of glass, leakage, noises or other harmful effects.

4. Conform strictly to the materials, finishes, shapes, profiles, sizes, thicknesses, and joint locations required by the Drawings and Specifications.
5. Match all materials to produce continuity of line, texture and color.
6. Work shall be of the highest quality, in accordance with the best trade practices, and performed by skilled workmen. All work shall be accomplished to the satisfaction of the Project Director/COR.
7. All components exposed in the finished work shall be free from warping, oil-canning effects; the telegraphing of welds, studs, and other fasteners; streaks, tool and die marks.
8. Finish exposed metal edges to match adjacent finished surfaces.

B. Reduce exposure to non-compatible chemical substances including, but not limited to, the following:

1. Phenols.
2. Silicone-based sealants (non-neutral cure agents).
3. Cutting oils.
4. Common cleaning chemicals known to contribute to polycarbonate environmental stress cracking such as ammonia.
5. Isopropyl not allowed unless rinsed with water.
6. Ethylene-propylene rubber (EPDM) setting block and gasket off-gassing compounds.

C. Manufacturer's Standards:

1. Materials, components and systems incorporated in the Work shall be mixed, applied, installed and otherwise used in strict accordance with the recommended standards and procedures of the respective manufacturers.

D. Storage and Handling at Manufacturing and Fabricating Facilities:

1. Refer to Part 1 Article on DELIVERY, STORAGE, AND HANDLING. Those requirements also apply during the fabrication portion of this Section.

E. Jointing and Reinforcing:

1. Accurately fit and firmly secure all exposed metal joints with metal to metal hairline contacts.
2. Install fastenings at an approved spacing.
3. Fasteners shall not penetrate gutters and drainage systems.
4. Screws and fasteners up to and including 8 mm (5/16 inch) diameter and all that are drilled and/or tapped into aluminum shall be 300 series stainless steel.
5. Fasteners 9.5 mm (3/8 inch) diameter and heavier shall be stainless steel or hot-dip galvanized.
6. Jointing and splicing of members shall be concealed. Exposed fasteners shall occur only where expressly permitted by the Project Director/COR. Where exposed in finished surfaces, screw heads shall be Phillips oval-head countersunk type, finish to match adjacent surfaces.
7. Conceal all joint sealants except as noted on the Drawings.

F. Anchors and Connections:

1. Reinforce elements to resist loads imposed upon them by doors, hardware, anchors, and other attachments. The window manufacturer shall provide anchors appropriate for substrate to which window frame and sub-frame is to be fastened.
2. Anchors and connections shall be provided to fully satisfy their required purpose of adjustability, movement and load transfer.
3. Design connections between different materials shall allow for the differential thermal movement of the respective materials.
4. Anchors and connections that do not provide for movement shall prevent such movement by appropriate means.
5. Anchors and connections that are designed for movement shall be of such construction that friction is low enough to allow for such movement without buckling and other damage and without causing binding and noises.
6. Self-drilling, self-threading fasteners shall not be permitted for use into concrete or masonry for the window frame, but is allowed for ballistic trim.
7. Separate metal surfaces shall be designed such that metal does not move on metal. Materials used for this purpose shall be low friction components, sealants or gaskets as applicable.
8. Anchorages to Structural Steel shall not induce rotational forces in supporting members.
9. All anchors and fasteners outboard of the air-seal shall be 300 series stainless steel. All other fasteners shall be stainless steel or zinc-plated steel. Fastener and anchor assemblies shall be detailed to prevent galvanic corrosion.
10. Shim packs that resist compressive forces only may be solid high-impact plastic, Korolath type or equal. Shim packs subject to bending or shear forces shall be stainless steel or HDG steel plates pinned together to form a monolithic shim.
11. Window frames shall have pre-drilled, vertically slotted bolt hole patterns at the jambs and left/right slotted bolt hole patterns at the head and sill, not to exceed as-tested on-center spacing.
12. The manufacturer shall verify substrates involved, and supply any special fastening tools (e.g., special drill or bit) required by anchoring system.
13. The anchor shall be acceptable for shock/short duration loading, and have potential for removal and re-installation during life of building.

G. Welding:

1. Weld steel in accordance with the recommendations of the American Welding Society.
2. Welding shall be done by skilled mechanics qualified by test in the last 12 months as prescribed in the American Welding Society Code and as applicable to the material thickness and type of welded joint on which the welders will be employed.
3. Welding shall be done with electrodes and/or methods recommended by the suppliers of the metals being welded. The type, size, and spacing of welds shall be as shown on the approved shop drawings. Welding materials and methods shall be such as not to cause distortion, discoloration, or result in any other adverse effect on the required profiles and finishes of visible surfaces of the windows.
4. Welding of aluminum alloys and the qualifications of aluminum welders shall conform to the requirements of the Aluminum Association “Specifications for Structures of Aluminum Alloys, Aluminum Construction Manual”.

5. Welding of stainless steel shall be by TIG welding or other methods subject to approval. Use double bevel butt welds, backing bars to remove heat, jigging, tack welds and any other measures necessary to minimize distortion.
6. Remove weld spatter and welding oxides on exposed surfaces. Finish exposed welds to match and blend with adjacent parent metal prior to final finish application.
7. Stud welding shall be done by mechanics trained by the manufacturer of the stud setting system. The manufacturer shall develop specific programs and instructions in cooperation with the fabricator to suit the needs of the specific details. The fabricator shall exercise particular care that all recommendations of the manufacturer are closely followed. Visible marks (telegraphing) on finished surfaces due to welding of studs shall not be acceptable.

H. Sealant and Gasket Applications:

1. Provide sealing mechanisms (sealants and gaskets) where shown on the drawings or required for a permanently weathertight installation. The sealing mechanism for each location and use shall be as indicated on drawings. In those locations where a mechanism is necessary but is not indicated, it shall be of a type recommended by the Contractor and approved by the Project Director/COR.
2. Design all sealed joints in accordance with the recommendations of the sealant and/or gasket manufacturer.
3. Gasket materials shall be appropriate for the function intended and are subject to approval by the Project Director/COR.
4. Submit test samples of all substrate materials to the sealant manufacturer for compatibility and peel adhesion testing.
5. Protect adjoining surfaces not to receive sealants against staining by masking and/or other methods. Conceal sealant joints from view to the extent possible. Do not allow sealants to contact interlayers of laminated glass.
6. Joints and joint surfaces shall be clean, dry, and free of any materials that may have an adverse effect on the performance of the sealant and gasket materials.
7. Sealant application: ASTM C1193.
8. Apply sealants and gaskets under the climatic conditions recommended by the manufacturer(s). Sealant shall not be installed when substrates are wet or when ambient or surface temperature is below 40 deg F. All surfaces to receive sealants shall be treated (cleaned, primed or unprimed) in accordance with the recommendations of the sealant manufacturer. Use no sealant that has started to set in its container or a sealant that has exceeded the shelf life published by the manufacturer.
9. Glazing gaskets shall be vulcanized, injection molded or heat-welded at the corners to form a continuous closure.
10. Fill all joints continuously and completely with sealant, forming a neat uniform, concave bead. Finish the material flush with adjoining surface unless otherwise shown on the Drawings. All sealant surfaces shall be tooled smooth. Upon completion of tooling, immediately remove masking tape from adjacent surfaces.

I. Glass and Glazing:

1. Comply with the GANA “Glazing Manual.”
2. Glazing shall be performed without springing or forcing. Follow all instructions of the glass and glazing materials manufacturers.

3. Glass and glazing materials shall be compatible with each other and adequate for their intended purpose. Each material type shall be as per details and approved Shop Drawings.
4. Protect all adjoining surfaces not to receive glazing materials against staining or damage of any kind.
5. Glazing pockets shall be clean, dry, and free of any materials that might adversely affect the bond and seal of the glazing materials or the drainage of the pockets.
6. Install glass and glazing materials under the climatological conditions recommended by the fabricator.
7. Prime all surfaces to receive glazing materials unless recommended otherwise, in writing, by the manufacturers and approved by the Project Director/COR.
8. Use no sealant that has started to set in its container, nor a sealant that has exceeded the shelf life published by the manufacturer.
9. Do not install sealant unless the ambient and joint surface temperature is at least 40°F and rising.
10. Install exposed sealants so that the top surfaces of the sealant beads are sloped to drain water away from the glass. Exposed sealant surfaces shall be tooled smooth.
11. Setting blocks shall be at least 6 mm (1/4 inch) in thickness, full width of the pocket, and placed at the glass quarter points. They shall be of a length recommended by the glass manufacturer and be configured in such a way as not to impede water drainage of the glazing pocket.
12. Provide jamb blocks on each glass unit supported on four sides. Place and glue blocks at the top and bottom of the glazing pocket 3 mm (1/8 inch) clear of the glass edge.
13. Glass shall be centered in each opening to provide the bite and clearances recommended by the glass manufacturer and approved by the Project Director/COR.
14. Apply no tapes, ribbons or markings to the glass.

J. Structural Glazing:

1. Comply with ASTM C 1401.
2. Wherever possible, silicone glazing design shall permit glazing to the major framing members in the factory.
3. Provide test samples of all substrate materials to the sealant manufacturer for peel adhesion and accelerated weathering testing. Conduct testing with materials and finishes identical in every respect to approved production materials and finishes.
4. Prior to undertaking any structural glazing, submit complete structural glazing procedures, including permissible conditions, temperatures, cure times, temporary restraint design, surface preparation and all other procedures, including quality control inspection program that may be employed.
5. Perform periodic deglazing of structural silicone glazed lites per ASTM C1401 Paragraph 34.4 and the sealant manufacturer's recommendations, at a rate of one unit in the first 10 produced, one in the next 40, one in the next 50, and one every 100 thereafter.
6. Clearance and bite dimensions shall match approved shop drawings.

K. Thermally Improved Construction: Fabricate aluminum windows with an integral, concealed, low-conductance thermal barrier; located between exterior materials and window members exposed on interior side; in a manner that eliminates direct metal-to-metal contact.

1. Provide thermal-break construction that has been tested to demonstrate resistance to thermal conductance and condensation and to show adequate strength and security of glass retention.
2. Provide thermal barriers tested according to AAMA 505; determine the allowable design shear flow per the appendix in AAMA 505.

L. Weep Holes: Provide weep holes and internal passages to conduct infiltrating water to exterior for dry glazed units:

M. Mullions with Strong-backs or Steel Connections: Provide thermally improved mullions and cover plates matching window units, complete with anchors for support to structure and installation of window units. Allow for erection tolerances and provide for movement of window units due to thermal expansion and building deflections, as indicated. Provide mullions and cover plates capable of withstanding design loads of window units.

N. Sub-Frames: Provide steel sub-frames/embeds for all FE or FE/BR windows for installation at concrete, masonry, and other non-steel rough openings and for structural steel openings where depth is less than door frame depth. Steel subframe material shall conform to ASTM A36 or ASTM A529 or ASTM A572 for plates, bars, and shapes; and ASTM A500 or ASTM A1085 for hollow structural sections ("steel tubes"). No steel element to receive a threaded fastener shall be less than 12 mm (1/2 inch) thick. For individual openings, sub-frames shall be provided by window supplier. For larger, multi-panel openings, sub-frames may be provided by either window supplier or Contractor; in either case they shall be designed by window supplier and shown with window shop drawings. For larger elevations that require knock-down subframe, provide hot-dipped embeds. Sub-frame depths shall be no less than the window frame depth on side of sub-frame that window is bolted. Steel sub-frame shall be assembled and braced by manufacturer prior to shipping to ensure deformations during transportation. Ensure steel sub-frame is braced so that deformation tolerances are not exceeded during installation and concrete placement. Where sub-frames are hot-dipped galvanized, temporary supports shall be designed and detailed not to damage to the galvanized surfaces during use and removal. Steel sub-frame shall be installed plumb and square. All sub-frames without adjustability shall be drilled and tapped in the field.

1. Exterior sub-frames/embeds and shall be hot-dipped galvanized for corrosion resistance.
2. Interior sub-frames/embeds shall be prime painted with a high-grade metal primer or may be hot dipped galvanized.

O. Post-installed Anchors: In addition to any restrictions or requirements indicated on the Construction Drawings, post-installed anchor systems proposed by the Contractor's delegated design shall each have ICC-ES Evaluation Report indicating conformance with current applicable ICC-ES Acceptance Criteria including, but not limited to, for cracked concrete for concrete substrates, seismic applications, and for the use in the specific substrate type and characteristics intended. Shop drawings and field sketches shall clearly indicate critical embedment, spacing, and edge distance requirements and placement tolerances determined by the design.

1. For New Concrete Substrates: Attach steel sub-frame to the concrete substrate with embedded anchors per the blast report, but not less than 12 mm diameter x 150 mm headed steel studs, spaced no greater than 300 mm on center. Final sub-frame shop drawings,

product data, and associated delegated design calculations shall be reviewed and approved prior to fabrication and shipment.

2. **[For Masonry Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has a minimum 12-mm thickness for the anchors and a minimum 300 mm width and as determined per the blast design, when blast is a requirement. Post-installed chemical anchors in hollow masonry substrates shall use appropriate screen tubes provided by the anchor system's manufacturer.]**
3. **[For Existing Concrete Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has a minimum 12-mm thickness for the anchors and a minimum depth of the product and as determined per the blast design, when blast is a requirement and in all cases should take into account the existing reinforcing blast.]**

P. [Window replacement and retrofit conditions: When FE/BR window is being replaced in kind, existing embed or subframe may be used if visually assessed to be in good condition and determined by calculation to possess sufficient capacity to meet the specified performance requirements for the window system. It does not need to be replaced solely because it does not meet one of above 12 mm thickness requirements for new sub-frames. Sub-frame design shall provide accommodations for field adjustments to enable installation when verifications in the field prior to fabrication for reinforcing steel or other elements are limited or not feasible. Filling abandoned holes in steel elements with weld material to tap a new hole overlapping the prior hole is not permitted; drilling and tapping a larger diameter hole fully encompassing the smaller hole is permitted, such as in a scenario where the existing threads are damaged or determined to be inadequate for the new connection design. New anchor holes shall satisfy minimum AISC 360 requirements for bolt hole spacing and edge distances. If subframe does require replacement, as determined by OBO/SM, or due to other conditions (e.g., corrosion or size of opening requires modification), then one of new subframe conditions above must be used.]

Q. Factory-Glazed Fabrication: Glaze aluminum windows in the factory. Comply with requirements in Section 088855 "Security Glazing" and with AAMA/WDMA 101/I.S.2/NAFS.

R. Glazing Stops: Provide snap-on or bolted glazing stops coordinated with Section 088855 "Glazing" and glazing system indicated. Provide glazing stops to match frames.

S. Cladding: Cladding shall include any extruded, break metal or otherwise formed component or trim that is applied as a decorative or finish covering of the window frame, mullion, steel frame, trim bars or other components integral to the functional security glazing system.

1. Exterior cladding material: shall be aluminum, stainless steel, or pre-approved composite compatible with the functional security window system.
2. Interior metal cladding or trim: Interior metal cladding shall be aluminum, stainless steel, or pre-approved composite compatible with the functional security window system.
3. Cladding or trim of any type that overlaps security window frame, sub-frame, shim space or ballistic trim bars shall be installed such that the window can be re-glazed without damage to any component or finish of the window system or to the Trim or cladding component, when trim is reinstalled

4. If overlapping material must be removed to re-glaze a window, the material fastening system shall be designed to allow for easy removal and reinstallation without damage to the original overlapping material.

2.5 PROTECTIVE TREATMENT FOR METALS

A. Galvanizing Carbon Steel (hot dip):

1. For shapes, plates, bars and strip: ASTM A123 (2 oz/ft2 minimum coating thickness).
2. For fasteners and hardware: ASTM A153.
3. For sheet: ASTM A653 (G90).
4. For protection against hydrogen embrittlement: ASTM A143.
5. For repair of damage to HDG coatings: ASTM A780.

   a. Acceptable product: ZRC Cold Galvanizing Compound, ZRC Worldwide.

B. Bituminous Paint: SSPC-Paint 12 or ASTM D1187, 762 microns (30 mils) minimum thickness.

C. Surface Protection Film:

1. Colored, strippable PVC film specifically intended for the temporary protection of metal.
2. Film thickness: 76.2 microns (3 mils) minimum

2.6 ALUMINUM FINISHES

A. Coat aluminum extrusions, pressings and similar items prior to assembly.

B. Finish, including color and gloss level, shall be as identified in Construction Drawings. Except where anodic finishes are identified, refer to Section 099602 “High-Performance FE/BR Coatings.”

1. Non-visible components shall be painted per the FE/BR Performance Coating required or may be anodized.

C. [Anodic Finishes:

1. Finish designations prefixed by AA comply with the system established by the Aluminum Association for designating aluminum finishes.
2. Class I, Clear Anodic Finish: AA-M12C22A41 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, clear coating 0.018 mm or thicker) complying with AAMA 611.
3. Class I, Color Anodic Finish: AA-M12C22A42/A44 (Mechanical Finish: nonspecular as fabricated; Chemical Finish: etched, medium matte; Anodic Coating: Architectural Class I, integrally colored or electrolytically deposited color coating 0.018 mm or thicker) complying with AAMA 611.]

D. No mill finish aluminum is permitted on visible and non-visible components.

E. Match the appearance, color and texture of samples submitted to and approved by the Project Director/COR.

2.7 STEEL FINISHES

A. Carbon Steel (strong-backs and other exposed subframes, connectors, and ballistic trim, etc.):

1. Coat carbon steel shapes and similar items prior to assembly to the maximum extent feasible.
2. Finish, including color and gloss level, shall be as identified in Construction Drawings and Section 099602 “High-Performance FE/BR Coatings.
3. All surfaces of steel members incorporated in the windows shall be finished.
4. If concealed from view, individual and aggregate members shall be hot-dip galvanized as per PROTECTIVE TREATMENT FOR METALS.

5. If exposed to view and connected to exterior elements, individual and aggregate steel members shall be hot-dip galvanized and receive the coating systems as specified in Construction Drawings and Section 099602 “High-Performance FE/BR Coatings.”

B. Stainless Steel:

1. Finish: uniform and free from blemishes, scratches, and other defects.
2. If exposed to view, finish shall be as follows:

   a. [Finish Type SS-1: AISI No. 4 satin directional finish.]
   b. [Finish Type SS-2: AISI No. 4 satin non-directional finish.]

3. If concealed from view, finish shall be AISI No. 2D.
4. Clean and passivate as per the recommendations of ASTM A 380.
5. The grain of all stainless steel and brushed finishes shall run in the long direction for contiguous or adjacent components except where noted on drawings.
6. Touch-up finish in field as required.

2.8 LOW-FRICTION MATERIALS

A. Wherever materials are subject by design to relative movement, provide suitable low friction material(s), such as:

1. Teflon strip, 0.762 mm (0.030 inch) thick; and Teflon tape, 0.127 mm (0.005 inch) thick.
2. High-impact polystyrene or Nylatron equal to Eel-Slip pads as manufactured by Scan-Pac.

B. Low friction materials shall be impervious to moisture.

2.9 SEALANTS AND SEALANT BACKING MATERIAL

A. Structural Glazing Sealant: The following sealants have been shown to be compatible with laminated glazings that include polycarbonates.

1. Neutral cure silicone, medium or high modulus, non-staining, matte finish, color to match the approved sample, and specifically intended for use specified.
2. Multi-component: ASTM C1184; ASTM C920, Type M, Grade NS, Class 12.5.

    a. Acceptable products:

        1) Dowsil 983, Dow Chemical Co.
        2) GE Ultraglaze 4400 or 4600, Momentive Performance Materials.

3. Single-component: ASTM C1184; ASTM C920, Type S, Grade NS, Class 25.

    a. Acceptable products:

        1) Dowsil 995, Dow Chemical Co.
        2) GE Ultraglaze 4000/4000AC, Momentive Performance Materials.

B. Weatherseal Sealant:

1. Neutral cure silicone, low or medium modulus, non-staining, matte finish, custom color to match the approved sample, and specifically intended for use specified.
2. Single-component: ASTM C920, Type S, Grade NS, Class 50, Use A,G, and O.
3. Acceptable products:

    a. Dowsil 795, Dow Chemical Co.
    b. GE Silpruf SCS2000, Momentive Performance Materials.

C. Sealant Backing Materials:

1. Preformed foam plastics and synthetic rubbers, compressible, non-gassing, non-staining, and compatible with sealants and as recommended by sealant manufacturers. Backing shall be of the sizes and shapes to suit the various conditions and shall be a color different than the sealant color. Backer rods shall be 25 percent wider than the joint width.
2. Open/closed cell extruded polyolefin backer rod: ASTM C1330, Type B.
3. Acceptable product: SOF-ROD, Nomaco Inc.
4. Extruded silicone rubber: As specified in the Part 2 Article on PRE-FORMED SYNTHETICS.
5. Cellular glazing tape: As specified in the Part 2 Article on PRE-FORMED SYNTHETICS.
6. Bond Breaker Tape: Lithographer Tape, 3M Company.

2.10 PRE-FORMED SYNTHETICS

A. The particular compound shall be appropriate to the intended function of the preformed synthetic and is subject to approval by the Project Director/COR.

B. Base gasket material manufacturers and gasket extruders are subject to approval by the Project Director/COR.

C. All material shall be non-staining, non-off-gassing, UV stabilized, ozone-resistant, and compatible with glazing edge sealants and polycarbonate.

D. All corners of weatherstripping shall be vulcanized, heat-welded, injection-molded, or otherwise required to form a continuous seal around the panel.

E. Gaskets:

1. Interior closed cell sponge gaskets: silicone gaskets: ASTM C 509, 60 ±5 Shore A durometer.
2. Exterior non-cellular dense wedge gaskets: Non-cellular silicone gaskets: ASTM C 864, 70 ±5 Shore A durometer.
3. Setting blocks:
4. Non-cellular (dense) extruded silicone: ASTM C 1115 Type C, 85 ±5 Shore A durometer, not less than 6mm thick.
5. Spacers, edge blocks, and other profiles:
6. Non-cellular (dense) extruded silicone: ASTM C 1115, 50 to 70 Shore A durometer.

F. Cellular Glazing Tapes:

1. Open cell, semi-rigid, adhesive-backed foam tape.

   a. Acceptable products: Norton Thermalbond V2100, V2200, or Xpress.

2. Closed cell, semi-rigid, adhesive-backed foam tape.

   a. Acceptable products: Norton Norseal V780 or V980.

G. Thermal isolators:

1. Clamped between metal components:

   a. Rigid polyvinylchloride: ASTM D 4216.

2. Integral to extruded aluminum framing: AAMA TIR-A8.

   a. Continuous extruded polyamide 6/6 (Nylon) with 25% glass fiber reinforcement, mechanically crimped to extrusions with knurled cavities. Comply with AAMA QAG-2-12.

      1) Perform shear tests per QAG-2-12. Shear value: Greater than 200 lb/in.

b. Polyurethane poured into a cavity of a single extrusion; dibridged after polyurethane hardens. Polyurethane thermal break systems shall utilize the thermal cavity in accordance with the material manufacturer's recommendations.

3. Provide a continuous thermal break with separation distance as required to comply with specified thermal performance requirements.

H. Weep Hole Filter: PVC-coated reticulated open cell polyurethane foam, 30 to 40 pores per 25.mm (1 inch) in length.

I. Shims: Provide compatible shim material for window frames and adjacent enclosure systems using one of the following:

1. Concealed: Solid PVC, polystyrene, or Nylon
2. Exposed to weather: Stainless steel.

2.11 FLASHING MATERIALS:

A. While General Contractor has overall responsibility for installation of all flashing materials, Manufacturer shall coordinate shop drawings and adjust rough opening and dimensions to accommodate specified flashing below:

B. Metal: Min. 0.607 mm (24 ga.) stainless steel, dead-soft.

C. Pre-Formed Silicone Sheet: ASTM C1518, Movement Class 200, Tear Class PT.

1. Dowsil 123 Silicone Seal, Dow Chemical Co.
2. Ultraspan, Momentive Performance Materials

D. Foil-Faced Polyethylene-Reinforced Self-Adhering Flashing (SAF):

1. Perm-A-Barrier Aluminum, Grace Construction Products
2. HE200AM Metal Clad Weather Barrier, Henry Company
3. Aluma-Flash, Polyguard Products, Inc.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine prepared substrate openings to receive framed fenestration units of this Section. Check anchorages for location and coordination of face plans between walls and fenestration units.

B. Prior to start of installation, inspect the building and verify all conditions and dimensions as being acceptable to receive the Work of this Section.

C. Coat substrate surfaces of concrete, masonry, or steel where they will be in contact or close proximity with aluminum or stainless steel framing of fenestration units. Apply membrane and weather proofing, or a minimum to confined to surfaces which will be concealed.

D. If any conditions are found that may inhibit proper execution of the Work, immediately notify the Project Director/COR in writing. Installation shall not proceed until remedial action, acceptable to the Project Director/COR, has been executed.

3.2 INSTALLATION:

A. Sequencing and Timing Requirements: At the time agreed upon with Project Director/COR, proceed with installation of fabricated aluminum window units in accordance with approved shop drawings, manufacturer's data and instructions, requirements of these specifications and attached Certificate of Compliance. Sequence installation work to achieve proper application for each element indicated, in manner which will produce maximum resistance to indicated forms of attack and weather.

B. Complete any assembly that was not accomplished in the shop. Refer to Part 2 Article on FABRICATION AND ASSEMBLY.

C. Erect the windows, including all snap-on components and accessories, plumb, square, level, and correctly aligned within the following limitations:

1. Offset from true horizontal, vertical, and design location shall not exceed 3.2 mm (1/8 inch) per 3.7 meters (12 feet) nor 12 mm (1/2 inch) over any one length or part thereof the building.
2. Offset from true alignment between abutting components or components separated by less than 75 mm (3 inches) shall not exceed 1.6 mm (1/16 inch).
3. Maximum offset of framing members intersecting at the corner of a glazing cavity shall not exceed 0.80 mm (1/32 inch).
4. Rotation shall not exceed one degree.

D. Joint widths as noted in the Contract Documents are the design joint width at an ambient temperature of 21 deg C (70 deg F). Adjust installation procedures to take into account the ambient temperature at the time of installation.

E. Exercise care to properly brace and reinforce units against racking during hoisting and installation.

F. Anchors and Connections:

1. Avoid cutting rebar during concrete sub-frame installation.
2. Provide 1.6 mm (1/16 inch) thick shims with break-off tabs for rough opening (RO) frame clearance.
3. Match finish of cap plugs used in frame with frame finish to the maximum extent possible. Do not install cap plugs until after the final QA inspection has been completed by either the OBO/CFSM/SM/SCD/SEB or OBO/CFSM/SM FE/BR Program representative

G. Metal Cladding Fastening and Connections shall be mechanically fastened with concealed fasteners or snap-on attachment.

1. Exposed fasteners shall not be permitted. Special cladding attachment conditions that cannot be achieved with concealed fasters may be considered only after formal written application for a specification exception, to include documented engineering proof that concealed fasteners are not achievable, and to include finish detailing of the exception condition.
2. Adhesive fastening of window cladding (trim) in absence of mechanical fastening shall not be permitted.
3. Cladding fastening shall allow for easy removal and re-installation after re-glazing, without damage to any part of the security window system or adjacent construction.
4. Cladding and Trim tolerances: Cladding profiles and fastening shall be designed to remain in place and maintain hairline joint alignment without deformation under positive and negative wind loads indicated in the drawings.

    a. Maximum misalignment of two adjoining members abutting in plane; 79 mm (1/32”)

H. Window Flashing:

1. Sill flashing: Provide stainless steel flashing bedded over membrane water/vapor barrier installed over steel embed. Note that shims shall be placed over stainless steel flashing; do not damage flashing with shim installation.

    a. Sill flashing shall be turned up min. 6 mm (1/4”) on interior side.
    b. Bolt penetrations through flashing, and female receptor nuts, shall be filled with non-hardening liquid sealant or water/vapor barrier compatible to flashing and barrier materials.
    c. Maximum gap (shim space) between top of stainless steel sill flashing and Window frame shall be 6.5 mm (¼”).

        1) The flashing and weather proofing, up to 3 mm, is excluded from calculating the allowable shim space between the embed/subframe and with window frame (i.e. if the flashing and weather proofing combined thickness is equal to 3 mm and the tested shim space was 6 mm, then the allowable space between the embed/subframe would be 9 mm).

    d. Provide weeps in shim space, over stainless steel flashing to allow any water infiltration to drain to the exterior.

2. Jamb and head flashing: Provide liquid or membrane flashing at heads and jambs, providing full cover and protection of steel or concrete window frame/opening. Overlap minimum 4” and seal to top of stainless steel sill flashing to provide continuous flashing around window opening.

I. Corrosion Protection:

1. Ensure by design that no metals, including alloys of the same base metal, are placed together in a manner, combination or location likely to give rise to damage by electrolytic action or other corrosion. Prevent metal to metal contact between aluminum and metals other than an appropriate grade and composition of stainless steel as per the recommendations of the material manufacturer and to the approval of the COR. Ensure that dissimilar aluminum alloys in contact with each other are compatible with each other or isolated. Any other dissimilar materials are to be treated or protected in such a manner as necessary to prevent corrosive action.
2. Isolation of dissimilar metal surfaces to prevent electrolytic action shall be accomplished by materials which are impervious to moisture and non-absorptive.
3. All steel parts shall receive a protective treatment commensurate with their respective functions and locations. The treatment shall be one or more of those described above, and as approved by the COR.
4. Where used to the exterior of air-seals, or in any location vulnerable to moisture, steel shall be hot-dip galvanized after fabrication.
5. Field welds on galvanized steel shall be treated with an approved field cold galvanizing process. Remediation of finish of galvanized steel shall be in accordance with the requirements of ASTM A780 and Sectiond 055005 “METAL FABRICATIONS.”
6. Aluminum surfaces in contact with mortar, concrete, fireproofing, plaster, masonry, or absorptive materials of any kind shall be coated with an anti-galvanic material, impervious to moisture.

3.3 FIELD QUALITY CONTROL FOR THE GENERAL CONTRACTOR/INSTALLATION CONTRACTOR:

A. Inspection: The manufacturer's technical representative shall observe and advise the crew during their installation of the first three FE/BR windows. Upon completion of the installation of each of the three initial FE/BR windows, the manufacturer's technical representative shall inspect the work and direct the crew in any correction or modifications required for acceptable performance of the units.

B. For unique site and design conditions, such as sloped glazing or atrium windows, the manufacturer's technical representative shall also be responsible for observing and inspecting the installation of FE/BR windows, beyond the initial three windows, as necessary to ensure that the installation crew is adequately prepared for installation.

C. Water Leakage Testing:

1. Representative windows shall be field tested for water leakage in accordance with ASTM E1105 (Procedure A):
2. Initial testing shall be performed on each window type shown on the window schedule immediately following approval of the trial installation. Subsequent tests shall be carried out at 30 percent and 60 percent completion of each system. Static pressure differential shall be as specified in the Part 2 Article on PERFORMANCE REQUIREMENTS.

3. At least **[three]** ***<insert number>*** initially successful tests shall be performed on each window type.
4. Test areas shall include perimeter seals to adjacent construction.
5. Test area locations will be designated by the Project Director/COR.
6. An initially successful test shall be defined as one wherein no leakage is observed. If leakage occurs at any point in the test area, the test shall be immediately declared "not initially successful."
7. For each failure condition discovered, make corrective repairs approved by the Project Director/COR and retest until the leakage is eliminated. All failures shall be considered systemic failures requiring corrective work at all similar conditions. Remedial measures shall maintain standards of aesthetics, quality, and durability, and are subject to approval by the Project Director/COR.
8. For each "not initially successful" test, test an additional **[two]** location(s) until an initially successful test is achieved. Additional tests required as a result of initially non-successful tests shall be performed at no cost to the Owner
9. Engage an Independent Testing Agency to perform the tests. Approval of all test areas, test procedures, remediation measures, and test results rests with the Project Director/COR.

D. Sealant Adhesion Testing:

1. Test sealant according to recommendations in ASTM C1521, Destructive Procedure, Method A.

2. Test a minimum of **[four]** locations on each façade.
3. Repair locations damaged by testing.
4. Where Project Director/COR determines that sealant has failed adhesively from testing or does not comply with requirements, additional testing shall be performed to determine extent of non-conforming sealant. Neatly cut out and remove non-conforming sealant, prepare and prime surfaces, and install new sealant. Perform field adhesion tests on new sealant. Additional testing and replacement of non-conforming sealant shall be at Contractor's expense.
5. Document testing with photographs and record results.

3.4 PROTECTION, CLEANING, AND ACCEPTANCE:

A. Protect the windows from any material, equipment or practices that may impair the functioning, appearance or durability of the windows or other construction.

B. Package and store materials in a manner that shall prevent damage, contamination, distortion, breakage or structural weakening.

C. Store pre-glazed units upright or crated and packaged with a rigid protection board on top to prevent damage from ponding of water or by the work of other trades.

D. Do not stage units and related components more than one week in advance of installation in order to avoid damage by other trades. Do not uncrate units more than one day in advance of installation.

E. Replace any material damaged during manufacture, shipping, storage or erection.

F. Protect the installed windows from damage by other trades.

G. Protection materials shall be suitable for the intended protection application and protection period. Do not use materials known to contribute to environmental stress cracking of polycarbonate.

H. Install protection materials in a manner that will not trap harmful moisture or otherwise contaminate the Work in any way.

I. Remove and replace any portion of the windows that has been damaged by other trades. Remove rejected or damaged material promptly from the site.

1. Re-glaze all damaged units per manufacturer's instructions. Install manufacturer provided set screws, 4 per window unit prior to removal of the glazing. Set screws shall be standard socket flat point, ISO 4026, DIN 913. After glass is replaced remove set screws and reinstall all permanent frame anchoring bolts in their original positions.

J. Acceptance of the completed installation of the windows requires the installation be sound, watertight and free from defects of materials and workmanship.

K. Immediately prior to completion of the Work, completely clean the entirety of all windows as follows:

1. Clean all components of the Work as per the recommendations of the specific product manufacturer.
2. Clean the windows from the top most levels down in order to avoid staining of cleaned surfaces from cleaning solution residue and run-off.
3. Clean glass with approved glass cleaning solutions only and ensure that cleaning solution is completely removed from the surface after cleaning. Do not clean glass when it is exposed to direct sunlight.

END OF SECTION 085652

Certificate of Compliance

Aluminum Security Teller Window Assemblies
Teller Window Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

	DESCRIPTION – TRAINING & OTHER DUTIES OF TECHNICAL REPRESENTATIVE	
1	The manufacturer's technical representative was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security teller windows has received training. See requirements for this representative in the Part 1 Article on QUALITY ASSURANCE.	**Representatives Name/Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Employees performing the installation meet the specified training and experience qualifications.		
3	Each sub-frame has been installed level, plumb and square.		
4	All sub-frame assemblies shall be factory welded together. Any large sections that exceed the limits of a standard shipping container shall be clearly identified for field welds.		
5	All units have been pre-glazed at the factory.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
6	All temporary fasteners have been replaced with permanent fasteners.		
7	All frame fasteners and threaded openings in subframe have been cleaned of all oil and debris, and have been dry-torqued to meet the manufacturer's specifications. Shims have been inserted at all bolt locations, minimum 1 shim per bolt and maximum as tested condition.		
8	Frame bolts/screws are as shown on the approved shop drawings.		
9	Finish materials do not overlap the window frame/sub-frame or shim space and ballistic trim bars in such a way that the window cannot be re-glazed unless the surrounding finishes and trim are demolished; unless the finish materials can be easily removed and reinstalled. All overlapping finish work (i.e. metal, wood, stone, etc.) can be removed without damaging the window and finish.		
10	Any cladding that covers window glazing stops (angles or tubes) is attached to the frames with hidden fasteners or snap on covers for easy removal.		
11	Any cladding that covers the frame bolt/screw access holes has either access holes with cap plugs or is attached with screws for easy removal. Cap plugs and cladding for each window have been bagged and won't be installed until after the final QA inspection has been conducted by the OBO/CFSM/SMSCD/SEB representative.		
12	Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.		
13	Ballistic trim bars have been secured/screwed to the sub-frame and not the window frame		
14	Ballistic trim bars have been installed tight against the window frame, or sill flashing, and gap shall not exceed 2 mm or as tested by the manufacturer.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
15	Maximum gap at shim space shall be no more than then the tested and DS certified assembly, except as noted in the requirements for "Window Flashings" within the Part 3 Article on INSTALLATION.		
16	The manufacturer has provided two metal ID plates for each product that has machine applied letters and numbers (see Part 1 Article on IDENTIFICATION SYSTEMS below).		
17	Deal Tray: Ensure deal tray cover is installed. Ensure no sharp edges.		
18	Deal Drawer: Ensure drawer opens and closes without binding or scraping. Ensure not sharp edges.		
19	Inspect glazing for distortion, defects and/or damage. Defective units, including spall liner damage, do not meet DS certification requirements and must be replaced.

SECTION 087135 – NON-SECURITY DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Commercial door hardware other than those included in Security Door Hardware sets.

B. Related Sections:

1. Section 081115 “Hollow Metal Doors and Frames.”
2. Section 081415 “Flush Wood Doors.”
3. Section 087155 “Security Door Hardware” for sets that have been certified by Bureau of Diplomatic Security (DS) and for key management system requirements
4. Division 26 sections for power for electrically operated hardware devices.

1.2 SUBMITTALS

A. Product Data: Submit three copies of catalog cuts of all items used in supplier's schedule.

B. Hardware Schedules: Based upon hardware indicated, organize hardware schedule into groups or sets showing complete designations of every item required for each door opening. Schedule shall be vertical layout. Lines shall be double-spaced with pages numbered and dated. Hardware Sets shall be listed as HW-101, HW-102, etc. with specific function.

1. For doors of different sizes or where hinges, locks or closers are different, a separate heading shall be used. Do not combine labeled openings with non-labeled openings. Horizontal hardware schedules are not acceptable. Include the following:

a. Number, location, hand, fire rating, size and material of each door opening (hands and swings to be determined in relation to key side of opening).
b. Type, style, function, size, finish and quantity of each hardware item.
c. Name and manufacturer of each item.
d. Fastening requirements.
e. Explanation of abbreviations used.
f. Keying information.
g. Wiring diagrams (after each corresponding hardware group).

C. Hardware Schedule Index: Furnish index cross referencing Contract Document door number and hardware group, and supplier's hardware set. Identify in index the page number in submittal where door is shown.

D. Keying Schedule: Submit separate detailed schedule, indicating Government's approved master key system, for Government review and approval after Hardware Schedule has been approved. Keying schedule shall use same numerical order as door schedule and include a column that cross references door numbers in design drawings with final room numbers from signage schedule. Key schedule shall list every door, whether they are keyed or not. Prepare the Key Schedule using Microsoft Excel and submit in electronic formats. Keying information can be sensitive; at no time shall keying schedule be combined with both project number and any form of city/country/location (including abbreviations and airport codes). Do not include city/country/location name fully or abbreviated in the schedule, as a file name, or in the P.O. of the schedule; the schedule shall be identified by the project number only). Key Schedule shall include the following information:

TABLE 1.2
REGISTRY GROUP

Door Number	Final Room Number (Coordinate with signage schedule so that keys for individual doors are properly coordinated with actual room numbers)	Room Description. Indicate From Room to Room.	Key ID Number	Quantity				HW Set	Notes
				Cores	Change Keys	Control Keys	Master Keys		

E. Wiring Diagrams: Furnish wiring diagrams illustrating point-to-point hook-up of all electrical hardware specified herein. Include fire alarm and/or access control system interface where applicable. Diagrams shall be complete by opening and shall indicate connections between all components affected. Manufacturers' standard line diagrams are not acceptable.

F. Shop Drawings:

1. Stand-Alone Key Cabinets: Include partial plans, partial elevations, wall sections, details, and attachments to other work. Indicate required clearances, method of field assembly, components, and location and size of each field connection. Indicate weight capacity of cabinet, and indicate organization method of keys.

G. Seismic Calculations: Where seismic stability is required by OBO adopted code provisions, submit calculations showing ability of door systems to withstand pertinent seismic forces.

H. Samples: If requested by Project Director/COR, submit one sample of each requested item tagged with full description for coordination with hardware schedule. These items will remain on file in Project Director/COR's office until all other similar items have been installed in project. At that time, items on file will be released for installation in pre-determined Project locations.

I. Installation Certification: After completion of hardware installation, submit written certification attesting that hardware has been installed in accordance with manufacturer's templates and instructions and that hardware has not been altered.

J. Operating Instructions: Furnish Government with one complete set of installation instructions, including special adjusting tools and maintenance instructions listing routine maintenance procedures, possible breakdowns and repairs, and troubleshooting guides. Furnish one complete catalog for each manufacturer listed in approved hardware schedule.

K. Templates: Furnish templates and approved hardware schedule to door and frame fabricators. Where fabricator cannot work to paper templates, ship templates and/or physical hardware to factories of respective manufacturers. Prepay cost for shipping and delivery.

L. Informational Submittals: Submit the following:

1. Certifications as required in Article on QUALITY ASSURANCE.
2. Qualifications Data: Hardware Suppliers Qualification data.

M. Closeout Submittals: Submit specified warranty in accordance with Division 01 requirements.

1.3 QUALITY ASSURANCE

A. General Requirements: Hardware has been specified by manufacturer's name, brand and catalog numbers for purpose of establishing basis for quality, design and operational function.

1. Except where specifically indicated otherwise (i.e., LCN, Von Duprin - no substitution), equivalent products from other listed manufacturers are also acceptable.
2. Provide designated product, or where more than one product or manufacturer is listed, provide equivalent product of one of other listed manufacturers.
3. Obtain each type of hardware from single manufacturer.
4. Hardware Sets within this Section are not complete with respect to thickness of doors, hand, backset, method of fastening, and other detail requirements.
5. Review Drawings and Door Schedules thoroughly and provide required hardware for all openings, including openings that may have been inadvertently omitted from Door Schedules.

6. Should opening be omitted or opening not indicated with hardware set, provide hardware of same quality, design and function as specified for similar openings.
7. Furnish hardware complete with brackets, plates, fittings, fastenings and other accessories required for installation.

B. Regulatory Requirements:

1. Comply with requirements of Chapter 11 of the OBO Building Code as applicable to accommodate barrier free design.
2. Provide knurled tactile warning on door hardware to hazardous areas; abrasive coating not acceptable.
3. Comply with NFPA 80 for hardware at fire-rated assemblies.
4. Provide hardware that has been tested and listed by UL or FM for fire-rated assemblies of types that comply with requirements of door and frame labels.

C. Hardware Supplier Qualifications: Door hardware supplier who has been furnishing hardware for period of not less than five years, and who is, or who employs an Architectural Hardware Consultant (AHC), who has facility clearance, and who will be available at reasonable times during course of Work for consultation about Project's hardware requirements.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Pack each hardware item separately. Include manufacturer's printed installation instructions, trim, fasteners accessories, and special tools necessary for installation.

B. Legibly mark and adequately label each package indicating opening for which intended. Provide markings corresponding with approved Hardware Schedule.

C. Deliver permanent security cores and keys as indicated in Keying section, not less than two months prior to scheduled substantial completion.

PART 2 - PRODUCTS

2.1 HINGES

A. Acceptable Manufacturers:

1. Bommer Industries.
2. Hager Companies.
3. McKinney.
4. Stanley Hardware.

B. Butt Hinges: Five knuckle design with square corners.

1. Full mortise type. (Heavyweight, Stainless Steel - ANSI A5111).
2. Flat button tip and matching plug.
3. Non-removable pins for out-swing exterior doors and for interior reverse bevel doors equipped with locking; safety stud is not acceptable**.** Non-rising pin for other doors.
4. Non-ferrous construction at all locations (interior and exterior).
5. Anti-friction bearings may be furnished in lieu of ball bearings, except where prohibited on fire doors by the requirements of NFPA 80.

C. Minimum Number Hinges:

1. Furnish two hinges for doors 1520 mm (60 inches) or less in height and one additional hinge for each additional 760 mm (30 inches) of height or fraction thereof.

D. Minimum Size:

1. Unless otherwise specified, hinges for doors through 914 mm (36-inches) wide shall be 115 by 115 mm (4-1/2 by 4-1/2 inch); hinges for doors over 914 mm (36-inches) wide shall be 127 by 115 mm (5 by 4-1/2 inch).

2.2 MECHANICAL LOCKS, LATCHES, AND DEADLOCKS

A. Acceptable Manufacturers:

1. Corbin Russwin Architectural Hardware. (no substitutions).

B. Description: Mortise locks and latches shall be equal to Corbin Russwin ML2200 Series with NSM trim.

1. Levers shall be cast or solid metal.
2. All internal working parts of the lock shall be brass bronze, steel or stainless steel.
3. For each lock and latch set, provide strike box and square corner ASA strike with curved lips of sufficient length to protect frames.

2.3 PUSHBUTTON LOCKS

A. Application: See parameters chart at end of specification section.

B. Acceptable Manufacturers:

1. Simplex Access Controls: KABA Simplex L1021C-26D-41, prepared for Corbin Russwin cores (no substitutions).

C. Trim: Furnish units complete with lever handle trim and ASA strikes.

1. Finish matching lock.

D. Strike: ASA 124 mm (4-7/8-inches)

1. Equip with wrought box.
2. Finish matching lock.

2.4 EXIT DEVICES AND EXIT DEVICE ACCESSORIES

A. Acceptable Manufacturers: No Substitutions:

1. Von Duprin, Inc.

B. Description:

1. Use Von Duprin 99-series devices.
2. Devices shall use lever operation except for Exit Only applications (and associated door side).

2.5 CYLINDERS AND CORES

A. Provide cylinders for locks, deadlocks, and other control and locking devices.

B. Doors:

1. Acceptable Manufacturer:

a. Corbin Russwin Architectural Hardware (no substitutions).
b. Use of Medeco cylinders is not permitted for non-security hardware sets at buildings; see Section 087155 “Security Hardware” for use of Medeco cylinders at buildings.
c. The use of restricted or reserved keyways is prohibited. If established, the use of a Department of State reserved keyway is allowed.

2. Description:

a. Cylinders shall be minimum six-pin keyway with large format interchangeable cores. Small format interchangeable cores are prohibited.
b. Equip cylinders with temporary construction core for use during construction.

3. Description:

a. Original high security cylinder with interchangeable core. Provide six-pin commercial keyway.
b. Equip cylinders with temporary construction core for use during construction.

C. Hardware for Wire Mesh Partitions (e.g., separating tenant storage in Warehouse): Corbin Russwin 4011 cylinder outside, blank inside; all other hardware by wire mesh partition manufacturer.

D. Permanent Cores: Contractor shall use only OBO project numbers for transmitting permanent locks. Do not identify by project name or location. Refer to Article on KEYING.

2.6 CLOSERS

A. Manufacturers: Basis of Design:

1. LCN 4040XP Series Closers

B. Features required for all closers:

1. Closers shall comply with ANSI/BHMI A156.4-2024 Grade 1
2. Manufacturer's standard cast iron construction.
3. Rack and pinion construction with compression spring, fully hydraulic.
4. Closing speed and latching speed controlled by independent valves.
5. Adjustable spring power allowing adjustment up to 50 percent in field to suit individual door conditions.
6. Adjustable hydraulic backcheck.
7. Furnish with necessary arms, track, brackets, plates, shoe, and other accessories to suit door and frame conditions.

C. Additional features specific to individual doors:

1. Provide non-sized, surface, or concealed mounted as scheduled, or as otherwise appropriate for each door.
2. Parallel Arm Closers: Where parallel arm closers are required, furnish manufacturer's extra-heavy duty arm.
3. Surface Closers: Provide manufacturer's standard non-metallic cover. Locate on the least conspicuous side of the door (side opposite public view).
4. Built-In Stops: Where door closers are used, and wall stops are not suitable, provide closer arms with built-in stops.
5. Hold open and dead stop features as scheduled or as otherwise appropriate for individual doors.
6. Provide manufacturer’s special rust inhibiting finish on closers exposed to elements.

2.7 AUXILIARY HARDWARE

A. Acceptable Manufacturers:

1. Hager Companies.
2. Ives.
3. Rockwood Manufacturing Co., Inc.
4. Triangle Brass Manufacturing Co., Inc.

B. Manual Flush Bolts: Top manual flush bolt shall not exceed 1880 mm (74-inches) from floor to centerline.

C. Wall Stops: Furnish wall stops wherever trim strikes wall.

1. Basis of Design: Rockwood 400.
2. Where wall stops are not suitable, see Article on OVERHEAD STOPS AND HOLDERS.
3. Where door closers are used, and wall stops are not suitable, provide closer arms with built-in stops; see Article on CLOSERS.

D. Silencers: Furnish rubber silencers for hollow metal frames; three per single door and four per pair. Silencers are not required at doors specified to receive continuous weather-stripping or seals.

1. Basis of Design: Rockwood 6008.

2.8 ARCHITECTURAL DOOR TRIM

A. Acceptable Manufacturers:

1. Builder's Brass Works Corp.
2. Hager Companies.
3. Rockwood Manufacturing Co.
4. Triangle Brass Manufacturing Co.

B. Protection Plates: Kick and armor plates shall be beveled on all sides, equal to Hager Companies 194S Series.

1. Size: Unless otherwise indicated or where narrow bottom rails dictate smaller size, kick plates shall be 250 mm (10-inches) high and armor plates shall be 865 mm (34-inches) high by 400 mm (16-inches) high on fire rated doors. Width shall be 40 mm (1-1/2-inches) less than the door width on single doors and 25 mm (1-inch) less than door width on double doors.
2. Factory-prepare flat goods for conflicting hardware (e.g. lever handles, cylinders, turn pieces, etc.) as required.

C. Push and pull plates shall be 150 mm by 400 mm (6 by 16 inches).

D. Fasteners: Flat goods shall be furnished with Phillips undercut, countersunk screws per ANSI A156.6. Trusshead screws are not acceptable.

2.9 OVERHEAD STOPS AND HOLDERS

A. Acceptable Manufacturers:

1. Architectural Builders Hardware.
2. *Glynn-Johnson.
3. Rixson.

B. Where wall stops will not work, furnish surface overhead stops.

1. Basis of Design: Glynn-Johnson 450 Series.

C. In hardware sets where door closers are scheduled, provide closer arms with built-in stops; see Article on CLOSERS.

2.10 THRESHOLDS, ASTRAGALS, WEATHER-STRIPPING, AND SMOKE SEALS

A. Acceptable Manufacturers:

1. Hager Companies.
2. National Guard Products.
3. Pemko.
4. Reese Enterprises.
5. Zero International.

B. Threshholds: Where required, field modify thresholds to accept strikes for flush bolts and exit device rods.

1. Basis of Design: Pemko 2005AT for accessible door with exit device.

C. Astragals: Astragals shall be full height, installed on "threat" side of opening.

1. Basis of Design (selected for application): Pemko 357, Pemko 18041.

D. Weatherstripping:

1. Basis of Design: Pemko 332CR.

E. Smoke Seals: Where required by OBO adopted model code, at doors located in Smoke Barrier Partitions, provide smoke seals, and coordinate Drawings and associated schedules. Basis of Design as follows:

1. Single Doors: Pemko S88 at head and jambs.
2. Pairs of Doors: One Pemko 375CR or two Pemko 303AS astragal seals as appropriate.

2.11 GENERAL SOUND PROTECTION

A. Provide full door gasketing/acoustical seals and automatic door bottoms where required in OBO Building Code Chapter 12 for sound protection.

B. Basis of Design:

1. Sound Seals: Pemko S88.
2. Automatic Door Bottom: Pemko 430CMPKL.

2.12 ACCESSORIES

A. Door Coat and Hat Hook: Provide cast aluminum, double prong hooks on inside face of all toilet rooms; ANSI/BHMA A156.16, L33113.

1. Basis of Design: Ives Model No. 405 wide body design.

B. Door Coat and Hat Hook: Provide polished chrome double prong hook on inside face of all private office doors; ANSI/BHMA A156.16, L33113.

1. Basis of Design: Mockett Model CH11 Longhorn Coat Hook.

2.13 KEY CONTROL SYSTEM

A. Stand-Alone Key Cabinets: Provide Global Industries Steelmaster Unitag 200 key (2019200D03) wall-mounted non-recessed key cabinet with dual control system including envelopes, labels, tags with self-locking clips, receipt forms, three-way visible card index, temporary markers, and permanent markers. And metal cabinet. Equip cabinet with pin tumbler locking mechanism.

1. General Services Office (GSO): Provide capacity for storing **[200]** key sets.
2. Facility Management (FM) Office: Provide capacity for storing **[100]** keys.

2.14 KEYING

A. Development of keying schedule may require facility clearance to access complete room schedule where classified access controls are involved. In these cases, handle documents in accordance with Industrial Security Act.

B. Reference and mark keying schedules using only OBO project number.

C. The following is Government recommended keying plan for NON-SECURE DOOR OPENINGS:

1. No keying should be done to a master key or grand master key system. To explain this requirement, no one MASTER KEY should operate a complete building or no one GRAND MASTER KEY should operate a group of buildings at post or site.
2. Buildings should be Master Keyed by floor.
3. Each of the following individual areas can utilize KEYED-ALIKE SETS and be passed by floor master (e.g., all of Mechanical Rooms from basement to penthouse should be keyed alike to a set, and be passed by individual floor Master Key):

    a. Mechanical Rooms.
    b. Electrical Rooms.
    c. Janitor Closets.
    d. Toilet Rooms.
    e. Telephone Rooms.
    f. Stair Wells.
    g. Kitchen Areas.

4. This system allows roving marine, who is carrying each of Floor Master Keys, access to any of these rooms on each floor.
5. Authorized personnel for any of individual keyed alike-set area carrying their keyed-alike set key should be able to open their area on any floor, and not open any other area. No other area keyed-alike set key should open any other area.
6. Tenant Areas should utilize keyed different sets and be passed by floor master.
7. Special storage areas and cashiers offices should be single keyed different (SKD), with no master key. This protects integrity of persons who have responsibility of these type areas.
8. Single office space shall be keyed different and passed by floor master key. If there is more than one entrance door into an office, these doors should be keyed alike, and passed by floor master key.

D. Project Director/COR, General Contractor, and post representative identified by Regional Security Officer (RSO) or Post Security Officer (PSO) shall meet to determine if there are any special keying conditions required so they may be incorporated into keying schedule.

E. Key Quantities : Furnish plain bow keys of nickel silver material in the following quantities:

1. For each master key system, provide:

    a. Two master keys.
    b. Two control keys (pinned to the master).
    c. Two operating keys per cylinder change.

2. For each individually keyed cylinder, provide:

    a. Two control keys.
    b. Two operating keys per keyed cylinder.

3. For each construction key system, provide:

a. Two control keys.
b. Eight master keys.

F. Identification and Control

1. Identify master keys with registry number; do not stamp with “master key,” letter “M,” or similar identification; manufacturer's trademark or identification not allowed.
2. Stamp master keys with DO NOT DUPLICATE.
3. Furnish visual controls system; coordinate provisions with Government. Stamp or emboss keys and cylinders with identification code.

G. Delivery of Cores, Keys and Cylinders:

1. Deliver construction cores, construction master keys, and construction key to the U.S. Department of State at the following address:

Diplomatic Security Lock Program
5800 Barclay Drive, Suite 5
Alexandria, VA 22315

2. Permanent cores, operating keys, and permanent control keys shall be individually packaged by door, identified by lock. Contact Project Director/COR to identify U.S. Government location for receiving shipment of these items from supplier via prepaid freight.
3. Clearly mark shipping boxes with OBO Project and Purchase Order numbers only. Pinning, bitting and keying schedules are required for all prepared systems.
4. After removal of temporary construction cores, ship construction cores, construction keys, and construction control keys to address above.

H. Delivery of Keying, Pinning, and Bitting Schedules

1. Keying, Pinning, and bitting schedules shall be provided for all non-security door hardware to:

Diplomatic Security Lock Program
5800 Barclay Drive, Suite 5
Alexandria, VA 22315

2.15 FINISHES

A. Base Metals: Produce hardware units of basic metal and forming method indicated, using manufacturers' standard metal alloy of composition, temper and hardness, but in no case of lesser quality than specified or inferred by use of particular manufacturer's number, style or grade or as established by appropriate referenced specification listed herein.

B. Finishes: Finishes shall conform to quality of finish including thickness of plating or coating (if any), composition, hardness and other qualities complying with manufacturers' standards, but in no case less than standards established by ANSI/BHMA A156.18.

1. All exposed hardware except door closers shall be satin stainless steel, ANSI/BHMA 630/US32D. Hinges shall be satin stainless steel.
2. Furnish items not available in stainless steel with satin chrome finish, ANSI/BHMA 626/US26D.
3. Paint closers, astragals, and brackets to match satin stainless steel.
4. Match non-security hardware finish with security hardware finish in Section 087155 “Security Door Hardware” to maximum extent possible.

C. Prime Coated Items: Field paint in accordance with Division 09 painting sections.

2.16 FASTENERS

A. Manufacture hardware shall conform to published templates, generally prepared for machine screw installation. Do not provide hardware that has been prepared for self-tapping or sheet metal screws except as specifically indicated.

1. Furnish screws for installation with each hardware item. Provide Phillips flat head or oval head screws except as otherwise indicated. Finish exposed (exposed under any condition) screws to match the hardware finish or, if exposed in surfaces of other work, to match finish of such work as closely as possible, except as otherwise indicated.
2. Provide concealed fasteners for hardware units that are exposed when the door is closed, except to extent no standard manufactured units of type specified are available with concealed fasteners.
3. Do not use through bolts for installation except where it is not possible to adequately reinforce work, to accept machine screws or concealed fasteners or other standard type, to satisfactory avoid use of through bolts. Grommet nuts and cealnuts are not acceptable.

B. Furnish fasteners that are compatible with both units fastened and substrates, and which will not cause corrosion or deterioration of hardware, base material reinforcement, or fastener. Furnish wall stops with expansion anchors and machine screws. Furnish thresholds with lead anchors and 1/4-20 stainless steel machine screws.

2.17 ACCESSORIES

A. Door Coat and Hat Hook: Provide cast aluminum, double prong hooks on inside face of all private office doors and toilet rooms; Ives Model No. 405 wide body design (ANSI/BHMA A156.16, L33113).

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions doors and frames, with Installer present, for compliance with requirements for installation tolerances, labeled fire-rated door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified door hardware installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install hardware plumb, level, and true to line in accordance with manufacturer's templates, and Project conditions.

1. Install fire rated hardware in accordance with NFPA 80.
2. Where cutting and fitting is required on substrates to be field painted or similarly finished, install, fit, remove and store hardware prior to finishing. Reinstall hardware after finishing operations are completed.
3. Do not install surface mounted items until finishes have been completed on the substrate.
4. Reinforce attachment substrates as necessary for installation and operation.
5. For substrates which are not factory prepared for hardware:
6. Mortise work to correct size and location without gouging, splintering or causing irregularities in exposed finish work.
7. Fit faces of mortised components snug and flush without excessive clearance.
8. Set thresholds at exterior doors in bed of sealant. Remove excess sealant.

B. Hardware Mounting Heights: Mount hardware units at heights recommended by DHI (see "Recommended Locations for Builders Hardware") on custom doors except as otherwise indicated or required to comply with governing regulations, and except as otherwise indicated.

C. Cylinder Cores: When instructed, Contractor shall remove temporary construction cores. Permanent cores will be installed by Government. Refer to Article on KEYING for requirements, after installation of permanent cores, regarding shipment of construction cores, operating keys, and control keys.

D. Power-Assist Operators: Where post mounted actuator buttons are indicated, run signal wire below grade in conduit complying with requirements in Division 26 sections. Run pneumatic lines between pumps and door operators concealed. At curtain walls, run pneumatic lines concealed in metal trays finished to match curtain wall.

E. Stand-Alone Key Control Cabinets: Surface mount units on wall.

3.3 ADJUSTING

A. Check and adjust each operating hardware item to ensure correct operation and function.

1. As applicable, adjust hardware to comply with accessibility requirements of Chapter 11 of the OBO Building Code for operating time and maximum opening force.
2. Ensure weather-stripping and seals do not inhibit closing and positive latching of door.
3. Lubricate moving or operating components as recommended by hardware manufacturer. Use graphite type lubrication if none other is recommended.
4. Replace defective materials or units that cannot be adjusted to operate as intended. Reinstall items found improperly installed.
5. Prior to date of Substantial Completion, readjust and reapply lubricant to hardware items as necessary.

3.4 DEMONSTRATION

A. Instruct Government's designated personnel in proper adjustment and maintenance of hardware at time of Substantial Completion.

1. In presence of Government's representative, demonstrate that keys operate freely in designated unit.
2. Hardware supplier: Completely set-up key control system for hardware associated with the Section, with keys tagged and placed in cabinet, cross index system executed with appropriate information typed in on index cards. Instruct Government's designated personnel in proper use of system.

3.5 HARDWARE SETS

QUAN.	ITEM	BASIS OF DESIGN	NOTES	FIN.
HW-101 – (Insert Lock Function (e.g. Passage, Privacy, Storeroom) next to Set I.D.)				
	Hinges	FBB199		630
1	Latch	ML2010	NSM	630
1	Closer	4041		689
1	Kick Plate	194S		630
1	Stop	A/R		626

END OF SECTION 087135

ILLUSTRATIVE PARAMETERS FOR LOCK FUNCTIONS
IN NON-SECURITY HARDWARE SETS

The following lists are partial and illustrative, and address door function only for non-security hardware sets. These functions and the functions for other doors shall be confirmed/identified with input from OBO. For security hardware sets (SHW), see OBO standard specification section 087155.

SECTION 087155 - SECURITY DOOR HARDWARE

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes door hardware associated with security door hardware sets that have been certified by the Bureau of Diplomatic Security (DS).

B. Related Sections

1. Section 013305 “Construction Submittals.”
2. Section 017825 “Operation and Maintenance Data” for digital format requirements.
3. Section 083454 “FE/BR Door Assemblies.”
4. Division 08 Section for other openings and frames were identified as using security door hardware in schedule(s) within Construction Documents.
5. Section 087135 “Non-Security Door Hardware.”
6. Division 26 and 28 for electronic security and power for electrically operated hardware devices.
7. Section 337105 “Underground Ducts and Raceways” for manhole/handhole lock requirements.

1.2 SUBMITTALS

A. General: Submit in accordance with Division 01 requirements.

1. All submittals under this Section shall be submitted as PDF’s conforming to the Digital Formatting requirements of Section 017825 “Operation and Maintenance Data,” except as noted. Refer to “Adobe XI Pro Accessibility Guide” from Adobe Systems Inc. for implementation guidance of PDF.

   a. The Binder PDF shall be “Bookmarked” to identify each different “Submittal Types” within the “Binder” PDF, and to identify sub-divisions within respective Submittal Types
   b. Appropriate “Shop Drawing (SDx)” submittals shall contain “Bookmarks” and “Hyperlinks” that easily provide access to “Product Data (PDx)” and other “Submittal Types”, within the “Binder” PDF.
   c. Failure to provide a “Binder” PDF containing “Bookmarks” and “Hyperlinks” shall be basis for rejecting submittals requiring concurrent submittal reviews.
   d. Contractor shall also use “Reduced Size” saving process when finalizing the PDF for submission. This has the following advantages:

      1) Minimizes the ProjNet upload and download time
      2) Maximizes navigation performance within the document.
      3) Minimizes the document size for hard drive storage.

B. Product Data: Submittals (PDx format):

1. Manufacturer's Catalog Data (PD1): This submittal shall be major part of a concurrent review with Standard Color Charts (PD2), appropriate Shop Drawing (SDx) submittals listed below.
2. Submit original PDF files downloaded from the vendor websites, to include the following: catalog cuts; brochures; construction and installation details; material descriptions, dimensions of individual components, profiles; finishes; Submit copies of catalog cuts of all items used in the supplier's schedule in PDF format; submittals of scans are not acceptable.
3. Include construction and installation details, material descriptions, dimensions of individual components and profiles, and finishes.

C. Shop Drawings: For power door operators. Include plans, elevations, sections, details, and attachments to other work.

1. Indicate required clearances, method of field assembly, components, and location and size of each field connection.
2. Include locations and elevations of entrances showing activation and safety devices.
3. Key Control Accessories: Include plans, elevations, sections, details, and attachments to other work. Indicate required clearances, method of field assembly, components, and location and size of each field connection. Include weight capacity of drawer and indicate organization method of keys.

D. Hardware Schedules: Based on hardware indicated, organize hardware schedule into groups or sets showing complete designations of every item required for each door opening. Schedule shall be vertical layout similar to format used herein. Lines shall be double-spaced with pages numbered and dated; Security Hardware Sets shall be listed as SHW-1, SHW-2, etc. Hardware schedules shall be submitted as a complete schedule for entire project and shall include forced entry rated door and non-forced entry rated doors and all outbuildings, except for projects with multiple office buildings or phases, as noted in the Part 2 Article on KEYING.

1. For doors of different sizes or where hinges, locks or closers are different, a separate heading shall be used. No labeled openings shall be combined with non-labeled openings. Horizontal hardware schedules are not acceptable. Include the following:

   a. Number, location, hand, fire rating, DOS Code, size and material of each door opening (hands and swings to be determined in relation to key side of opening).
   b. Type, style, function, size, finish and quantity of each hardware item.
   c. Name and manufacturer of each item.
   d. Fastening requirements.
   e. Explanation of abbreviations used.
   f. Keying information.

E. Hardware Schedule Index: Furnish an index cross referencing Contract Document door number and hardware group, and supplier's hardware set.

F. Keying Schedule: With the Security Hardware Schedule submit a separate detailed keying schedule conforming to the Government's approved Master Key System for Government review and approval. Entire permanent Medeco (SHW) keying system must be created and procured by a single vendor for the Project. Prepare the Key Schedule using Microsoft Excel and submit in electronic formats. Keying information can be sensitive; at no time shall keying schedule be combined with both project number and any form of city/country/location (including abbreviations and airport codes). Do not include city/country/location name fully or abbreviated in the schedule, as a file name, or in the P.O. of the schedule; the schedule shall be identified by the project number only). Key Schedule shall include the following information:

1. Cover page entitled "Keying Schedule, Section 087145 " with the following information: OBO Project Number (do not include city/country/location name); List of buildings included in the schedule identified by building type (i.e. Utility Building, New Office Building, etc.); General Contractor's Name, address, and phone number; Supplier's name, address and phone number; DS/FSE/TDB (DS Lock Support) complete address; Date of issue; Revision Number; Name, email address, and phone number of the person who drafted the schedule; Purchase Order (PO) or other Contract number.
2. Page two shall include General Information, table of contents that identifies all buildings, previous completed phases, Excel Workbook tabs, OBO Project Number as shown on the Cover page, and OBO Criteria year applicable to project. Each subsequent page shall also have the page number, number of total pages and the OBO project number.
3. Key Schedule spreadsheets shall include the OBO Project Number as shown on the Cover page and shall be organized and subdivided by "Registry Group" type (e.g., Chancery DOSC and DOSN, Annex1 DOSC and DOSN, Annex3 DOSN, Compound DOSN 32 series). Actual Registry numbers shall be generated by Medeco. Refer to Table 1.2 "Registry Group."
4. Spreadsheets shall be divided into Subsets by the Categories described in the Part 2 Article on KEYING (e.g., Exterior FEBR, Interior FEBR, Telecom, CAA, SKD, Roof, refer to the Part 2 Article on KEYING for categories) and shall include the following information for each key:

TABLE 1.2
REGISTRY GROUP
(e.g., Chancery DOSC and DOSN, Annex1 DOSC and DOSN, Annex2 DOSC and DOSN, Annex3 -DOSN, Compound -DOSN):

Door Number	Room Description (e.g., Lobby, telecon, RSO office; except where classifications standards do not	From Room to Room (use room number)	Key ID Number	Quantity				SHW Set	Notes
				Cores	Change Keys	Control Keys	Master Keys		

	allow labeling, in that case no room descriptions shall be provided)								

5. Provide project specific SHW hardware set description for each SHW set. Include set descriptions for all hardware for the FE and FE/BR and non-rated SHW doors and all modifications.

G. Samples: If requested by Project Director/COR, submit one sample of each requested item tagged with full description for coordination with the hardware schedule. These items will remain on file in the Project Director/COR's office until all other similar items have been installed in the project. At that time, items on file will be released for installation in pre-determined Project locations.

H. Operating Instructions: Furnish the Government with one complete set of installation instructions, including special adjusting tools and maintenance instructions listing routine maintenance procedures, possible breakdowns, and repairs, and troubleshooting guides. One complete catalog shall be furnished for each manufacturer listed in the approved hardware schedule.

I. Templates: Furnish templates and approved hardware schedule to door and frame fabricators. Where fabricator cannot work to paper templates, ship templates and or physical hardware to factories of respective manufacturers. Prepay cost for shipping and delivery.

J. Informational Submittals: Submit the following:

1. Certifications specified in the Part 1 Article on QUALITY ASSURANCE.
2. Qualifications Data: Hardware Suppliers Qualification data.

K. Closeout Submittals: Submit specified warranty in accordance with Division 01 requirements.

L. Certification: After completion of hardware installation, submit written certification attesting that hardware has been installed in accordance with manufacturer's templates and instructions and that hardware has not been altered.

1.3 QUALITY ASSURANCE

A. General Requirements: Hardware has been specified by manufacturer's name, brand and catalog numbers for purpose of establishing basis for quality, design and operational function.

1. Provide designated product, or where more than one product or manufacturer is listed, provide equivalent product of one of other listed manufacturers.
2. Obtain each type of hardware from single manufacturer.
3. Hardware Sets within this Section are not complete with respect to thickness of doors, hand, backset, method of fastening, and other detail requirements.

4. Review Drawings and Door Schedules thoroughly and provide required hardware for all openings, including openings that may have been inadvertently omitted from Door Schedules.
5. Should opening be omitted or opening not indicated with hardware set, provide hardware of same quality, design and function as specified for similar openings.
6. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
7. Furnish hardware complete with brackets, plates, fittings, fastenings, and other accessories required for installation.

B. Regulatory Requirements:

1. Comply with Architectural Barriers Act (ABA) in accordance with Chapter 11 of the OBO Building Code to accommodate barrier free design except where specifically indicated by the Government.
2. Provide knurled tactile warning on door hardware to hazardous areas, abrasive coating not acceptable.
3. Comply with NFPA 80 for hardware at fire-rated assemblies.
4. Provide hardware that has been tested and listed by UL or FM for fire-rated assemblies of types that comply with requirements of door and frame labels.
5. Comply with NFPA 70 (model National Electrical Code) requirements for personnel doors to protect workers in applicable electrical spaces.
6. Latches and Locks for Means of Egress Doors (Except where Specifically Indicated Otherwise): Comply with NFPA 101. Latches shall not require more than 67 N (15 lbf) to release the latch. Locks shall not require use of a key, tool, or special knowledge for operation.
7. Electrical Components, Devices, and Accessories: Listed and labeled as defined in accordance with Chapter 1 of the OBO Electrical Code (NFPA 70 “National Electrical Code” as amended by OBO) by testing agency acceptable to Project Director/COR based upon input from OBO/PDCS/DE/EE, and marked for intended location and application.

C. Hardware Supplier Qualifications: Door hardware supplier who has been furnishing hardware for a period of not less than two years, and who is, or who employs an Architectural Hardware Consultant (AHC) who will be available at reasonable times during the course of Work for consultation about Project's hardware requirements.

D. Installer Qualification Data for Locks that Utilize a 3-Position Spin Dial or GSA Approved Locks in Accordance with Federal Specifications FF-L-2740 (Locks, Combination, Electromechanical) FF-L-2937 (Combination Lock, Mechanical) or FF-L-2890 Lock Extensions):

1. Submit resumes and training certificates of all installers (present and responsible for each install) documenting that installer has installed GSA approved locks within last three years. Resume shall include at least three references (including contract information) that can provide verification that installer has expertise required to perform successful installation. Installer's qualifications require approval by the Office of Overseas Buildings Operations, Construction Facilities Security Management, Security Management, Security Countermeasures Division, Security Engineering Branch (OBO/CFSM/SM/SCD/SEB) and/or FE/BR Program, and the Project Director/COR. Each installer of the installation

team shall be certified by the manufacturer, certified security industry training institute, or certified by US Government training, as being capable of properly installing the locks. As part of the on-site or factory installation, the Contractor shall provide written documentation to the Project Director/COR that the installer is certified in each specific GSA approved lock installation. Certification to be on the lock manufactures letter head, or USG letterhead and indicate dates of training and what products they are certified to install. Certification is required for each type of lock product (i.e. certification training for installation of a Kaba Mas X-10, does not qualify an individual for the CD-X10 or the S&G2890 series lock).

a. A partial list with hyperlinks of sources of approved training courses include:

1) DOD Lock Program Training *Kaba Mas Lock Training (navy.mil)*
2) Kaba Mas Certified Security Locks Installer Training (KabaMas.com), *Certified Security Locks Installer Training - Kaba Mas*
3) MBAUSA Training Institute (MBAUSA.com), *Kaba-Mas X-10 Factory Certification (mbausa.com)*
4) Lockmasters Security Institute (Lockmasters.com), *Lockmasters Security Institute*
5) Sargent & Greenleaf (sargentandgreeleaf.com), *2890B/2740B Dual Certification Class - S&G (sargentandgreenleaf.com)*

b. Contact the US Department of State, Diplomatic Security Lock Program at DSLockSupport@state.gov if additional information is needed with regards to the training requirements refenced in this section.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Comply with Division 01 requirements.

1. Pack each hardware item separately. Include manufacturer's printed installation instructions, trim, fasteners accessories, and special tools necessary for installation.
2. Legibly mark and adequately label each package indicating opening for which intended. Provide markings corresponding with approved Hardware Schedule.
3. Deliver permanent security cores and keys as indicated in the Part 2 Article on KEYING of this specification to DS Lock Program office. This requirement is not referring to submittals or purchase orders, but actual delivery of cores and keys.

a. For new compounds, delivery shall not be less than 90 days prior to scheduled substantial completion.
b. For a phased projects with turnover and occupancy of a new office building, delivery shall be provided not less than 90 days prior to scheduled substantial of completion of each office building.
c. For renovated office facility, delivery shall be provided not less than 90 days prior to scheduled substantial completion of each renovated office building phase.

PART 2 - PRODUCTS

2.1 APPROVED PRODUCTS

A. See door hardware sets in this Section for approved products.

2.2 HINGES

A. FE/BR Hinges: Hinges shall be in accordance with associated FE/BR tested door and shall conform to requirements in Section 083454 “Forced Entry/ Ballistic Resistant Door Assemblies.” All hinges shall be factory drilled by hinge manufacturer and not by FE/BR manufacturer, or hinge warranty will be voided.

B. For non-FE/BR, door hinges, substitutions require approval from OBO/CFSM/SM/SCD/SEB. These substitutions shall use extra-heavy-duty hinges for double weight doors conforming to ANSI/BHMA 156.1. Hinges shall be non-removable pin. Provide cycle tested hinges per ANSI/BHMA 156.1-2006 to a minimum of 500,000 cycles. Other minimum requirements are as follows:

1. Cycle Testing: 500,000
2. Hinge Pin Rise: None Allowed
3. Hinge Play: 0.38 mm (0.015 in)
4. Vertical Wear: 0.76 mm (0.030 in)
5. Lateral Wear: 1.60 mm (0.062 in)

2.3 CYLINDERS, CORES AND KEYS

A. Provide large format interchangeable core (LFIC) housings, LFIC cores and keys for locks, and other control and locking devices indicated in the Hardware Sets.

B. Security Doors:

1. Acceptable Manufacturers:

a. Medeco Security Locks, Inc. an ASSA ABLOY Group company.
b. No substitutions.

2. Description:

a. Medeco LFIC 32 Series housing and Medeco six-pin 32 series LFIC cores.
b. All cylinders shall be equipped with temporary construction core for use during construction. The contractor is responsible for the purchase of the final cores and coordination of their secure shipment to the project site through DS.

3. Cylinders, Cores, & Keys

a. Provide mortise/rim LFIC housing with tailpieces/cams and LFIC cores for locks and other access control locking devices indicated in the SHW Hardware Sets.

b. Acceptable Manufacturers:

Medeco Security Locks, Inc.,
P.O. Box
3075 Salem,
VA 24153

c. Approved Lock Cores

1) General Work Area (GWA)

Six-pin LFIC Medeco product (32-) with DS GWA/DOSN commercial keyway.

2) CAA/LAA

Six-pin LFIC; Medeco product (32-) with DS reserved keyway (M3 or M4 system keyways depending on project scope).

3) Standard Construction Cores

Six-pin LFIC Medeco Biaxial product (32-) with black finish (22 or BB) and R1 keyway.

4) Lock and Leave

a) Classified lock and leave entry and bypass doors

Six pin LFIC Medeco M4 product with LL-C keyway

b) Unclassified lock and leave entry and bypass doors

Six pin LFIC Medeco M4 product with LL-NC keyway

5) Miscellaneous Non-Standard Cores

Six/five/four pin LFIC or cam locks in Medeco original, M3 original, or M4 as required by specific application. Keyway dependent on the application.

C. The Contractor is responsible for supplying temporary construction cores and associated keys for all cylinders during construction. These shall be different color than permanent cores and consist of the following:

Biaxial R1 keyway - Construction Core part number

with keys: 320201 CC W BI R1 P N N E

16 6 6 00 R1 05 N Operating key
16 6 6 00 R1 08 N Control key

1. Upon installation of final cores, construction cores will be returned to the Construction Contractor.

2.4 KEY CONTROL ACCESSORIES

A. Key Management System:

1. The total quantity of key capabilities required shall be determined by total number of all keys required to open all doors in the project (including SHW sets, HW sets, and designated groups and specialty keys), as defined in the Part 2 Article on KEYING.

   a. For compounds with multiple office buildings, provide a key management system for each building with an MSG Post.

2. Control location for the system is adjacent to or within line of sight of Post One. Refer to the Part 3 Article on INSTALLATION for additional installation requirements.

   a. For a post, or compound, without a MSG detachment, provide cabinets only for the non-CAA doors.
   b. For new office buildings on an existing compound, if they include a new Post One (manned by MSG or local), provide a Key Management System per this section.

      1) For compounds with an existing Key Management System, in lieu of installing a completely new system in the new building, the existing system shall be expanded if directed in project contract documents (e.g., SOW or design documents).

3. Acceptable Manufacturer and Product:

   a. Morse Watchmans, Inc., 2 Morse Road, Oxford, CT 06478. Model: KeyWatcher Illuminated System,

      1) Description: Furnish Morse KeyWatcher key management system (DOS PN KW-8494). The system shall provide a minimum 48 key main cabinet and a minimum 48 key secondary cabinet (one for Classified Access Area (CAA) keys and one for non-CAA keys) that are both expandable. The system shall be expandable in 32 key increments, unit (DOS PN KW-8495). System shall be provided with the Key-Pro software package for complete monitoring of the key control system. Provide keypad and control console with one cabinet.

2) Dimensions: 525 mm (21 inches) w x 850 mm (34 inches) h x 325 mm (13 inches) d; installed semi-recessed
3) Electrical: 100 – 240 VAC, 50 – 60HZ
4) Modifications to Standard Model: The Standard factory cam locks are required to be replaced. Four pin cam locks (DOS PN FSS-KW5 from Federal Security Systems 8580 Cinderbed Road LortonVA 22079) shall replace the standard three pin locks. The locks shall be pinned alike for all KeyWatchers at a given post and each post shall have a unique key.
5) Provide smartkey tags that are "red" color for CAA. Provide smartkey tags that are "black" color for non-CAA. Do not use "black" or "red" key tags in other State Department key watch systems used (i.e., facilities or GSO).

B. Key Drawer: In Post One, provide a lockable key drawer capable of storing a minimum of 200 tagged/labeled keys in a manner that is easy to use (organize and reach/retrieve keys).

C. Stand-Alone Key Cabinets: In the RSO suite provide Global Industries Steelmaster Unitag 200 key (2019200D03) wall-mounted key cabinet with dual control system including envelopes, labels, tags with self-locking clips, receipt forms, three-way visible card index, temporary markers, permanent markers and metal cabinet. Equip the cabinet with pin tumbler locking mechanism. Provide unit capable of storing a minimum of 200 keys.

1. Refer to Section 087135 "Non-Security Door Hardware" for key cabinets serving General Services Office (GSO) and Facility Management (FM) Office.

2.5 POWER DOOR OPERATORS FOR FORCED ENTRY OR ASTM BLAST RATED DOORS

A. Acceptable Manufacturers:

1. Each forced entry or ASTM/blast rated door manufacturer shall provide a power door operator that has been tested and approved by US Department of State, Diplomatic Security Lock Program.

B. Standard: BHMA A156.19.

C. Description: Units shall be ; surface mounted to frame or door leaf head, and power door operators shall operate as manual door closers unless power door is activated and when power is lost, as well as having the ability to operate in a fully automatic mode.

1. Activation of power door shall open doors to 90-degrees.
2. Powered operators shall be 24vDC and/or 120/240 dual voltage 50/60 hertz electrically powered. Furnish actuators with satin stainless steel dress plates embossed with the universal handicap symbol, except as noted below. Refer to Chapter 11 of the OBO Building Code for additional power door operator requirements.

a. 24vDC and/or 120/240 dual voltage 50/60 hertz electrically powered operators are not required to provide actuators if they are designed to operate in the fully automatic

mode and opening force is no more than 22 N (5lbf) to fully open the door and approved by OBO/CFSM/SM/SCD/SEB.

3. Opening Force:

   a. If Power Fails: Not more than 67 N (15 lbf) required to release a latch if provided, not more than 133 N (30 lbf) required to manually set door in motion, and not more than 67 N (15 lbf) required to fully open door.
   b. Accessible Interior Doors: Not more than 22 N (5 lbf) to fully open door.

4. Entrapment Protection: Not more than 67 N (15 lbf) required to prevent stopped door from closing or opening.

D. Required Features: Manufacturer's standard cast iron construction.

1. Rack and pinion construction with compression spring.
2. Adjustable Closing speed and/or latching speed.
3. Adjustable latching force allowing adjustment up to 50 percent in field to suit individual door conditions.
4. Adjustable backcheck.

2.6 AUXILIARY HARDWARE

A. Acceptable Manufacturers:

1. Hager Companies.
2. Ives Hardware; an Ingersoll-Rand Company.
3. Rockwood Manufacturing Co., Inc.

B. Manual Flush Bolts: Top manual flush bolt shall not exceed 1880 mm (74-inches) from floor to centerline.

C. Floorstops and Doorstops: Furnish wall stops equal to Ives 407CVX or Rockwood 400 for all doors without a closer and wherever trim strikes wall for all doors equipped with power door operators and for doors with closers that do not include a stop built into the closer. Where floor and wall stops are not suitable, furnish surface mounted overhead stops All wall or floor mounted doorstops must be installed at a distance of 50 percent or greater than the door's width from the door's inactive edge width along the door leaf. Floor stops are only to be used for doors in alcoves, to avoid trip hazards.

D. Silencers: Furnish rubber silencers equal to Ives SR64 or Rockwood 608 for hollow metal frames; three per single door and four per pair. Silencers are not required at doors specified to receive continuous weather-stripping or seals.

2.7 OVERHEAD STOPS AND HOLDERS

A. Acceptable Manufacturers:

1. Architectural Builders Hardware.
2. Glynn-Johnson; an Ingersoll-Rand Company.
3. Rixson, an ASSA ABLOY Group company.

B. Where wall stops are not suitable, furnish surface overhead stops equal to Glynn-Johnson 450 Series. In Hardware Sets where door closers are specified, provide closer arms with built-in stops (LCN No.3077-CNS). Floor stops are not allowed without written authorization of OBO.

2.8 THERESHOLDS, WEATHER-STRIPPING AND SEALS

A. Acceptable Manufacturers:

1. Hager Companies.
2. National Guard Products.
3. Pemko Manufacturing Co.
4. Reese Enterprises, Inc.
5. Zero International, Inc.

B. Description: Refer to the Hardware Sets for grade and style. Where required, field modify thresholds to accept strikes for flush bolts and exit device rods.

C. Smoke Seals: Where required by applicable code, at doors located in Smoke Barrier Partitions, provide smoke seals equal to Pemko S88 at the head and jambs; and at pairs of doors, one Pemko 375CR or two Pemko 303AS astragal seals as appropriate; coordinate with Drawings and schedules.

D. Astragals: Where indicated in the Hardware Sets, provide overlapping astragals equal to Pemko 357SP. Astragals shall be full height, installed on the "threat" side of the opening.

2.9 ACOUSTICAL TREATMENT

A. Provide full door gasketing/acoustical seals with flat threshold installed to maintain STC rating of surrounding walls.

B. Certification: Provide certification that the door construction utilized has been tested at an independent laboratory in accordance with ASTM E90 and that the STC determined in accordance with ASTM E413 is not less than that specified. The laboratory referenced in the certification must be qualified under the National Voluntary Laboratory Accreditation Program (NAVLAP) of the U.S. Bureau of Standards. Certification must reference laboratory name, test report number, and date of test; substitution of test data not in accordance with ASTM E90 and E413 will not be acceptable.

C. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated, based on testing according to ASTM E 1408.

D. Secondary Requirements: If fire resistance is required, certify that assemblies have been tested in accordance with UL 10B for labeled fire doors and frames and meets the requirements of NFPA 80. If seismic stability is required, submit calculations showing ability of door systems to withstand pertinent seismic forces.

2.10 ELECTROMAGNETIC DOOR HOLDERS

A. Acceptable Manufacturers:

1. As indicated in HARDWARE SETS – SECURE DOORS in this Section, no exceptions.

2.11 MAGNETIC DOOR CONTACT

A. As indicated in HARDWARE SETS – SECURE DOORS in this Section, no exceptions, except as noted below.

B. Magnetic door contacts shall match the approved technical security (TSS) design and the DOS Technical Security Installation Requirements Guide.

C. Where the TSS and DOS Technical Security Installation Requirements Guide do not require a magnetic door contact, but the SHW set includes a magnetic door contact, the door contact may be deleted from the door, provided the following conditions are met:

1. Submit, in table format, a detailed list indicated which doors will have the contact deleted, the SHW set and from what room to what room is impacted by room name, unless room name would make the document classified and then use room numbers (i.e. exterior to warehouse corridor, or room 1121 to room 1123). List shall be provided as part of the CD-2 submittal and noted in the door hardware schedule.
2. Failure to provide the list of doors to have the magnetic contact deleted will result in DOS requiring the magnetic contacts to be installed on the doors, even if the TSS plan may not require them.

2.12 KEYING

A. The following is the DOS required keying plan for SECURITY DOOR OPENINGS:

1. All keying systems must be factory generated and recorded.

a. All key operated locks on individual doors and multiple doors into the same space shall be keyed alike, unless noted otherwise.
b. Grand Master and Great Grand Master systems and engineering keys are not permitted.

c. Office Buildings (i.e., New Office Buildings (NOB), New Office Annexes (NOX) Existing Office Buildings (EOB) shall use the Medeco products with both reserved commercial Keyways. Each compound shall have one unique factory generated registry number for controlled access area (CAA) and limited access area (LAA) in office buildings and one registry for non CAA. Lock and leave buildings shall use either LL-C or LL-NC keyways as primary and secondary entry doors in accordance with facility type. Exceptions exist for residential buildings. 2.3.B.3

d. Residential buildings, Marine Security Guard Residences (MSGR), to include MSGR's and CMR's that are conjoined with an office building, warehouse (WHE), support annexes with shop areas (SPX), recreational buildings (REC), USAID Annexes, mechanical/engineering/plumbing (UTL) buildings, Compound Access Control (CAC) facilities shall use the Medeco product (32-) with DOSN/GWA Keyway and shall use one registry number for all the commercial keyways on compound, regardless of the number of building on the compound.

   1) When a residence is conjoined with an office building, any doors between the two shall follow the office building keyway and registry requirements.

e. All exterior forced entry (FE) and forced-entry/ballistic-resistant (FE/BR) doors shall have an interior cylinder with a non-removable thumb turn on the Force Entry Locks (FELs), except as noted in the security door hardware descriptions.

f. This specification uses the following definitions and nomenclature when describing the key requirements:

   1) Keyed Alike (KA) – Cylinder/core pinning which results in the same change key working two or more locks.
   2) Keyed Different (KD) – Cylinder/core pinning which results in a different change key being required for each of two or more locks.
   3) Single Keyed Alike (SKA) – single or multiple cores on multiple openings with unique pinning, change, and control keys; part of the registry, not pinned to any MK and not associated with any cores in any other Master Keyed System used at post.
   4) Single Keyed Different (SKD) – single or multiple cores with unique pinning, change, and control keys; part of the registry, not pinned to any MK and not associated with any cores in any other Master Keyed System used at post.
   5) Master Keyed (MK) – Cylinder/core pinning which results in operation by both a change key and one master key.
   6) Change key - operates lock/s
   7) Control key - install/remove interchangeable core/s
   8) Bypass key / Bypass lock – A lock and its key that are not the primary means of securing or accessing a space but exist to bypass the access control system or day lock, when needed.

g. Security doors shall be KD and MK within categories identified below and are per building, even if multiple buildings share a registry number (e.g., all exterior FEBR doors in office building A shall be KD and master keyed together for building A for office building B, all exterior FEBR doors shall be KD and master keyed together

with all exterior FE/BR doors in building B). Exceptions for CACs are identified in subparagraph l:

1) Exterior building perimeter FE and FE/BR doors
2) Interior FE and FE/BR doors
3) Technical security systems (TSS) EC Room doors (when multiple EC rooms or sub-EC room exists; otherwise, EC room is SKD).
4) Groups 4 and beyond - MK by floor, except for the PCC, secure conference rooms; except as indicated by the SKD and KD doors in sections i and j below.

h. The following Security doors shall be KA and SKD within their own numbered categories or SKD if only a single door access the space. Each numbered category shall be KD from all others:

1) Roof access doors
2) Safe Haven, Compound Emergency Sanctuary or Safe Area
3) Limited access area (LAA) Lock and Leave doors
4) CAA+ suites

i. The security doors shall be SKD, and either KD for a single lock on a single door or KA for multiple doors/locks into the same area. No two areas shall be KA:

1) Telephone Equipment Rooms (PBX, TSEF, MTS)
2) PCC Generator Room
3) React Room or MSG Suite
4) Doors within the PCC
5) Secure Conference rooms
6) Primary Lock and Leave doors
7) EC Room – if only one
8) PCC Switchgear
9) Secure Command Center (SCC)
10) Tactical Operation Commands (TOC)
11) Post 1
12) Guard Booths
13) Pharmacy
14) Roof Maintenance Sheds (RMS)

j. The following doors shall be SKD:

1) PCC

k. All CACs on a compound shall be keyed as follows:

1) Street side exterior doors – KA and NMK (SKA).
2) Compound Side exterior doors, to include sally port – KA and NMK (SKA) (KD from the street side doors);
3) CAC guard booth – SKD.
4) CAC utility demarcation rooms – SKD.

5) Interior/compound/sally port non-forced entry control doors (EC room, pump room, telephone and/or electrical rooms) shall be SKD.

l. Chief of Mission Residence (CMR) and Residences with FE or FE/BR doors – KA all exterior doors (per individual building or individual dwelling unit).

1) Safe areas in stand-alone residences shall be SKD.
2) Safe areas in multiple unit buildings (apartments or townhouses) shall be KD and MK by building.

m. Specialty keys:

1) LAA or CAA access hatches shall be, SKA/SKD when multiple access hatches open into the same space.
2) Lock and leave entry and bypass doors shall be SKA/SKD.
3) GWA access hatches shall be SKA.
4) Exterior manholes/handholds; see Section 337105 “Underground Ducts and Raceways” for lock requirements:

a) TSS shall be SKA
b) Electrical shall be SKA
c) Communication (not cable/local TV) shall be SKA
d) Water and sewer shall be SKA
e) All other misc. utilities shall be SKA
f) KA applies per manhole discipline/function.

B. The Project Director, the General Contractor's representative, and either the RSO or the PSO shall meet to determine if there are any special keying conditions required so they may be incorporated into the keying schedule and provide recommendations for any deviation from the above specification to OBO/CFSM/SM/SCD/SEB for review and approval before the keying plan/schedule is submitted.

1. The General Contractor shall submit a keying plan/schedule for the entire project, or phase as noted below, at the same time of submission of the secure door shop drawings, or at the time of FE hardware submission for FE/BR only projects. Medeco keying system shall be created and procured by a single vendor for the Project except for the keys required for the ACF.

a. The General Contractor shall provide ACF keys that are on a separate commercial keyway 90 days before ACF is to be put into use.

2. For a phased project that includes multiple office buildings, the General Contractor may elect to break the keying plan/schedule submission out to reflect the phases with the approval of OBO/CFSM/SM/SCD/SEB, or if required by the SOW and/ or design documents, and shall meet the following requirements:

a. The registry numbers and keying requirements shall be based on the requirements for the entire project.

b. The registry from any earlier phases shall be used in accordance with the requirements herein and shall be an extension of the keying plan approved in earlier phases to include number of the keys.
c. Each keying plan/schedule for subsequent phase shall include the earlier phases and shall be clearly annotated showing what is existing.
d. Keying sequences shall be a continuation of earlier submissions (i.e., if earlier phase for a registry number stopped at SKD5, the new phase should start at SKD6) and if a number is skipped in a sequence the number shall be labeled as "not used" or "reserved" (e.g. SKD12, SKD13 – not used, SKD14).

C. Key Quantities: Furnish plain bow keys of nickel silver material in the following quantities:

1. For each master key system, provide:

a. Four master keys (include two for key control cabinet and two for MSG keys).
b. One control key.
c. Two change keys per keyed different core.

2. For each individually KD or SKD core, provide:

a. One control key.
b. Four change keys. (Include two for key control cabinet and two for MSG keys)

3. For each individually keyed alike (KA) core, provide:

a. One control key.
b. Two change keys per door.

4. For Specialty keys, provide:

a. LAA/CAA Access Hatches, KA/SKD for multiple hatches accessed from within a suite or common space or SKD for a single hatch:

1) One control key.
2) Two change keys.

b. GWA Access hatches (4 total change keys) and Manholes/handholes (provide for 5 keys, see HW and manhole/handhold specifications.

5. For new compounds, buildings or major building rehabs provide MSG Keys (react key ring/s) for two MSG Keysets:

a. Six sets of keys consisting of master keys, and SKD door keys (no specialty keys) in such a manner to use the minimum number of keys possible to open all doors in the project.

6. For each construction key system, provide:

a. All construction cores shall be black in finish.
b. Construction cores and keys shall be turned over to the USG Project Director or the Site Security Manager (SSM) for distribution and control during the project duration.
c. Two control keys.
d. Operating change keys per quantity of construction cores as follows:

1) One to 10 doors: four keys.
2) 10 or more doors: 20 or as directed by the USG.
3) For renovations with an active MSG Post, provide six additional keys for the MSG keys.

D. Identification and Control

1. Identify master keys (MK) with registry number; do not stamp with master key, letter M, or similar identification; manufacturer's trademark or identification not allowed.
2. Stamp master keys with DO NOT DUPLICATE.

E. Delivery

1. Deliver construction cores, construction control keys, and construction keys to the Project Site.
2. Permanent cores, change keys, and permanent control keys shall be individually packaged by door, identified by door and lock. Shipment shall be by manufacturer via prepaid freight to:

DS Lock Program
5800 Barclay Drive, Suite 5
Alexandria, Virginia 22315-5700

3. Clearly mark shipping boxes; indicate “OBO PROJECT AND/OR PURCHASE ORDER NUMBERS ONLY”. A pinning schedule is required for all prepared systems.

2.13 FINISHES

A. Base Metals: Produce hardware units of basic metal and forming method indicated, using manufacturers' standard metal alloy of composition, temper and hardness, but in no case of lesser quality than specified or inferred by use of a particular manufacturer's number, style or grade, or as established by appropriate referenced specification listed herein.

B. Finishes: Finishes shall conform to the quality of finish including thickness of plating or coating (if any), composition, hardness and other qualities complying with manufacturers' standards, but in no case less than the standards established by ANSI/BHMA A156.18.

1. All exposed hardware except door closers shall be satin stainless steel, ANSI/BHMA 630/US32D. Closers shall be painted to match satin stainless steel. Hinges shall be satin

stainless steel. Items not available in stainless steel shall be furnished with satin chrome finish, ANSI/BHMA 626/US26D.

C. Prime Coated Items: Field painted under Division 09 painting section.

2.14 FASTENERS

A. Manufacture hardware to conform to published templates, generally prepare for machine screw installation. Do not provide hardware that has been prepared for self-tapping or sheet metal screws except as specifically indicated.

1. Furnish screws for installation with each hardware item. Provide Phillips flat head or oval head screws except as otherwise indicated. Finish exposed (exposed under any condition) screws to match the hardware finish or, if exposed in surfaces of other work, to match the finish of such work as closely as possible, except as otherwise indicated.
2. Provide concealed fasteners for hardware units that are exposed when the door is closed, except to the extent no standard manufactured units of the type specified are available with concealed fasteners.
3. Do not use through bolts for installation except where it is not possible to adequately reinforce the work, to accept machine screws or concealed fasteners or other standard type, to satisfactory avoid the use of through bolts. Grommet nuts and cleat nuts are not acceptable.

B. Furnish fasteners that are compatible with both the units fastened and the substrates, and which will not cause corrosion or deterioration of hardware, base material reinforcement, or fastener. Furnish wall stops with expansion anchors and machine screws. Furnish thresholds with lead anchors and 1/4-20 stainless steel flat head socket cap screws.

2.15 ACCESSORIES

A. Door Coat and Hat Hook: Provide cast aluminum, double prong hooks on inside face of all private office doors and toilet rooms; Ives Model No. 405 wide body design (ANSI/BHMA A156.16, L33113).

2.16 DOOR CONTACTS

A. Door Contacts: As specified in the SHW sets to include vault doors and Core area with following exception:

1. Doors without card readers providing access to LAA and Restricted CAA shall use the Cinch Model Ce-M1ZRST. Refer to Section 283105 “Technical Security Intrusion Detection Systems.”

2.17 MULTI-POINT LOCKING HARDWARE

A. Multi-point locking hardware: As specified in the SHW sets. Hardware must be approved as part of a door manufacturer's certification. When used on a Forced Entry door it must be tested as an approved part of the door to SD-STD-01.01 Rev H. When required as part of the perimeter blast resistant design of a building, it must be tested as an approved part of the door to ASTM F2927-xx and DOS DS ASTM F2927 supplement. See door specific requirements in Specification 083454. Only multi-point lock models tested on specific certified door manufacturer doors are approved. No substitutions.

B. Multi-point locking hardware is used in SHW-31 – SHW-38. "Multi-lock Device" function in SHW is defined as follows: [AST][PST][TLF]-[KA][MAC][EAC]-[MBR][DE][RTE] (ie: LP2-101-MBR RTE)

1. AST – Attack Side Trim

   a. X- None
   b. L- Lever
   c. P- Pull
   d. T- Thumbpiece
   e. D- Dummy

2. PST – Protected Side Trim

   a. X – None
   b. L – Lever
   c. P – Panic

3. TLF - Trim Lock Function

   a. 0 – Dummy [No latching or locking hardware device]
   b. 1 – Passage [Latch bolt operated by handle form either side at all times]
   c. 2 – Entry [Exterior handle/trim always locked except for momentary KAC or EAC. Interior handle always free access.]
   d. 3 – Entry [Exterior handle/trim always locked except for momentary KAC, MAC or EAC. Interior handle always free access.]
   e. 4 – Apartment or Dormitory [Exterior handle/trim locked except for momentary KAC or EAC. Or if by KAC handle/trim set to allow free passage. (dogging of MP bolts in retracted position is not permitted). Interior handle always free access.]
   f. 5 – [Reserved]
   g. 6 – [Reserved]
   h. 7 – Institutional or Utility [Exterior handle/trim locked except by KAC handle/trim set to allow free passage. Interior handle/trim locked except by KAC handle/trim to allow free passage. (dogging of MP bolts in retracted position is not permitted.)
   i. 8 – Institutional or Utility [Exterior handle/trim locked except for momentary KAC, MAC, or EAC. Interior handle/trim locked except for momentary KAC, MAC, or EAC.]

j. 9 – Exit [Deadlocking latch bolt operated by inside handle only. Blank pate outside projection]

4. KA – Key Access

a. 0 – None
b. 1 – Outer [attack](Single)
c. 2 – Inner [protected] (Single)
d. 3 – Both [attack and protected]

5. MAC – Manual Access Control

a. 0 – None
b. 1 – Outer [attack](Single)
c. 2 – Inner [protected] (Single)
d. 3 – Both [attack and protected]

6. EAC – Electric Access Control

a. 0 – None
b. 1 – Outer [attack](Single)
c. 2 – Inner [protected] (Single)
d. 3 – Both [attack and protected]

7. Options:

a. MBR – Motorized Bolt Retraction
b. DE – Delayed Egress
c. RTE – Request to Exit Switch

d.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and proceed with work in accordance with Division 01 requirements.

3.2 INSTALLATION

A. Install hardware plumb, level, square and true to line in accordance with manufacturer's templates and Project conditions.

1. Install fire rated hardware in accordance with NFPA 80.

2. Where cutting and fitting is required on substrates to be field painted or similarly finished, install, fit, remove and store hardware prior to finishing. Reinstall hardware after finishing operations are completed.
3. Do not install surface mounted items until finishes have been completed on the substrate.
4. Reinforce attachment substrates as necessary for installation and operation.
5. Mortise work to correct size and location without gouging, splintering or causing irregularities in exposed finish work.
6. Fit faces of mortised components snug and flush without excessive clearance.
7. Set thresholds at exterior doors in bed of sealant. Remove excess sealant.

B. Hardware Mounting Heights: Mount hardware units at heights recommended by DHI (see "Recommended Locations for Builders Hardware") on custom doors except as otherwise indicated or required to comply with governing regulations, and except as may be otherwise indicated.

C. Cylinder Cores: When instructed, Contractor shall remove temporary construction cores. Permanent cores will be installed by the Government. After installation of the permanent cores, construction cores, operating keys, and control keys remain the property of the contractor and are to be returned to the contractor.

D. Power Door Operators: Where post mounted actuator buttons are indicated, run signal wire below grade in conduit complying with Division 26. Elsewhere, run signal wire concealed in Technical Security System conduit. Run pneumatic lines between pumps and door operators concealed. At curtain walls, run pneumatic lines concealed in metal trays finished to match curtain wall.

E. Key Management System: Install primary and secondary cabinet immediately adjacent to each other. Place cabinet with keypad and control console as the right of the two cabinets (as viewed facing the cabinets). Provide power and data outlets at keypad and control console. Place system in conformance to accessibility requirements of the OBO Building Code.

F. Door Closer: Ensure the valve on the back side of the cylinder is screwed in before installing on door leaf. Ensure the closer arm is installed level and parallel to the door leaf. Set back-check to ensure the closer arm does not hit the door stop pin inserted into the closer arm bracket.

G. Door Sweep: Install door sweep on the attack side of the door leaf.

3.3 ADJUSTING

A. Check and adjust each operating hardware item to ensure correct operation and function.

1. Adjust closer sweep period so that, from an open position of 70 degrees, the door will take at least 3 seconds to move to a point 75 mm (3 inches) from the latch, measured to the leading edge of the door.
2. Ensure weather-stripping and seals do not inhibit closing and positive latching of door.
3. Lubricate moving or operating components as recommended by hardware manufacturer. Use graphite type lubrication if none other is recommended.

4. Replace defective materials or units that cannot be adjusted to operate as intended. Reinstall items found improperly installed.
5. Prior to date of Substantial Completion, readjust and reapply lubricant to hardware items as necessary.

3.4 DEMONSTRATION

A. Instruct Government's designated personnel in proper adjustment and maintenance of hardware at time of Substantial Completion.

1. In the presence of the Government's representative, demonstrate that the keys operate freely in designated unit.
2. Hardware supplier: Completely set-up key control system with keys tagged and placed in cabinet. Cross index system executed with appropriate information typed in on index cards and instruct Government's designated personnel in the proper use of the system.

3.5 HARDWARE SETS – SECURE DOORS

A. Refer to the following pages for secure hardware sets.

SECURITY DOOR HARDWARE SCHEDULE PARAMETERS

The following security hardware schedule parameters are provided as general guidance. The designer is responsible to fully develop the security hardware schedules according to the RFP package, including the OBO Building Code. The schedules in this section utilize the room descriptions found in the OBO Space Requirements Program (SRP) and respective Space Requirements Program Modules (SRP-Ms), and are meant to serve as a tool, or guide, to assist the designer in the development of the actual door hardware schedule or schedules. They are organized according to operational function with the SRP-M room description used to identify their locations. This means that in some cases the SRP descriptions will be divided so that the doors will be grouped where they are found instead of being grouped solely within their functional prefixes (i.e., building common spaces (prefix Z) will include some IRM (prefix G) and RSO (prefix E) functional spaces). When more than one door provides access to a particular room, or when the SRP-M room description does not fully describe a door location, additional information to describe the location has been provided. Doors included in these schedules apply to new office buildings (NOBs), new office annexes (NOXs), compound access control facilities (CACs) and new embassy compound (NEC) housing (MSGR and CMR). Post Communication Center (PCC) hardware is covered separately in the classified criteria.

When preparing the door hardware schedule, the designer shall coordinate/design/update the following: acoustic protection, stops, finishes (for both hardware and doors), thresholds, weather stripping, seals, sweeps, DOS Code (coordinated with required fire protection), degree opening setting for door closers, verifying/selecting models when alternatives are possible, etc. The "Swing" column, along with other information typically found on a door schedule, have been omitted for clarity, since these items are ultimately dictated by the design. SRP-M descriptions are intended to be used for planning purposes only and shall not be included in any post specific schedule. Only door mark number and room numbers are to be used in post specific schedules. Lastly, please note that all forced entry and ballistic resistant (FEBR) doors are to have a reverse bevel swing and the designer is required to use DOS security hardware terminology for swing and FEBR descriptions.

SECTION 088855 - SECURITY GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section specifies laminated security glazing comprised of both glass and glazing-plastic sheets, combined at fabrication plant, including laminated panels and/or insulating panels for glazing, and including proprietary panels of special fabrication.

B. Related Sections include the following:

1. Division 01 Section "Secure Shipment."
2. Section 080001 “Blast Requirements.”
3. Section 083454 "Forced Entry (FE) / Ballistic Resistant (BR) Door Assemblies."
4. **[Section 084414 “Structurally-Framed Security Curtain Wall System.”]**
5. Section 085651 "Aluminum Security Windows."
6. Section 085652 "Aluminum Security Teller Windows.”
7. **[Other Division 08 Section(s) on glazing and which specify glass support framing for these panels.]**
8. **[Division 01 Section on Building Enclosure (FE/BR Windows and Doors) Commissioning.]**
9. **[Division 08 Section “GPE Window and Door Requirements.”]**

1.2 REGULATIONS AND STANDARDS

A. Standards and codes referenced in this Specification shall be those editions referenced in the applicable version of the OBO Building Codes (OBO adopted codes and OBO Code Supplements) and references cited in those Codes, or those current at the date of this Specification, unless otherwise noted.

B. In the event of a conflict between referenced codes and standards and/or the Drawings and Specifications, the code or standard having the more stringent requirements shall govern.

C. Comply with the following industry Standards, unless more stringent requirements are indicated or are required by an approved product manufacturer:

1. American Society for Testing and Materials (ASTM): Documents specified herein.
2. Glass Association of North America (GANA): “Glazing Manual,” “Laminated Glazing Reference Manual,” and “Tempering Division Engineering Standards Manual.”
3. Insulating Glass Manufacturers Association (IGMA): TM-3000 and TM-4000.

1.3 SUBMITTALS

A. Product data for each type of product and fabricated panels specified, including component element documentation, layup description, and glazing/maintenance/cleaning instructions.

B. Standard test reports including certified test reports confirming compliances. Submit laboratory test reports, showing compliance with performances required for air infiltration and water penetration.

C. Design Data including supporting calculations/analysis/interpolation of performances.

D. Certificates attesting that system will meet specified requirements; provide for each window type.

E. Initial samples: provide four 300 mm (12 inches) square panel samples for each glass type required for Project, complete with required elements included as indicated.

1. For insulating glass panels provide assemblies representative of panels to be used in the finished work, including scheduled glass, coatings, spacers, edge seals, and edge deletion.

F. Manufacturer's Quality Control Program: Submit prior to start of fabrication, including all aspects of manufacturing the glazing.

G. Manufacturer's and Fabricator's Calculations:

1. Submit glass manufacturer's calculations for wind pressure and thermal stress showing the glazing demonstrates compliance with specified requirements. Submit written confirmation that the glass fabricator/manufacturer has reviewed the pertinent shop drawings and has confirmed the acceptability of the proposed use of the specified glass products.

H. Certificates for FE/BR Products: See related forms in other Division 08 Sections.

I. Warranties: Samples of special warranties.

J. Submit samples and manufacturer's performance data, as well as application and removal procedures, for all protection materials.

K. Closeout Submittals:

1. Maintenance Manual: At the completion of the project, digitally submit a maintenance manual for all security glazing components. The FE/BR fabricator may include this information in their FE/BR maintenance manual, in lieu of a standalone document. Include the following information:

a. Instructions for cleaning.
b. Warranties.
c. Manufacturer's product data.

2. Contact information for manufacturers and suppliers of all components used in the glazing makeup.

3. When polycarbonate is used in glazing layup, provide documentation from laminator:

   a. Source of polycarbonate (supplier and location)
   b. Lot number(s) of polycarbonate used for each project.

1.4 QUALITY CONTROL

A. Environmental Performance Qualifications:

1. The Manufacturer shall use fabrication techniques to construct certified laminated glazing in such a manner that they have constructed system which has survived, without damage, each of the following environments for at least 72 hours:

   a. High temperature and high humidity, 60 deg C (140 deg F) and 95 percent relative humidity.
   b. Low temperature and low humidity, -18 deg C (0 deg F) and 10 percent relative humidity.

B. Comply with recommendations of GANA Glazing Manual and Sealant Manual, except where more stringent requirements are indicated.

C. Manufacturer's Quality Control Program:

1. Prepare and implement a comprehensive written Quality Control Program covering all phases of the glazing work including, but not necessarily limited to, the following:

   a. Procurement of materials, including quality assurance programs of major suppliers.
   b. Clean room requirements.
   c. Fabrication of components.
   d. Production testing.
   e. Final assembly of components.
   f. Cleaning protocols of components and final glazing panels.
   g. Installation and site quality control.

2. Quality Control Program shall indicate the following for each quality control measure/activity:

   a. Item/property being inspected/tested
   b. Control point in process and frequency of inspection/testing
   c. Inspection/test method
   d. Acceptance criteria and reference standards/specifications
   e. Method of documentation
   f. Action to address deficiencies

3. Quality Control Program shall include detailed descriptions of inspection and production testing programs and inspection reports for:

   a. Glazing fabrication

b. Structural glazing.

4. At the request of the Project Director/COR, a Government representative shall be allowed access to the Contractor's facilities and those of major suppliers, with advance notice, to monitor QC procedures. Make available all QC Program records upon request.

D. Quality Inspections

1. Inspect each glazing layer for Optical defects thoroughly for observable edge damage, face imperfections, optical defects, or distortion prior to assembly in accordance with the ASTM standards below:

a. ASTM C 1036 for flat glass.
b. ASTM C 1048 for heat strengthened glass.
c. ASTM C 1172 for laminated glass.
d. ASTM C 1349 for flat glass clad polycarbonate.
e. ASTM C 1376 for pyrolytic and vacuum deposition coatings on glass.

2. Ballistic Resistant glazing layup with spall liner: Damage to spall liner or shatter resistant window film is considered a compromise to SD-STD-01.01 certification performance.
3. Conduct routine in-house staff training to ensure awareness of factors that affect polycarbonate cracking, including environmental stress cracking, creep, and non-compatible materials.

E. Quality Control inspection documents shall incorporate:

1. Detailed description of glazing layup.
2. Acceptance criteria, optical defect limitation tables, industry terminology for defects, means of detection, and other requirements of referenced standards, applied to entire layup.

1.5 IDENTIFYING DEVICES

A. Provide fritted or etched label within glazing panel layers with the following information: manufacturer's name, date of manufacture, DOS Code number, and Glazing Layup number, and glazing panel dimensions in mm. Locate label in lower right corner on the protected side and visible after glazing is framed and cladded.

B. Provide "ATTACK SIDE" removable label on attack side of glazing panel in very conspicuous location.

C. Glazing panels that include the CAA metallic coating described in Part 2 Article on MISCELLANEOUS GLAZING MATERIALS shall be identified by 10 mm (3/8-inch) diameter black dot located on lower right-hand corner of glazing panel viewed from the protected side of glazing panel, and identification shall be embedded within glazing layup.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Protect laminated security glazing panels against face and edge damage during entire sequence of fabrication, handling, and delivery to installation location. Provide protective covering on exposed faces of glazing plastics, and mark inside as "INTERIOR FACE" or "PROTECTED FACE."

1. Treat security glazing as fragile merchandise, and packaged and shipped in cases or racks, not comprised of wood manufactured with phenols, and blocked together in a mass. Do not use plastic or polyethylene sheeting, or extruded polystyrene. Storage and handling shall comply with Manufacturer's directions and as required to prevent edge damage or other damage to glazing resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, other environmental conditions, ground contaminants, and contact with chemical solvents.
2. Protect sealed-air-gap insulating glazing panels from exposure to abnormal pressure changes, as could result from substantial changes in altitude during delivery by air freight. When windows will be installed in a location that has a different above sea level elevations than where they were manufactured and as a result will cause the glass to deflect, provide temporary capillary/breather tubes which do not nullify applicable warranties on hermetic seals.
3. Temporary protections: Security glazing shall be temporarily protected with manufacturer-applied compatible, peelable, heat-resistant film. This film shall be peeled by Contractor for inspections, and re-applied by Contractor, in accordance with manufacturer’s recommended procedures.
4. Conduct thorough visual inspections of the glazing prior to packaging.
5. Pack replacement glazing panels with no more than two panels per crate. Provide replacement glazing tape, setting blocks, spacers, and other required accessories, packed in the same crate as the glazing panels.
6. Include warning label(s) that clearly indicates non-compatible materials for temporary protection during construction and cleaning. Include this information on the manufacturer’s product literature, warranties, and other documents provided to the construction team and building occupants.
7. Store materials in a dry, well-ventilated location. Keep handling of materials to a minimum, and carefully protect materials from soiling and from condensation and other harmful moisture. Provide vapor-permeable materials for protection during shipping. Do not trap moisture within or adjacent to windows.
8. Conduct thorough visual inspections of glazing before installation. Inspections should include removal of glazing stops, if applicable. Do not install glazing with cracks in the polycarbonate.

1.7 SPECIAL PRODUCT WARRANTIES

A. General: Comply with Division 01 Section “Closeout Procedures” for furnishing to Government of specific warranty on each required type of laminated security glazing, executed by authorized officer of manufacturing/fabricating firm, and agreeing to replace defective panels during the warranty period following panel installations at Project Site. Government will certify that it will continue proper maintenance and non-exposure to destructive forces exceeding those forces

indicated to be satisfactorily resisted by panels without incurring permanent damages. Defective panels are defined to include delamination, change of optical characteristics, glass/plastic breakage or cracking, weathering, change of light/heat/solar transmittances, abnormal aging, and, for insulating panels, loss of hermetic seal.

1. Warranty Period: 5 years for delamination; 10 years for all other defects from Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Responsibilities for ensuring conformance to performance requirements of this Section shall be handled by engineer with Delegated Design responsibilities for associated glazed assembly; see applicable Division 08 Section(s).

B. Blast Resistance: See Section 080001 “Blast Requirements.”

C. Forced Entry and/or Ballistic Resistance: Provide product which has been certified by Bureau of Diplomatic Security (DS) in accordance with DS/PSD Standard SD-STD-01.01, Revision H, for requirements related directly to the glazing.

D. Performance Parameters for Glazing with CAA Metallic Coatings: Glazing with CAA metallic coatings identified in the Part 2 Article on MISCELLANEOUS GLAZING MATERIALS have non-security performance limitations related to the varying characteristics of each approved product. Examples of these characteristics include solar heat gain coefficient (SHGC) and visible light transmittance (VLT). The performance characteristics of these products shall be factored into the overall performance for glazed units using this coating.

E. Each glazing shall withstand normal temperature changes, wind loading, in accordance with ASTM E 1300, usual material handling, and impact loading without breakage.

F. Provide glass of the appropriate thickness and strength to withstand anticipated thermal stresses based on a probability of breakage not to exceed 8 lites per 1000 for vertical glazing.

G. Windborne-Debris Impact Resistance: Provide resistance to windborne-debris impacts as indicated in other Division 08 Sections.

H. Safety Glazing: Where safety glazing is indicated, provide glazing that complies with 16 CFR 1201, Category II.

I. Distortion: Per ASTM C 1036-16, paragraph 6.1.2; applicable to complete glazing panel, vision interference angle greater than or equal to 15 degrees, as observed by an unbiased observer (one who has not viewed up-close or been informed about the panel beforehand), viewed at eye level for a maximum duration of two minutes.

J. Air Gap: Provide adequately sized air gap to prevent lites from touching when deflecting as a result of exterior and interior environmental conditions.

2.2 GLASS CLAD POLYCARBONATE SYSTEM

A. Glazing fabricated with chemically or thermally strengthened or annealed glass panes and polycarbonate sheets, each pane or sheet interlayered with polyvinyl butyral interlayers (PVB) or thermoplastic urethane (TPU) as appropriate, combined for permanent, stable bond. For glass-to-glass use PVB, and for glass-to-polycarbonate use TPU. Provide spall liner at interior (protected side) exposed polycarbonate surfaces (see paragraph on Spall Liner in the Part 2 Article on GLAZING PANEL PRODUCTS, GENERAL, and paragraph on Exposed Glazing Surfaces (general requirements) in the Part 3 Article on GLAZING PANEL FABRICATION) for additional requirements).

2.3 GLASS, AIR GAP, AND POLYCARBONATE SYSTEM

A. Glazing fabricated using alternate layers of chemically strengthened, heat strengthened and tempered or annealed glass laminated with polyvinyl butyral (PVB) interlayers. The polycarbonates shall be fusion bonded without interlayers into a solid core, or shall be laminated with thermoplastic urethane (TPU) interlayers. The glass layup shall be separated from polycarbonate layup by means of air gap. Provide spall liner at interior (protected side) exposed polycarbonate surfaces (see paragraph on Spall Liner in the Part 2 Article on GLAZING PANEL PRODUCTS, GENERAL, and paragraph on Exposed Glazing Surfaces (general requirements) in the Part 3 Article on GLAZING PANEL FABRICATION) for additional requirements).

2.4 GLASS, AIR GAP, AND IONOMER SYSTEM

A. Glazing fabricated using chemically or thermally strengthened or annealed glass laminated with ionomer interlayers. The glass layups shall be separated by means of air gap.

2.5 GLAZING-PANEL PRODUCTS, GENERAL

A. Heat-Treated/Strengthened Glass: Provide float glass complying with ASTM C 1036, Type I, Quality q3, of the following Class, which has been heat treated in accordance with ASTM C 1048, Condition A (uncoated), Kind FT (fully tempered) except as otherwise indicated.

B. Roller distortion for each individual piece of glass: Measured peak to valley, shall not exceed 0.0762 mm (0.003 inches) in the central area or 0.2032 mm (0.008 inches) within 266.7 mm (10.5 inches) of the leading or trailing edge.

C. Chemically-Strengthened Glass: Manufacturer's/Fabricator's proprietary system of chemical bath treatment in which sodium ions in glass faces are replaced with larger ions, resulting in a permanent degree of temper which amounts to a modulus of rupture (MOR) increase to at least 30,000 psi for thicknesses of 3 mm (1/8 inch) and less, per ASTM C 158.

D. Annealed Glass: Except as otherwise indicated, provide float glass; ASTM C 1036, Type I, Quality q3, of indicated Classes (tints) and thicknesses.

E. Glass Colors (Tints): Provide glass in following colors or tints, as indicated, per ASTM C 1036; provide Class 1 "clear" where there is no indication of color/tint requirement:

1. Class 1, clear.

F. Polycarbonate Glazing Plastic: Provide polycarbonate sheets complying with Commercial Item Description (CID) A-A-59502, with minimum flexural strength of 93.1 MPa (13,500 psi) per ASTM D 790, with 116 C (240 deg. F) allowable continuous service temperature, and with Izod impact strength of 0.854 N-m/mm (16 ft-lb per inch), per ASTM D 256. Provide in sizes and thickness as indicated in clear colorless transparent sheet, with light transmittance and thickness in accordance with ASTM C 1349-04, Type 1 UV stabilized, Table X1.2, when measured in accordance with ASTM D 1003.

1. Bonded Sheets: Where bonded polycarbonate sheet thickness of more than 9.5 mm (0.375 inches) is indicated, provide fusion-bonded-ply construction to form a solid sheet of thickness indicated in lamination

G. Glass-to-Glass Interlayers:

1. Clear polyvinyl butyral (PVB) laminating film/sheet. Except as otherwise indicated or required to achieve performances, provide 0.76 mm (30-mil) minimum thickness; provide 1.52 mm (60-mil) minimum thickness where one or both glass sheets have been heat strengthened or chemically strengthened. Assure that PVB layer does not contact urethane or polycarbonate as it can adversely affect these materials.
2. Ionmer sheet. Except as otherwise indicated or required to achieve performances, provide 1.52mm (60-mil) minimum thickness.

a. Acceptable products:

1) Noviflex by AGP
2) SentryGlas Xtra by Kuraray

H. Polycarbonate-Contact Interlayers: Laminator's clear proprietary urethane-type laminating film/sheet. Except as otherwise indicated or required to achieve performances, provide 0.635 mm (25-mil) minimum thickness, and provide 1.27 mm (50-mil) minimum thickness where polycarbonate is laminated to heat-strengthened or chemically-strengthened glass.

I. Edge protection: To cushion and protect glazing edges from contamination or foreign matter, the four edges shall be sealed the depth of glazing with continuous standard-thickness TPU or Santoprene tape. Alternatively, continuous channel shaped extrusion of Santoprene shall be used, with flanges extending onto faces of glazing.

J. Shatter Resistant Window Film (as a spall liner): Provide as required for ballistics or blast performance of glazing layup. When required, provide factory installed.

1. SRWF may be field replaced if damaged in accordance with glazing manufacturer instructions. Replace only with approved product consistent with FE/BR testing and/or with blast calculations.

K. Spall Liner: Provide chemical resistant polyethylene (PET) spall liner laminated to interior (protected) side of glazings that utilize a polycarbonate on the interior (protected) most side, with TPU interlayer; or on glass layers as required for forced entry or ballistic performance per certified design.

1. Approved Products [chemical resistant spall liner]:

a. Madico Spall Shield CL-700SRB TPU, CL-700SRB PVB, or LCL1500 SRB TPU.
b. Kuraray Spallshield.

L. Anti-Reflective Coating at Consular Teller Windows: Provide anti-reflective coating on #1 surface (exterior surface) to reduce reflectivity of glass surface, increase light transmission and decrease obscurity when viewing from either side of the transparency. Anti-reflective coated glass substrate shall have less than 8% exterior reflectance. Anti-glare coatings or surface etching are prohibited as they can alter image quality in viewing due to defusing light. Anti-reflective surface applied films are prohibited.

2.6 MISCELLANEOUS GLAZING MATERIALS

A. Silicone Sealants: ASTM C920. Shall withstand 50 percent joint width change when tested per ASTM C719.

B. If glazing contains any polycarbonate, all glazing materials shall be approved by manufacturer, including those specified above, and pre-shimmed glazing tapes, cleaners, primers, etc.

C. CAA Metallic Coating: CAA glazings and identified glazings in the drawings and windows schedules shall receive one of the following DOS approved coatings or interlayer products. Refer to Part 2 Article on PERFORMANCE REQUIREMENTS for performance parameter limitations for glazing with these coatings. Refer to Part 1 Article on IDENTIFYING DEVICES related to glazing with these coatings.

1. Solarban 70XL: Two coats of Vitro Solarban 70XL coating applied under the first layer of glazing, Coatings shall be applied to subsequent layers of glass, the first coating shall be applied to inner face of a layer of glass, the second to the outer layer of the subsequent layer of glass.
2. Viracon VE1-2M Cybershield Glazing: One coat of VE1-2M coating applied to the number two surface (inner face of first layer of glass which will serve as exterior of layup) Viracon Datastop Coating on the number 4 and 6 surfaces (after the first glazing facing the air space and on the following glazing panel). Provide conductive gasketing between datastop coating and window frame.
3. Viracon VRE1-59 Cybershield Glazing: One coat of Viracon VRE1-59 coating applied to the number two surface (inner face of first layer of glass which will serve as exterior of layup) with Viracon Datastop Coating on the number 4 and 6 surfaces (after the first

glazing facing the air space and on the following glazing panel). Provide conductive gasketing between datastop coating and window frame.

PART 3 - EXECUTION

3.1 GLAZING, GENERAL

A. The installation of glass-and-plastic glazing panels is specified in other sections of these specifications; not work of this Section.

B. Replace panels containing imperfections, distortion, or damage.

3.2 GLAZING-PANEL FABRICATION

A. Industry standards: Comply with applicable requirements by GANA standards titled "Glazing Manual" and "Sealant Manual."

B. Use no materials, equipment or practices that may adversely affect the function, appearance, performance, or long-term durability of the completed glazing assembly or adjacent construction.

C. When possible, reduce exposure to non-compatible chemical substances including, but not limited to, the following:

1. Phenols
2. Silicone-based sealants (non-neutral cure agents)
3. Cutting oils
4. Common cleaning chemicals known to contribute to polycarbonate environmental stress cracking such as ammonia.

    a. Isopropyl not allowed, unless rinsed with water.

5. Ethylene-propylene rubber (EPDM) setting block off-gassing compounds.

D. Manufacturer Requirements:

1. Fabricate laminated assemblies utilizing automated or computer feedback-controlled autoclave processes that monitors temperatures and pressures during autoclaving to confirm the rate of heating and cooling using thermocouples.

    a. Recommended Best Practice: Air gap between laminated layups within autoclaving equipment and horizontal orientation with ample space for airflow between laminated layups provides best results.

E. Manufacturer's Standards:

1. Materials, components, and systems incorporated in the Work shall be mixed, applied, installed and otherwise used in strict accordance with the recommended standards and procedures of the respective manufacturers.

F. Laminated Glass-and-Plastic Panels: Laminate panels by manufacturer's standard heat-plus-pressure process to produce laminations free from foreign substances, including air pockets.

G. Insulating Glass-and-Plastic Panels: Fabricate panel by manufacturer's standard process to produce and maintain dry-and-clean air/gas space between glass exterior and plastic interior sheets using flexible proprietary hermetic edge sealer/spacer bar materials and special corner construction. At Fabricator's option, where insulating glazing panels are indicated for interior partition installations, and both faces are exposed to relatively constant-temperature indoor environmental conditions, provide Fabricator's standard metal-tube-type hermetic edge sealer/spacer-bar materials for non-flexible performance between sheets not subject to significant thermal expansion differential.

H. Exposed Glazing Surfaces:

1. General: Provide edge-banding on panels with exposed edges of polycarbonate.
2. Window and Door Glazings: Glass is required on all exterior surfaces. Interior surface (protected side) may use glass or polycarbonate with adhered chemical resistant PET-(PolyEthylene Terephthalate coating) spall liner.

I. Tolerances:

1. Thickness: Unless otherwise specified, glazing industry thickness tolerances are acceptable for all components used in laminated security glazing assemblies.
2. Outside dimensions: Overall outside dimensions (height and width) of laminated security glazing shall maintain tolerance of +/- 3 mm.
3. Maximum Allowable Overall Bow: ASTM C 1349 Table 1.
4. Mismatch of Laminated Glazing: 1mm maximum between any two plies of the glazing panel on the sill side and 4 mm maximum between any two plies on all other sides. Provide temporary label identifying sill side.

3.3 PROTECTION AND CLEANING

A. Refer to Division 08 Sections associated with these security glazings for additional protection and cleaning requirements.

B. Clean polycarbonate surfaces that have been exposed to known environmental stress cracking agents during fabrication. Use cleaning practices recommended for polycarbonate. Provide documentation logs of all panels exposed to such agents.

C. Protect the glazing from any material, equipment or practices that may impair the functioning, appearance, or durability of the glazing or other construction.

D. Package and store materials in a manner that shall prevent damage, contamination, distortion, breakage, or structural weakening.

E. Replace any material damaged during manufacture, shipping, storage, or erection.

1. Ballistic Resistant glazing layup with spall liner over glass on protected face (i.e., DOS 1123):

a. Visual defects of the spall liner such as scuffs or distortion, are not permitted.
b. Perforations through the spall liner are considered non-compliant and will compromise SD-STD-01.01 certification performance and must be replaced.
c. Temporary mitigation of damaged spall liner is not permitted unless specifically approved in writing by OBO/SM/SEB. Temporary mitigation will only be considered when replacement glazing is ordered and time does not permit replacement prior to accreditation; however, replacement is still required.

2. Ballistic Resistant glazing using Shatter Resistant Window Film (SRWF) (i.e., DOS 1123):

a. Visual defects of the spall liner such as scuffs or distortion are not permitted.
b. Perforations through the SRWF are considered non-compliant and will compromise SD-STD-01.01 certification performance and must be replaced. With approval of window manufacturer of material and installation requirements, SRWF may be field replaced.

F. Protection materials, such as plastic membrane tapes and adhesive sheeting, shall be suitable for the intended protection application and protection period.

1. Provide labels (on crate and on the film) indicating the date of protective membrane installation and the date when it should be removed.
2. If the film is removed, provide instructions for interim protection until the window is installed.

G. Install protection materials in a manner that will not trap harmful moisture or otherwise contaminate the Work in any way.

H. Acceptance of the completed installation of the glazing requires the installation be sound, watertight, and free from defects of materials and workmanship.

3.4 SECURITY GLAZING SCHEDULE

A. [Glazing Type GL-01 (Vision Glass):

1. Insulating glass panel consisting of:

a. Outer lite: Laminated glass with Xxx Xxx coating on the surface facing the air gap.
b. Air Gap: XX mm (XX inch) minimum air gap with black spacer.

c. Inner lite: Glass-clad polycarbonate faced with a 0.XX mm (0.0XX-inch) thick, spall-resistant xxx film laminated to indoor face and with xxx xxx coating applied to the surface facing the air gap.

2. Performance characteristics shall be equal to or better than the following:

a. Visible Light Transmittance (VLT): XX percent min.
b. Reflectance (vis,out): XX percent max.
c. U-value (summer): 0.XX max.
d. Solar Heat Gain Coefficient (SHGC): 0.XX max.]

END OF SECTION 088855

SECTION 089117 - SECURITY LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. The extent of security louvers required to provide specified resistances is indicated on Contract Drawings.

B. Install security louver assemblies only into a steel substrate in such a manner that allows for future adjustment. This may be either a structural steel wall or other structural steel assembly, a tube steel sub-frame or steel embed in concrete, or a tube steel sub-frame attached to concrete or masonry.

C. Related Sections include the following:

1. Division 01 Section "Secure Shipment."
2. Section 033000 “Cast-in-Place Concrete” for concrete substrates which provide anchorage/support for work of this Section.
3. Division 055005 “Metal Fabrications” for structural steel framing work, fabrication, and metal treatments/coating for supporting louvers of this Section, and for basic metal fabrication requirements.
4. Section 099602 “High-Performance FE/BR Coatings.”

1.2 PRE-INSTALLATION MEETINGS

A. Before beginning installation of the FE/BR assemblies, the manufacturer's technical representative shall conduct a pre-installation conference at the Project site with the Installer, the Project Director/COR, and other interested parties to review installation procedures and manuals, schedules, and coordination of the FE/BR-assembly installation with other elements of the Work.

1.3 ACTION SUBMITTALS

A. General:

1. All submissions must be in accordance with Division 01 Specifications.
2. Submit shop drawings, samples, data, reports, and engineering calculations for the Project Director/COR 's approval before proceeding with the Work of this Section. Upon award of contract, provide a submittal log and a list of major products proposed to be furnished. Submissions shall be made according to a schedule that allows adequate time for review and approval by the Project Director/COR as stated in Division 01 and the General Conditions.
3. Submissions shall be complete and comprehensive and include all shop drawings, samples, material data submissions, and engineering calculations for the part of the assembly addressed. All work shall be coordinated by the Contractor prior to submission.

Incomplete, non-conforming, or uncoordinated submissions are subject to rejection or return without action by the Project Director/COR. Any work executed which deviates from approved shop drawings and submittals are subject to rejection.

B. Product data for each manufactured component, accessory, material, and device required for fabrication of louver units, including hardware, installation inserts, anchors, and similar elements.

C. Manufacturer's Certifications:

1. Provide a copy of the Letter from manufacturer indicating the products have been certified by Bureau of Diplomatic Security (DS) in accordance with the Part 2 Article on PERFORMANCE REQUIREMENTS.

D. Standard test reports including certified test reports confirming compliances. Submit laboratory test reports demonstrating conformance with required air flow capability identified in the Part 2 Article on PERFORMANCE REQUIREMENTS.

E. Engineering Calculations:

1. Submit project-specific engineering calculations as described herein and in the General Conditions and to address the performance requirements in this specification section for the louver system and its attachment to the supporting building structure.
2. Submit engineering calculations concurrently with corresponding shop drawings to include free area calculations and other calculations required to support the design. Include calculations of air pressure drop, airflow, and similar applicable mechanical design performance.
3. Calculations shall bear the seal and signature of a Professional Engineer licensed in accordance with Chapter 1 of the OBO Building Code.
4. For data including engineering design showing compliance with physical performance requirements.

F. Shop drawings showing dimensioned details of louvers, including performance rating and adjacent construction. After final modifications and corrections have been incorporated, submit drawings as AutoCAD files with .DWG extension. Show the following:

1. Cover sheet: Include manufacturer's name, address, telephone, and facsimile numbers; customer and address; project location; contract or purchase order number; and submittal release record.
2. Unit information:

   a. Mark (louver no.).
   b. Manufacturer's model number.
   c. Government DOS model number.
   d. DOS code.
   e. Louver/frame finish.
   f. Louver type (interior or exterior).

3. Elevation Drawings: Show typical louver exterior elevations at not less than 1:20 scale.

a. Rough opening dimensions.
b. Frame opening dimensions.
c. Separate steel sub-frames (number and list).
d. Detail symbols.
e. Mark (louver number)

4. Plan Drawings:

a. Relate to elevation on drawing.
b. Identify "Attack" and "Protected" sides.
c. Mark (louver number)
d. Indicate room space numbers taken from Contract Drawings.
e. Orientation of the louver (i.e., either vertical or horizontal as in a slab).
f. If applicable, include Manufacturer's name and reference numbers for primer and finish paint, including number of coats applied; see Section 099602 "High-Performance Coatings."

5. Details: Show section at 1:5 scale of members indicating construction, size, and thickness of components, louver blade profiles, anchorage, steel sub-frames, continuous shim plates (where applicable), and spacing details, together with connections, fastenings, shims, sealant, backer rods, and means of separating dissimilar metals. Details shall be on separate sheets from plan and elevation drawings. Include sections that show the jambs, head, and sill condition to include drainage systems (e.g., weep holes, drainage channels), and weather proofing and flashing that has been coordinated with the weather proofing systems.
6. General Product Information: Include notes sheet, miscellaneous materials specifications, abbreviations, finish/paint system, and legend.
7. Breakdown of Product Line Items:

a. If Manufacturer produces one contract line item as several parts, they shall break out items on drawings. Each item shall be a subdivision of that product line item number.

8. Engineering Calculation Summaries: Include summary of key engineering design calculations to confirm compliance with the Part 2 Article on "Performance Requirements."
9. Certificates of compliance confirming adequacy of performance for required units.

a. Where air flow requirement is identified, certify compliance with the Performance Requirements of this Section.
b. Provide air flow test reports that are both directions across the louver for the as-tested FE/BR size.

10. Submittal shall cite all anchorage components, including complete description of anchors and installation criteria such as drilling specifications into concrete or masonry, torque requirements, minimum edge distance, spacing, etc.

a. For sub-frame attachment to concrete, Contractor's instructions shall include alert to installers to avoid cutting rebar during concrete anchor installation.

11. Installation instructions shall be customized for each type of application.

G. Manufacturer's Technical Representative and Contractor shall review the design and submit a list of unique project specific site conditions that require special manufacturer representative inspection and/or installation training.

1.4 INFORMATIONAL SUBMITTALS

A. General:

1. Informational submittals shall be submitted at least four weeks prior to installation.
2. Refer to Division 01 Section on Submittals for general administrative requirements.

B. Qualification Data: For Manufacturer and Installer in accordance with the Part 1 Article on QUALITY ASSURANCE.

1.5 CLOSEOUT SUBMITTALS:

A. General:

1. Refer to Division 01 Sections on Submittals and on Closeout for general administrative requirements.

B. Special Warranty: Provide special warranty in accordance with the Part 1 Article on WARRANTY.

C. Maintenance Data.

1. Data shall include instructions for cleaning and maintenance.

D. Inspection Reports and Certificates of Compliance: See forms at end of this Section.

1. Provide Table of contents and/or bookmarks organizing by building and floor for each product using contract identification number.
2. Provide plan showing location of products (one plan may cover multiple products or whole floor if legible).
3. Provide completed certificates of compliance documenting that all FE/BR louver assemblies have been installed in accordance with contract documents including all supplemental photographs, sketches, and drawings. Signed by certified installer.
4. Provide any additional QC documents used by Contractor during the installation. including all supplemental photographs, sketches, and drawings.

1.6 QUALITY ASSURANCE

A. Testing Laboratory Qualifications: For compliance with non-security performance requirements on security louver assemblies of this Section, use only those testing laboratories which have

successfully demonstrated to Project Director/COR that they have experience and capabilities needed to satisfactorily conduct required tests.

B. Quality Control for Forced-Entry/Ballistic-Resistant (FE/BR) Products: Certify compliance of fabricated and assembled FE/BR products specified in this Section with each quality control procedure established by the Government; these procedures are identified in the Compliance Form at end of this Section.

C. Delegated Design Responsibility: Contractor shall retain an experienced Professional Engineer, registered in the U.S. or in country with significant experience with louvers of similar complex performance requirements, and acceptable to the Project Director/COR, to perform responsibilities of Delegated Design.

D. Qualifications: The sub-contractor, including the team lead, shall have a minimum of three years of experience in the installation of FE/BR Louvers. If the team lead will also serve the function of the technical representative, then they should have experience installing the manufacturer's louver that will be installed or factor trained. The team lead shall have the ability to read and understand the Contract Drawings, Specifications, shop drawings, and installation manuals by the manufacturer.

E. Manufacturer's Technical Representative: For new construction and renovation projects with five or more FE/BR louvers or if the project includes more than 20 FE/BR products, regardless of manufacturer, the FE/BR supplier shall appoint a manufacturer's technical representative to the project. The manufacturer's technical representative shall be an employee of the manufacturer. If no technical representative is appointed, the contractor's team leader shall fulfill the training and installation supervision requirements for the manufacturer's representative. The manufacturer's technical representative shall have the following responsibilities:

1. Pre-Installation Conference: See the Part 1 Article on PRE-INSTALLATION MEETINGS.
2. Installation Team Training: The manufacturer's technical representative shall provide the crew which is to perform the installations of the FE/BR assemblies on-site, hands-on training to include the entire assembly of the first FE/BR louver. The manufacturer's technical representative shall also instruct the crew on preventive measures which must be taken to protect the FE/BR assemblies from damage during construction.
3. Inspection: See the Part 3 Article on FIELD QUALITY CONTROL.
4. Additional Assistance: The manufacturer's technical representative shall provide the Contractor any additional advice, instruction, training, supervision, or inspection required to enable the Contractor to complete the installation certification described below, and to fully train the Embassy staff in the proper operation and maintenance of the FE/BR assemblies.

F. Team Lead for FE/BR product installation: Each project shall designate a "Team Lead" for the installation of FE/BR louver products. Team lead shall have the following responsibilities:

1. Shall be familiar with the scope of the project, has reviewed the submittals.
2. Shall be trained in the field by the Manufacture's technical representative or provides appropriate proof of certified installer per ARTICLE on Qualifications

3. Shall be responsible for the installation team and quality of the installation.

   a. Fills out the “Certificate of Compliance” for each Marked unit.
   b. Coordinates with the Contractor Quality Control Manager.

G. Certification by General Contractor: Prior to final completion, the General Contractor shall provide to the Project Director/COR a certification that the FE/BR materials have been installed in accordance with the manufacturer's instructions, these specifications and are operational. Use Certificates of Compliance forms at end of this Section. Deviation from these requirements is only permitted with the written approval of the Project Director/COR with input from the OBO/CFSM/SM Physical Security Engineer. Specifically, the General Contractor's certification shall include verification that:

1. The manufacturer's technical representative or Team Leader (as allowed by the Part 1 Article on QUALITY ASSURANCE) was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security louvers has received training. See the requirements for the representative or leader in the Part 1 Article on QUALITY ASSURANCE.
2. Each sub-frame has been installed level, plumb and square.
3. All pre-fabricated sub-frame assemblies, to include embeds, have been factory welded together.
4. Employees performing the installation meet the specified training and experience qualifications.
5. All temporary bolts have been replaced with permanent bolts.
6. All frame bolts have been torqued per manufacturer’s specifications. Shims have been inserted at all bolt locations, minimum one shim per bolt.
7. Maximum gap at shim space is no more than 6.5mm (1/4”) or as per the manufacturer’s specifications based on the tested and DS certified assembly. A minimum of one shim at each bolt location has been provided.
8. Frame bolts/screws are per the approved shop drawings. When within a blast envelope of a structure, blast design and anchorage requirements have been met.
9. All product bolts, screws and anchors are metric products.
10. Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.
11. Ballistic trim bars have been secured/screwed to the sub-frame and not the louver frame.
12. The manufacturer has provided two metal ID plates for each louver that has machine applied letters and numbers.

H. Employ only experienced tradesmen for fabrication and installation, who are capable of producing work of the highest standard of quality in the industry.

1.7 IDENTIFICATION SYSTEMS

A. Identify each assembly to provide the Government with ready reference to original manufacturer to facilitate reorders, replacement parts, service, resolution of complaints, and inventory. The label shall be typically embossed/printed metal plate or metallic foil with adhesive backing for permanent identification. One label shall be visible after installation from interior and shall be

located at the lower right-hand corner if installed vertically. A second label shall be mounted on a primary, non-removable component of louver. The labels shall be approximately 40 by 75 mm and shall cite:

1. Manufacturer's name/city/state.
2. Contract number.
3. Month/year of manufacture.
4. Mark number.
5. DOS certification model number.
6. DOS digit code (i.e. 2123, 2133, etc).

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver each assembly to project site with fabrication, finishing, and assembly of primary panels, sub-frames, and frames completed and prepared for installation and connection with security systems. Refer to Division 01 Section “Secure Shipment” for additional requirements.

B. Pack louver assemblies and accessories in two crates: one crate for the louver, and one crate for the sub-frame and ballistic trim. Provide a separate compartment in each crate for installation hardware. With Project Director/COR approval, for larger projects, embeds and/or subframes, may be shipped separately and may be crated or containerized, provided they are properly braced to prevent bending, twisting or damaged in shipping.

C. Provide protection of pre-finished units.

D. Treat security louver assemblies as fragile merchandise, and package and ship in export wood cases blocked together in a mass. Comply with Manufacturer's directions for storage and handling to prevent edge damage or other damage to assembly resulting from effects of moisture, condensation, temperature changes, direct exposure to sun, and contact with chemical solvents. Clearly mark crates to indicate which side should be opened first.

E. Clearly sub-frames with louver mark number. Identify “sill”; horizontally-installed louvers (e.g, installed within slab) shall be marked with identifier that matches marking on louver (i.e., “side A”) and “attack side.” Package sub-frames separately and ship in export wood crates separate from the louver assemblies. Protect each sub-frame piece to minimize damage to finished surfaces.

F. Package and ship installation hardware (anchors, bolts, screws, shims, ballistic trim, installation manual, etc.) for each louver in the same crate as the louver assembly. With Project Director/COR approval, for larger projects, may be shipped separately and may be crated or containerized, provided they are properly braced to prevent bending, twisting or damaged in shipping.

G. Package and ship shop drawings and installation manual for louvers prior to door assembly **[may be shipped with the louvers]**. When shipped with louvers, crate shall clearly indicate on the outside that it contains the shop drawings and installation instructions and be marked, “open first.”

1.9 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace louver that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Failure to meet performance requirements.
b. Deterioration of metals, other materials, and metal finishes beyond normal weathering.

2. Warranty Period:

a. Louvers: Manufacturer will warrant the doors for a period of five years from substantial completion.

3. See Section 099602, “High-Performance FE/BR Coatings” for coatings warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Fabricate and install security louvers to successfully achieve indicated levels of resistance to security attacks. Resistances apply to anchorages, framing, louver blades, fasteners, hardware, and accessories, along with providing minimum ratio of 1:3 for open air-passage way to gross louver face area, achieving long-term resistances to effects of weathering and exposures to deterioration, and resisting (as applicable) penetration of water, light, sight, dirt, birds/animals, insect screen (if required/project specific), and similar intrusions of deleterious nature as applicable for indicated use in each case.

B. DOS Louver Codes: For each performance identified below, provide specific performance ratings, also referred to as Government Code numbers, as indicated in Table 2.1, “Louver Codes.”

1. Forced-Entry (FE) resistant assemblies: Where louver assembly is shown or scheduled as FE, provide assemblies conforming to rating for attack with ordinary hand tools for rating categories established by Physical Security Division of the Bureau of Diplomatic Security (DS/PSP/PSD).
2. Ballistic Resistance (BR) assemblies: Where louver assembly is shown or scheduled as BR, provide assemblies conforming to rating for ballistic attack for rating categories established by Physical Security Division of the Bureau of Diplomatic Security (DS/PSP/PSD).

TABLE 2.1: LOUVER CODES

DOS CODE	1st DIGIT – NOT USED	2nd DIGIT – NOT USED	3rd DIGIT – FORCED ENTRY RATING	4th DIGIT – BALLISTIC RESISTANCE RATING
1	Transparent	None	None	None
2	Opaque	*	15 minutes	Not Used
3	*	*	60 minutes	Rifle 5.56 & 7.62 NATO
4	*	*	5 minutes	Armor-Piercing (.30-06)

3. Provide combined performances for indicated requirements, with each performance surviving combined attacks within rating limitations of performance, but recognizing that certain forms of attack may result in severe damage to units, even though repelled successfully, leading to need for replacement of units, or of damaged elements of units.

C. Air Flow Capability:

1. Minimum free area: 33 percent. Free area calculation must include allowances for all airflow obstructions (e.g., insect screen, bird screen, louvers, structural/support framing, etc.).
2. Maximum intake pressure drop: 3.8 mm (0.15 in) water gage at face velocity of 55 meters/min (180 ft/min).
3. Maximum discharge pressure drop: 7.5 mm (0.29 in) water gage at face velocity of 80 meters/min (265 ft/min).
4. Note: Testing is typically performed at a specified free area velocity (airflow through free area of louver), which is significantly higher than face velocity (airflow through framed opening without louver).

D. Normal environmental exposures when exposed to outdoor conditions: Except as otherwise indicated or applicable for type of security louver shown in each instance of use, achieve the following performances as defined by applicable industry standards, and as acceptable to Project Director/COR.

1. Water penetration: Configure and fabricate exterior exposed louvers to effectively repel normal range of exposures to precipitation.

2. Bird screens: Where indicated, equip louvers with bird screens so that maximum size opening for passage through louver is 12.7 mm in width, or 19 mm square. Except as otherwise indicated, locate on interior louver face, and provide access for cleaning/removal as acceptable to Project Director/COR.

E. Structural Performance: Security louver assemblies and their anchorage to the supporting building structure shall withstand the effects of wind loads determined as follows, with no permanent deformation when designed in according to ASCE 7-16, as adopted and amended by the OBO Building Code:

1. Basic Wind Speed: Shall be as indicated in the Structural Drawings.

2.2 MANUFACTURER/FABRICATOR

A. Certified Units: Provide units which are manufactured/fabricated by firms which have produced units identical with types required for this Project, which have been previously certified by Bureau of Diplomatic Security (DS) to comply with requirements for levels of resistance to attack specified or indicated, in accordance with Department of State, DS/PSP/PSD, Forced Entry and Ballistics Certification Standard SD-STD-01.01, Revision H.

2.3 SPECIAL APPLICATIONS:

A. Anti-Climb Performance: Based upon design criteria associated with building type or location within project, FE/BR louvers may be required to meet DOS anti-climb criteria.

1. While project design may adequately facilitate use of secondary louver outboard of FE/BR louver to achieve anti-climb, design must be coordinated through Project Director/COR and confirmed by OBO/CFSM/SM Physical Security Engineer, and must conform to all mechanical air flow project criteria.
2. Secondary louver design may be used to address both anti-climb and storm louver project requirements.

B. Hurricane-Resistant Louvers: In hurricane-prone regions, FE/BR louver louver design shall mitigate the effects of hurricane-driven precipitation.

1. While project design may adequately facilitate use of secondary louver outboard of FE/BR louver to address this precipitation risk, design must be coordinated through Project Director/COR and confirmed by OBO/CFSM/SM Physical Security Engineer, and must conform to all mechanical air flow project criteria.
2. Secondary louver design may be used to address both anti-climb and these hurricane-resistant louver requirements.

2.4 CORROSION RESISTANCE PERFORMANCE

A. Corrosion Risk: As indicated in project Contract (e.g., Statement of Work). The OBO Building Code Appendix W defined OBO Atmospheric Corrosivity Level for this site is **[Low] [Moderate] [Extreme]**. The atmospheric corrosion risk exposure risk type for a given component shall be as defined by OBO Building Code R101.1.2 (i.e., direct exterior, indirect exposure to exterior, and interior exposure only).

B. Corrosion Resistance Standards: Provide materials and finishes for the components in accordance with the material specifications of this Specification Section and the general material type as indicated by this article for the project-specific corrosion risk identified above or elsewhere in the Contract Documents.

C. Material Standards for Components for Interior Louvers: As applicable for the OBO Atmospheric Corrosivity Level (ACL) of site:

1. Mild Steel: hot-dipped galvanized coating; low, moderate, and extreme ACL.
2. Stainless Steel: low, moderate, and extreme ACL
3. Aluminum: low, moderate, and extreme ACL.

D. Material Standards for Components for Exterior Louvers: As applicable for the OBO Atmospheric Corrosivity Level (ACL) of site and for both direct exterior exposure and indirect exposure to the exterior:

1. Mild Steel: hot-dipped galvanized coating; low and moderate ACL.
2. Stainless Steel: low, moderate, and extreme ACL.
3. Aluminum: low, moderate, and extreme ACL.

2.5 MATERIALS, GENERAL REQUIREMENTS FOR MILD STEEL LOUVERS

A. Hot-Rolled Steel Sheets and Strips: ASTM A 569, commercial quality, pickled and oiled, except as otherwise indicated.

B. Cold-Rolled Steel Sheets: ASTM A 366, commercial quality, except as otherwise indicated.

C. Galvanized (Zinc-Coated) Steel Sheets: ASTM A 653, G90 zinc coating, mill phosphatized; commercial steel, except as otherwise indicated. Zinc-iron alloy-coated (galvannealed) steel sheet products are not permitted.

D. Stainless Steel Sheets where required for finish: AISI Type 316, complying with ASTM A 167; commercial quality, No. 4 directional polish.

E. Plates, Bars, Angles, and Channels: ASTM A36 or ASTM A572

F. Hollow Structural Sections (steel tubes): ASTM A500 or ASTM A1085

G. Supports and Anchors: Fabricate to endure required performances, but of not less than 1.5 mm sheet steel. For exterior wall assemblies, hot-dip zinc coat support/anchor units after fabrication in compliance with ASTM A 153, Class B.

H. Inserts, Bolts Fasteners: Standard units of strengths required to endure performances; hot-dip zinc coated where used in exterior wall assemblies in compliance with ASTM F2329.

I. Hot-Dip Galvanizing: All mild steel louver components must be hot-dip galvanized in accordance with ASTM A123.

2.6 MATERIALS, GENERAL REQUIREMENTS FOR STAINLESS STEEL LOUVERS

A. Stainless Steel Plates, Sheets, and Strips: AISI Type 316, 316L, 2101 or 2205 complying with ASTM A240/A240M or ASTM A895/A895M

B. Stainless Steel Bars and Shapes: AISI Type 316, 316L, 2101 or 2205 where welding is to be performed, complying with ASTM A276/A276M or A582/A582M

C. Stainless Steel Tubing: AISI Type 316, 316L, 2101 or 2205A1016/A1016M

D. Stainless Steel Wire and Rod: AISI Type 316, 316L, or as recommended by the manufacturer for AISI 2101 or 2205 steel, complying with ASTM A555/A555M

E. Stainless Steel Bolts, Hex Headed Screws, Nuts, and Washers: AISI Type 316 (Alloy Group 2), complying with ASTM F593 and ASTM A594, or ASTM A193 and ASTM A194, or ASTM A320 and ASTM A194, or ASTM A1082; provide washers of compatible stainless steel alloy where appropriate.

2.7 MATERIALS, GENERAL REQUIREMENTS FOR ALUMINUM LOUVERS

A. Minimum Aluminum Extrusions: In compliance with FE/BR performance of tested assembly.

B. Aluminum Sheets, Plates, Bars, Tubes, and Shapes: Comply with Aluminum: ASTM B209 (ASTM B209M) stretcher-leveled aluminum alloy or ASTM B221 (ASTM B221M)

C. Minimum sheet thickness: Sheet one-piece 1.02 mm (0.040-inch)

D. Inserts, Bolts, Fasteners: Standard units of strengths required to endure performances; Stainless steel, grade shall match tested/certified condition. Provide compatible washer that prevents galvanic action. See paragraph below on “Frame to Subframe Attachments” for anchor bolt requirements.

1. Stainless Steel Bolts, Hex Headed Screws, Nuts, and Washers: AISI Type 316 (Alloy Group 2), complying with ASTM F593 and ASTM A594, or ASTM A193 and ASTM A194, or ASTM A320 and ASTM A194, or ASTM A1082; provide compatible AISI Type 316 washers where appropriate.

E. Fasteners: Sizes and spacings as required to fulfill performance requirements, including strength-of-steel selections; finished to match steel louver members, except as otherwise indicated. Where fastener heads or nuts are exposed on forced-entry resistant faces of louvers, provide non-removable-type fastener units of stainless steel unless otherwise indicated; comply with ASTM A 320.

F. Inserts, Anchors, and Accessories: **[Hot-dip galvanized after fabrication, complying with ASTM A 2329.] [Stainless steel Type 316]** Provide concrete inserts of cast-iron or malleable-iron complying with ASTM A 47, or of fabricated steel. In addition to any restrictions or requirements indicated on the Construction Drawings, post-installed anchor systems proposed by the Contractor's delegated design shall each have ICC-ES Evaluation Report indicating conformance with current applicable ICC-ES Acceptance Criteria including, but not limited to, for cracked concrete for concrete substrate applications, seismic applications, and for the use in the specific substrate type and characteristics intended. Shop drawings and field work sketches shall clearly indicate critical embedment, spacing, and edge distance requirements and placement tolerances determined by the design.

G. Supports and Anchors: For wall assemblies, hot-dip zinc coat support/anchor units after fabrication in compliance with ASTM A 153, Class B

H. Frame to Subframe Attachment: Stainless steel, hot-dip, zinc-coated steel, or iron, complying with ASTM B 633 and ASTM F1941 for fasteners; provide sufficient mechanical properties that design conforms to the Part 2 Article on PERFORMANCE REQUIRMENTS.

1. All fasteners for louvers shall be socket head metric (Class 8.8) equivalent to SAE J429 Grade 5 or other appropriate high strength bolts and hardened nuts and washers as identified in the blast report or as needed to satisfy the performance requirements and comply with standard OBO specifications for FE/BR and Blast resistant products. If blast, or other requirements, result in changes to the tested FE/BR design, to include anchor or other material changes, the FE/BR vendor shall contact DS/PSP/RD for to determine if a technical review is required. Shop drawings should include the TR number, where applicable. Contractor's design shall provide appropriate corrosion prevention where dissimilar metals are in close proximity and to address the atmospheric corrosion performance requirements identified in this specification.

I. Welding Rods/Bare Electrodes: Provide type recommended by applicable AWS specifications, for metal/alloy being welded in each element of louver fabrication and installation.

J. Stainless Steel Flashing: Provide dead soft stainless steel sheet of gage indicated, but not less than 0.61 mm (24-gage, 0.0235 inches) thick; comply with ASTM A 167, **[Type 316]**.

2.8 FABRICATION AND ASSEMBLY

A. General: Fabricate, test, and preassemble security louver units at factory. Weld joints/seams in metal work to utilize full strength of each member in assembly to resist forces of attack to maximum. Comply with applicable AWS standards for welding workmanship, and grind exposed-to-view welds reasonably smooth. Provide welded-in-place steel reinforcements,

including anchorage devices, as indicated. Provide for disassembly of each expanse of louvered area to the extent necessary for shipment, handling, storage, and installation. Comply with AWS D1.1 Structural Welding Code for Steel. D1.6 for Stainless Steel and D1.2 for Aluminum. Fabricate to avoid leakage and entrapment of normal wind-driven precipitation, sand/dirt, and similar substances in atmosphere in configurations of louver blades, frames, and other elements. See the Part 1 Article on ACTION SUBMITTALS for participation requirements.

1. Fabrication: Except as otherwise indicated, fabricate louver assemblies entirely of steel, stainless steel, or aluminum shapes, plates, and bars; welding principal elements of assemblies for maximum strength, and resistance to security attack.

    a. Include supports, anchorages, and accessories required for complete secure assembly.
    b. Provide vertical support at spacings no further apart than used on the FE/BR tested sample.
    c. Join frame members to one another and to stationary louver aperture bar stock slats by welding, except where field bolted connections between frame members are made necessary by sized of louvers. Maintain equal slat spacing, including separation between slats and frames at head and sill to produce uniform appearance. The slanted slats or other approved configuration shall be designed to allow flow of air and privacy but to exclude rain, debris, or sun.
    d. Stainless Steel Welded Joint Treatment: At all welded joints in stainless steel assemblies, remove oxides, carbon precipitation, and weld spatter at or around welded joints and passivate surfaces in accordance with ASTM A380 and ASTM A967.

2. Load deflection isolation: Fabricate head and jamb anchorage system for each louver unit to ensure isolation of unit from absorbing or being subjected to vertical and lateral loading due to building structure deflections, caused by dead and live loading of the structure, including anticipated seismic deflections as indicated in the Structural Movements Narrative. Mounting shall be designed to allow movements needed for isolation from structure while maintaining the as tested design for anchors.
3. Bird Screens: Fabricate of stainless steel material with maximum size opening for passage through louver that is 12.7mm in width, or 19mm square. Screens shall be located on inside face of exterior louvers and shall be secured to louver frames to permit removal and cleaning. Screens are not required on louvers inside of the building (i.e., non-exterior louvers)

B. Sub-Frames: Provide steel sub-frames for all FE or FE/BR louvers for installation at concrete, masonry, and other non-steel rough openings and for structural steel openings where the depth is less than the louver frame depth. Sub-frames and their anchorages to the supporting building structure shall be designed by the louver supplier and shown in the louver shop drawings. No steel element to receive a threaded fastener shall be less than 12 mm (1/2 inch) thick. Embedded plates with headed steel studs shall not be less than 12 mm thick and have depth not less than the louver frame depth. Embed plates shall be designed to receive bolts for attaching the louvers and shall be detailed to ensure the bolts do not bottom out and the that the proper installation torque can be achieved. Coordinate the sub-frame anchor locations with the louver frame bolt hole locations. When within blast envelope of structure, in addition to the structural and FEBR

performance requirements the sub-frame design shall conform to blast design and anchorage requirements.

1. Steel sub-frame material shall conform to:

    a. Plates and Bars: ASTM A36 or ASTM A572
    b. Channels and Angles: ASTM A36 or ASTM A572
    c. Hollow Structural Sections ("steel tubes"): ASTM A500 or ASTM A1085.

2. Post-installed Anchors: In addition to any restrictions or requirements indicated on the Construction Drawings, post-installed anchor systems proposed by the Contractor's delegated design shall each have ICC-ES Evaluation Report indicating conformance with current applicable ICC-ES Acceptance Criteria including, but not limited to, for cracked concrete for concrete substrates, seismic applications, and for the use in the specific substrate type and characteristics intended. Shop drawings and field sketches shall clearly indicate critical embedment, spacing, and edge distance requirements and placement tolerances determined by the design.
3. Shipping and Handling: Steel sub-frame shall be assembled and braced by manufacturer prior to shipping to avoid out of plane deformations during transportation. Where sub-frames are hot -dipped galvanized, temporary supports shall be designed and detailed to minimize damage to the galvanized surfaces during use and removal.
4. Contractor shall install steel sub-frames plumb and square. Contractor shall ensure that installation, or concrete pouring do not exceed the installation tolerances of the supported door system.
5. All sub-frames without adjustability shall be drilled and tapped in the field.
6. For New Concrete Substrates: Attach steel sub-frame the concrete substrate with embedded anchors with minimum 12mm x 150mm steel studs, spaced no less than 450 mm on center. Final sub-frame shop drawings, product data, and associated delegated design calculations shall be approved by OBO/SEB prior to fabrication and shipment.

    a. Exterior sub-frames shall be hot-dipped galvanized for corrosion resistance in accordance with ASTM A123.
    b. Interior sub-frames shall be hot-dipped galvanized in accordance with ASTM A123 when cast in place.

7. **[For Masonry Substrates: Provide steel sub-frame, typically a plate, tube, or channel that has a minimum 12-mm thickness for the anchors and a minimum 150 mm width and as determined per the blast design, when blast is a requirement. Post-installed chemical anchors in hollow masonry substrates shall use appropriate screen tubes provided by the anchor system's manufacturer installed in conformance with the Manufacturer's Printed Installation Instructions, and coordinated with the delegated design calculations to meet the performance requirements.]**
8. **[For Existing Concrete Substrates: Provide steel sub-frame frame and attach to the concrete substrate with post-installed anchors with minimum 12 mm diameter, embedded no less than 200 mm, spaced no greater than 300 mm on-center, with edge distances not less than required by the anchor system manufacturer, installed in conformance with the Manufacturer's Printed Installation Instructions, and**

coordinated with the delegated design calculations to meet the performance requirements.]

2.9 FINISHES

A. Finish Standards for Louver: As applicable for risk associated with Atmospheric Corrosivity Level (ACL) for the project location. Refer to the Part 2 Article on CORROSION RESISTANCE PERFORMANCE for acceptable component materials for various ACL.

1. Stainless Steel: These components do not require coating, but may be coated for aesthetic purposes. See Section 099602 “High-Performance FE/BR Coatings” where coatings are applied.
2. Fluoropolymer Coatings: Fluoropolymer coatings may be used over any acceptable base metal. See Section 099602 “High-Performance FE/BR Coatings.”

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine prepared substrate openings to receive security louver units. Check anchorages for location and coordination of face plans between walls and louver units. Check clearances provided for isolation of louver units from building movements and deflections, and for joint sealer applications.

B. Apply bituminous paint coating, in 30-mil (0.76-mm) thickness, on louver sub-frame edge members, where required to be in contact with cementitious substrates or other dissimilar materials. Confine coating to surfaces not exposed to view, and allow to dry nominally before installation of units.

C. Provide through wall flashing at all louvers. Flashing to provide weather and watertight seal.

3.2 INSTALLATION

A. General: Install Security Louver Assemblies in accordance with approved shop drawings, manufacturer's data and instructions, and requirements of these specifications and the attached Certificate of Compliance

B. Sequencing and Timing Requirements: At the time agreed upon with Project Director/COR, proceed with installation of fabricated metal louver units. Sequence installation work to achieve proper application for each element indicated, in manner which will produce maximum resistance to indicated forms of attack and weather.

1. Coordinate installation of louver units with installation of expansion joint materials, isolators, joint fillers, spacer strips, tapes, gaskets, sealants, sub-frame stops, and other elements as indicated. Produce tightly fitted, weather resistant, securely supported louver

unit installation, achieving required performances. Tighten bolts for maximum shear and tensile strength, for resisting forces indicated. Comply with requirements in Division 07 section on joint sealants and Division 08 section on glazing. Comply with Fabricator's instructions and recommendations.

C. Coordinate installation of louver units in sub-frames with installation of expansion joint materials, isolators, joint fillers, spacer strips, tapes, gaskets, sealants, backer rods, sub-frame stops, and other elements indicated. Install louver units uniformly to lines and elevations indicated, plumb and level, true to plane of optical reflection. Produce tightly fitted, weather resistant security louver units achieving required performances. Comply with Fabricator's instructions for final assembly and installation. Install anchor bolts and devices as indicated, exercising care to shim and tighten against substrates without distorting or deflecting frames from intended lines. Comply with requirements in Division 07 section on joint sealants.

D. Place installation accessory items as shown and as required for unit installations, including flashings, shims, fillers, bedding materials, and anchorage accessories. Prepare openings for unit interfaces with other work.

E. Install bird screen only on inside face of exterior most louver when louvers are installed in tandem.

F. Anchorage: The louver manufacturer shall provide anchors appropriate for substrate to which louver frame and sub-frame is to be fastened. Louver frames shall have pre-drilled, vertically slotted bolt hole patterns not to exceed as tested condition. The Contractor shall verify substrates involved, and supply any special fastening tools (e.g., special drill or bit) required by anchoring system. The anchor shall be acceptable for shock/short duration loading, and have potential for removal and re-installation during life of building. Exercise extreme care in tightening of fasteners at lines of anchorage where building deflections are indicated to be accommodated without transferring loading onto louver units.

1. Avoid cutting rebar during concrete sub-frame installation.
2. Provide 1.5 mm (1/16 inch) thick shims with break-off tabs for rough opening (RO) frame clearance.

G. Overcoat Painting: Refer to Division 09 section for painting for final overcoating on metal framing and trim members of fenestration units; not work of this Section.

H. Interface joint sealers: Refer to applicable Division 07 sections for installation of exposed joint sealant beads and related materials as indicated; not work of this Section.

I. [Field Touch-up: For projects that include coating of aluminum, refer to Section 099602, "High-Performance FE/BR Coatings."; these may require touch-up of installed louvers.]

3.3 FIELD QUALITY CONTROL

A. The manufacturer's technical representative shall observe and advise the crew during their installation of the first three FE/BR louvers. Upon completion of the installation of each of the three initial FE/BR louvers, the manufacturer's technical representative shall inspect the work and

direct the crew in any correction or modifications required for acceptable performance of the units.

B. For unique site conditions, the manufacturer's technical representative shall also be responsible for observing and inspecting the installation of FE/BR louvers, beyond the initial three louvers, as necessary to ensure that the installation crew is adequately prepared for installation. Contractor is responsible for documenting the installation of the unique installation on the "Certificate of Compliance" and for photographing said conditions (and anything that would be hidden after the installation).

3.4 CLEANING AND PROTECTION

A. General: When other work in area(s) of security louver installations has been completed, and when authorized by Project Director/COR, proceed with final cleaning of units. Remove protective coverings and residue of adhesives. Repair minor abrasions, and replace substantially damaged work as requested by Project Director/COR. Clean exposed coatings in accordance with instructions and recommendations of both coating Manufacturer and unit Fabricator. Test operating parts to show compliance with requirements; correct operational deficiencies as directed; lubricate bearings and remove excess lubrication.

END OF SECTION 089117

Certificate of Compliance

FE/BR Louver Assemblies
Louver Number _____
(per Construction Documents)

The Contractor shall complete the Certificates of Compliance in full prior to acceptance of the FE/BR products by DOS. A Certificate of Compliance is required for each individual installed product. Each Certificate of Compliance shall be completed by the Installer Team Lead and the Contractor's Quality Control Manager. When there is no QC Manager then the Contractor's Project Manager shall complete the form.

The DOS Approving Official (OBO/CFSM/SM/SEB, OBO/CFSM/SM/SOD/PSO, OBO/CFSM/CM, Post Facility Officer, or DOS representative appointed by the COR) will review each Certificate of Compliance for completeness.

DESCRIPTION – TRAINING & OTHER DUTIES OF REPRESENTATIVE/ LEADER

1	The manufacturer's technical representative (or Team Leader as allowed by the Part 1 Article on QUALITY ASSURANCE) was on site during the initial stages of installation and for site-specific unique conditions as required. Team installing security louvers has received training. See the requirements for the representative or leader in the Part 1 Article on QUALITY ASSURANCE.	**Representative's [Installer Team Leader's when there is no manufacturer's technical representative] Name/ Date:**

	DESCRIPTION - GENERAL	**INSTALLER TEAM LEAD: INITIALS/ DATE**	**CONTRACTOR QC MANAGER: INITIALS/ DATE**
2	Each sub-frame has been installed level, plumb and square.		
3	All pre-fabricated sub-frame assemblies, to include embeds, have been factory welded together.		
4	Employees performing the installation meet the specified training and experience qualifications.		

	DESCRIPTION - GENERAL	INSTALLER TEAM LEAD: INITIALS/ DATE	CONTRACTOR QC MANAGER: INITIALS/ DATE
5	All temporary bolts have been replaced with permanent bolts.		
6	All frame bolts have been torqued per manufacturer's specifications. Shims have been inserted at all bolt locations, minimum one shim per bolt.		
7	Maximum gap at shim space is no more than 6.5mm (1/4") or as per the manufacturer's specifications based on the tested and DS certified assembly. A minimum of one shim at each bolt location has been provided.		
8	Frame bolts/screws are per the approved shop drawings. When within a blast envelope of a structure, blast design and anchorage requirements have been met.		
9	All product bolts, screws and anchors are metric products.		
10	Separate pieces of ballistic trim have been installed, as indicated in the approved shop drawings.		
11	Ballistic trim bars have been secured/screwed to the sub-frame and not the louver frame.		
12	The manufacturer has provided two metal ID plates for each louver that has machine applied letters and numbers.		

Installer Team Lead:	**Contractor's QC Manager:**

SECTION 092400 - CEMENT PLASTERING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Exterior vertical plasterwork (stucco).
2. Exterior horizontal and nonvertical plasterwork (stucco).
3. Interior vertical plasterwork.
4. Interior horizontal and nonvertical plasterwork.

B. Material Index / Material Codes Include:

1. PSW-[##] <(VERTICAL) PLASTER WALL.>
2. PSC-[##] <(HORIZONTAL AND NONVERTICAL) PLASTER CEILING OR SOFFIT.>

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Color Charts: Submit color charts showing full range of manufacturer's standard colors, for selection of colors for finish coats having integral color.

C. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

D. Shop Drawings: Show locations and installation of control and expansion joints, including plans, elevations, sections, details of components, and attachments to other work.

E. Samples for Verification: For each type of factory-prepared finish coat and for each color and texture specified, 305 by 305 mm (12 by 12 inches). Prepare on rigid backing.

1. Color Charts: Submit color charts showing full range of manufacturer's standard colors, for Project Director/COR selection of colors, based on input from the A/E of Record, for finish coats having integral color.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups for each substrate and finish texture indicated for cement plastering, including accessories.

a. Size: **[9 sq. m (100 sq. ft.)]** <**Insert dimension**> in surface area.

2. For interior plasterwork, simulate finished lighting conditions for review of mockups.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store materials inside under cover. Keep them dry and protected against damage from weather, moisture, direct sunlight, surface contamination, corrosion, construction traffic, and other causes.

1.6 FIELD CONDITIONS

A. Comply with ASTM C 926 requirements.

B. Exterior Plasterwork:

1. Apply and cure plaster to prevent plaster drying out during curing period. Use procedures required by climatic conditions, including moist curing, providing coverings, and providing barriers to deflect sunlight and wind.
2. Apply plaster when ambient temperature is greater than 4.4 deg C (40 deg F).
3. Protect plaster coats from freezing for not less than 48 hours after set of plaster coat has occurred.

C. Interior Plasterwork: Maintain room temperatures at greater than 4.4 deg C (40 deg F) for at least 48 hours before plaster application, and continuously during and after application.

1. Avoid conditions that result in plaster drying out during curing period. Distribute heat evenly; prevent concentrated or uneven heat on plaster.

2. Ventilate building spaces as required to remove water in excess of that required for hydrating plaster in a manner that prevents drafts of air from contacting surfaces during plaster application and until plaster is dry.

D. Factory-Prepared Finishes: Comply with manufacturer's written recommendations for environmental conditions for applying finishes.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance Ratings: Where indicated, provide cement plaster assemblies identical to those of assemblies tested for fire resistance according to ASTM E119 by a qualified testing agency.

2.2 METAL LATH

A. Expanded-Metal Lath: ASTM C 847, cold-rolled carbon-steel sheet with ASTM A 653/A 653M, Z180 (G60), hot-dip galvanized-zinc coating.

1. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.
2. Diamond-Mesh Lath: **[Flat] [Self-furring]**, **[1.4 kg/sq. m (2.5 lb/sq. yd.)] [1.8 kg/sq. m (3.4 lb/sq. yd.)]**.

3. Flat-Rib Lath: Rib depth of not more than 3 mm (1/8 inch), [**1.5 kg/sq. m (2.75 lb/sq. yd.)**] [**1.8 kg/sq. m (3.4 lb/sq. yd.)**].

4. 10-mm (3/8-Inch) Rib Lath: [**1.8 kg/sq. m (3.4 lb/sq. yd.)**] [**2.2 kg/sq. m (4 lb/sq. yd.)**].

B. Wire-Fabric Lath:

1. Welded-Wire Lath: ASTM C 933; self-furring, [**0.8 kg/sq. m (1.4 lb/sq. yd.)**] [**1.1 kg/sq. m (1.95 lb/sq. yd.)**].
2. Woven-Wire Lath: ASTM C 1032; self-furring, with stiffener wire backing, 0.8 kg/sq. m (1.4 lb/sq. yd.).

C. Paper Backing: FS UU-B-790a, Type I, **[Grade D, Style 2 vapor-permeable paper] [Grade B, Style 1a vapor-retardant paper]** <**Insert requirements**>.

1. Provide paper-backed lath **[unless otherwise indicated] [at exterior locations] [in locations indicated on Drawings] <Insert locations>**.

2.3 ACCESSORIES

A. General: Comply with ASTM C 1063, and coordinate depth of trim and accessories with thicknesses and number of plaster coats required.

B. Metal Accessories:

1. Cornerite: Fabricated from metal lath with ASTM A 653/A 653M, Z180 (G60), hot-dip galvanized-zinc coating.

2. Foundation Weep Screed: Fabricated from hot-dip galvanized-steel sheet, ASTM A653/A653M, G60 (Z180) zinc coating.
3. Cornerbeads: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**.

a. Smallnose cornerbead with expanded flanges; use unless otherwise indicated.
b. Smallnose cornerbead with perforated flanges; use on curved corners.
c. Smallnose cornerbead with expanded flanges reinforced by perforated stiffening rib; use on columns and for finishing unit masonry corners.
d. Bullnose cornerbead, radius 19 mm (3/4 inch) minimum, with expanded flanges; use at locations indicated on Drawings.

4. Casing Beads: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; square-edged style; with expanded flanges.
5. Control Joints: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; one-piece-type, folded pair of unperforated screeds in M-shaped configuration; with perforated flanges and removable protective tape on plaster face of control joint.
6. Expansion Joints: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; folded pair of unperforated screeds in M-shaped configuration; with expanded flanges.
7. Two-Piece Expansion Joints: Fabricated from **[zinc] [or] [zinc-coated (galvanized) steel]**; formed to produce slip-joint and square-edged reveal that is adjustable from 6 to 16 mm (1/4 to 5/8 inch) wide; with perforated flanges.

2.4 MISCELLANEOUS MATERIALS

A. Water for Mixing and Finishing Plaster: Potable and free of substances capable of affecting plaster set or of damaging plaster, lath, or accessories.

B. Fiber for Base Coat: Alkaline-resistant glass or polypropylene fibers, 13 mm (1/2 inch) long, free of contaminants, manufactured for use in cement plaster.

C. Bonding Compound: ASTM C 932.

D. Fasteners for Attaching Metal Lath to Substrates: ASTM C 1063.

E. Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper, not less than 1.21-mm (0.0475-inch) diameter unless otherwise indicated.

F. Sound-Attenuation Blankets: ASTM C 665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.

1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.
2. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <**Insert value**> percent.

2.5 PLASTER MATERIALS **[PSC-[##] AND/OR PSW-[##]]**

A. Portland Cement: ASTM C 150/C 150M, **[Type I] [Type II]**.

1. Color for Finish Coats: **[White] [Gray]**.

B. Masonry Cement: ASTM C 91, Type N.

1. Color for Finish Coats: **[White] [Gray]**.

C. Plastic Cement: ASTM C 1328.

D. Colorants for Job-Mixed Finish Coats: Colorfast mineral pigments that produce finish plaster color **[to match Project Director/COR's sample]** <**Insert requirements**>.

E. Lime: ASTM C 206, Type S; or ASTM C 207, Type S.

F. Sand Aggregate: ASTM C 897.

1. Color for Job-Mixed Finish Coats: **[White] [In color matching Project Director/COR's sample]**.

G. Perlite Aggregate: ASTM C 35.

H. Exposed Aggregates for Finish Coats: **[For marblecrete finish, clean, sound, crushed marble matching color and size gradation of Project Director/COR's sample] <Insert requirements>**.

I. Ready-Mixed Finish-Coat Plaster: Mill-mixed portland cement, aggregates, coloring agents, and proprietary ingredients.

1. Color: **[Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

J. Acrylic-Based Finish Coatings: Factory-mixed acrylic-emulsion coating systems formulated with colorfast mineral pigments and fine aggregates; for use over cement plaster base coats. Include manufacturer's recommended primers and sealing topcoats for acrylic-based finishes.

1. Color: **[Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

2.6 PLASTER MIXES

A. General: Comply with ASTM C 926 for applications indicated.

1. Fiber Content: Add fiber to base-coat mixes after ingredients have mixed at least two minutes. Comply with fiber manufacturer's written instructions for fiber quantities in mixes, but do not exceed 0.6 kg of fiber/cu. m (1 lb of fiber/cu. yd.) of cementitious materials.

B. Base-Coat Mixes for Use over Metal Lath: Scratch and brown coats for three-coat plasterwork as follows:

1. Portland Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part portland cement and **[0 to 3/4] [3/4 to 1-1/2]** parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
b. Brown Coat: For cementitious material, mix 1 part portland cement and **[0 to 3/4] [3/4 to 1-1/2]** parts lime. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

2. Masonry Cement Mixes:

a. Scratch Coat: Mix 1 part masonry cement and 2-1/2 to 4 parts aggregate.
b. Brown Coat: Mix 1 part masonry cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.

3. Portland and Masonry Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
b. Brown Coat: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

4. Plastic Cement Mixes:

a. Scratch Coat: Mix 1 part plastic cement and 2-1/2 to 4 parts aggregate.
b. Brown Coat: Mix 1 part plastic cement and 3 to 5 parts aggregate, but not less than volume of aggregate used in scratch coat.

5. Portland and Plastic Cement Mixes:

a. Scratch Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
b. Brown Coat: For cementitious material, mix 1 part plastic cement and 1 part portland cement. Use 3 to 5 parts aggregate per part of cementitious material, but not less than volume of aggregate used in scratch coat.

C. Base-Coat Mixes for Use over **[Unit Masonry] [and] [Concrete]**: Single base (scratch) coat for two-coat plasterwork on low-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 0 to 3/4 part lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
2. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
3. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

D. Base-Coat Mixes for Use over **[Unit Masonry] [and] [Concrete]**: Single base (scratch) coat for two-coat plasterwork on high-absorption plaster bases as follows:

1. Portland Cement Mix: For cementitious material, mix 1 part portland cement and 3/4 to 1-1/2 parts lime. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
2. Masonry Cement Mix: Use 1 part masonry cement and 2-1/2 to 4 parts aggregate.
3. Portland and Masonry Cement Mix: For cementitious material, mix 1 part portland cement and 1 part masonry cement. Use 2-1/2 to 4 parts aggregate per part of cementitious material.
4. Plastic Cement Mix: Use 1 part plastic cement and 2-1/2 to 4 parts aggregate.

E. Job-Mixed Finish-Coat Mixes:

1. Portland Cement Mix: For cementitious materials, mix 1 part portland cement and **[3/4 to 1-1/2] [1-1/2 to 2]** parts lime. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
2. Masonry Cement Mix: Use 1 part masonry cement and 1-1/2 to 3 parts aggregate.
3. Portland and Masonry Cement Mix: For cementitious materials, mix 1 part portland cement and 1 part masonry cement. Use 1-1/2 to 3 parts aggregate per part of cementitious material.
4. Plastic Cement Mix: Use 1 part plastic cement and 1-1/2 to 3 parts aggregate.

F. Factory-Prepared Finish-Coat Mixes: For **[ready-mixed finish-coat plasters] [acrylic-based finish coatings]**, comply with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Protect adjacent work from soiling, spattering, moisture deterioration, and other harmful effects caused by plastering.

B. Prepare smooth, solid substrates for plaster according to ASTM C 926.

3.3 INSTALLATION, GENERAL

A. Fire-Resistance-Rated Assemblies: Install components according to requirements for design designations from listing organization and publication indicated on Drawings.

B. Sound-Attenuation Blankets: Where required, install blankets before installing lath unless blankets are readily installed after lath has been installed on one side.

3.4 INSTALLING METAL LATH

A. Metal Lath: Install according to ASTM C 1063.

1. Partition Framing and Vertical Furring: Install **[flat-diamond-mesh] [flat-rib] [welded-wire] [woven-wire]** lath.
2. Flat-Ceiling and Horizontal Framing: Install **[flat-diamond-mesh] [flat-rib] [10-mm (3/8-inch) rib] [welded-wire] [woven-wire]** lath.

3. Curved-Ceiling Framing: Install **[flat-diamond-mesh] [welded-wire] [flat-woven-wire]** lath.
4. On Solid Surfaces, Not Otherwise Furred: Install self-furring, **[diamond-mesh] [welded-wire] [woven-wire]** lath.

3.5 INSTALLING ACCESSORIES

A. Install according to ASTM C 1063 and at locations indicated on Drawings.

B. Reinforcement for External (Outside) Corners:

1. Install **[lath-type, external-corner reinforcement] [cornerbead]** at exterior locations.
2. Install cornerbead at interior locations.

C. Control Joints: Locate as approved by Project Director/COR for visual effect and as follows:

1. As required to delineate plasterwork into areas (panels) of the following maximum sizes:

   a. Vertical Surfaces: 13.4 sq. m (144 sq. ft.).
   b. Horizontal and Other Nonvertical Surfaces: 9.3 sq. m (100 sq. ft.).

2. At distances between control joints of not greater than 5.5 m (18 feet) o.c.
3. As required to delineate plasterwork into areas (panels) with length-to-width ratios of not greater than 2-1/2:1.
4. Where control joints occur in surface of construction directly behind plaster.
5. Where plasterwork areas change dimensions, to delineate rectangular-shaped areas (panels) and to relieve the stress that occurs at the corner formed by the dimension change.

3.6 PLASTER APPLICATION

A. General: Comply with ASTM C 926.

1. Do not deviate more than plus or minus 6 mm in 3 m (1/4 inch in 10 feet) from a true plane in finished plaster surfaces when measured by a 3-m (10-foot) straightedge placed on surface.
2. Finish plaster flush with metal frames and other built-in metal items or accessories that act as a plaster ground unless otherwise indicated. Where casing bead does not terminate plaster at metal frame, cut base coat free from metal frame before plaster sets and groove finish coat at junctures with metal.
3. Provide plaster surfaces that are ready to receive field-applied finishes indicated.

B. Bonding Compound: Apply on **[unit masonry] [and] [concrete]** substrates for direct application of plaster.

C. Walls; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork with 19-mm (3/4-inch) total thickness, as follows:

1. Portland cement mixes.
2. Masonry cement mixes.
3. Portland and masonry cement mixes.
4. Plastic cement mixes.
5. Portland and plastic cement mixes.

D. Ceilings; Base-Coat Mixes for Use over Metal Lath: For scratch and brown coats, for three-coat plasterwork and having **[13-mm (1/2-inch) total thickness] [19-mm (3/4-inch) total thickness for metal lath on concrete]**, as follows:

1. Portland cement mixes.
2. Masonry cement mixes.
3. Portland and masonry cement mixes.
4. Plastic cement mixes.
5. Portland and plastic cement mixes.

E. Walls; Base-Coat Mix: For base (scratch) coat, for two-coat plasterwork and having **[10-mm (3/8-inch) thickness on masonry] [6-mm (1/4-inch) thickness on concrete]**, as follows:

1. Portland cement mix.
2. Masonry cement mix.
3. Portland and masonry cement mix.
4. Plastic cement mix.
5. Portland and plastic cement mix.

F. Ceilings; Base-Coat Mix: For base (scratch) coat, for two-coat plasterwork and having 6-mm (1/4-inch) thickness on concrete, as follows:

1. Portland cement mix.
2. Masonry cement mix.
3. Portland and masonry cement mix.
4. Plastic cement mix.
5. Portland and plastic cement mix.

G. Plaster Finish Coats: Apply to provide **[float] [dash] [scraped trowel-textured] [skip trowel-textured] [brocade (knock-down dash)] [trowel sweep] [combed] [sacked (California mission)] [English] [marblecrete] <Insert requirements>** finish to match Project Director/COR's sample.

H. Acrylic-Based Finish Coatings: Apply coating system, including primers, finish coats, and sealing topcoats, according to manufacturer's written instructions.

I. Concealed Exterior Plasterwork: Where plaster application is used as a base for adhered finishes, omit finish coat.

J. Concealed Interior Plasterwork:

1. Where plaster application is concealed behind built-in cabinets, similar furnishings, and equipment, apply finish coat.

2. Where plaster application is concealed above suspended ceilings and in similar locations, omit finish coat.
3. Where plaster application is used as a base for adhesive application of tile and similar finishes, omit finish coat.

3.7 PLASTER REPAIRS

A. Repair or replace work to eliminate cracks, dents, blisters, buckles, crazing and check cracking, dry outs, efflorescence, sweat outs, and similar defects and where bond to substrate has failed.

3.8 CLEANING AND PROTECTION

A. Remove temporary protection and enclosure of other work after plastering is complete. Promptly remove plaster from door frames, windows, and other surfaces not indicated to be plastered. Repair floors, walls, and other surfaces stained, marred, or otherwise damaged during plastering.

END OF SECTION 092400

SECTION 092900 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Interior gypsum board.
2. Exterior gypsum board for ceilings and soffits.
3. Sound-rated construction.
4. Tile backing panels.
5. Gypsum board finishing.
6. Trim and accessories.

B. Related Requirements:

1. Division 06 Section on "Sheathing" for gypsum sheathing for exterior walls.
2. Division 07 Section on "Acoustical Joint Sealants" for acoustical joint sealants installed in gypsum board assemblies.
3. Division 09 Section on "Gypsum Board Shaft Wall Assemblies" for metal shaft-wall framing, gypsum shaft liners, and other components of shaft-wall assemblies.
4. Division 09 Section on "Non-Structural Metal Framing" for non-structural steel framing and suspension systems that support gypsum board panels.
5. Division 09 Section on "Gypsum Veneer Plastering" for gypsum base for veneer plaster and for other components of gypsum-veneer-plaster finishes.
6. Division 09 Section on "Ceramic Tiling" for cementitious backer units installed as substrates for ceramic tile.

1.2 PREINSTALLATION MEETINGS

1. Preinstallation Conference: Conduct conference at the Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and preconsumer recycled content. Include statement indicating costs for each product having recycled content.

2. Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
3. Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, include printed statement of VOC content.
4. Provide reports required by Division 01 Section “Construction Waste Management”.

C. Samples: For the following products:

1. Trim Accessories: Full-size Sample in 12-inch (300-mm) long length for each trim accessory indicated.

D. Shop Drawings: Submit Shop Drawings of interior wall elevations indicating control joint locations.

1.4 QUALITY ASSURANCE

A. Fire-Test-Response Characteristics: For gypsum board assemblies with fire-resistance ratings, provide materials and construction identical to those tested in assembly indicated by an independent testing and inspecting agency acceptable to authorities having jurisdiction, and according to one of the following standards:

1. ASTM E 119 "Test Methods for Fire Tests of Building and Construction Materials."
2. ISO 834, Parts 1, 3-9 “Fire Resistance Tests-Elements of Building Construction."
3. Fire-Resistance-Rated Assemblies: Indicated by design designations from UL's "Fire Resistance Directory.

B. Sound Transmission Characteristics: For gypsum board assemblies with STC ratings, provide materials and construction identical to those tested in assembly indicated according to one of the following standards:

1. ASTM E 90 "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements."
2. BS EN ISO 140-1:1998 Acoustics: Measurement of Sound Insulation in Buildings and Building Elements Part 1: Requirements for Laboratories.
3. BS EN ISO 140-3: 1995 Acoustics: Measurement of Sound Insulation in Buildings and Building Elements Part 3: Laboratory Measurements of Airborne Sound Insulation of Building Elements.”

   a. Classified according to ASTM E 413 "Classification for Rating Sound Insulation" by a qualified independent testing agency.

4. STC-Rated Assemblies: Indicated by design designations from Gypsum Association's GA-600, "Fire Resistance Design Manual."

C. Mockups: Before finishing gypsum board assemblies, build mockups of at least 9 sq. m (100 sq. ft.) in surface area to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Build mockups for the following:

a. Each level of gypsum board finish indicated for use in exposed locations.
b. Each texture finish indicated.

2. Apply or install final decoration indicated, including painting and wallcoverings, on exposed surfaces for review of mockups.
3. Simulate finished lighting conditions for review of mockups.
4. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 PERFORMANCE REQUIREMENTS

A. Deflection Limits:

1. Tile or Stone-Faced Assemblies: L/360.
2. All Other Wall Assemblies: L/240.
3. Ceiling Assemblies: L/240.

1.6 DELIVERY, STORAGE AND HANDLING

A. Deliver materials in original packages, containers, or bundles bearing brand name and identification of manufacturer or supplier. Comply with Gypsum Association publication GA-238-03 "Guidelines for Prevention of Mold Growth on Gypsum Board" for transportation, storage and handling requirements.

B. Store materials inside under cover and keep them dry and protected against weather, condensation, direct sunlight, construction traffic, and other potential causes of damage. Stack panels flat and supported on risers on a flat platform to prevent sagging.

1.7 FIELD CONDITIONS

A. Environmental Limitations: Comply with ASTM C840 requirements or gypsum board manufacturer's written instructions, whichever are more stringent.

B. Do not install paper-faced gypsum panels until installation areas are enclosed and conditioned.

C. Do not install panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: For fire-resistance-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E119 by an independent testing agency.

B. STC-Rated Assemblies: For STC-rated assemblies, provide materials and construction identical to those tested in assembly indicated according to ASTM E90 and classified according to ASTM E413 by an independent testing agency.

2.2 GYPSUM BOARD, GENERAL

A. Size: Provide maximum lengths and widths available that will minimize joints in each area and that correspond with support system indicated.

2.3 INTERIOR GYPSUM BOARD

A. Gypsum Wallboard: ASTM C1396/C1396M.

1. Thickness: 15.9 mm (5/8 inch).
2. Long Edges: Tapered.

B. Gypsum Board, Type X: ASTM C1396/C1396M.

1. Thickness: 15.9 mm (5/8 inch).
2. Long Edges: Tapered.

C. Flexible Gypsum Board: ASTM C1396/C1396M. Manufactured to bend to fit radii and to be more flexible than standard regular-type gypsum board of same thickness.

1. Thickness: 6.4 mm (1/4 inch).
2. Long Edges: Tapered.

D. Gypsum Ceiling Board: ASTM C1396/C1396M.

1. Thickness: 12.7 mm (1/2 inch).
2. Long Edges: Tapered.

E. [Foil-Backed Gypsum Board: ASTM C1396/C1396M.

1. Core: [As indicated on Drawings] [9.5 mm (3/8 inch), regular type] [12.7 mm (1/2 inch), regular type] [15.9 mm (5/8 inch), Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings].
2. Long Edges: Tapered.]

F. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.

1. Core: **[As indicated on Drawings] [15.9 mm (5/8 inch), regular type] [15.9 mm (5/8 inch), Type X]**.
2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
3. Indentation: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
5. Long Edges: Tapered.
6. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

G. Impact-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.

1. Core: **[As indicated on Drawings] [15.9 mm (5/8 inch), regular type] [15.9 mm (5/8 inch), Type X]**.
2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
3. Indentation: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements.
5. Hard-Body Impact: ASTM C1629/C1629M, meets or exceeds **[Level 1] [Level 2] [Level 3]** requirements according to test in Annex A1.
6. Long Edges: Tapered.
7. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

H. Mold-Resistant Gypsum Board: ASTM C1396/C1396M. With moisture- and mold-resistant core and paper surfaces.

1. Core: **[As indicated] [15.9 mm (5/8 inch), regular type] [15.9 mm (5/8 inch), Type X]**.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

2.4 SPECIALTY GYPSUM BOARD

A. Gypsum Board, Type C: ASTM C1396/C1396M. Manufactured to have increased fire-resistive capability.

1. Thickness: As required by fire-resistance-rated assembly indicated on Drawings.
2. Long Edges: Tapered.

B. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.

1. Core: **[As indicated] [12.7 mm (1/2 inch), regular type] [12.7 mm (1/2 inch), Type C] [15.9 mm (5/8 inch), Type X] [15.9 mm (5/8 inch), abuse resistant]**.
2. Long Edges: Tapered.
3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

C. Acoustically Enhanced Gypsum Board: ASTM C1396/C1396M. Multilayer products constructed of two layers of gypsum boards sandwiching a viscoelastic sound-absorbing polymer core.

1. Core: **[As indicated] [12.7 mm (1/2 inch), regular type] [12.7 mm (1/2 inch), Type X] [15.9 mm (5/8 inch), regular type] [15.9 mm (5/8 inch), Type X] [35 mm (1-3/8 inch), regular type]**.
2. Long Edges: Tapered.

D. Skim-Coated Gypsum Board: ASTM C1396/C1396M. Manufactured with a factory-applied skim coat.

1. Core: **[As indicated] [15.9 mm (5/8 inch), regular type] [15.9 mm (5/8 inch), Type X]**.
2. Long Edges: Tapered.

2.5 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

A. Exterior Gypsum Soffit Board: ASTM C1396/C1396M, with manufacturer's standard edges.

1. Core: **[As indicated] [12.7 mm (1/2 inch), regular type] [15.9 mm (5/8 inch), Type X]**.

B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.

1. Core: **[As indicated] [12.7 mm (1/2 inch), regular type] [15.9 mm (5/8 inch), Type X]**.

2.6 TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.

1. Core: **[As indicated on Drawings] [12.7 mm (1/2 inch), regular type] [15.9 mm (5/8 inch), Type X]**.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

B. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.

1. Thickness: **[6.4 mm (1/4 inch)] [12.7 mm (1/2 inch)] [15.9 mm (5/8 inch)] [As indicated]**.
2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

C. Water-Resistant Gypsum Backing Board: ASTM C1396/C1396M, with manufacturer's standard edges.

1. Core: **[As indicated on Drawings] [12.7 mm (1/2 inch), regular type] [15.9 mm (5/8 inch), Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings]**.

2.7 TRIM ACCESSORIES

A. Interior Trim: ASTM C1047.

1. Material: Galvanized or aluminum-coated steel sheet or rolled zinc.
2. Shapes:

a. Cornerbead.
b. Bullnose bead.
c. LC-Bead: J-shaped; exposed long flange receives joint compound.
d. L-Bead: L-shaped; exposed long flange receives joint compound.
e. U-Bead: J-shaped; exposed short flange does not receive joint compound.
f. Expansion (control) joint.
g. Curved-Edge Cornerbead: With notched or flexible flanges.
h. Base-of-Wall Galvanized Moisture Barrier Trim: Galvanized-steel sheet, 2 inches (50 mm) high.

B. Exterior Trim: ASTM C1047.

1. Material: Hot-dip galvanized-steel sheet, or rolled zinc.
2. Shapes:

a. Cornerbead.
b. LC-Bead: J-shaped; exposed long flange receives joint compound.
c. Expansion (Control) Joint: One-piece, rolled zinc with V-shaped slot and removable strip covering slot opening.

C. Aluminum Trim: Extruded accessories of profiles and dimensions indicated.

1. Aluminum: Alloy and temper with not less than the strength and durability properties of ASTM B221 (ASTM B221M), Alloy 6063-T5.
2. Finish: **[Corrosion-resistant primer compatible with joint compound and finish materials specified] <Insert requirements for Class II anodic finishes and factory-painted, baked-enamel finishes>**.

2.8 JOINT TREATMENT MATERIALS

A. General: Comply with ASTM C475/C475M.

B. Joint Tape:

1. Interior Gypsum Board: Paper.
2. Exterior Gypsum Soffit Board: Paper.
3. Glass-Mat Gypsum Sheathing Board: 10-by-10 glass mesh.
4. Tile Backing Panels: As recommended by panel manufacturer.

C. Joint Compound for Interior Gypsum Board: For each coat, use formulation that is compatible with other compounds applied on previous or for successive coats.

1. Prefilling: At open joints**[, rounded or beveled panel edges,]** and damaged surface areas, use setting-type taping compound.
2. Embedding and First Coat: For embedding tape and first coat on joints, fasteners, and trim flanges, use **[setting-type taping] [drying-type, all-purpose]** compound.

   a. Use setting-type compound for installing paper-faced metal trim accessories.

3. Fill Coat: For second coat, use **[setting-type, sandable topping] [drying-type, all-purpose]** compound.
4. Finish Coat: For third coat, use **[setting-type, sandable topping] [drying-type, all-purpose]** compound.
5. Skim Coat: For final coat of Level 5 finish, use **[setting-type, sandable topping compound] [drying-type, all-purpose compound] [high-build interior coating product designed for application by airless sprayer and to be used instead of skim coat to produce Level 5 finish]**.

D. Joint Compound for Exterior Applications:

1. Exterior Gypsum Soffit Board: Use setting-type taping compound and setting-type, sandable topping compound.
2. Glass-Mat Gypsum Sheathing Board: As recommended by sheathing board manufacturer.

E. Joint Compound for Tile Backing Panels:

1. Glass-Mat, Water-Resistant Backing Panel: As recommended by backing panel manufacturer.
2. Cementitious Backer Units: As recommended by backer unit manufacturer.

3. Water-Resistant Gypsum Backing Board: Use setting-type taping compound and setting-type, sandable topping compound.

2.9 AUXILIARY MATERIALS

A. Provide auxiliary materials that comply with referenced installation standards and manufacturer's written instructions.

B. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate.

C. Steel Drill Screws: ASTM C1002 unless otherwise indicated.

1. Use screws complying with ASTM C954 for fastening panels to steel members from 0.84 to 2.84 mm (0.033 to 0.112 inch) thick.
2. For fastening cementitious backer units, use screws of type and size recommended by panel manufacturer.

D. Sound-Attenuation Blankets: ASTM C665, Type I (blankets without membrane facing) produced by combining thermosetting resins with mineral fibers manufactured from glass, slag wool, or rock wool.

1. Fire-Resistance-Rated Assemblies: Comply with mineral-fiber requirements of assembly.

E. Thermal Insulation: As specified in Division 07 Section on "Thermal Insulation."

F. Vapor Retarder: As specified in Division 07 Section on "Vapor Retarders."

2.10 ACOUSTICAL SEALANT

A. Acoustical Sealant for Exposed and Concealed Joints: Nonsag, paintable, nonstaining, latex sealant that effectively reduces airborne sound transmission through perimeter joints and openings in building construction. Comply with the following:

1. ASTM C 834 "Standard Specification for Latex Sealants" as demonstrated by testing representative assemblies according to ASTM E 90 "Standard Test Method for Laboratory Measurement of Airborne Sound Transmission Loss of Building Partitions and Elements."
2. For adhesive and sealant applications that are inside the weatherproofing system, comply with the Division 01 Section on Sustainable Design Requirements limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24) if credit pursued by contractor.
3. Provide STC rating as indicted in the drawings.

B. Acoustical Sealant for Concealed Joints: Nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic-rubber sealant recommended for sealing interior concealed joints to reduce airborne sound transmission.

1. For adhesive and sealant applications that are inside the weatherproofing system, comply with the Division 01 Section on Sustainable Design Requirements limits for VOC content when calculated according to 40 CFR 59, Subpart D (EPA Method 24) if credit pursued by contractor.
2. Provide STC rating as indicted in the drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and substrates including welded hollow-metal frames and support framing, with Installer present, for compliance with requirements and other conditions affecting performance of the Work.

B. Examine panels before installation. Reject panels that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION AND FINISHING OF PANELS, GENERAL

A. Install in accordance with reference standards and manufacturer's instructions, and as required to comply with seismic requirements.

B. Gypsum Board Application and Finishing Standards: Comply with one of the following:

1. ASTM C840 "Standard Specification for Application and Finishing of Gypsum Board" and GA-216 "Specifications for the Application and Finishing of Gypsum Board" published by the Gypsum Association.

C. Install ceiling panels across framing to minimize the number of abutting end joints and to avoid abutting end joints in central area of each ceiling. Stagger abutting end joints of adjacent panels not less than one framing member.

D. Install panels with face side out. Butt panels together for a light contact at edges and ends with not more than 1.5 mm (1/16 inch) of open space between panels. Do not force into place.

E. Locate edge and end joints over supports, except in ceiling applications where intermediate supports or gypsum board back-blocking is provided behind end joints. Do not place tapered edges against cut edges or ends. Stagger vertical joints on opposite sides of partitions. Do not make joints other than control joints at corners of framed openings.

F. Form control and expansion joints with space between edges of adjoining gypsum panels.

G. Cover both faces of support framing with gypsum panels in concealed spaces (above ceilings, etc.), except in chases braced internally.

1. Unless concealed application is indicated or required for sound, fire, air, or smoke ratings, coverage may be accomplished with scraps of not less than 8 sq. ft. (0.7 sq. m) in area.
2. Fit gypsum panels around ducts, pipes, and conduits.
3. Where partitions intersect open concrete coffers, concrete joists, and other structural members projecting below underside of floor/roof slabs and decks, cut gypsum panels to fit profile formed by coffers, joists, and structural members; allow 6.4- to 9.5-mm- (1/4- to 3/8-inch-) wide joints to install sealant.

H. Isolate perimeter of gypsum board applied to non-load-bearing partitions at structural abutments. Provide 6.4- to 12.7-mm- (1/4- to 1/2-inch-) wide spaces at these locations and trim edges with edge trim where edges of panels are exposed. Seal joints between edges and abutting structural surfaces with acoustical sealant.

I. Attachment to Steel Framing: Attach panels so leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.

J. STC-Rated Assemblies: Seal construction at perimeters, behind control joints and expansion joints, and at openings and penetrations with a continuous bead of acoustical sealant. Install acoustical sealant at both faces of partitions at perimeters and through penetrations. Comply with ASTM C919 and with manufacturer's written instructions for locating edge trim and closing off sound-flanking paths around or through assemblies, including sealing partitions above acoustical ceilings.

1. ASTM C 919 "Standard Practice for Use of Sealants in Acoustical Applications."

K. Install sound attenuation blankets before installing gypsum panels unless blankets are readily installed after panels have been installed on one side.

3.3 INSTALLATION OF INTERIOR GYPSUM BOARD

A. Single-Layer Application:

1. On ceilings, apply gypsum panels before wall/partition board application to greatest extent possible and at right angles to framing unless otherwise indicated.
2. On partitions/walls, apply gypsum panels [**vertically (parallel to framing)**] [**horizontally (perpendicular to framing)**] unless otherwise indicated or required by fire-resistance-rated assembly, and minimize end joints.

   a. Stagger abutting end joints not less than one framing member in alternate courses of panels.

   b. At stairwells and other high walls, install panels horizontally unless otherwise indicated or required by fire-resistance-rated assembly.

3. On Z-shaped furring members, apply gypsum panels vertically (parallel to framing) with no end joints. Locate edge joints over furring members.

4. Fastening Methods: Apply gypsum panels to supports with steel drill screws.

B. Multilayer Application:

1. On ceilings, apply gypsum board indicated for base layers before applying base layers on walls/partitions; apply face layers in same sequence. Apply base layers at right angles to framing members and offset face-layer joints one framing member, 400 mm (16 inches) minimum, from parallel base-layer joints, unless otherwise indicated or required by fire-resistance-rated assembly.
2. On partitions/walls, apply gypsum board indicated for base layers and face layers vertically (parallel to framing) with joints of base layers located over stud or furring member and face-layer joints offset at least one stud or furring member with base-layer joints unless otherwise indicated or required by fire-resistance-rated assembly. Stagger joints on opposite sides of partitions.
3. On Z-shaped furring members, apply base layer vertically (parallel to framing) and face layer either vertically (parallel to framing) or horizontally (perpendicular to framing) with vertical joints offset at least one furring member. Locate edge joints of base layer over furring members.
4. Fastening Methods: Fasten base layers with screws; fasten face layers with adhesive and supplementary fasteners.

C. Laminating to Substrate: Where gypsum panels are indicated as directly adhered to a substrate (other than studs, joists, furring members, or base layer of gypsum board), comply with gypsum board manufacturer's written instructions and temporarily brace or fasten gypsum panels until fastening adhesive has set.

D. Curved Surfaces:

1. Install panels horizontally (perpendicular to supports) and unbroken, to extent possible, across curved surface plus 300-mm (12-inch) long straight sections at ends of curves and tangent to them.
2. For double-layer construction, fasten base layer to studs with screws 400 mm (16 inches) o.c. Center gypsum board face layer over joints in base layer, and fasten to studs with screws spaced 300-mm (12-inches) o.c.

3.4 INSTALLATION OF EXTERIOR GYPSUM PANELS FOR CEILINGS AND SOFFITS

A. Apply panels perpendicular to supports, with end joints staggered and located over supports.

1. Install with 6.4-mm (1/4-inch) open space where panels abut other construction or structural penetrations.
2. Fasten with corrosion-resistant screws.

3.5 INSTALLATION OF TILE BACKING PANELS

A. Glass-Mat, Water-Resistant Backing Panels: Comply with manufacturer's written installation instructions and install at locations indicated on the Drawings. Install with 6.4-mm (1/4-inch) gap where panels abut other construction or penetrations.

B. Cementitious Backer Units: ANSI A108.11, at showers, tubs, and where indicated.

C. Water-Resistant Backing Board: Install where indicated with 6.4-mm (1/4-inch) gap where panels abut other construction or penetrations.

D. Where tile backing panels abut other types of panels in same plane, shim surfaces to produce a uniform plane across panel surfaces.

3.6 INSTALLATION OF TRIM ACCESSORIES

A. General: For trim with back flanges intended for fasteners, attach to framing with same fasteners used for panels. Otherwise, attach trim according to manufacturer's written instructions.

B. Control Joints: Install control joints according to ASTM C840 and in specific locations approved by Project Director/COR, based on input from the A/E of Record for visual effect.

C. Interior Trim: Install in the following locations:

1. Cornerbead: Use at outside corners**[unless otherwise indicated]**.
2. Bullnose Bead: Use **[at outside corners] [where indicated] <Insert requirements>**.
3. LC-Bead: Use **[at exposed panel edges] <Insert requirements>**.
4. L-Bead: Use **[where indicated] <Insert requirements>**.
5. U-Bead: Use **[at exposed panel edges] [where indicated] <Insert requirements>**.
6. Curved-Edge Cornerbead: Use at curved openings.

D. Exterior Trim: Install in the following locations:

1. Cornerbead: Use at outside corners.
2. LC-Bead: Use **[at exposed panel edges] <Insert requirements>**.

E. Aluminum Trim: Install in locations **[indicated on Drawings] <Insert requirements>**.

3.7 FINISHING GYPSUM BOARD

A. General: Treat gypsum board joints, interior angles, edge trim, control joints, penetrations, fastener heads, surface defects, and elsewhere as required to prepare gypsum board surfaces for decoration. Promptly remove residual joint compound from adjacent surfaces.

B. Prefill open joints**[, rounded or beveled edges,]** and damaged surface areas.

C. Apply joint tape over gypsum board joints, except for trim products specifically indicated as not intended to receive tape.

D. Gypsum Board Finish Levels: Finish panels to levels indicated below and according to ASTM C840:

1. Level 1: Ceiling plenum areas, concealed areas, and where indicated.
2. Level 2: Panels that are substrate for tile and panels that are substrate for acoustical tile.
3. Level 3: Where indicated on Drawings.
4. Level 4: Standard finish, unless otherwise noted.

a. Primer and its application to surfaces are specified in Division 09 Section on "Interior Painting."

5. Level 5: **[Where indicated on Drawings] <Insert locations>**. Provide level 5 finish as standard finish for Finish Code A1 and A2 where noted in Finish Code notes.

a. Primer and its application to surfaces are specified in Division 09 Section on "Interior Painting."

E. Glass-Mat Gypsum Sheathing Board: Finish according to manufacturer's written instructions for use as exposed soffit board.

F. Glass-Mat Faced Panels: Finish according to manufacturer's written instructions.

G. Cementitious Backer Units: Finish according to manufacturer's written instructions.

3.8 PROTECTION

A. Protect adjacent surfaces from drywall compound and promptly remove from floors and other non-drywall surfaces. Repair surfaces stained, marred, or otherwise damaged during drywall application.

B. Protect installed products from damage from weather, condensation, direct sunlight, construction, and other causes during remainder of the construction period.

C. Remove and replace panels that are wet, moisture damaged, and mold damaged.

1. Indications that panels are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that panels are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

END OF SECTION 092900

SECTION 093013 - CERAMIC TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Ceramic mosaic tile.
2. Quarry tile.
3. Pressed floor tile.
4. Porcelain tile.
5. Glazed wall tile.
6. Stone thresholds.
7. Waterproof membrane**[for thinset applications**].
8. Crack isolation membrane.
9. Metal edge strips.

B. Material Index / Material Codes Include:

1. TCB-[##], TCF-[##], TCW-[##] <CERAMIC TILE BASE, FLOOR, WALL.>
2. TQB-[##], TQF-[##], TQW-[##] <(QUARRY TILE BASE, FLOOR, WALL.>
3. TPB-[##], TPF-[##], TPW-[##] <(PORCELAIN TILE BASE, FLOOR, WALL.>
4. TGB-[##], TGW-[##] <(GLASS TILE WALL.>
5. TSB-[##], TSF-[##], TSW-[##] <(STONE TILE BASE, FLOOR, WALL.>
6. STG-[##] <STONE THRESHOLD.>
7. GTG-[##] <GROUT.>

C. Related Requirements:

1. **[Division 07 Section on "Self-Adhering Sheet Waterproofing"] [Division 07 Section on "Elastomeric Sheet Waterproofing"] [Division 07 Section on "Thermoplastic Sheet Waterproofing"] [Division 07 Section on "Hot Fluid-Applied Rubberized Asphalt Waterproofing"] [Division 07 Section on "Cold Fluid-Applied Waterproofing"]** for waterproofing under thickset mortar beds.
2. Division 07 Section on "Joint Sealants" for sealing of expansion, contraction, control, and isolation joints in tile surfaces.
3. Division 09 Section on "Cement Plastering" for scratch coat for thickset mortar setting-bed installations.
4. Division 09 Section on "Gypsum Board" for **[cementitious backer units] [glass-mat, water-resistant backer board]**.

1.2 DEFINITIONS

A. General: Definitions in the ANSI A108 series of tile installation standards and in ANSI A137.1 apply to Work of this Section unless otherwise specified.

B. ANSI A108 Series: ANSI A108.01, ANSI A108.02, ANSI A108.1A, ANSI A108.1B, ANSI A108.1C, ANSI A108.4, ANSI A108.5, ANSI A108.6, ANSI A108.8, ANSI A108.9, ANSI A108.10, ANSI A108.11, ANSI A108.12, ANSI A108.13, ANSI A108.14, ANSI A108.15, ANSI A108.16, and ANSI A108.17, which are contained in its "Specifications for Installation of Ceramic Tile."

C. Module Size: Actual tile size plus joint width indicated.

D. Face Size: Actual tile size, excluding spacer lugs.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review requirements in ANSI A108.01 for substrates and for preparation by other trades.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
3. Laboratory Test Reports: For sealers, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Show locations of each type of tile and tile pattern. Show widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.

D. Samples for Initial Selection: For grout and accessories involving color selection.

E. Samples for Verification:

1. Full-size units of each type and composition of tile and for each color and finish required.**[For ceramic mosaic tile in color blend patterns, provide full sheets of each color blend.]**
2. Assembled samples mounted on a rigid panel, with grouted joints, for each type and composition of tile and for each color and finish required. Make samples at least 900 mm (36 inches) square, but not fewer than four tiles. Use grout of type and in color or colors approved for completed Work.
3. Full-size units of each type of trim and accessory for each color and finish required.
4. Stone thresholds in 150-mm (6-inch) lengths.
5. Metal edge strips in 150-mm (6-inch) lengths.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Certificates: For each type of product.

C. Product Test Reports: For tile-setting and -grouting products**[and certified porcelain tile]**.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match and are from same production runs as products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Tile and Trim Units:**[Furnish quantity of full-size units equal to 3 percent of amount installed for each type, composition, color, pattern, and size indicated.]**
2. Grout: Furnish quantity of grout equal to 3 percent of amount installed for each type, composition, and color indicated.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Not less than 5 years documented successful experience with work comparable to Work of this Project.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Build mockups of**[each type of]** floor tile installation.
2. Build mockups of**[each type of]** wall tile installation.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use. Comply with requirements in ANSI A137.1 for labeling tile packages.

B. Store tile and cementitious materials on elevated platforms, under cover, and in a dry location.

C. Store aggregates where grading and other required characteristics can be maintained and contamination can be avoided.

D. Store liquid materials in unopened containers and protected from freezing.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not install tile until construction in spaces is complete and ambient temperature and humidity conditions are maintained at the levels indicated in referenced standards and manufacturer's written instructions.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Tile: Obtain **[tile of each type and color or finish] [tile of each type] [tile of each color or finish] [tile]** from single source or producer.

1. Obtain tile of each type and color or finish from same production run and of consistent quality in appearance and physical properties for each contiguous area.

B. Source Limitations for Setting and Grouting Materials: Obtain ingredients of a uniform quality for each mortar, adhesive, and grout component from single manufacturer and each aggregate from single source or producer.

1. Obtain setting and grouting materials, except for unmodified Portland cement and aggregate, from single manufacturer.
2. Obtain **[waterproof membrane] [and] [crack isolation membrane]**, except for sheet products, from manufacturer of setting and grouting materials.

C. Source Limitations for Other Products: Obtain each of the following products specified in this Section from a single manufacturer:

1. Stone thresholds.
2. Waterproof membrane.
3. Crack isolation membrane.
4. Cementitious backer units.

5. Metal edge strips.

2.2 PRODUCTS, GENERAL

A. ANSI Ceramic Tile Standard: Provide tile that complies with ANSI A137.1 for types, compositions, and other characteristics indicated.

1. Provide tile complying with Standard grade requirements**[unless otherwise indicated]**.

B. ANSI Standards for Tile Installation Materials: Provide materials complying with ANSI A108.02, ANSI standards referenced in other Part 2 articles, ANSI standards referenced by TCNA installation methods specified in tile installation schedules, and other requirements specified.

C. Factory Blending: For tile exhibiting color variations within ranges, blend tile in factory and package so tile units taken from one package show same range in colors as those taken from other packages and match approved Samples.

D. Mounting: For factory-mounted tile, provide back- or edge-mounted tile assemblies as standard with manufacturer unless otherwise indicated.

1. Where tile is indicated for installation **[in swimming pools] [on exteriors] [or] [in wet areas]**, do not use back- or edge-mounted tile assemblies unless tile manufacturer specifies in writing that this type of mounting is suitable for installation indicated and has a record of successful in-service performance.

2.3 TILE PRODUCTS

A. Ceramic Tile Type **[TCB-[##], TCF-[##], or TCW-[##]]**: Factory-mounted **[unglazed] [glazed]** ceramic mosaic tile.

1. Composition: **[Porcelain] [Impervious natural clay or porcelain] [Vitreous or impervious natural clay or porcelain]**.
2. Module Size: [**25.4 by 25.4 mm (1 by 1 inch)**] [**25.4 by 50.8 mm (1 by 2 inches)**] [**50.8 by 50.8 mm (2 by 2 inches)**] <**Insert dimensions**>.
3. Thickness: 6.4 mm (1/4 inch).
4. Face: **[Plain] [Pattern of design indicated,]** with cushion edges.

5. Surface: **[Smooth, without] [Slip resistant, with]** abrasive admixture.
6. Dynamic Coefficient of Friction for Floor Tile: Not less than 0.42.

7. Finish: **[Bright, opaque] [Bright, clear] [Mat, opaque] [Mat, clear] [Semimat, opaque] [Semimat, clear] [Vellum, opaque] [Vellum, clear] [Crystalline] <Insert description>** glaze.
8. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**.
9. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable**[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base Cove: Cove, module size [**25.4 by 25.4 mm (1 by 1 inch)**] [**50.8 by 25.4 mm (2 by 1 inch)**] <**Insert dimensions**>.
    b. Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[25.4 by 25.4 mm (1 by 1 inch)] [50.8 by 25.4 mm (2 by 1 inch)] <Insert dimensions>**.
    c. Base Cap for Thinset Mortar Installations: Surface bullnose, module size [**25.4 by 25.4 mm (1 by 1 inch)**] [**50.8 by 25.4 mm (2 by 1 inch)**] [**50.8 by 50.8 mm (2 by 2 inches)**] <**Insert dimensions**>.
    d. Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[25.4 by 25.4 mm (1 by 1 inch)] [50.8 by 25.4 mm (2 by 1 inch)] <Insert dimensions>**.
    e. Wainscot Cap for Thinset Mortar Installations: Surface bullnose, module size [**25.4 by 25.4 mm (1 by 1 inch)**] [**50.8 by 25.4 mm (2 by 1 inch)**] [**50.8 by 50.8 mm (2 by 2 inches)**] <**Insert dimensions**>.
    f. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
    g. External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size **[25.4 by 25.4 mm (1 by 1 inch)] [50.8 by 25.4 mm (2 by 1 inch)] <Insert dimensions>**.
    h. External Corners for Thinset Mortar Installations: Surface bullnose, module size [**25.4 by 25.4 mm (1 by 1 inch)**] [**50.8 by 25.4 mm (2 by 1 inch)**] [**50.8 by 50.8 mm (2 by 2 inches)**] <**Insert dimensions**>.

    i. Internal Corners: Cove, module size [**25.4 by 25.4 mm (1 by 1 inch)**] [**50.8 by 25.4 mm (2 by 1 inch)**] <**Insert dimensions**>.
    j. Internal Corners: Field-butted square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.

    k. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide

reduction in thickness from 12.7 to 6.4 mm (1/2 to 1/4 inch) across nominal 100-mm (4-inch) dimension.

B. Ceramic Tile Type **[TQB-[##], TQF-[##], or TQW-[##]]**: **[Unglazed] [Glazed]** square-edged quarry tile.

1. Face Size: [**76 by 76 mm (3 by 3 inches)**] [**102 by 102 mm (4 by 4 inches)**] [**152 by 76 mm (6 by 3 inches)**] [**152 by 152 mm (6 by 6 inches)**] [**200 by 98 mm (8 by 3-7/8 inches)**] [**200 by 200 mm (8 by 8 inches)] <Insert dimensions**>.
2. Thickness: **[9.5 mm (3/8 inch)] [12.7 mm (1/2 inch)] [19 mm (3/4 inch)]**.
3. Wearing Surface: **[Nonabrasive, smooth] [Abrasive aggregate embedded in surface] <Insert description**>.
4. Dynamic Coefficient of Friction for Floor Tile: Not less than 0.42.
5. Finish: **[Bright, opaque] [Bright, clear] [Mat, opaque] [Mat, clear] [Semimat, opaque] [Semimat, clear] [Vellum, opaque] [Vellum, clear] [Crystalline] <Insert description**> glaze.
6. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern**>.
7. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color**>.
8. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable**[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:

   a. Base: Coved**[with surface bullnose top edge]**, face size [**152 by 152 mm (6 by 6 inches)**] [**200 by 98 mm (8 by 3-7/8 inches)**] <**Insert dimensions**>.
   b. Wainscot Cap: Surface bullnose, face size [**152 by 152 mm (6 by 6 inches)**] [**200 by 98 mm (8 by 3-7/8 inches)**] <**Insert dimensions**>.
   c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.

C. Ceramic Tile Type **[TCF-[##] or TPF-[##]]**: **[Unglazed] [Glazed]** pressed floor tile.

1. Composition: **[Impervious natural clay or porcelain] [Vitreous or impervious natural clay or porcelain] [Natural clay or porcelain]**.
2. Face Size: **[76 by 76 mm (3 by 3 inches)] [102 by 102 mm (4 by 4 inches)] [152 by 152 mm (6 by 6 inches)] [197 by 98 mm (7-3/4 by 3-7/8 inches)] [200 by 200 mm (7-7/8 by 7-7/8 inches)] [300 by 300 mm (11-13/16 by 11-13/16 inches)] [165 by 333 mm] [200 by 250 mm] [250 by 250 mm] [333 by 333 mm] [400 by 400 mm] <Insert dimensions**>.
3. Face Size Variation: **[Calibrated or rectified] [Rectified]**.
4. Thickness: **[6.4 mm (1/4 inch)**] [**9.5 mm (3/8 inch)**] [**12.7 mm (1/2 inch)**].
5. Face: **[Plain with square or cushion edges] [Plain with square edges] [Plain with cushion edges] [Pattern of design indicated, with square or cushion edges] [As indicated]**.
6. Dynamic Coefficient of Friction: Not less than 0.42.

7. Glaze: **[Bright, opaque] [Bright, clear] [Mat, opaque] [Mat, clear] [Semimat, opaque] [Semimat, clear] [Vellum, opaque] [Vellum, clear] [Crystalline] <Insert description>**.
8. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**.
9. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable**[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base Cove: Cove, module size **[same as adjoining flat tile] <Insert size>**.
    b. Base Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[same as adjoining flat tile] <Insert size>**.
    c. Base Cap for Thinset Mortar Installations: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.
    d. Wainscot Cap for Portland Cement Mortar Installations: Bead (bullnose), module size **[same as adjoining flat tile] <Insert size>**.
    e. Wainscot Cap for Thinset Mortar Installations: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.
    f. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
    g. External Corners for Portland Cement Mortar Installations: Bead (bullnose), module size **[same as adjoining flat tile] <Insert size>**.
    h. External Corners for Thinset Mortar Installations: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.

    i. Internal Corners: Cove, module size **[same as adjoining flat tile] <Insert size>**.
    j. Internal Corners: Field-butted square corners. For coved base and cap, use angle pieces designed to fit with stretcher shapes.

    k. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 12.7 to 6.4 mm (1/2 to 1/4 inch) across nominal 100-mm (4-inch) dimension.

D. Ceramic Tile Type **[TPB-[##], TPF-[##], or TPW-[##]]**: **[Unglazed] [Glazed]** porcelain tile.

1. Certification: Tile certified by the Porcelain Tile Certification Agency.
2. Face Size: **[76 by 76 mm (3 by 3 inches)] [102 by 102 mm (4 by 4 inches)] [152 by 152 mm (6 by 6 inches)] [197 by 98 mm (7-3/4 by 3-7/8 inches)] [200 by 200 mm (7-7/8 by**

7-7/8 inches)] [300 by 300 mm (11-13/16 by 11-13/16 inches)] [165 by 333 mm] [200 by 250 mm] [250 by 250 mm] [333 by 333 mm] [400 by 400 mm] <Insert dimensions>.

3. Face Size Variation: Rectified.
4. Thickness: **[6.4 mm (1/4 inch)] [9.5 mm (3/8 inch)] [12.7 mm (1/2 inch)]**.
5. Face: **[Plain with square or cushion edges] [Plain with square edges] [Plain with cushion edges] [Polished with square edges] [As indicated]**.
6. Dynamic Coefficient of Friction for Floor Tile: Not less than 0.42.
7. Tile Color, Glaze, and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color, glaze, and pattern>**.
8. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.
9. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable**[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:

   a. Base Cap: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.
   b. Wainscot Cap: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.
   c. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
   d. External Corners: Surface bullnose, module size **[same as adjoining flat tile] <Insert size>**.
   e. Internal Corners: Field-butted square corners.

   f. Tapered Transition Tile: Shape designed to effect transition between thickness of tile floor and adjoining floor finishes of different thickness, tapered to provide reduction in thickness from 12.7 to 6.4 mm (1/2 to 1/4 inch) across nominal 100-mm (4-inch) dimension.

E. Ceramic Tile Type **[TCW-[##]]**: Glazed wall tile.
   1. Module Size: **[108 by 108 mm (4-1/4 by 4-1/4 inches)] [152 by 108 mm (6 by 4-1/4 inches)] [152 by 152 mm (6 by 6 inches)] [200 by 200 mm] [250 by 250 mm] [200 by 300 mm] <Insert dimensions>**.

   2. Face Size Variation: Rectified.
   3. Thickness: 8 mm (5/16 inch).

4. Face: **[Plain with modified square edges or cushion edges] [Plain with modified square edges] [Plain with cushion edges] [Pattern of design indicated, with manufacturer's standard edges]**.
5. Finish: **[Bright, opaque] [Bright, clear] [Mat, opaque] [Mat, clear] [Semimat, opaque] [Semimat, clear] [Vellum, opaque] [Vellum, clear] [Crystalline] <Insert description>** glaze.
6. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**.
7. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.
8. Mounting: Factory, back mounted.
9. Mounting: Pregrouted sheets of tiles are factory assembled and grouted with manufacturer's standard white silicone rubber.
10. Trim Units: Coordinated with sizes and coursing of adjoining flat tile where applicable**[and matching characteristics of adjoining flat tile]**. Provide shapes as follows, selected from manufacturer's standard shapes:

    a. Base for Portland Cement Mortar Installations: Coved, module size **[108 by 108 mm (4-1/4 by 4-1/4 inches)] [152 by 152 mm (6 by 6 inches)] [152 by 95 mm (6 by 3-3/4 inches)] <Insert dimensions>**.
    b. Base for Thinset Mortar Installations: Straight, module size **[108 by 108 mm (4-1/4 by 4-1/4 inches)] [152 by 152 mm (6 by 6 inches)] [152 by 51 mm (6 by 2 inches)] <Insert dimensions>**.
    c. Wainscot Cap for Portland Cement Mortar Installations: Bullnose cap, module size **[108 by 108 mm (4-1/4 by 4-1/4 inches)] [152 by 152 mm (6 by 6 inches)] [152 by 51 mm (6 by 2 inches)] <Insert dimensions>**.
    d. Wainscot Cap for Thinset Mortar Installations: Surface bullnose, module size **[108 by 108 mm (4-1/4 by 4-1/4 inches)] [152 by 152 mm (6 by 6 inches)] [152 by 51 mm (6 by 2 inches)] <Insert dimensions>**.
    e. Wainscot Cap for Flush Conditions: Regular flat tile for conditions where tile wainscot is shown flush with wall surface above it, same size as adjoining flat tile.
    f. External Corners for Portland Cement Mortar Installations: Bullnose shape with radius of at least 19 mm (3/4 inch) unless otherwise indicated.
    g. External Corners for Thinset Mortar Installations: Surface bullnose, same size as adjoining flat tile.
    h. Internal Corners: Field-butted square corners. For coved base and cap use angle pieces designed to fit with stretcher shapes.

F. Large-Format Glass-Tile Type **[TGW-[##]]**: [Cast] [Fused] [Low temperature].

1. Face Size: [**76 by 76 mm (3 by 3 inches)**] **[102 by 102 mm (4 by 4 inches)] [108 by 108 mm (4-1/4 by 4-1/4 inches)] <Insert dimensions>**.
2. Sizing Category: [**Standard**] [**Natural**].
3. Aesthetic Class: [**V0**] [**V1**] [**V2**] [**V3**] [**V4**].

4. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**.
5. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

G. Factory-Mounted Mosaic Glass-Tile Type **[TGW-[##]]**: [**Cast**] [**Fused**] [**Low temperature**].

1. Module Size: [**12.7 by 50.8 mm (1/2 by 2 inches)**] [**12.7 by 76.2 mm (1/2 by 3 inches)**] [**16 by 32 mm (5/8 by 1-1/4 inches)**] [**25.4 by 25.4 mm (1 by 1 inch)**] [**25.4 by 50.8 mm (1 by 2 inches)**] [**50.8 by 50.8 mm (2 by 2 inches)**] [**50.8 by 101.6 mm (2 by 4 inches)**] **<Insert dimensions>**.
2. Sizing Category: [**Standard**] [**Natural**].
3. Aesthetic Class: [**V0**] [**V1**] [**V2**] [**V3**] [**V4**].
4. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>.**
5. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

H. Factory-Mounted Miniature Mosaic Glass-Tile Type **[TGW-[##]]**: [**Cast**] [**Fused**] [**Low temperature**].

1. Module Size: **[12.7 by 12.7 mm (1/2 by 1/2 inch)] [12.7 by 25.4 mm (1/2 by 1 inch)] [15.9 by 15.9 mm (5/8 by 5/8 inch)] [19 by 19 mm (3/4 by 3/4 inches)] <Insert dimensions>**.
2. Sizing Category: [**Standard**] [**Natural**].
3. Aesthetic Class: [**V0**] [**V1**] [**V2**] [**V3**] [**V4**].
4. Tile Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**.
5. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

I. Stone Tile Type **[TSB-[##], TSF-[##], or TSW-[##]]**:

1. Granite: Complying with ASTM C615/C615M.
2. Limestone: Complying with ASTM C568/C568M, Classification [**II (Medium Density)**] [**III (High Density)**].
3. Marble: Complying with ASTM C503/C503M, Classification [**I, Calcite**] [**II, Dolomite**].
4. Quartz-Based Stone: Complying with ASTM C616/C616M, Classification [**II, Quartzitic Sandstone**] [**III, Quartzite**].
5. Serpentine: Complying with ASTM C1526, Classification [**I, Exterior**] [**II, Interior**].
6. Slate: Complying with ASTM C629/C629M, Classification [**I, Exterior**] [**II, Interior**].

7. Travertine: Complying with ASTM C1527/C1527M, Classification [**I, Exterior**] [**II, Interior**].
8. Varieties and Sources:

    a. **<Insert, in separate subparagraphs, name of variety and producer, distributor, or importer>**.

9. Cut: [**Vein**] [**Fleuri**].
10. Finish: **[Polished] [Honed] [Sand rubbed] [Thermal] [Natural cleft] [As indicated] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.
11. Edges: **[Square] [Beveled] [Eased]**.
12. Module Size: **[6 by 6 inches (152 by 152 mm)] [6 by 12 inches (152 by 305 mm)] [12 by 12 inches (305 by 305 mm)] [300 by 300 mm] [18 by 18 inches (457 by 457 mm)] [500 by 500 mm] [As indicated]**.
13. Nominal Tile Thickness: **[1/4 inch (6 mm)] [3/8 inch (10 mm)] [1/2 inch (13 mm)] [5/8 inch (16 mm)]**.
14. Joint Width: **[Hand tight] [1/16 inch (1.5 mm)] [1/8 inch (3 mm)] [1/4 inch (6 mm)] [3/8 inch (10 mm)] [1/2 inch (13 mm)]**.
15. Grout Color **[GTG-[##]]**: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

2.4 THRESHOLDS

A. General: Fabricate to sizes and profiles indicated or required to provide transition between adjacent floor finishes.

    1. Bevel edges at 1:2 slope, with lower edge of bevel aligned with or up to 1.5 mm (1/16 inch) above adjacent floor surface. Finish bevel to match top surface of threshold. Limit height of threshold to 12.7 mm (1/2 inch) or less above adjacent floor surface.

B. Granite Thresholds **[STG-[##]]**: ASTM C615/C615M, with [**polished**] [**honed**] <**Insert finish**> finish.

    1. Description: Uniform, [**fine**] [**medium**]-grained, [**white**] [**gray**] [**black**] <**Insert color**> stone without veining.
    2. Description: Project Director/COR's sample.
    3. Description: Provide[**one of**] the following:

        a. <**Insert, in separate subparagraphs, name of variety and producer, distributor, or importer**>.

C. Marble Thresholds **[STG-[##]]**: ASTM C 503/C 503M, with a minimum abrasion resistance of **[10] [12]** according to ASTM C 1353 or ASTM C 241/C 241M and with honed finish.

1. Description: Uniform, fine- to medium-grained white stone with gray veining.
2. Description: Match Project Director/COR's sample.
3. Description: Provide**[one of]** the following:

   a. <**Insert, in separate subparagraphs, name of variety and producer, distributor, or importer**>.

2.5 WATERPROOF MEMBRANE

A. General: Manufacturer's standard product**[, selected from the following,]** that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric.

   1. Nominal Thickness: 0.76 mm (0.030 inch).
   2. Nominal Thickness: 1 mm (0.040 inch).

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester.

   1. Nominal Thickness: 0.6 mm (0.025 inch).
   2. Nominal Thickness: 1 mm (0.040 inch).

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.2-mm (0.008-inch) nominal thickness.

E. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, SBS-modified-bituminous sheet with fabric reinforcement facing; 1 -mm (0.040-inch) nominal thickness.

F. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and continuous fabric reinforcement.

G. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

H. Latex-Portland Cement Waterproof Mortar: Flexible, waterproof mortar consisting of cement-based mix and latex additive.

I. Waterproofing and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both waterproofing and tile-setting adhesive in a two-step process.

   1. Adhesives shall have a VOC content of **[65]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.6 CRACK ISOLATION MEMBRANE

A. General: Manufacturer's standard product**[, selected from the following,]** that complies with ANSI A118.12 for **[standard performance] [high performance]** and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.76-mm (0.030-inch) nominal thickness.

C. PVC Sheet: PVC heat-fused on both sides to facings of nonwoven polyester; 1-mm (0.040-inch) nominal thickness.

D. Polyethylene Sheet: Polyethylene faced on both sides with fleece webbing; 0.2-mm (0.008-inch) nominal thickness.

E. Corrugated Polyethylene: Corrugated polyethylene with dovetail-shaped corrugations and with anchoring webbing on the underside; 4-mm (3/16-inch) nominal thickness.

F. Fabric-Reinforced, Modified-Bituminous Sheet: Self-adhering, modified-bituminous sheet with fabric reinforcement facing; 1-mm (0.040-inch) nominal thickness.

G. Fabric-Reinforced, Fluid-Applied Membrane: System consisting of liquid-latex rubber or elastomeric polymer and fabric reinforcement.

H. Fluid-Applied Membrane: Liquid-latex rubber or elastomeric polymer.

I. Latex-Portland Cement Crack-Resistant Mortar: Flexible mortar consisting of cement-based mix and latex additive.

J. Crack Isolation Membrane and Tile-Setting Adhesive: One-part, fluid-applied product intended for use as both a crack isolation membrane and tile-setting adhesive in a two-step process.

1. Adhesives shall have a VOC content of **[65]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.7 SETTING MATERIALS

A. Portland Cement Mortar (Thickset) Installation Materials: ANSI A108.02.

1. Cleavage Membrane: Asphalt felt, ASTM D 226/D 226M, Type I (No. 15); or polyethylene sheeting, ASTM D 4397, 0.1 mm (4.0 mils) thick.

2. Reinforcing Wire Fabric: Galvanized, welded-wire fabric, 50.8 by 50.8 mm (2 by 2 inches) by 1.57-mm (0.062-inch) diameter; comply with ASTM A 185/A 185M and ASTM A 82/A 82M, except for minimum wire size.

3. Latex Additive: **[Manufacturer's standard] [acrylic resin] [or] [styrene-butadiene-rubber]** water emulsion, serving as replacement for part or all of gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement and aggregate mortar bed.

B. Standard Dry-Set Mortar (Thinset): ANSI A118.1.

1. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.1.

C. Modified Dry-Set Mortar (Thinset): ANSI A118.4.

1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.4.

D. Medium-Bed, Modified Dry-Set Mortar: Comply with requirements in ANSI A118.4. Provide product that is approved by manufacturer for application thickness of **[16 mm (5/8 inch)]** <**Insert thickness**>.

1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.

E. Improved Modified Dry-Set Mortar (Thinset): ANSI A118.15.

1. Provide prepackaged, dry-mortar mix containing dr, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.
3. For wall applications, provide mortar that complies with requirements for nonsagging mortar in addition to the other requirements in ANSI A118.15.

F. EGP (Exterior Glue Plywood) Latex-Portland Cement Mortar (Thinset): ANSI A118.11.

1. Provide prepackaged, dry-mortar mix containing dry, redispersible, vinyl acetate or acrylic additive to which only water must be added at Project site.
2. Provide prepackaged, dry-mortar mix combined with **[acrylic resin] [or] [styrene-butadiene-rubber]** liquid-latex additive at Project site.

G. Water-Cleanable, Tile-Setting Epoxy: ANSI A118.3.

1. Adhesives shall have a VOC content of **[65]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
3. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 60 and 100 deg C (140 and 212 deg F), respectively, and certified by manufacturer for intended use.
4. <Type II organic adhesive is also available but is suitable only for interior ceilings and walls subject to dry, light service or limited water exposure.>

H. Organic Adhesive: ANSI A136.1, Type I.

1. Adhesives shall have a VOC content of **[65]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.8 GROUT MATERIALS

A. Sand-Portland Cement Grout: ANSI A108.10, consisting of white or gray cement and white or colored aggregate as required to produce color indicated.

B. Standard Cement Grout: ANSI A118.6.

C. High-Performance Tile Grout: ANSI A118.7.

1. Polymer Type: Ethylene vinyl acetate or acrylic additive, in dry, redispersible form, prepackaged with other dry ingredients.
2. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to prepackaged dry-grout mix.

D. Water-Cleanable Epoxy Grout: ANSI A118.3

1. **[Grout shall have a VOC content of 65 g/L or less]**.
2. Provide product capable of withstanding continuous and intermittent exposure to temperatures of up to 60 and 100 deg C (140 and 212 deg F), respectively, and certified by manufacturer for intended use.

E. Grout for Pregrouted Tile Sheets: Same product used in factory to pregrout tile sheets.

2.9 MISCELLANEOUS MATERIALS

A. Trowelable Underlayments and Patching Compounds: Latex-modified, portland cement-based formulation provided or approved by manufacturer of tile-setting materials for installations indicated.

B. Vapor-Retarder Membrane: Polyethylene sheeting, ASTM D 4397, 0.1 mm (4.0 mils) thick.

C. Metal Edge Strips: Angle or L-shaped, height to match tile and setting-bed thickness, metallic or combination of metal and PVC or neoprene base, designed specifically for flooring applications; **[half-hard brass] [white zinc alloy] [nickel silver] [stainless-steel, ASTM A 666, 300 Series]** exposed-edge material. Install at locations indicated or where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile. Approve product prior to use.

D. Tile Cleaner: A neutral cleaner capable of removing soil and residue without harming tile and grout surfaces, specifically approved for materials and installations indicated by tile and grout manufacturers.

E. Floor Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.

1. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.10 MIXING MORTARS AND GROUT

A. Mix mortars and grouts to comply with referenced standards and mortar and grout manufacturers' written instructions.

B. Add materials, water, and additives in accurate proportions.

C. Obtain and use type of mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures to produce mortars and grouts of uniform quality with optimum performance characteristics for installations indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions where tile will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

1. Verify that substrates for setting tile are firm; dry; clean; free of coatings that are incompatible with tile-setting materials, including curing compounds and other substances that contain soap, wax, oil, or silicone; and comply with flatness tolerances required by ANSI A108.01 for installations indicated.
2. Verify that concrete substrates for tile floors installed with **[adhesives] [bonded mortar bed] [or] [thinset mortar]** comply with surface finish requirements in ANSI A108.01 for installations indicated.

a. Verify that surfaces that received a steel trowel finish have been mechanically scarified.
b. Verify that protrusions, bumps, and ridges have been removed by sanding or grinding.

3. Verify that installation of grounds, anchors, recessed frames, electrical and mechanical units of work, and similar items located in or behind tile has been completed.

4. Verify that joints and cracks in tile substrates are coordinated with tile joint locations; if not coordinated, adjust joint locations in consultation with Project Director/COR.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Fill cracks, holes, and depressions in concrete substrates for tile floors installed with **[adhesives] [or] [thinset mortar]** with trowelable leveling and patching compound specifically recommended by tile-setting material manufacturer.

B. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1:50 (1/4 inch per foot) toward drains.

C. Blending: For tile exhibiting color variations, verify that tile has been factory blended and packaged so tile units taken from one package show same range of colors as those taken from other packages and match approved Samples. If not factory blended, either return to manufacturer or blend tiles at Project site before installing.

3.3 CERAMIC TILE INSTALLATION

A. Comply with TCNA's "Handbook for Ceramic, Glass, and Stone Tile Installation" for TCNA installation methods specified in tile installation schedules. Comply with parts of the ANSI A108 series "Specifications for Installation of Ceramic Tile" that are referenced in TCNA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.

1. For the following installations, follow procedures in the ANSI A108 series of tile installation standards for providing 95 percent mortar coverage:

a. Exterior tile floors.
b. Tile floors in wet areas.
c. Tile swimming pool decks.
d. Tile floors in laundries.
e. Tile floors consisting of tiles 200 by 200 mm (8 by 8 inches) or larger.
f. Tile floors consisting of rib-backed tiles.

B. Extend tile work into recesses and under or behind equipment and fixtures to form complete covering without interruptions unless otherwise indicated. Terminate work neatly at obstructions, edges, and corners without disrupting pattern or joint alignments.

C. Accurately form intersections and returns. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

D. Provide manufacturer's standard trim shapes where necessary to eliminate exposed tile edges.

E. Where accent tile differs in thickness from field tile, vary setting-bed thickness so that tiles are flush.

F. Jointing Pattern: Lay tile in grid pattern unless otherwise indicated. Lay out tile work and center tile fields in both directions in each space or on each wall area. Lay out tile work to minimize the use of pieces that are less than half of a tile. Provide uniform joint widths unless otherwise indicated.

1. For tile mounted in sheets, make joints between tile sheets same width as joints within tile sheets so joints between sheets are not apparent in finished work.
2. Where adjoining tiles on floor, base, walls, or trim are specified or indicated to be same size, align joints.
3. Where tiles are specified or indicated to be whole integer multiples of adjoining tiles on floor, base, walls, or trim, align joints unless otherwise indicated.

G. Joint Widths: Unless otherwise indicated, install tile with the following joint widths:

1. Ceramic Mosaic Tile: [**1.6 mm (1/16 inch)**] [**3.2 mm (1/8 inch)**].
2. Quarry Tile: [**6.4 mm (1/4 inch)**] [**9.5 mm (3/8 inch)**].
3. Pressed Floor Tile: [**6.4 mm (1/4 inch)**] [**9.5 mm (3/8 inch)**].
4. Glazed Wall Tile: [**1.6 mm (1/16 inch)**] [**3.2 mm (1/8 inch)**].
5. Porcelain Tile: [**6.4 mm (1/4 inch)**] [**9.5 mm (3/8 inch)**].

H. Lay out tile wainscots to dimensions indicated or to next full tile beyond dimensions indicated.

I. Expansion Joints: Provide expansion joints and other sealant-filled joints, including control, contraction, and isolation joints, where indicated. Form joints during installation of setting materials, mortar beds, and tile. Do not saw-cut joints after installing tiles.

1. Where joints occur in concrete substrates, locate joints in tile surfaces directly above them.

J. Stone Thresholds: Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated.

1. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in **[modified dry-set] [improved modified dry-set]** mortar (thinset).
2. Do not extend **[cleavage membrane] [waterproofing] [or] [crack isolation membrane] under thresholds set in [standard dry-set] [modified dry-set] [or] [improved modified dry-set]** mortar. Fill joints between such thresholds and adjoining tile set on **[cleavage membrane] [waterproofing] [or] [crack isolation membrane]** with elastomeric sealant.

K. Metal Edge Strips: Install **[at locations indicated] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with top of tile] [where exposed edge of tile flooring meets carpet, wood, or other flooring that finishes flush with or below top of tile and no threshold is indicated]**.

L. Floor Sealer: Apply floor sealer to**[cementitious]** grout joints**[in tile floors]** according to floor-sealer manufacturer's written instructions. As soon as floor sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

3.4 WATERPROOFING INSTALLATION

A. Install waterproofing to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.

B. Allow waterproofing to cure and verify by testing that it is watertight before installing tile or setting materials over it.

3.5 CRACK ISOLATION MEMBRANE INSTALLATION

A. Install crack isolation membrane to comply with ANSI A108.17 and manufacturer's written instructions to produce membrane of uniform thickness that is bonded securely to substrate.

B. Allow crack isolation membrane to cure before installing tile or setting materials over it.

3.6 ADJUSTING AND CLEANING

A. Remove and replace tile that is damaged or that does not match adjoining tile. Provide new matching units, installed as specified and in a manner to eliminate evidence of replacement.

B. Cleaning: On completion of placement and grouting, clean all ceramic tile surfaces so they are free of foreign matter.

1. Remove grout residue from tile as soon as possible.
2. Clean grout smears and haze from tile according to tile and grout manufacturer's written instructions but no sooner than 10 days after installation. Use only cleaners recommended by tile and grout manufacturers and only after determining that cleaners are safe to use by testing on samples of tile and other surfaces to be cleaned. Protect metal surfaces and plumbing fixtures from effects of cleaning. Flush surfaces with clean water before and after cleaning.

3.7 PROTECTION

A. Protect installed tile work with kraft paper or other heavy covering during construction period to prevent staining, damage, and wear. If recommended by tile manufacturer, apply coat of neutral protective cleaner to completed tile walls and floors.

B. Prohibit foot and wheel traffic from tiled floors for at least seven days after grouting is completed.

C. Before final inspection, remove protective coverings and rinse neutral protective cleaner from tile surfaces.

3.8 EXTERIOR TILE INSTALLATION SCHEDULE

A. Exterior Floor Installations:

1. TCNA F101 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) **[bonded to concrete] [over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated]**.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA F102; thinset mortar [on concrete] **[over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated]**.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

3. TCNA F101 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**: Cement mortar bed (thickset) **[bonded to concrete] [over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and bonded to concrete where membrane is not indicated]**.

   a. Stone Tile Type: **[TSF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

4. TCNA F102: Thinset mortar **[on concrete] [over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated]**.

   a. Stone Tile Type: **[TSF-[##]]**.
   b. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

B. Exterior Roof/Deck Floor Installations:

1. **[TCNA F103] [TCNA F103B]** and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) over drainage material on roof membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA F104; thinset mortar **[on concrete] [over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated].**

   a. Ceramic Tile Type: [**TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** portland cement mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

3. [**TCNA F103**] [**TCNA F103B**] and [**ANSI A108.1A**] [**ANSI A108.1B**] [**ANSI A108.1C**]: Cement mortar bed (thickset) over drainage material on roof membrane.

   a. Stone Tile Type: **[TSF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

4. TCNA F104: Thinset mortar **[on concrete] [over waterproof membrane on concrete] [over waterproof membrane on concrete where indicated and on concrete where membrane is not indicated]**.

   a. Stone Tile Type: **[TSF-[##]]**.
   b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

C. Exterior Wall Installations, Masonry or Concrete:

1. TCNA W201 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) on metal lath**[over vapor-retarder membrane]**.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.

   b. Bond Coat for Wet-Set Method: **[Standard] [Modified] [Improved modified]** dry-set mortar.
   c. Bond Coat for Cured-Bed Method: **[Modified dry-set] [Improved modified dry-set]** mortar.
   d. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA W202; thinset mortar**[over waterproof membrane]**.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

3. TCNA W201 and **[ANSI A108.14] [ANSI A108.15] [ANSI A108.16]**: Cement mortar bed (thickset) on metal lath**[over vapor-retarder membrane]**.

   a. Glass-Tile Type: **[TGW-[##]]**.
   b. Bond Coat: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

4. TCNA W202: Thinset mortar**[over waterproof membrane]**.

   a. Glass-Tile Type: **[TGW-[##]]**.
   b. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

5. TCNA W201 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**: Cement mortar bed (thickset) on metal lath**[over vapor-retarder membrane]**.

a. Stone Tile Type: **[TSW-[##]]**.

b. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

c. Bond Coat for Cured-Bed Method: **[Dry-set] [Latex-] portland cement mortar.**
d. **Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

6. TCNA W202 STONE: Thinset mortar **[over waterproof membrane]**.

a. Stone Tile Type: **[TSW-[##]]**.
b. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

D. Exterior Wall Installations, Wood or Metal Studs:

1. TCNA W244E; thinset mortar **[over waterproof membrane on cementitious backer units] [on cementitious backer units over vapor-retarder membrane]**.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** portland cement mortar.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA W244E: Thinset mortar **[over waterproof membrane on cementitious backer units] [on cementitious backer units over vapor-retarder membrane]**.

a. Stone Tile Type: **[TSW-[##]]**.
b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

3.9 INTERIOR TILE INSTALLATION SCHEDULE

A. Interior Floor Installations, Concrete Subfloor:

1. TCNA F111 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) with cleavage membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**

   c. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set] mortar.**
   d. **Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA F112 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) bonded to concrete.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.

   c. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set] mortar.**
   d. **Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

3. TCNA F113; thinset mortar.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.
   c. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]**mortar.
   d. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

4. TCNA F114 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) with cleavage membrane; epoxy grout.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]**mortar.
   c. Grout: Water-cleanable epoxy grout.

5. TCNA F115; thinset mortar; epoxy grout.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]**mortar.
   c. Grout: Water-cleanable epoxy grout.

6. TCNA F116; **[organic adhesive] [water-cleanable, tile-setting epoxy]**.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

7. TCNA F121 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) on waterproof membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.

   c. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   d. **Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

8. TCNA F122; thinset mortar on waterproof membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.
   c. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]**mortar.
   d. Grout: High-performance **[sanded] [unsanded]** grout.

9. **[TCNA F125-Full] [TCNA F125-Full, except where partial coverage is indicated] [TCNA F125-Partial]**; thinset mortar on crack isolation membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.
   c. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]**mortar.
   d. Grout: **[Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

10. TCNA F131; water-cleanable, tile-setting epoxy; epoxy grout.

    a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
    b. Grout: Water-cleanable epoxy grout.

11. TCNA F132; water-cleanable, tile-setting epoxy on cured cement mortar bed **[bonded to concrete subfloor] [installed over cleavage membrane]**; epoxy grout.

    a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
    b. Grout: Water-cleanable epoxy grout.

B. Interior Floor Installations, Wood Subfloor:

1. TCNA F121 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) on waterproof membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.

   b. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

2. TCNA F141 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) with cleavage membrane.

   a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
   b. Stone Tile Type: **[TSF-[##]]**.

   c. Bond Coat for Cured-Bed Method**: [Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.

d. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

3. TCNA F142; organic adhesive.

a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
b. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

4. TCNA F143; water-cleanable, tile-setting epoxy; epoxy grout.

a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.
b. Grout: Water-cleanable epoxy grout.

5. TCNA F144; **[thinset mortar] [water-cleanable epoxy adhesive]** on**[waterproof membrane over]** cementitious backer units or fiber-cement backer board.

a. Ceramic Tile Type: **[TCF-[##], TQF-[##], or TPF-[##]]**.

b. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

6. TCNA F250: **[Thinset mortar] [Water-cleanable, tile-setting epoxy]** on**[waterproof membrane over]** cementitious backer units or fiber-cement backer board.

a. Stone Tile Type: **[TSF-[##]].**

b. Thinset Mortar: **[Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

C. Interior Wall Installations, Masonry or Concrete:

1. TCNA W202; thinset mortar.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass Tile Type: **[TGW-[##]].**

c. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Medium-bed, modified dry-set] [Improved modified dry-set]** mortar.
d. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

2. TCNA W211 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) bonded to substrate.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.

d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

3. TCNA W221 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**, cement mortar bed (thickset) on metal lath **[over cleavage membrane] [over waterproof membrane]**.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

e. Bond Coat for Cured-Bed Method**: [Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

4. TCNA W222 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; one-coat cement mortar bed (thickset) on metal lath **[over cleavage membrane] [over waterproof membrane].**

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass Tile Type: **[TGW-[##]]**.
   c. Stone Tile Type: **[TSW-[##]]**.

   d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

   e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

5. TCNA W223: Organic adhesive.

   a. Glass-Tile Type: **[TGW-[##]]**.
   b. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

D. Interior Wall Installations, Metal Studs or Furring:

1. TCNA W221 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) **[over cleavage membrane] [over waterproof membrane]** on solid backing.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass-Tile Type: **[TGW-[##]]**.
   c. Stone Tile Type: **[TSW-[##]]**.

   d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

   e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

2. TCNA W222 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; one-coat cement mortar bed (thickset) **[over cleavage membrane] [over waterproof membrane]** on solid backing.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass-Tile Type: **[TGW-[##]]**.
   c. Stone Tile Type: **[TSW-[##]]**.

   d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

   e. Bond Coat for Cured-Bed Method**: [Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

3. TCNA W223; organic adhesive on solid backing.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass-Tile Type: **[TGW-[##]]**.
   c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

   d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

   e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

4. TCNA W242; organic adhesive on gypsum board.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.

b. Glass-Tile Type: **[TGW-[##]]**.
c. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

5. TCNA W243; thinset mortar on gypsum board.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar**: [Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

6. TCNA W244C or TCNA W244F; thinset mortar on cementitious backer units or fiber-cement backer board**[over vapor-retarder membrane]**.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
d. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

7. TCNA W245 or TCNA W248; thinset mortar on glass-mat, water-resistant gypsum backer board.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

E. Bathtub Wall Installations with No Shower Head, Wood or Metal Studs or Furring:

1. TCNA B413; **[thinset mortar] [organic adhesive]** on water-resistant gypsum board.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.

d. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

F. Bathtub/Shower Wall Installations, Wood or Metal Studs or Furring:

1. TCNA B411 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) over vapor-retarder membrane.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.

d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

2. TCNA B412; **[thinset mortar] [organic adhesive] [water-cleanable, tile-setting epoxy]** on cementitious backer units or fiber-cement backer board.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.

d. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

3. TCNA B419; thinset mortar on coated glass-mat, water-resistant gypsum backer board.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar: **[Modified dry-set] [Improved modified dry-set]** mortar.

e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

G. Shower Receptor and Wall Installations:

1. TCNA B414 and **[ANSI A108.1A] [ANSI A108.1B] [ANSI A108.1C]**; cement mortar bed (thickset) over vapor-retarder membrane.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass-Tile Type: **[TGW-[##]]**.
   c. Stone Tile Type: **[TSW-[##]]**.

   d. Bond Coat for Wet-Set Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.

   e. Bond Coat for Cured-Bed Method: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   f. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

2. TCNA B415; **[thinset mortar] [organic adhesive] [water-cleanable, tile-setting epoxy]** on **[waterproof membrane over cementitious backer units or fiber-cement backer board] [cementitious backer units or fiber-cement backer board over vapor-retarder membrane]**.

   a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
   b. Glass-Tile Type: **[TGW-[##]]**.
   c. Stone Tile Type: **[TSW-[##]]**.

   d. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
   e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

3. TCNA B420; thinset mortar on **[waterproof membrane over coated glass-mat, water-resistant gypsum backer board] [coated glass-mat, water-resistant gypsum backer board over vapor-retarder membrane]**.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar: **[Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded] [Water-cleanable epoxy]** grout.

4. TCNA B421; thinset mortar on waterproof membrane over solid backing.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar: **[Modified dry-set] [Improved modified dry-set] mortar.**
e. **Grout: [Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

5. TCNA B422; thinset mortar on waterproof membrane with integrated bonding flange for bonded membranes.

a. Ceramic Tile Type: **[TCW-[##], TQW-[##], or TPW-[##]]**.
b. Glass-Tile Type: **[TGW-[##]]**.
c. Stone Tile Type: **[TSW-[##]]**.
d. Thinset Mortar: **[Standard dry-set] [Modified dry-set] [Improved modified dry-set]** mortar.
e. Grout: **[Sand-portland cement] [Standard sanded cement] [Standard unsanded cement] [High-performance sanded] [High-performance unsanded]** grout.

END OF SECTION 093013

SECTION 095113- ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes acoustical panels and exposed suspension systems for interior ceilings.

B. Material Index / Material Codes Include:

1. **APC-[##] <ACOUSTICAL PANEL CEILING.>**

C. Related Requirements:

1. **[Division 09 Section on "Linear Metal Ceilings."]**

D. Products furnished, but not installed under this Section, include anchors, clips, and other ceiling attachment devices to be cast in concrete.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Laboratory Test Reports: For ceiling products, indicating compliance with requirements for low-emitting materials.

C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of sizes indicated below:

1. Acoustical Panels: Set of **[full-size] [150-mm- square]** <**Insert size**> Samples of each type, color, pattern, and texture.
2. Exposed Suspension-System Members, Moldings, and Trim: Set of **[150-mm-]** <**Insert dimension**> long Samples of each type, finish, and color.
3. Clips: Full-size **[hold-down] [impact] [and] [seismic]** clips.

D. Delegated-Design Submittal: For seismic restraints for ceiling systems.

1. Include design calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.4 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.

a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.

4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Size and location of initial access modules for acoustical panels.
6. Items penetrating finished ceiling and ceiling-mounted items including the following:

a. Lighting fixtures.
b. Diffusers.
c. Grilles.
d. Speakers.
e. Sprinklers.
f. Access panels.
g. Perimeter moldings.

7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
8. Interface With Other Systems: Coordinate layout and installation of acoustical ceiling units, suspension system components and accessories with other Work supported by, or penetrating through, ceilings. This includes, but is not limited to: light fixtures, fire and smoke detection system components, HVAC equipment, fire-suppression system components and partition system.
9. Minimum Drawing Scale: **[1:48] [1:96] [1:50] [1:100]** <**Insert scale**>.

B. Product Test Reports: For each acoustical panel ceiling, include tests performed by **[manufacturer and witnessed by a qualified testing agency] [a qualified testing agency]**.

C. Evaluation Reports: For each acoustical panel ceiling suspension system**[and anchor and fastener type]**, include evaluation from ICC-ES.

D. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials**[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Acoustical Ceiling Units: Full-size panels equal to 2 percent of quantity installed.
2. Suspension-System Components: Quantity of each exposed component equal to 2 percent of quantity installed.
3. Hold-Down Clips: Equal to 2 percent of quantity installed.
4. Impact Clips: Equal to 2 percent of quantity installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Not less than 5 years documented successful experience with work comparable to Work of this Project.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups of typical ceiling area as shown on Drawings.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR, based on input from the A/E of Record, specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels, suspension-system components, and accessories to Project site and store them in a fully enclosed, conditioned space where they will be protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

1.9 FIELD CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1. Pressurized Plenums: Operate ventilation system for not less than 48 hours before beginning acoustical panel ceiling installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain each type of acoustical ceiling panel and its supporting suspension system from single source from single manufacturer.

2.2 PERFORMANCE REQUIREMENTS

A. Ceiling products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Delegated Design: Engage a qualified professional engineer to design seismic restraints for ceiling systems.

C. Seismic Performance: Suspended ceilings shall withstand the effects of earthquake motions determined according to ASCE/SEI 7 and OBO-ICS Building Code requirements.

D. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Class A according to ASTM E 1264.
2. Smoke-Developed Index: 50 or less.

E. Fire-Resistance Ratings: Comply with ASTM E 119; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Indicate design designations from UL or from the listings of another qualified testing agency.

2.3 ACOUSTICAL PANELS, GENERAL

A. Acoustical Panel Standard: Provide manufacturer's standard panels according to ASTM E 1264 and designated by type, form, pattern, acoustical rating, and light reflectance unless otherwise indicated.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than <**Insert value**> percent.

2.4 ACOUSTICAL PANELS **[APC-[##] - APC-[##]]**:

A. Product **[APC-[##]]**:

1. Classification:

   a. Type and Form: <**Insert Type**>
   b. Pattern: <**Insert Pattern**>

2. Color: **[White] [As selected from manufacturer's full range] [Match Project Director/COR's sample based on input from the A/E of Record] [As indicated by manufacturer's designation] [As indicated on Drawings] [As indicated in a schedule] <Insert color>**.
3. Light Reflectance (LR): Not less than 0.80.
4. Ceiling Attenuation Class (CAC): Not less than **[CAC indicated in a schedule] [20] [25] [30] [35] [40] <Insert CAC>**.
5. Noise Reduction Coefficient (NRC): Not less than 0.75.
6. Articulation Class (AC): Not less than **[AC indicated in a schedule] [170] [180] [190] [200] [210] <Insert AC>**.
7. Edge/Joint Detail: **[Square] [Reveal sized to fit flange of exposed suspension-system members] [Flush reveal sized to fit flange of exposed suspension-system members] [Beveled, kerfed, and rabbeted long edges and square, butt-on short edges] [As indicated by manufacturer's designation] <Insert requirement>**.

8. Thickness: **[15 mm] [19 mm] [22 mm] [As indicated on Drawings] [As indicated in a schedule] <Insert thickness>**.

9. Thickness: **[3 mm] [12 mm] [15 mm] [15 mm] [19 mm] [22 mm] [25 mm] [38 mm] [51 mm] [76 mm] [As indicated on Drawings] [As indicated in a schedule] <Insert dimension>**.

10. Modular Size: **[610 by 610 mm] [610 by 1220 mm] [610 by 1830 mm] [610 by 2440 mm] [1220 by 1220 mm] [600 by 600 mm] [600 by 1200 mm] [As indicated on Drawings] [As indicated in a schedule] <Insert size>**.
11. Antimicrobial Treatment: Manufacturer's standard broad spectrum, antimicrobial formulation that inhibits fungus, mold, mildew, and gram-positive and gram-negative bacteria and showing no mold, mildew, or bacterial growth when tested according to ASTM D 3273, ASTM D.

2.5 METAL SUSPENSION SYSTEM

A. Metal Suspension-System Standard: Provide manufacturer's standard, direct-hung, metal suspension system and accessories according to ASTM C 635/C 635M and designated by type, structural classification, and finish indicated.

1. High-Humidity Finish: Where indicated, provide coating tested and classified for "severe environment performance" according to ASTM C 635/C 635M.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.

2.6 METAL SUSPENSION SYSTEMS:

A. Product:

1. Wide-Face, Capped, Double-Web,**[Fire-Rated,]** Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, Z90 coating designation; with prefinished 24-mm- wide metal caps on flanges.

a. Structural Classification: **[Intermediate] [Heavy]**-duty system.
b. End Condition of Cross Runners: **[Override (stepped)] [or] [butt-edge]** type.
c. Face Design: Flat, flush.
d. Cap Material: **[Cold-rolled steel] [or] [aluminum]**.
e. Cap Finish: **[Painted white] [Painted in color as selected from manufacturer's full range] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Plated with metallic finish as selected from manufacturer's full range] [Plated with metallic finish indicated by manufacturer's designation] [Natural finish for aluminum]**.

B. Product:

1. Narrow-Face, Capped, Double-Web,**[Fire-Rated,]** Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet; prepainted, electrolytically zinc coated, or hot-dip galvanized, Z90 coating designation; with prefinished 15-mm- wide metal caps on flanges.

    a. Structural Classification: **[Intermediate] [Heavy]**-duty system.
    b. End Condition of Cross Runners: **[Override (stepped)] [or] [butt-edge]** type.
    c. Face Design: **[Flat, flush] [Flanges formed with an integral center reveal]**.
    d. Cap Material: **[Cold-rolled steel] [or] [aluminum]**.
    e. Cap Finish: **[Painted white] [Painted in color as selected from manufacturer's full range] [Painted to match color indicated by manufacturer's designation] [Painted to match color of acoustical unit] [Plated with metallic finish as selected from manufacturer's full range] [Plated with metallic finish indicated by manufacturer's designation] [Natural finish for aluminum]**.

2.7 ACCESSORIES

A. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, "Direct Hung," unless otherwise indicated. Comply with seismic design requirements.

1. Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to five times that imposed by ceiling construction, as determined by testing according to ASTM E 488/E 488M or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.

    a. Type: **[Cast-in-place] [Postinstalled expansion] [Postinstalled bonded]** anchors.

    b. Corrosion Protection: Carbon-steel components zinc plated according to ASTM B 633, Class SC 1 (mild) service condition.
    c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316.
    d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.

2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing according to ASTM E 1190, conducted by a qualified testing and inspecting agency.

B. Wire Hangers, Braces, and Ties: Provide wires as follows:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.

2. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304, nonmagnetic.
3. Nickel-Copper-Alloy Wire: ASTM B 164, nickel-copper-alloy UNS No. N04400.
4. Size: Wire diameter sufficient for its stress at three times hanger design load (ASTM C 635/C 635M, Table 1, "Direct Hung") will be less than yield stress of wire, but not less than **[2.69-mm-] [3.5-mm-]** <**Insert dimension**> diameter wire.

C. Hanger Rods: Mild steel, zinc coated or protected with rust-inhibitive paint.

D. Flat Hangers: Mild steel, zinc coated or protected with rust-inhibitive paint.

E. Angle Hangers: Angles with legs not less than 22 mm wide; formed with 1-mm- thick, galvanized-steel sheet complying with ASTM A 653/A 653M, Z275 coating designation; with bolted connections and 8-mm- diameter bolts.

F. Hold-Down Clips: Manufacturer's standard hold-down.

G. Impact Clips: Manufacturer's standard impact-clip system designed to absorb impact forces against acoustical panels.

H. Seismic Clips: Manufacturer's standard seismic clips designed to secure acoustical panels in place during a seismic event.

I. Seismic Stabilizer Bars: Manufacturer's standard perimeter stabilizers designed to accommodate seismic forces.

J. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

2.8 METAL EDGE MOLDINGS AND TRIM

A. Roll-Formed, Sheet-Metal Edge Moldings and Trim: Type and profile indicated or, if not indicated, manufacturer's standard moldings for edges and penetrations that comply with seismic design requirements; formed from sheet metal of same material, finish, and color as that used for exposed flanges of suspension-system runners.

1. Edge moldings shall fit acoustical panel edge details and suspension systems indicated and match width and configuration of exposed runners unless otherwise indicated.
2. For lay-in panels with reveal edge details, provide **[stepped edge molding that forms reveal of same depth and width as that formed between edge of panel and flange at exposed suspension member]** <**Insert description**>.

3. For circular penetrations of ceiling, provide edge moldings fabricated to diameter required to fit penetration exactly.

B. Extruded-Aluminum Edge Moldings and Trim: Where indicated, provide manufacturer's extruded-aluminum edge moldings and trim of profile indicated or referenced by manufacturer's designations, including splice plates, corner pieces, and attachment and other clips, complying with seismic design requirements.

1. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.
2. Baked-Enamel or Powder-Coat Finish: Minimum dry film thickness of 0.04 mm. Comply with ASTM C 635/C 635M and coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

2.9 ACOUSTICAL SEALANT

A. Acoustical Sealant: As specified in Division 07 Section on "Acoustical Joint Sealants."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of acoustical panel ceilings.

B. Examine acoustical panels before installation. Reject acoustical panels that are wet, moisture damaged, or mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders unless otherwise indicated, and comply with layout shown on reflected ceiling plans.

B. Layout openings for penetrations centered on the penetrating items.

3.3 INSTALLATION

A. Install acoustical panel ceilings according to ASTM C 636/C 636M**[, seismic design requirements,]** and manufacturer's written instructions.

1. Fire-Rated Assembly: Install fire-rated ceiling systems according to tested fire-rated design.

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.

2. Splay hangers only where required **[and, if permitted with fire-resistance-rated ceilings,]** to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension-system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.

4. Secure wire hangers to ceiling-suspension members and to supports above with a minimum of three tight turns. Connect hangers directly to structure or to inserts, eye screws, or other devices that are secure and appropriate for substrate and that will not deteriorate or otherwise fail due to age, corrosion, or elevated temperatures.
5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both the structure to which hangers are attached and the type of hanger involved. Install hangers in a manner that will not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. **[Do not attach hangers to steel deck tabs.]**
9. **[Do not attach hangers to steel roof deck. Attach hangers to structural members.]**
10. Space hangers not more than 1200 mm o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 200 mm from ends of each member.
11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers, without

attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.

1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
2. Screw attach moldings to substrate at intervals not more than 400 mm o.c. and not more than 75 mm from ends. Miter corners accurately and connect securely.
3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension-system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Install acoustical panels with undamaged edges and fit accurately into suspension-system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide precise fit.

1. Arrange directionally patterned acoustical panels as follows:

a. As indicated on reflected ceiling plans.
b. Install panels with pattern running in one direction parallel to **[long] [short]** axis of space.
c. Install panels in a basket-weave pattern.

2. For square-edged panels, install panels with edges fully hidden from view by flanges of suspension-system runners and moldings.
3. For reveal-edged panels on suspension-system runners, install panels with bottom of reveal in firm contact with top surface of runner flanges.
4. For reveal-edged panels on suspension-system members with box-shaped flanges, install panels with reveal surfaces in firm contact with suspension-system surfaces and panel faces flush with bottom face of runners.

5. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.
6. Install **[hold-down] [impact] [and] [seismic]** clips in areas indicated; space according to panel manufacturer's written instructions unless otherwise indicated.

a. Hold-Down Clips: Space **[610 mm]** <**Insert dimension**> o.c. on all cross runners.

7. Protect lighting fixtures and air ducts according to requirements indicated for fire-resistance-rated assembly.

3.4 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 3 mm in 3.6 m, non-cumulative.

B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 3 mm in 3.6 m, non-cumulative.

3.5 FIELD QUALITY CONTROL

A. Special Inspections: Government will engage a qualified special inspector to perform the following special inspections:

1. Periodic inspection during the installation of suspended ceiling grids according to ASCE/SEI 7.

B. Testing Agency: Government will engage a qualified testing agency to perform tests and inspections.

C. **[Testing and inspections will be performed of completed installations of acoustical panel ceiling hangers and anchors and fasteners in successive stages and when installation of ceiling suspension systems on each floor has reached 20 percent completion, but no panels have been installed. Do not proceed with installations of acoustical panel ceiling hangers for the next area until test results for previously completed installations of acoustical panel ceiling hangers show compliance with requirements.]**

1. [Within each test area, testing agency will select one of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 900 N of tension; it will also select one of every two postinstalled anchors used to attach bracing wires to concrete and will test them for 1950 N of tension.
2. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.]

D. Acoustical panel ceiling hangers, anchors, and fasteners will be considered defective if they do not pass tests and inspections.

3.6 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension-system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage.

B. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 095113

SECTION 095423 - LINEAR METAL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes strip, linear metal pans and suspension systems for ceilings.

B. Material Index / Material Codes Include:

1. **MTC-[##] <(LINEAR) METAL CEILING.>**

C. Related Requirements:

1. Division 09 Section on "Acoustical Metal Pan Ceilings" for clip-in, lay-in, snap-in, and torsion-spring-hinged metal pan ceilings with exposed suspension systems.

1.2 DEFINITIONS

A. LR: Light Reflectance coefficient.

B. NRC: Noise Reduction Coefficient.

1.3 COORDINATION

A. Coordinate layout and installation of linear metal pans and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Samples for Verification: For each component indicated and for each exposed finish required, prepared on Samples of size indicated below:

1. Linear Metal Pan: Set of 300-mm- (12-inch-) long Samples of each type and color and a 300-mm- (12-inch-) long spliced section.
2. Suspension System Members: 300-mm- (12-inch-) long Sample of each type.
3. Exposed Molding and Trim: Set of 300-mm- (12-inch-) long Samples of each type, finish, and color.
4. Filler Strips: Set of 300-mm- (12-inch-) long Samples of each type, finish, and color.
5. Sound Absorber: 300 mm (12 inches) long.
6. End Cap: Full size.

D. Delegated-Design Submittal: For design of **[seismic restraints and]**attachment devices.

1.6 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Linear pattern.
2. Joint pattern.
3. Ceiling suspension members.
4. Method of attaching hangers to building structure.

a. Furnish layouts for cast-in-place anchors, clips, and other ceiling attachment devices whose installation is specified in other Sections.

5. Ceiling-mounted items including, but not limited to, light fixtures, diffusers, grilles, speakers, sprinklers, and access panels.
6. Ceiling perimeter and penetrations through ceiling; trim and moldings.
7. Minimum Drawing Scale: **[1:48 (1/4 inch = 1 foot)] [1:96 (1/8 inch = 1 foot)] [1:50] [1:100]** <**Insert scale**>.

B. Product Test Reports: For each linear metal ceiling, for tests performed by a qualified testing agency.

C. Evaluation Reports: For linear metal ceiling and components**[and anchor and fastener type]**.

D. Field quality-control reports.

1.7 CLOSEOUT SUBMITTALS

A. Maintenance Data: For finishes to include in maintenance manuals.

1.8 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Linear Metal Ceiling Components: Quantity of each pan, carrier, accessory, and exposed molding and trim equal to 2 percent of quantity installed.

1.9 QUALITY ASSURANCE

A. Testing Agency Qualifications: Accredited by National Voluntary Laboratory Accreditation Program for testing indicated.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for materials and execution.

1. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.10 DELIVERY, STORAGE, AND HANDLING

A. Deliver ceiling components, and accessories to Project site in original, unopened packages and store them in a fully enclosed, conditioned space where they are protected against damage from moisture, humidity, temperature extremes, direct sunlight, surface contamination, and other causes.

B. Handle ceiling components, and accessories carefully to avoid damaging units and finishes in any way.

1.11 PROJECT CONDITIONS

A. Environmental Limitations: Do not install linear metal ceilings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design **[seismic restraints and]**attachment devices.

B. Structural Performance: Exterior linear metal ceilings shall withstand exterior exposure and the effects of gravity loads and the following loads and stresses without showing permanent deformation of ceiling system components including pans and suspension system; noise or metal fatigue caused by vibration, deflection, and displacement of ceiling pans; or permanent damage to fasteners and anchors:

1. Wind Load: Uniform pressure **[of 960 Pa (20 lbf/sq. ft.)] [of 1436 Pa (30 lbf/sq. ft.)] [as indicated on Drawings]** <**Insert pressure**>, acting inward or outward.
2. Seismic Criteria: Provide linear metal ceilings designed and installed to withstand the effects of earthquake motions according to the following:

a. Standard for Ceiling Suspension Systems Requiring Seismic Restraint: Comply with ASTM E 580/E 580M.
b. CISCA's Recommendations for Acoustical Ceilings: Comply with CISCA's "Recommendations for Direct-Hung Acoustical Tile and Lay-in Panel Ceilings - Seismic Zones 0-2."
c. CISCA's Guidelines for Systems Requiring Seismic Restraint: Comply with CISCA's "Guidelines for Seismic Restraint of Direct-Hung Suspended Ceiling Assemblies - Seismic Zones 3 & 4."
d. ASCE/SEI 7, "Minimum Design Loads for Buildings and Other Structures": Section 9, "Earthquake Loads."

C. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes.

1. Temperature Change (Range): 67 deg C (120 deg F), ambient; 100 deg C (180 deg F) material surfaces.

D. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.

E. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: Comply with ASTM E 1264 for Class A materials.
2. Smoke-Developed Index: 50 or less.

2.2 LINEAR METAL CEILING PANS **[MTC-[##]]**:

A. Acoustical Metal Pan Standard: Provide manufacturer's standard linear metal pans of configuration indicated that comply with ASTM E 1264 classifications as designated by types, acoustical ratings, and light reflectances unless otherwise indicated.

1. Mounting Method for Measuring NRC: Type E-400; plenum mounting in which face of test specimen is 400 mm (15-3/4 inches) away from test surface per ASTM E 795.

B. Sheet Metal Characteristics: For metal components exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, roughness, stains, or discolorations.

1. Aluminum Sheet: Roll-formed aluminum sheet, complying with ASTM B 209M (ASTM B 209); alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.
2. Steel Sheet: Commercial-quality, cold-rolled, carbon-steel sheet; stretcher leveled; with protective coating complying with ASTM C 635/C 635M.

a. Painted Finishes: Electrolytic zinc-coated steel complying with ASTM A 879/A 879M, 12G (04Z) coating; surface treatment as recommended by finish manufacturer for type of use and finish indicated.

b. Chemical/Mechanical Finishes: Uncoated steel sheet complying with ASTM A 1008/A 1008M with luster or bright finish as required by finisher for applying electroplating or other metallic-finishing processes.

3. Stainless-Steel Sheet: Complying with ASTM A 240/A 240M, **[Type 304] [Type 430]**.

C. Pan Fabrication: Manufacturer's standard units of size, profile, and edge treatment indicated, formed from metal indicated to snap on and be securely retained on carriers without separate fasteners, and finished to comply with requirements indicated.

D. Pan Splices: Construction same as pans, in lengths 200 to 300 mm (8 to 12 inches); with manufacturer's standard finish.

E. End Caps: **[Metal matching pans] [Plastic] [Manufacturer's standard material]**; fabricated to fit and conceal exposed ends of pans.

F. Filler Strips: **[Metal matching pans] [Plastic] [Manufacturer's standard material]**; fabricated to uninterruptedly close voids between pans.

G. Moldings and Trim: Provide manufacturer's standard moldings and trim for exposed members, and as indicated or required, for edges and penetrations of ceiling, around fixtures, at changes in ceiling height, and for other conditions; of same metal and finish as linear metal ceiling pans.

H. Sound-Absorbent Fabric Layer: Provide fabric layer, sized to fit concealed surface of pan, and consisting of black, nonwoven, nonflammable, sound-absorbent material with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84.

1. Bond fabric layer to pan in the factory with manufacturer's standard nonflammable adhesive.

I. Sound-Absorbent Pads: Provide width and length to completely fill between carriers, joined at center of panel, with surface-burning characteristics for flame-spread index of 25 or less and smoke-developed index of 50 or less, as determined by testing per ASTM E 84, and to comply with the following requirements:

1. Plastic Sheet-Wrapped Mineral-Fiber Insulation: Pads consisting of nonrigid, PVC plastic sheet encapsulating unfaced mineral-fiber insulation complying with ASTM C 553, Type I, II, or III, and as follows:

a. Mineral-Fiber Type and Thickness: Glass fiber; **[25 mm (1 inch)] [38 mm (1-1/2 inches)] [76 mm (3 inches)] <Insert dimension>**.
b. Mineral-Fiber Density: [**12 kg/cu. m (3/4 lb/cu. ft.)**] [**16 kg/cu. m (1 lb/cu. ft.)**] [**24 kg/cu. m (1-1/2 lb/cu. ft.)**] **<Insert value>**.
c. Plastic Sheet Thickness and Color: Not less than 0.076 mm (0.003 inch); **[clear] [flat black] [white] <Insert requirements>**.

2. Unwrapped, Glass-Fiber Insulation: Black-coated, unfaced, glass-fiber insulation complying with ASTM C 553, Type I, II, or III, not less than 16-kg/cu. m (1-lb/cu. ft.) density, treated to be nondusting, and as follows:

a. Thickness: [**25 mm (1 inch)**] [**38 mm (1-1/2 inches)**] **<Insert dimension>**.

2.3 METAL SUSPENSION SYSTEMS

A. Metal Suspension Systems Standard: Provide ceiling manufacturer's standard metal suspension systems of types and finishes indicated that comply with applicable ASTM C 635/C 635M requirements.

B. Suspension Systems: Provide systems complete with carriers, splice sections, connector clips, alignment clips, leveling clips, hangers, molding, trim, retention clips, load-resisting struts, fixture adapters, and other suspension components required to support ceiling units and other ceiling-supported construction.

C. Attachment Devices: Size for five times the design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung, unless otherwise indicated.

1. Cast-in-Place and Postinstalled Anchors in Concrete: Anchors of type and material indicated below, with holes or loops for attaching hangers of type indicated and with capability to sustain, without failure, a load equal to **[five] <Insert safety factor>** times that imposed by ceiling construction, as determined by testing per ASTM E 488/E 488M or ASTM E 1512 as applicable, conducted by a qualified testing and inspecting agency.

a. Type: **[Cast-in-place] [Postinstalled expansion] [Postinstalled bonded]** anchors.

b. Corrosion Protection: Carbon-steel components zinc plated to comply with ASTM B 633, Class Fe/Zn 5 (0.005 mm) for Class SC service condition (mild).
c. Corrosion Protection: Stainless-steel components complying with ASTM F 593 and ASTM F 594, Group 1 Alloy 304 or 316 for bolts; Alloy 304 or 316 for anchors.

d. Corrosion Protection: Components fabricated from nickel-copper-alloy rods complying with ASTM B 164 for UNS No. N04400 alloy.

2. Power-Actuated Fasteners in Concrete: Fastener system of type suitable for application indicated, fabricated from corrosion-resistant materials, with clips or other accessory devices for attaching hangers of type indicated, and with capability to sustain, without failure, a load equal to 10 times that imposed by ceiling construction, as determined by testing per ASTM E 1190, conducted by a qualified testing and inspecting agency.

D. Wire Hangers, Braces, and Ties: Provide wire complying with the following requirements:

1. Zinc-Coated, Carbon-Steel Wire: ASTM A 641/A 641M, Class 1 zinc coating, soft temper.

2. Size: Select wire diameter so its stress at 3 times the hanger design load indicated in ASTM C 635/C 635M, Table 1, Direct Hung is less than yield stress of wire, but provide not less than 2.69-mm- (0.106-inch-) diameter wire.

E. Carriers: Factory finished **[with matte-black baked finish]** <Insert finish description>.

1. Main Carriers: Aluminum, not less than 6.0-mm (0.240-inch) rolled sheet, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated, complying with ASTM B 209M (ASTM B 209).
2. Main Carriers: Steel, not less than 0.53-mm (0.0209-inch) nominal thickness, cold-rolled sheet, with factory-applied protective coating, complying with ASTM C 635/C 635M.

a. Electrolytic Zinc-Coated Steel: ASTM A 879/A 879M, not less than **[24G (08Z)]** <**Insert coating designation**> zinc coating.
b. Hot-Dip Galvanized Steel: ASTM A 653/A 653M, not less than **[Z180 (G60)]** <**Insert coating designation**> zinc coating.

3. Adaptable Carriers: Manufacturer's standard carriers for direct attachment to existing suspended tees.

4. Flexible Radial Carriers: Manufacturer's standard radial carriers.

5. Expansion Carriers: Manufacturer's standard carriers allowing for irregularities or other unusual space conditions.

F. Carrier Splices: Same metal, profile, and finish as for carriers.

G. Stabilizer Channels, Tees, and Bars: Manufacturer's standard components for stabilizing main carriers at regular intervals and at light fixtures, air-distribution equipment, access doors, and other equipment; spaced as standard with manufacturer for use indicated; and factory finished with matte-black baked finish.

H. Seismic Struts: Manufacturer's standard compression struts designed to accommodate seismic forces.

I. Exterior Bracing: Cold-rolled steel channels and angles, hot-dip galvanized to comply with ASTM A 653/A 653M, Z180 (G60) coating designation; size and profile as required to withstand wind load.

J. Hold-Down Clips: Manufacturer's standard hold-down clips spaced as standard with manufacturer.

K. Edge Moldings and Trim: Provide exposed members as indicated or required to comply with seismic requirements of authorities having jurisdiction, to conceal edges of penetrations through ceiling, to conceal ends of pans and carriers, for fixture trim and adapters, for fasciae at changes in ceiling height, and for other conditions; of metal and finish matching linear metal pans or extruded plastic unless otherwise indicated.

1. For Circular Penetrations of Ceiling: Fabricate edge moldings to diameter required to fit penetration exactly.

2.4 ALUMINUM PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING **[MTC-[##]]**:

A. Aluminum Pans and Suspension System:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers**

offering products that may be incorporated into the Work include, but are not limited to, the following]:

2. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings] <Insert manufacturer's name; product name or designation>** or comparable product by one of the following:

   a. American Decorative Ceilings (ADC).
   b. Ceilings Plus.
   c. Chicago Metallic Corporation.
   d. Hunter Douglas Architectural Products, Inc.
   e. Simplex Ceilings, a division of Intalite Inc.
   f. United States Gypsum Company.

B. Classification: Units complying with ASTM E 1264 for **[Type XIII, aluminum strips with mineral- or glass-fiber-base backing; Form 1, perforated] [Type XIII, aluminum strips with mineral- or glass-fiber-base backing; Form 2, unperforated] [Type XX, other types described as perforated aluminum strips with sound-absorbent fabric backing] <Insert Type XX description>**.

   1. Pattern: **<Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area>**.

C. Pan Thickness: Not less than [**0.46 mm (0.018 inch)**] [**0.56 mm (0.022 inch)**] [**0.6 mm (0.024 inch)**] [**0.65 mm (0.025 inch)**] [**0.7 mm (0.027 inch)**] [**0.8 mm (0.032 inch)**] [**1.0 mm (0.040 inch)**] **<Insert dimension>**.

D. Pan Edge Detail: **[Beveled] [Square] [Round] [Manufacturer's standard edge detail]**.

E. Linear Module Width and Pan Face Width: **[51-mm (2-inch) module width and 32-mm (1-1/4-inch) face width] [102-mm (4-inch) module width and 83-mm (3-1/4-inch) face width] [152-mm (6-inch) module width and 133-mm (5-1/4-inch) face width] [203-mm (8-inch) module width and 184-mm (7-1/4-inch) face width] [100-mm module width and 80-mm face width] [200-mm module width and 180-mm face width] [300-mm module width and 280-mm face width] [As indicated on Drawings] <Insert dimensions>**.

F. Pan Depth: **[16 mm (5/8 inch) deep] [19 mm (3/4 inch) deep] [Not less than 25 to 38 mm (1 to 1-1/2 inches) deep] [15 mm deep] [As indicated] <Insert depth>**.

G. Pan Face Finish: **[Mill] [Lacquered mill] [Clear anodized] [Clear mirror-anodized] [Painted white] [Painted to match color indicated by product designation] [Painted to match Project Director/COR's sample based on input from the A/E of Record] [Painted in color selected from manufacturer's full range] [High-performance organic coating in color selected from manufacturer's full range] [Bright-reflective finish selected from manufacturer's full range] <Insert finish>**.

H. End Cap, Finish of Exposed Portions: **[Matte black] [To match pan] [Manufacturer's standard finish]**.

I. Filler Strip Design: **[Recessed] [Flush] [An integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion]**.

J. Filler Strip, Finish of Exposed Portions: **[Matte black] [To match pan]**.

K. LR: Not less than **[0.70] [0.75]** <**Insert LR**>.

L. NRC: Not less than **[0.65] [0.75] [0.95]** <**Insert NRC**>.

M. Suspension-System Main-Carrier Material: **[Aluminum] [Electrolytic zinc-coated steel] [Hot-dip galvanized steel] [Manufacturer's standard material and protective finish]**.

2.5 STEEL PANS AND SUSPENSION SYSTEM FOR LINEAR METAL CEILING **[MTC-[##]]**:

A. Steel Pans and Suspension System:

1. Manufacturers: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following]**:
2. Basis-of-Design Product: Subject to compliance with requirements, provide **[product indicated on Drawings]** <**Insert manufacturer's name; product name or designation**> or comparable product by one of the following:

   a. Ceilings Plus.
   b. Chicago Metallic Corporation.
   c. Hunter Douglas Architectural Products, Inc.
   d. United States Gypsum Company.

B. Classification: Units complying with ASTM E 1264 for **[Type XIII, steel strips with mineral- or glass-fiber-base backing; Form 1, perforated] [Type XIII, steel strips with mineral- or glass-fiber-base backing; Form 2, unperforated] [Type XX, other types described as perforated steel strips with sound-absorbent fabric backing]** <**Insert Type XX description**>.

1. Pattern: <**Insert pattern designation for perforated pans and any requirements for perforation alignment, hole shape and size, holes per square foot or inch, and percent open area**>.

C. Pan Thickness: Not less than [**0.4 mm (0.015 inch)**] [**0.5 mm (0.020 inch)**] [**0.6 mm (0.024 inch)**] [**0.75 mm (0.030 inch)**] <**Insert dimension**>.

D. Pan Edge Detail: **[Beveled] [Square] [Round] [Manufacturer's standard edge detail]**.

E. Linear Module Width and Pan Face Width: **[51-mm (2-inch) module width and 32-mm (1-1/4-inch) face width] [102-mm (4-inch) module width and 83-mm (3-1/4-inch) face width] [152-mm (6-inch) module width and 133-mm (5-1/4-inch) face width] [203-mm (8-inch) module width and 184-mm (7-1/4-inch) face width] [As indicated on Drawings] <Insert dimensions>**.

F. Pan Depth: **[16 mm (5/8 inch) deep] [19 mm (3/4 inch) deep] [Not less than 25 to 38 mm (1 to 1-1/2 inches) deep] [15 mm deep] [As indicated] <Insert depth>**.

G. Pan Face Finish: **[Painted white] [Painted to match color indicated by product designation] [Painted to match Project Director/COR's sample based on input from the A/E of Record] [Painted in color selected from manufacturer's full range] [Electroplated finish selected from manufacturer's full range] <Insert finish>**.

H. End Cap, Finish of Exposed Portions: **[Matte black] [To match pan] [Manufacturer's standard finish]**.

I. Filler Strip Design: **[Recessed] [Flush] [An integral extension of pan profile] [Expansion, for use with expansion carriers] [Slotted, for air diffusion]**.

J. Filler Strip, Finish of Exposed Portions: **[Matte black] [To match pan]**.

K. LR: Not less than **[0.70] [0.75] <Insert LR>**.

L. NRC: Not less than **[0.65] [0.75] [0.95] <Insert NRC>**.

M. Suspension-System Main-Carrier Material: **[Aluminum] [Electrolytic zinc-coated steel] [Hot-dip galvanized steel] [Manufacturer's standard material and protective finish]**.

2.6 ACCESSORIES

A. Access Panels: For access at locations indicated, provide door hinge assembly, retainer clip, and retainer bar, assembled with ceiling panels and carrier sections into access doors of required size, permitting upward or downward opening.

2.7 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. High-Humidity Finish: Comply with ASTM C 635/C 635M requirements for "Coating Classification for Severe Environment Performance" where high-humidity finishes are indicated.

2.8 ALUMINUM FINISHES

A. Mill Finish: AA-M10C10.

B. Lacquered Mill Finish: AA-M10C10R1x with manufacturer's standard clear, organic coating.

C. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

D. Clear Mirror Anodic Finish: AA-M21C12A212, 0.005 mm or thicker.

E. Color-Coated Finish: Manufacturer's standard**[powder-coat]** baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

F. High-Performance Organic Finish: Two-coat fluoropolymer finish complying with **[AAMA 2604] [AAMA 2605]** and containing not less than **[50] [70]** percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

G. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical, bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

2.9 GALVANIZED-STEEL SHEET FINISHES

A. Color-Coated Finish: Manufacturer's standard**[powder-coat]** baked paint finish complying with coating manufacturer's written instructions for surface preparation, pretreatment, application, baking, and minimum dry film thickness.

2.10 STEEL SHEET FINISHES

A. Electroplated Finish: Electroplating process complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, and minimum thickness to produce a coating uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unplated areas, and other visible defects.

B. Bright-Reflective Finish: Manufacturer's standard chemical/mechanical, bright-reflective metallic finish complying with finish manufacturer's written instructions for surface preparation, pretreatment, process, protective coating, and minimum thickness to produce a finish uniform in appearance and free of blisters, pits, roughness, nodules, burning, cracks, unfinished areas, and other visible defects.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, including structural framing and substrates to which linear metal ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage and with requirements for installation tolerances and other conditions affecting performance of linear metal ceilings.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Measure each ceiling area and establish layout of linear metal pans to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width pans at borders, and comply with layout shown on reflected ceiling plans and on Coordination Drawings.

3.3 INSTALLATION

A. Comply with ASTM C 636/C 636M and seismic requirement indicated, per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."

B. Suspend ceiling hangers from building's structural members and as follows:

1. Install hangers plumb and free from contact with insulation or other objects within ceiling plenum that are not part of supporting structure or of ceiling suspension system.
2. Splay hangers only where required to miss obstructions; offset resulting horizontal forces by bracing, countersplaying, or other equally effective means.
3. Where width of ducts and other construction within ceiling plenum produces hanger spacings that interfere with location of hangers at spacings required to support standard suspension system members, install supplemental suspension members and hangers in form of trapezes or equivalent devices.

4. Secure wire hangers to ceiling suspension members and to supports above with a minimum of three tight turns. Connect hangers directly either to structures or to inserts, eye screws,

or other devices that are secure and appropriate for substrate to which hangers are attached and for type of hanger involved.

5. Secure flat, angle, channel, and rod hangers to structure, including intermediate framing members, by attaching to inserts, eye screws, or other devices that are secure and appropriate for both structure to which hangers are attached and type of hanger involved. Install hangers in a manner that does not cause them to deteriorate or fail due to age, corrosion, or elevated temperatures.

6. Do not support ceilings directly from permanent metal forms or floor deck. Fasten hangers to cast-in-place hanger inserts, postinstalled mechanical or adhesive anchors, or power-actuated fasteners that extend through forms into concrete.
7. When steel framing does not permit installation of hanger wires at spacing required, install carrying channels or other supplemental support for attachment of hanger wires.
8. Do not attach hangers to steel deck tabs.

9. Do not attach hangers to steel roof deck. Attach hangers to structural members.
10. Space hangers not more than 1200 mm (48 inches) o.c. along each member supported directly from hangers unless otherwise indicated; provide hangers not more than 200 mm (8 inches) from ends of each member.
11. Size supplemental suspension members and hangers to support ceiling loads within performance limits established by referenced standards and publications.

C. Secure bracing wires to ceiling suspension members and to supports with a minimum of four tight turns. Suspend bracing from building's structural members as required for hangers but without attaching to permanent metal forms, steel deck, or steel deck tabs. Fasten bracing wires into concrete with cast-in-place or postinstalled anchors.

D. Install edge moldings and trim of type indicated at perimeter of linear metal ceiling area and where necessary to conceal edges and ends of linear metal pans.

1. Screw attach moldings to substrate at intervals not more than 400 mm (16 inches) o.c. and not more than 75 mm (3 inches) from ends, leveling with ceiling suspension system to a tolerance of 3.2 mm in 3.6 m (1/8 inch in 12 feet). Miter corners accurately and connect securely.

2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

E. Install suspension system carriers so they are aligned and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

F. Cut linear metal pans for accurate fit at borders and at interruptions and penetrations by other work through ceilings. Stiffen edges of cut units as required to eliminate evidence of buckling or variations in flatness exceeding referenced standards for stretcher-leveled metal sheet.

G. Install linear metal pans in coordination with suspension system and exposed moldings and trim.

1. Align joints in adjacent courses to form uniform, straight joints parallel to room axis in both directions unless otherwise indicated.
2. Fit adjoining units to form flush, tight joints. Scribe and cut units for accurate fit at borders and around construction penetrating ceiling.
3. Install pans with butt joints using internal pan splices and in the following joint configuration:

   a. Aligned.
   b. Aligned, every other pan length.
   c. Staggered a minimum of 300 mm (12 inches).
   d. Random.
   e. As indicated.

4. Install directionally textured metal pans in directions indicated.
5. Where metal pan ends are visible, install end caps unless trim is indicated.

6. Install filler strips where indicated.

7. Install sound-absorbent pads at right angle to perforated metal pans so pads do not hang unsupported.

H. Install hold-down clips where indicated.

3.4 FIELD QUALITY CONTROL

A. Special Inspections: **[Project Director/COR will engage] [Engage]** a qualified special inspector to perform the following special inspections:

1. Suspended ceiling system.
2. Hangers, anchors, and fasteners.

B. Testing Agency: **[Project Director/COR will engage] [Engage]** a qualified testing agency to perform tests and inspections.

C. Tests and Inspections: Testing and inspecting of completed installations of linear metal ceiling hangers and anchors and fasteners shall take place in successive stages, in areas of extent and using methods as follows. Do not proceed with installations of linear metal ceiling hangers for the next area until test results for previously completed installations show compliance with requirements.

1. Test Areas: Test installation of ceiling suspension systems on each floor when installation has reached 20 percent completion but before pans have been installed.

a. Within each test area, testing agency will select 1 of every 10 power-actuated fasteners and postinstalled anchors used to attach hangers to concrete and will test them for 890 N (200 lbf) of tension; it will also select 1 of every 2 postinstalled anchors used to attach bracing wires to concrete and will test them for 1957 N (440 lbf) of tension.
b. When testing discovers fasteners and anchors that do not comply with requirements, testing agency will test those anchors not previously tested until 20 pass consecutively and then will resume initial testing frequency.

D. Linear metal ceiling hangers and anchors and fasteners will be considered defective if they do not pass tests and inspections.

E. Prepare test and inspection reports.

3.5 CLEANING

A. Clean exposed surfaces of linear metal ceilings, including trim and edge moldings after removing strippable, temporary protective covering if any. Comply with manufacturer's written instructions for stripping of temporary protective covering, cleaning, and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage, including dented and bent units.

END OF SECTION 095423

SECTION 096340 - STONE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Dimension stone exterior flooring.
2. Dimension stone interior flooring.
3. Dimension stone stair treads **[and risers]**.
4. Dimension stone thresholds.

B. Material Index / Material Codes Include:

1. STF-[##] <STONE FLOORING OR PAVING.>
2. STG-[##] <STONE STAIR TREADS.>
3. STG-[##] <STONE THRESHOLDS.>

C. Related Requirements:

1. Division 04 Section on “Exterior Stone Cladding” for exterior stone.
2. Division 07 Section on "Joint Sealants" for sealing joints in stone flooring system with elastomeric sealants.
3. Division 09 Section on “Stone Wall Facing”.
4. Division 32 Section on "Unit Paving" for stone pavers.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each **[variety of stone,]** stone accessory, and manufactured product.

B. Sustainable Design Submittals:

1. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
2. Product Data: For adhesives, indicating VOC content.
3. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

4. Laboratory Test Reports: For sealers, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Include plans, sections, details, and attachments to other work.

1. Show locations and details of joints both within stone flooring and between stone flooring and other finish materials.
2. Show direction of veining, grain, or other directional patterns.

D. Samples for Verification:

1. For each stone type indicated, in sets of Samples not less than 300 mm (12 inches) square. Include at least **[two] [three] [four] [five]** <**Insert number**> or more Samples in each set and show the full range of color and other visual characteristics in completed Work.
2. For each color of **[grout] [pointing mortar]** required.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For fabricator.

B. Material Test Reports:

1. Stone Test Reports: For**[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, according to referenced ASTM standards. Base reports on testing within previous **[three] [five]** <**Insert number**> years.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For stone flooring to include in maintenance manuals. Include product data for stone-care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate stone flooring.

B. Installer Qualifications: A firm or individual experienced in installing stone flooring similar in material, design, and extent to that indicated for this Project, whose work has a record of successful in-service performance. Not less than 5 years documented successful experience with work comparable to Work of this Project.

C. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and execution.

1. Build mockups of typical interior floor area **[as shown on Drawings] [about 2400 mm (96 inches) square] <Insert size>**.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.

1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
2. Store stone on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.

B. Mark stone units, on surface that is concealed after installation, with designations used on Shop Drawings to identify individual stone units. Orient markings on vertical panels, so that they are right side up when units are installed.

C. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.8 FIELD CONDITIONS

A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 10 deg C (50 deg F) during installation and for seven days after completion.

B. Cold-Weather Requirements for Exterior Stone Flooring: Do not use frozen materials or materials mixed or coated with ice or frost. Do not build on frozen substrates. Remove and replace unit masonry damaged by frost or by freezing conditions. Comply with cold-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602.

C. Hot-Weather Requirements for Stone Flooring: Comply with hot-weather construction requirements contained in ACI 530.1/ASCE 6/TMS 602 and with the following:

1. Maintain temperature of materials below 38 deg C (100 deg F).
2. Do not apply mortar to substrates with temperatures of 38 deg C (100 deg F) and above.
3. When the ambient temperature exceeds 32 deg C (90 deg F), fog spray installed stone flooring until damp at least three times a day until flooring is three days old.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations for Stone: Obtain **[each variety of]** stone, **[regardless of finish,]**from single quarry**[, whether specified in this Section or in another Section of the Specifications,]** with resources to provide materials of consistent quality in appearance and physical properties.

1. For stone types that include same list of varieties and sources, provide same variety from same source for each.

2. Make stone slabs available for examination by Project Director/COR.

a. Project Director/COR will select**, based on input from the A/E of Record,** aesthetically acceptable slabs[and will indicate aesthetically unacceptable portions of slabs].
b. Segregate slabs selected for use on Project and mark backs indicating approval.
c. Mark and photograph aesthetically unacceptable portions of slabs as directed by Project Director/COR.

3. Physical Properties:

a. Slip Resistance: Provide a DCOF rating of 0.42 or better.

2.2 GRANITE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 615/C 615M.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: Uniform, **[fine] [medium]-grained, [white] [pink] [gray] [black] <Insert color> stone[without veining]**.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Cut: **[Vein] [Fleuri]**.

F. Minimum Thickness: Comply with ASTM C1528.

G. Finish: **[Polished] [Honed] [Thermal] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.3 LIMESTONE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 568/C 568M.

1. Classification: **[II Medium] [III High]** Density.

2. Stone Abrasion Resistance: Minimum value of **[10]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: **[Dolomitic] [Oolitic] [Shell]** limestone.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Cut: **[Vein] [Fleuri]**.

F. Minimum Thickness: Comply with ASTM C1528.

G. Finish: **[Smooth finish] [Sand rubbed] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**> **[, matching standard ILI finish]**.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.4 MARBLE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 503/C 503M**[, Classification I Calcite] [, Classification II Dolomite] [, Group A] [, Group B] [, Group C] [, Group D]**.

1. Stone Abrasion Resistance: Minimum value of **[10]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: Uniform, fine- to medium-grained, **[white]** <**Insert color**> stone with only slight veining.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Cut: **[Vein] [Fleuri]**.

F. Minimum Thickness: Comply with ASTM C1528.

G. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 QUARTZ-BASED STONE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 616/C 616M, Classification III Quartzite.

1. Stone Abrasion Resistance: Minimum value of **[10]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Minimum Thickness: Comply with ASTM C1528.

E. Finish: **[Sand rubbed] [Natural cleft] [Thermal] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 SERPENTINE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 1526, Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of **[10]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Minimum Thickness: Comply with ASTM C1528.

E. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.7 SLATE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 629/C 629M, Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of **[8]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: **[Black] [Blue-black] [Gray] [Blue-gray] [Green] [Purple] [Mottled purple and green] [Red]** slate with a fine, even grain**[and unfading color,]** from clear, sound stock.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Minimum Thickness: Comply with ASTM C1528.

F. Finish: **[Honed] [Sand rubbed] [Natural cleft] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

G. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.8 TRAVERTINE **[STF-[##] OR STG-[##]]**

A. Material Standard: Comply with ASTM C 1527/C 1527M, Classification II Interior.

1. Stone Abrasion Resistance: Minimum value of **[10]** <**Insert value**>, based on testing according to ASTM C 241/C 241M or ASTM C 1353

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Cut: Vein.

E. Filling: Fill pores on faces of stone with cementitious filler of color **[selected by Project Director/COR] [matching Project Director/COR's sample]**.

F. Minimum Thickness: Comply with ASTM C1528.

G. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample] <Insert finish>**.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.9 OTHER STONE **[STF-[##] OR STG-[##]]**

A. Material Standards:

1. Maximum Absorption according to ASTM C 97/C 97M: <**Insert required value**>.
2. Minimum Compressive Strength according to ASTM C 170/C 170M: <**Insert required value**>.
3. Minimum Flexural Strength according to ASTM C 880/C 880M: <**Insert required value**>.
4. Minimum Modulus of Rupture according to ASTM C 99/C 99M: <**Insert required value**>.

5. Stone Abrasion Resistance: Minimum value of **[10] [12] <Insert value>**, based on testing according to ASTM C 241/C 241M or ASTM C 1353.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Minimum Thickness: Comply with ASTM C1528.

E. Finish: **[Polished] [Honed] [Sand rubbed] [Natural cleft] [As indicated] [Match Project Director/COR's sample] <Insert finish>**.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.10 MORTAR MATERIALS

A. **[Regional Materials: Aggregate for mortar and grout[, cement, and lime] shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.]**

B. Portland Cement: ASTM C 150/C 150M, Type I or Type II**.[Provide natural color or white cement as required to produce mortar color indicated.]**

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.

C. Hydrated Lime: ASTM C 207, Type S.

D. Portland Cement-Lime Mix: Packaged blend of portland cement complying with ASTM C 150/C 150M, Type I or Type III, and hydrated lime complying with ASTM C 207, Type S.

E. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979/C 979M. Use only pigments with a record of satisfactory performance in stone masonry mortar.

F. Colored Portland Cement-Lime Mix: Packaged blend of portland cement, hydrated lime, and mortar pigments. Mix shall produce color indicated or, if not indicated, as selected from manufacturer's standard colors. Pigments shall not exceed 10 percent of portland cement by weight.

G. Aggregate: ASTM C 144; except for **[joints narrower than 6 mm (1/4 inch)] [and] [pointing mortar]**, use aggregate graded with 100 percent passing 1.18-mm (No. 16) sieve.

1. White Aggregates: Natural white sand or ground white stone.
2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

H. Latex Additive: **[Manufacturer's standard] [acrylic-resin] [or] [styrene-butadiene-rubber]** water emulsion, serving as replacement for part of or all gaging water, of type specifically recommended by latex-additive manufacturer for use with field-mixed portland cement mortar bed, and not containing a retarder.

I. Thinset Mortar:

1. Standard Dry-Set Mortar: ANSI A118.1.
2. Modified Dry-Set Mortar: ANSI A118.4.

   a. Prepackaged Dry-Mortar Mix: Factory-prepared, packaged mixture of portland cement; dry, redispersible, ethylene vinyl acetate or acrylic additive; and other ingredients to which only water needs to be added at Project site.
   b. Mixture of Dry-Mortar Mix and Latex Additive: Mixture of packaged dry-mortar mix and **[styrene-butadiene-rubber] [or] [acrylic-resin]** liquid-latex additive.

3. Medium-Bed Modified Dry-Set Mortar: ANSI A118.4. Provide product that is approved by manufacturer for application thickness of **[16 mm (5/8 inch)]** <**Insert value**>.

   a. Prepackaged Dry-Mortar Mix: Factory-prepared, packaged mixture of portland cement; dry, redispersible, ethylene vinyl acetate or acrylic additive; and other ingredients to which only water needs to be added at Project site.
   b. Mixture of Dry-Mortar Mix and Latex Additive: Mixture of packaged dry-mortar mix and **[styrene-butadiene-rubber] [or] [acrylic-resin]** liquid-latex additive.

4. Improved Modified Dry-Set Mortar: ANSI A118.15.

   a. Prepackaged Dry-Mortar Mix: Factory-prepared, packaged mixture of portland cement; dry, redispersible, ethylene vinyl acetate or acrylic additive; and other ingredients to which only water needs to be added at Project site.
   b. Mixture of Dry-Mortar Mix and Latex Additive: Mixture of packaged dry-mortar mix and **[styrene-butadiene-rubber] [or] [acrylic-resin]** liquid-latex additive.

J. Water: Potable.

2.11 GROUT

A. Grout Colors: **[Match stone] [As indicated by manufacturer's designations] [Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.

C. Standard Cement Grout: ANSI A118.6, packaged.

1. Unsanded grout mixture for joints 3 mm (1/8 inch) and narrower.
2. Sanded grout mixture for joints wider than 3 mm (1/8 inch).

D. High-Performance Cement Grout: ANSI A118.7, packaged.

1. Polymer Type: **[Acrylic resin] [or] [ethylene vinyl acetate]**, in dry, redispersible form, packaged with other dry ingredients.
2. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to packaged dry-grout mix.

3. Unsanded grout mix for joints 3 mm (1/8 inch) and narrower.
4. Sanded grout mix for joints wider than 3 mm (1/8 inch).

E. Water-Cleanable Epoxy Grout: ANSI A118.3 packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.

2.12 WATERPROOF MEMBRANES

A. General: Manufacturer's standard product**[, selected from the following,]** that complies with ANSI A118.10 and is recommended by the manufacturer for the application indicated. Include reinforcement and accessories recommended by manufacturer.

B. Chlorinated Polyethylene Sheet: Nonplasticized, chlorinated polyethylene faced on both sides with nonwoven polyester fabric; 0.76-mm (0.030-inch) nominal thickness.

C. PVC Sheet: Two layers of PVC sheet heat-fused together and to facings of nonwoven polyester; 1.01-mm (0.040-inch) nominal thickness.

2.13 ACCESSORIES

A. Water-Cleanable Epoxy Adhesive: ANSI A118.3.

1. Adhesives shall have a VOC content of **[65]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Cleavage Membrane: Polyethylene sheeting, ASTM D 4397, 0.1 mm (4.0 mils) thick**[; or unperforated asphalt felt, ASTM D 226/D 226M, Type I (No. 15)]**.

C. Reinforcing Wire: Galvanized, welded, 1.57-mm- (0.062-inch-) diameter wire; 50-by-50-mm (2-by-2-inch) mesh; comply with ASTM A 1064/A 1064M, except for minimum wire size.

D. Divider Strips and Edging: Metal or combination of metal and PVC or neoprene base, designed specifically for flooring applications, in longest lengths available, and as follows:

1. Exposed-Edge Material: **[Half-hard brass] [White zinc alloy] [Nickel silver] [Stainless steel; ASTM A 666, Type 302]**.
2. Cross-Section Profile: **[Angle or L-shape] [T-shape, single or two part] [Straight shape]**.
3. Height**: [Match stone thickness] [Equal to stone thickness plus depth of setting bed]**.
4. Exposed-Edge Width: **[1.6 mm (0.063 inch)] [3.2 mm (1/8 inch)] [6.4 mm (1/4 inch)] [10 mm (3/8 inch)]**.
5. Control-Joint Filler: Neoprene.

E. Abrasive Inserts for Stair Treads: Abrasive strips consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder, fabricated for installing in routed grooves of stair treads to provide slip resistance. Provide epoxy-resin installation adhesive compatible with inserts.

1. Width: [**6.4 mm (1/4 inch)**] <**Insert dimension**>.
2. Depth: [**12.7 mm (1/2 inch)**] <**Insert dimension**>.
3. Length: **[100 mm (4 inches) less than stair width] [As indicated]**.

F. Joint Sealants: Manufacturer's standard sealants that comply with applicable requirements in Division 07 Section on "Joint Sealants" and will not stain the stone they are applied to.

1. Use mildew-resistant joint sealant at plumbing fixtures and for control and expansion joints in toilet rooms**[and other wet locations]**.
2. Colors: Provide colors of exposed sealants to match other joints in stone adjoining sealed joints unless otherwise indicated.

G. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer**[and by sealer manufacturer]**. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

H. Floor Sealer: Colorless, slip- and stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

1. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.14 MORTAR **[AND GROUT]**MIXES

A. Mortar: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.
2. Combine mortar materials and thoroughly mix in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

3. Mixing Pointing Mortar: Thoroughly mix cementitious and aggregate materials together before adding any water. Add only enough water to produce a damp, unworkable mix that retains its form when pressed into a ball. Maintain mortar in this dampened condition for one to two hours. Add remaining water in small portions until mortar reaches desired consistency. Use mortar within 30 minutes of final mixing; do not retemper or use partially hardened material.

B. Portland Cement-Lime Setting Mortar: ASTM C 270, Proportion Specification, **[Type N] [Type S]**. Use amount of water to produce a stiff mixture with a moist surface when bed is ready to receive stone.

C. Latex-Modified Portland Cement Setting Mortar: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions and to produce a stiff mixture with a moist surface when bed is ready to receive stone.

D. Mortar-Bed Bond Coat: Mix neat cement and **[water] [latex additive]** to a creamy consistency.

E. Cement-Paste Bond Coat: Mix either neat cement or cement and sand with water to a consistency similar to that of thick cream.

F. Latex-Modified Portland Cement Bond Coat: Proportion and mix portland cement, aggregate, and latex additive to comply with latex-additive manufacturer's written instructions.

G. Pointing Mortar: Comply with requirements indicated above for setting mortar, including type and the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Packaged Portland Cement-Lime Mix Mortar: Use portland cement-lime mix of selected color.
3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.

H. Joint Grout: Comply with mixing requirements in referenced ANSI standards and with manufacturer's written instructions.

2.15 STONE FABRICATION

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by Project Director/COR.

B. Fabricate stone to comply with requirements indicated and with the following references:

1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
2. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."

3. For marble, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
4. For stone not otherwise indicated, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."

C. Cut stone to produce pieces of thickness, size, and shape indicated.

1. Stone Thickness: [**13 mm (1/2 inch)**] [**20 mm (3/4 inch)**] [**21 mm (7/8 inch)**] [**25 mm (1 inch)**] [**32 mm (1-1/4 inches)**] [**50 mm (2 inches)**] unless otherwise indicated.
2. Pattern: **[Rectangular] [Diamond]-grid pattern of [305 by 305 mm (12 by 12 inches)] [457 by 457 mm (18 by 18 inches)] [610 by 610 mm (24 by 24 inches)]**.
3. Pattern: Rectilinear **[brickwork] [herringbone]** pattern of 305-by-610-mm (12-by-24-inch) units.
4. Pattern: Random, rectangular pattern composed of units of not less than **[152 mm (6 inches)] [203 mm (8 inches)] or more than [610 mm (24 inches)] [813 mm (32 inches)]** in nominal dimension.
5. Pattern: Random, polygonal pattern composed of units of not less than 0.09 sq. m (1 sq. ft.) or more than 0.46 sq. m (5 sq. ft.) in area.
6. Pattern: As indicated.
7. Stone Edges: **[Square cut with top corner slightly eased to prevent snipping] [Square cut with 1.5-mm- (1/16-inch-) wide bevel at top corner] [Rough split] [As indicated].**
8. **Joint Width: [1.5 mm (1/16 inch)] [3 mm (1/8 inch)] [6 mm (1/4 inch)] [10 mm (3/8 inch)]** <**Insert dimension**>.

D. Pattern Arrangement: Fabricate and arrange stone units with veining and other natural markings to comply with the following requirements:

1. Cut stone from one block or contiguous, matched blocks in which natural markings occur.
2. Arrange units **[with veining as indicated on Drawings] [in blend pattern]**.
3. Book match adjacent units**[in each row and between adjacent rows]**.
4. Book match adjacent units in each row, and arrange units in end-slip pattern between adjacent rows.
5. Arrange units in side-slip**[and end-slip]** pattern.
6. Arrange four units adjoining center point of room in two-way book match, and arrange surrounding units in side-slip and end-slip pattern.
7. Number stone units and note numbers on Shop Drawings to designate installation location of each unit.

E. Fabricate stone thresholds in sizes and profiles as indicated or required to provide transition between adjacent floor finishes.

1. Bevel edges of thresholds at 1:2 slope, aligning lower edge of bevel with adjacent floor finish. Limit height of bevel to 13 mm (1/2 inch) or less, and finish bevel to match adjacent surfaces of threshold.
2. Where difference in floor levels exceeds 13 mm (1/2 inch), bevel edge of threshold at 1:12 slope, aligning lower edge of bevel with adjacent floor finish. Finish bevel to match adjacent surfaces of threshold.

F. Fabricate stone stair treads in sizes and profiles indicated**.[Rout grooves into treads to receive abrasive strips and install strips to comply with manufacturer's written instructions.][Cut grooves about 3 mm (1/8 inch) wide by 1.5 mm (1/16 inch) deep in stair treads as indicated.]**

G. Carefully inspect finished stone units at fabrication plant for compliance with appearance, material, and fabrication requirements. Replace defective units. Clean sawed backs of stones to remove rust stains and iron particles.

1. Grade and select stone for overall uniform appearance when assembled in place.
2. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples**[and sample installations]**.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive stone flooring and conditions under which stone flooring will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone flooring.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone flooring.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. **[Vacuum] [Sweep]** concrete substrates to remove dirt, dust, debris, and loose particles.

B. Remove substances from concrete substrates that could impair mortar bond, including curing and sealing compounds, form oil, and laitance.

C. Where indicated, prepare substrates to receive waterproofing by applying a reinforced mortar bed that complies with ANSI A108.1A and is sloped 1:50 (1/4 inch per foot) toward drains.

D. Before setting stone, clean dirty or stained stone surfaces by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

3.3 INSTALLATION, GENERAL

A. Do necessary field cutting as stone is set. Cut lines straight and true, and finish field-cut edges to match shop-cut edges.

1. Use power saws with diamond blades to cut stone**[, except for stone that is specified to have rough-split edges]**.

B. Set stone to comply with requirements indicated.**[Match stone for color and pattern by using units numbered in sequence as indicated on Shop Drawings.]**

C. Scribe and field cut stone as necessary to fit at obstructions. Produce neat joints of size specified or indicated.

D. Provide control and expansion joints of widths and at locations indicated. Keep control and expansion joints free of mortar, grout, and other rigid materials.

3.4 INSTALLATION TOLERANCES

A. Variation in Line: For positions shown in plan for edges of flooring, ramps, steps, changes in color or finish, and continuous joint lines, do not exceed 3 mm in 3 m (1/8 inch in 10 feet), 6 mm in 6 m (1/4 inch in 20 feet), or 10 mm (3/8 inch) maximum.

B. Variation in Joint Width: Do not vary from average joint width more than plus or minus 1.5 mm (1/16 inch) or one-fourth of nominal joint width, whichever is less.

C. Variation in Surface Plane: Do not exceed 3 mm in 3 m (1/8 inch in 10 feet), 6 mm in 6 m (1/4 inch in 20 feet), or 10 mm (3/8 inch) maximum from level or slope indicated.

D. Variation in Plane between Adjacent Units (Lipping): Do not exceed 0.8-mm (1/32-inch) difference between planes of adjacent units.

3.5 INSTALLATION OF STONE BONDED TO CONCRETE

A. Saturate concrete with clean water several hours before placing setting bed. Remove surface water about one hour before placing setting bed.

B. Apply mortar-bed bond coat to damp concrete and broom to provide an even coating that completely covers the concrete. Do not exceed 1.5-mm (1/16-inch) thickness. Limit area of mortar-bed bond coat to avoid its drying out before placing setting bed.

1. Place reinforcing wire mesh over concrete, lapped at joints by at least one full mesh and supported so mesh becomes embedded in middle of mortar bed. Hold edges back from vertical surfaces about 13 mm (1/2 inch).

C. Apply mortar bed immediately after applying mortar-bed bond coat. Spread, tamp, and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

D. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

E. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1.5-mm- (1/16-inch-) thick bond coat to mortar bed or to back of each stone unit.

F. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with mortar bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

G. Rake out joints to depth required to receive **[grout] [pointing mortar]** as units are set.

H. Point joints after setting. Fill full with mortar type and color indicated. Tool joints flat, uniform, and smooth, without visible voids.

3.6 INSTALLATION OF STONE OVER **[CLEAVAGE MEMBRANE] [WATERPROOFING]**

A. Place cleavage membrane over substrates indicated to receive stone, lapped at least 100 mm (4 inches) at joints.

B. See waterproofing Section for installation of waterproofing**[and protection board]**.

1. Carefully place stone and setting materials over waterproofing, so protection materials are not displaced and waterproofing is not punctured or otherwise damaged. Replace protection materials that become displaced and arrange for repair of damaged waterproofing before covering with stone flooring.
2. Provide cork joint filler, where indicated, at waterproofing that is turned up on vertical surfaces or, if not indicated, provide temporary filler or protection until stone flooring installation is complete.

C. Install waterproof membrane to comply with ANSI A108.13 and manufacturer's written instructions to produce waterproof membrane of uniform thickness that is bonded securely to substrate.

1. Do not install tile or setting materials over waterproofing until waterproofing has cured and been tested to determine that it is watertight.

D. Place reinforcing wire fabric over **[cleavage membrane] [waterproofing] [protection board]**, lapped at least one full mesh at joints and supported so mesh becomes embedded in middle of mortar bed. Hold edges back from vertical surfaces and control and expansion joints about 13 mm (1/2 inch).

E. Place mortar bed over **[cleavage membrane] [waterproofing] [protection board]** with reinforcing wire fabric fully embedded in middle of mortar bed. Spread, tamp, and screed to uniform thickness at elevations required for setting stone to finished elevations indicated.

F. Mix and place only that amount of mortar bed that can be covered with stone before initial set. Cut back, bevel edge, and discard material that has reached initial set before stone can be placed.

G. Place stone before initial set of mortar occurs. Immediately before placing stone on setting bed, apply uniform 1.5-mm- (1/16-inch-) thick bond coat to mortar bed or to back of each stone unit.

H. Tamp and beat stone with a wooden block or rubber mallet to obtain full contact with mortar bed and to bring finished surfaces within indicated tolerances. Set each unit in a single operation before initial set of mortar; do not return to areas already set and disturb stone for purposes of realigning finished surfaces or adjusting joints.

I. Rake out joints to depth required to receive **[grout] [pointing mortar]** as units are set.

J. Point joints after setting. Fill full with mortar type and color indicated. Tool joints flat, uniform, and smooth, without visible voids.

3.7 INSTALLATION OF STONE FLOORING ON PEDESTALS OVER WATERPROOFING

A. See waterproofing Section for installation of waterproofing**[and protection board]**.

B. Accurately install pedestals and other accessories to elevations required. Adjust for final level and slope with shims.

1. Fill pedestal with concrete mix, strike smooth with top of pedestal, and cure according to ACI 301.

C. Loosely lay stone flooring units on pedestals, maintaining a uniform, open joint width. Tightly seat stone units against spacers to eliminate lateral movement or drift of flooring assembly. Align joint patterns parallel in each direction.

1. Lay out stone units to avoid less than half-width units at perimeter or other terminations.

D. Install stone flooring units to not vary more than 1.5 mm (1/16 inch) in elevation between adjacent units.

3.8 STONE THRESHOLD INSTALLATION

A. At locations adjacent to stone flooring, install stone thresholds in same type of setting bed as abutting stone flooring unless otherwise indicated.

1. Set thresholds in thinset mortar to comply with ANSI A108.5 at locations where mortar bed would otherwise be exposed above other adjacent flooring.

B. At locations not adjacent to stone flooring, install stone thresholds in **[thinset mortar to comply with ANSI A108.5] [water-cleanable epoxy adhesive to comply with ANSI A108.4]**.

3.9 STONE STAIR TREAD**[AND RISER]** INSTALLATION

A. Install stone stair treads **[and risers]**to comply with "Installation of Stone Bonded to Concrete" Article.

B. Install stone stair treads **[and risers]**in **[thinset mortar to comply with ANSI A108.5] [water-cleanable epoxy adhesive to comply with ANSI A108.4]**.

3.10 GROUTING

A. Grout stone joints to comply with ANSI A108.10 and with manufacturer's written instructions.

1. Do not use sanded grout for polished stone.
2. Grout joints as soon as possible after initial set of setting bed. Force grout into joints, taking care not to smear grout on adjoining stone and other surfaces. After initial set of grout, finish joints by tooling to produce a slightly concave polished joint, free of drying cracks.

B. Grout stone joints with water-cleanable epoxy grout to comply with ANSI A108.6 and with manufacturer's written instructions.

3.11 JOINT-SEALANT INSTALLATION

A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Division 07 Section on "Joint Sealants."

3.12 ADJUSTING AND CLEANING

A. Remove and replace stonework of the following description:

1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Project Director/COR.
2. Defective joints.
3. Stone flooring and joints not matching approved Samples and sample installations.
4. Stonework not complying with other requirements indicated.

B. Replace in a manner that results in stonework matching approved Samples and sample installations, complying with other requirements, and showing no evidence of replacement.

C. In-Progress Cleaning: Clean stonework as work progresses. Remove **[mortar fins and smears] [grout smears]** before tooling joints.

D. Clean stonework after setting and **[pointing] [grouting]** are complete. Use procedures recommended by stone fabricator for application types.

E. Apply sealer to cleaned stonework according to sealer manufacturer's written instructions.

3.13 PROTECTION

A. Prohibit traffic from installed stone for a minimum of 72 hours.

B. Protect installed stonework during construction with nonstaining kraft paper. Where adjoining areas require construction work access, cover stonework with a minimum of 20-mm (3/4-inch) untreated plywood over nonstaining kraft paper.

END OF SECTION 096340

SECTION 096400 - WOOD FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Factory-finished wood flooring.
2. Field-finished wood flooring.
3. Sound control underlayment.

B. Material Index / Material Codes Include:

1. WDF-[##] <WOOD FLOORING.>

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.
2. Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, include printed statement of VOC content.
3. Credit EQ 4.2: For field-applied paints and coatings used inside the weatherproofing system, include printed statement of VOC content.
4. Credit EQ 4.3: For hard surface flooring systems, include documentation from an independent testing agency indicating compliance with the FloorScore Standard. For flooring system finishes, include printed statement of VOC content.

C. Shop Drawings: For each type of floor assembly and accessory. Include plans, sections, and attachment details. Include expansion provisions and trim details.

D. Samples: For each exposed product and accessory, and for each color and texture specified, approximately 300 mm (12 inches) long and of same thickness and material indicated for the Work and showing the full range of normal color and texture variations expected.

1.3 CLOSEOUT SUBMITTALS

A. Maintenance Data:

1. Submit manufacturer's written maintenance instructions which describe materials, devices and procedures to be followed in cleaning and maintaining flooring.
2. Include manufacturer's brochures describing actual materials, finishes and accessories used in Work.
3. Include copy of maintenance instructions in Project maintenance and information manual.

1.4 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Wood Flooring: Equal to 1 percent of amount installed for each type, color, and finish of wood flooring indicated.

1.5 QUALITY ASSURANCE

A. Installer Qualifications: Not less than 5 years documented, successful experience with work comparable to Work of this Project.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver wood flooring materials in unopened cartons or bundles.

B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet-work is complete and dry.

C. Store wood flooring materials in a dry, warm, ventilated, weathertight location.

1.7 FIELD CONDITIONS

A. Conditioning period begins not less than seven days before wood flooring installation, is continuous through installation, and continues not less than seven days after wood flooring installation.

1. Environmental Conditioning: Maintain ambient temperature between 18 and 24 deg C (65 and 75 deg F) and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.

2. Wood Flooring Conditioning: Move wood flooring into spaces where it will be installed, no later than the beginning of the conditioning period.

   a. Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
   b. Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.

B. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.

C. Install factory-finished wood flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Hardwood Flooring: Comply with NWFA A500 for species, grade, and cut.

B. Softwood Flooring: Comply with WCLIB No. 17 grading rules for species, grade, and cut.

2.2 FIELD-FINISHED WOOD FLOORING

A. Solid-Wood Flooring **[WDF-[##]]**: Kiln dried to 6 to 9 percent maximum moisture content; tongue and groove and end matched; with backs channeled.

1. Grade and Species: **[Clear red oak] [Select red oak] [No. 1 Common red oak] [No. 2 Common red oak] [MFMA-RL First Grade hard maple] [MFMA-RL Second and Better Grade hard maple] [Grade C & BTR - Flooring Douglas fir] [Grade D - Flooring Douglas fir] <Insert grade and species>**.
2. Cut: **[Plain sawn] [Quarter/rift sawn] [Edge grain] [Vertical grain] <Insert description>.**
3. Thickness: **[20 mm (25/32 inch)] [19 mm (3/4 inch)] <Insert dimension>.**
4. Face Width: **[57 mm (2-1/4 inches)] [79 mm (3-1/8 inches)] [130 mm (5-1/8 inches)] <Insert dimension>.**
5. Lengths: **[Manufacturer's standard] [Random-length strips complying with applicable grading rules] [Lengths required to form pattern indicated] <Insert requirements>**.

B. Solid-Wood Parquet Flooring: Kiln dried to 6 to 9 percent maximum moisture content.

1. Species: **[Red oak] [White oak] [Ash] [Maple] [Black cherry] <Insert species>.**
2. Grade: **<Insert grade>.**
3. Thickness: **[8 mm (5/16 inch)] [17 mm (11/16 inch)] [6 mm (1/4 inch)] <Insert dimension>**.
4. Pattern: **<Insert description>.**
5. Size: **<Insert dimension>.**

C. Engineered-Wood Flooring **[WDF-[##]]**: HPVA EF[**, complying with requirements for composite wood products**].

1. Species: **[Red oak] [White oak] [Ash] [Beech] [Maple] [Black cherry] <Insert species>**.
2. Grade: **<Insert grade>**.
3. Thickness: **[13 mm (1/2 inch)] [10 mm (3/8 inch)] <Insert dimension>**.
4. Construction: **[Five] [Three]** ply.
5. Face Width: **[57 mm (2-1/4 inches)] [76 mm (3 inches)] <Insert dimension>**.
6. Length: Manufacturer's standard.

D. Urethane Finish System: Complete [**solvent-based, oil-modified**] [**water-based**] system of compatible components that is recommended by finish manufacturer for application indicated.

1. Stain: Penetrating and nonfading type.

   a. Color: **[Match sample] [As selected by Architect from manufacturer's full range] <Insert color>**.

2. Floor Sealer: Pliable, penetrating type.
3. Finish Coats: Formulated for multicoat application on wood flooring.

E. Wood Filler: Compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved Samples, provide pigmented filler.

2.3 FACTORY-FINISHED WOOD FLOORING

A. Solid-Wood Flooring **[WDF-[##]]**: Kiln dried to 6 to 9 percent maximum moisture content; tongue and groove and end matched; with backs channeled.

1. Species: **[Red oak] [White oak] [Ash] [Birch] [Maple] [Black cherry] [Hickory] [Walnut] <Insert species>**.
2. Grade: **<Insert grade>**.

3. Cut: **[Plain sawn] [Quarter/rift sawn] [Edge grain] [Vertical grain] <Insert description>**.
4. Thickness: **[19 mm (3/4 inch)] [20 mm (25/32 inch)] <Insert dimension>**.
5. Face Width: **[57 mm (2-1/4 inches)] [79 mm (3-1/8 inches)] [130 mm (5-1/8 inches)] <Insert dimension>**.
6. Lengths: **[Random-length strips complying with applicable grading rules] [Lengths required to form pattern indicated] <Insert requirements>**.
7. Edge Style: **[Square] [Beveled (eased)] <Insert style>**.
8. Finish: UV urethane.

    a. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]** <**Insert color**>.

B. Solid-Wood Parquet Flooring **[WDF-[##]]**: Kiln dried to 6 to 9 percent maximum moisture content.

1. Species: **[Red oak] <Insert species>**.
2. Grade: **<Insert grade>**.
3. Thickness: **[8 mm (5/16 inch)] [17 mm (11/16 inch)] [6 mm (1/4 inch)] <Insert dimension>**.
4. Edge Style: **<Insert style>**.
5. Pattern: **<Insert description>**.
6. Size: **<Insert dimension>**.
7. Finish: **[UV urethane] [Acrylic impregnated]**.

    a. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]** <**Insert color**>.

C. Engineered-Wood Flooring **[WDF-[##]]**: HPVA EF[**, complying with requirements for composite wood products**].

1. Species: **[Red oak] [White oak] [Ash] [Beech] [Birch] [Maple] [Black cherry] [Hickory] [Walnut] <Insert species>**.
2. Grade: **<Insert grade>**.
3. Thickness: **[13 mm (1/2 inch)] [10 mm (3/8 inch)] <Insert dimension>**.
4. Construction: **[Five] [Three]** ply.
5. Face Width: **[57 mm (2-1/4 inches)] [76 mm (3 inches)] <Insert dimension>**.
6. Length: Manufacturer's standard.
7. Edge Style: **[Square] [Beveled (eased)] <Insert style>**.
8. Finish: **[UV urethane] [Acrylic impregnated]**.

a. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]** <**Insert color**>.

D. Engineered-Wood Parquet Flooring **[WDF-[##]]**: HPVA EF[**, complying with requirements for composite wood products**].

1. Species: **[Red oak] [Ash] [Beech] [Maple] [Walnut] <Insert species>**.
2. Grade: **<Insert grade>**.
3. Thickness: **[10 mm (3/8 inch)] [13 mm (1/2 inch)] <Insert dimension>**.
4. Construction: **[Five] [Three]** ply.
5. Edge Style: **<Insert style>**.
6. Pattern: **<Insert description>**.
7. Size: **<Insert dimension>**.
8. Finish: UV urethane.

a. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]** <**Insert color**>.

2.4 SOUND CONTROL UNDERLAYMENT

A. Sound Control Underlayment: Sound reducing underlayment consisting of impact-absorbing materials. Minimum Impact Insulation Class (IIC) of [**50**] [**55**] <**Insert value**> when tested according to ASTM E492.

1. Material: **[Recycled rubber] [Polyurethane foam] [Wood fiber] [Wood fiber complying with requirements for composite wood products] <Insert material>**.
2. Thickness: [**19 mm (3/4 inch)**] [**13 mm (1/2 inch)**] [**10 mm (3/8 inch)**] [**6 mm (1/4 inch)**] [**4 mm (5/32 inch)**] **<Insert dimension>**.

2.5 ACCESSORY MATERIALS

A. Wood Sleepers and Subfloor: [**As specified in Division 06 Section on "Rough Carpentry" and Division 06 Section on "Sheathing."**] <**Insert requirements.**>

B. Wood Underlayment: [**As specified in Division 06 Section on "Sheathing."**] <**Insert requirements.**>

C. Vapor Retarder: ASTM D4397, polyethylene sheet not less than [**6.0 mils (0.15 mm)**] [**8.0 mils (0.2 mm)**] thick.

D. Asphalt-Saturated Felt: ASTM D4869/D4869M, Type II.

E. Wood Flooring Adhesive: Mastic recommended by flooring and adhesive manufacturers for application indicated.

F. Trowelable Leveling and Patching Compound: Latex-modified, hydraulic-cement-based formulation approved by wood flooring manufacturer.

G. Fasteners: As recommended by manufacturer, but not less than that recommended in [**NWFA's "Installation Guidelines."**] <**Insert standard or publication.**>

H. Thresholds and Saddles: To match wood flooring. Tapered on each side.

I. Reducer Strips: To match wood flooring. [**51 mm (2 inches)**] <**Insert dimension**> wide, tapered, and in thickness required to match height of flooring.

J. Cork Expansion Strip: Fine-grained composition cork strip, color: **[natural cork][stained color to compliment wood flooring finish] <Insert color>**.

K. Feature Strips: [**2-inch- (51-mm-) wide, square-edged walnut strips**] <**Insert description**>, furnished in lengths as long as practical and in thickness to match wood flooring.

L. Metal Feature Strips: [**1/8-by-1/8-inch (3-by-3-mm) solid-brass strips**] <**Insert description**>, designed for inlaying into routed reveal in wood flooring surface.

M. Wood Air Vents and Grilles: To match wood flooring and in sizes and design indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of wood flooring.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

C. Concrete Slabs: Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

1. Moisture Testing: Perform tests so that each test area does not exceed 304.8 sq. m (1000 sq. ft.), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[1.36 kg of water/92.9 sq. m (3 lb of water/1000 sq. ft.)]** in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.
c. Perform additional moisture tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

3.2 PREPARATION

A. Concrete Slabs:

1. Grind high spots and fill low spots to produce a maximum 1/8-inch (3-mm) deviation in any direction when checked with a 10-foot (3-m) straight edge.
2. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, and depressions in substrates.

3. Remove coatings, including curing compounds, and other substances on substrates that are incompatible with installation adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.

B. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.3 INSTALLATION

A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in [**NWFA's "Installation Guidelines."**] <**Insert standard or publication.**>

B. Wood Sleepers and Subfloor: [**Install according to requirements in Division 06 Section on "Rough Carpentry" and Division 06 Section on "Sheathing."**] <**Insert requirements.**>

C. Wood Underlayment: [**Install according to requirements in Division 06 Section on "Sheathing."**] <**Insert requirements.**>

D. Provide expansion space at walls and other obstructions and terminations of flooring **of not less than 19 mm (3/4 inch)**.

E. Vapor Retarder: Comply with the following for vapor retarder installation:

1. Wood Flooring Nailed to Wood Subfloor: Install flooring over a layer of asphalt-saturated felt.
2. Wood Flooring Nailed to Sleepers over Concrete: Install flooring over a layer of polyethylene sheet with edges overlapped over sleepers and turned up behind baseboards.
3. Wood Flooring Installed Directly on Concrete: Install a layer of polyethylene sheet according to flooring manufacturer's written instructions.

F. Sound Control Underlayment: Install over vapor retarder according to manufacturer's written instructions.

G. Solid-Wood Flooring: Blind nail or staple flooring to substrate.

H. Solid-Wood Parquet Flooring: Set in adhesive in pattern indicated on Drawings.

I. Engineered-Wood Flooring: [**Set in adhesive**] [**Nail or staple**] [**Install floating floor**].

3.4 FIELD FINISHING

A. Machine-sand flooring to remove offsets, ridges, cups, and sanding-machine marks that are noticeable after finishing. Vacuum and tack with a clean cloth immediately before applying finish.

1. Comply with applicable recommendations in [**NWFA's "Installation Guidelines."**] <**Insert standard or publication.**>

B. Fill [**open-grained hardwood**] <**Insert description of wood to be filled**>.

C. Fill and repair wood flooring defects.

D. Apply floor-finish materials in number of coats recommended by finish manufacturer for application indicated, but not less than one coat of floor sealer and [**three**] <**Insert number**> finish coats.

1. Apply stains to achieve an even color distribution matching approved Samples.
2. For water-based finishes, use finishing methods recommended by finish manufacturer to minimize grain raise.

E. Cover wood flooring before finishing.

F. Do not cover wood flooring after finishing until finish reaches full cure, and not before seven days after applying last finish coat.

3.5 PROTECTION

A. Protect installed wood flooring during remainder of construction period with covering of heavy kraft paper or other suitable material. Do not use plastic sheet or film that might cause condensation.

1. Do not move heavy and sharp objects directly over kraft-paper-covered wood flooring. Protect flooring with plywood or hardboard panels to prevent damage from storing or moving objects over flooring.

END OF SECTION 096400

SECTION 096513 - RESILIENT BASE AND ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thermoset-rubber base.
2. Thermoplastic-rubber base.
3. Rubber stair accessories.
4. Rubber molding accessories.

B. Material Index / Material Codes Include:

1. RLB-[##] <RESILIENT MATERIAL (THERMOSET-RUBBER) BASE.>
2. RLB-[##] <RESILIENT MATERIAL (THERMOPLASTIC-RUBBER) BASE.>
3. RLG-[##] <RESILIENT MATERIAL (RUBBER) STAIR ACCESSORIES.>
4. RLG-[##] <RESILIENT MATERIAL (RUBBER) MOLDING ACCESSORIES.>

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
3. Product Data: For sealants, indicating VOC content.
4. Laboratory Test Reports: For sealants, indicating compliance with requirements for low-emitting materials.
5. Laboratory Test Reports: For resilient base and stair products and accessories, indicating compliance with requirements for low-emitting materials.
6. Environmental Product Declaration: For each product.
7. Health Product Declaration: For each product.
8. Sourcing of Raw Materials: Corporate sustainability report for each manufacturer.

C. Samples: For each exposed product and for each color and texture specified, not less than 300 mm (12 inches) long.

D. Product Schedule: For resilient base and accessory products. Use same designations indicated on Drawings.

1.3 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials**[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Furnish not less than 3 linear m (10 linear feet) for every 150 linear m (500 linear feet) or fraction thereof, of each type, color, pattern, and size of resilient product installed.

1.4 QUALITY ASSURANCE

A. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Coordinate mockups in this Section with sample installations specified in other Sections.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Store resilient products and installation materials in dry spaces protected from the weather, with ambient temperatures maintained within range recommended by manufacturer, but not less than 10 deg C (50 deg F) or more than 32 deg C (90 deg F).

1.6 FIELD CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 21 deg C (70 deg F) or more than 35 deg C (95 deg F), in spaces to receive resilient products during the following periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. After installation and until Substantial Completion, maintain ambient temperatures within range recommended by manufacturer, but not less than 13 deg C (55 deg F) or more than 35 deg C (95 deg F).

C. Install resilient products after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.2 THERMOSET-RUBBER BASE **[RLB-[##]]**

A. Product Standard: ASTM F 1861, Type TS (rubber, vulcanized thermoset), Group I (solid, homogeneous).

1. Style and Location:

a. Style A, Straight: Provide in areas with carpet.
b. Style B, Cove: Provide in areas with hard surface floor coverings.

B. Thickness: 3.2 mm (0.125 inch).

C. Height: **[102 mm(4 inches)] [As indicated on Drawings]**.

D. Lengths: Coils in manufacturer's standard length.

E. Outside Corners: **[Job formed] [Preformed] [Job formed or preformed]**.

F. Inside Corners: **[Job formed] [Preformed] [Job formed or preformed]**.

G. Colors: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample]** <**Insert colors**>.

2.3 THERMOPLASTIC-RUBBER BASE **[RLB-[##]]**

A. Product Standard: ASTM F 1861, Type TP (rubber, thermoplastic).

1. Group: **[I (solid, homogeneous)] [or] [II (layered)]**.
2. Style and Location:

a. Style A, Straight: Provide in areas with carpet.
b. Style B, Cove: Provide in areas with hard surface floor coverings.

B. Thickness: **[3.2 mm (0.125 inch)]** <**Insert dimension**>.

C. Height: [**102 mm (4 inches)**] [As indicated on Drawings].

D. Lengths: Coils in manufacturer's standard length.

E. Outside Corners: **[Job formed] [Preformed] [Job formed or preformed]**.

F. Inside Corners: **[Job formed] [Preformed] [Job formed or preformed]**.

G. Colors: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] <Insert colors>**.

2.4 RUBBER STAIR ACCESSORIES **[RLG-[##]]**

A. Fire-Test-Response Characteristics: As determined by testing identical products according to ASTM E 648 or NFPA 253 by a qualified testing agency.

1. Critical Radiant Flux Classification: Class I, not less than 0.45 W/sq. cm.

B. Stair Treads: ASTM F 2169.

1. Type: [TS (rubber, vulcanized thermoset)] [or] [TP (rubber, thermoplastic)].
2. Class: 2 (pattern; embossed, grooved, or ribbed).
3. Group: **[1 (embedded abrasive strips)] [2 (with contrasting color for the visually impaired)].**
4. **Nosing Style: [Square, adjustable to cover angles between 60 and 90 degrees] [Square] [Round]**.
5. Nosing Height: **[38 mm (1-1/2 inches)] [51 mm (2 inches)] [56 mm (2-3/16 inches)] <Insert dimension>**.
6. Thickness: **[6 mm (1/4 inch) and tapered to back edge] <Insert thickness>**.
7. Size: Lengths and depths to fit each stair tread in **[one piece] [one piece or, for treads exceeding maximum lengths manufactured, in equal-length units]**.

8. Integral Risers: Smooth, flat; in height that fully covers substrate.

C. Separate Risers: Smooth, flat; in height that fully covers substrate; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

1. Style: **[Coved toe, 178 mm (7 inches) high by length matching treads] [Toeless, by length matching treads]**.
2. Thickness: **[3.2 mm (0.125 inch)] [Manufacturer's standard] <Insert thickness>**.

D. Stringers: Height and length after cutting to fit risers and treads and to cover stair stringers, produced by same manufacturer as treads, and recommended by manufacturer for installation with treads.

1. Thickness: **[3.2 mm (0.125 inch)] [2.0 mm (0.080 inch)] [Manufacturer's standard] <Insert thickness>**.

E. Landing Tile: Matching treads; produced by same manufacturer as treads and recommended by manufacturer for installation with treads.

F. Locations: **[Provide rubber stair accessories in areas indicated] <Insert requirements>**.

G. Colors and Patterns: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] <Insert colors and patterns>**.

2.5 RUBBER MOLDING ACCESSORY **[RLG-[##]]**

A. Description: Rubber **[stair-tread nosing] [cap for cove carpet] [cap for cove resilient floor covering] [carpet bar for tackless installations] [carpet edge for glue-down applications] [nosing for carpet] [nosing for resilient floor covering] [reducer strip for resilient floor covering] [joiner for tile and carpet] [transition strips] <Insert description>**.

B. Profile and Dimensions: **[As indicated] <Insert profile and dimensions>**.

C. Locations: **[Provide rubber molding accessories in areas indicated] <Insert requirements>**.

D. Colors and Patterns: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] <Insert colors and patterns>**.

2.6 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland-cement-based or blended hydraulic-cement-based formulation provided or approved by resilient-product manufacturer for applications indicated.

B. Adhesives: Water-resistant type recommended by resilient-product manufacturer for resilient products and substrate conditions indicated.

1. Adhesives shall have a VOC content of **[50] <Insert value>** g/L or less**[and 60 g/L or less for rubber stair treads]**.

C. Stair-Tread Nose Filler: Two-part epoxy compound recommended by resilient stair-tread manufacturer to fill nosing substrates that do not conform to tread contours.

D. Metal Edge Strips: **[Extruded aluminum with mill finish] <Insert requirements>**, nominal 50.8 mm (2 inches) wide, of height required to protect exposed edges of flooring, and in maximum available lengths to minimize running joints.

E. Floor Polish: Provide protective, liquid floor-polish products recommended by resilient stair-tread manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

1. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion of resilient products.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

1. Installation of resilient products indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of resilient products.

B. Concrete Substrates for Resilient Stair Accessories: Prepare horizontal surfaces according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrate alkalinity falls within range on pH scale recommended by manufacturer in writing, but not less than 5 or more than **[9] [10]** <**Insert number**> pH.
4. Moisture Testing: Perform tests so that each test area does not exceed **[18.6 sq. m (200 sq. ft.)] [304.8 sq. m (1000 sq. ft.)]** <**Insert area**>, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[1.36 kg of water/92.9 sq. m (3 lb of water/1000 sq. ft.)] <Insert rate>** in 24 hours.

b. Relative Humidity Test: Using in-situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum **[75]** <**Insert number**> percent relative humidity level measurement.

C. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound; remove bumps and ridges to produce a uniform and smooth substrate.

D. Do not install resilient products until materials are the same temperature as space where they are to be installed.

1. At least 48 hours in advance of installation, move resilient products and installation materials into spaces where they will be installed.

E. Immediately before installation, sweep and vacuum clean substrates to be covered by resilient products.

3.3 RESILIENT BASE INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient base.

B. Apply resilient base to walls, columns, pilasters, casework and cabinets in toe spaces, and other permanent fixtures in rooms and areas where base is required.

C. Install resilient base in lengths as long as practical without gaps at seams and with tops of adjacent pieces aligned.

D. Tightly adhere resilient base to substrate throughout length of each piece, with base in continuous contact with horizontal and vertical substrates.

E. Do not stretch resilient base during installation.

F. On masonry surfaces or other similar irregular substrates, fill voids along top edge of resilient base with manufacturer's recommended adhesive filler material.

G. Preformed Corners: Install preformed corners before installing straight pieces.

H. Job-Formed Corners:

1. Outside Corners: Use straight pieces of maximum lengths possible and form with returns not less than **[76 mm (3 inches)]** <**Insert dimension**> in length.

a. Form without producing discoloration (whitening) at bends.

2. Inside Corners: Use straight pieces of maximum lengths possible and form with returns not less than **[76 mm (3 inches)]** <**Insert dimension**> in length.

a. **[Miter] [Cope] [Miter or cope]** corners to minimize open joints.

3.4 RESILIENT ACCESSORY INSTALLATION

A. Comply with manufacturer's written instructions for installing resilient accessories.

B. Resilient Stair Accessories:

1. Use stair-tread-nose filler to fill nosing substrates that do not conform to tread contours.
2. Tightly adhere to substrates throughout length of each piece.
3. For treads installed as separate, equal-length units, install to produce a flush joint between units.

C. Resilient Molding Accessories: Butt to adjacent materials and tightly adhere to substrates throughout length of each piece. Install reducer strips at edges of floor covering that would otherwise be exposed.

3.5 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protecting resilient products.

B. Perform the following operations immediately after completing resilient-product installation:

1. Remove adhesive and other blemishes from surfaces.
2. Sweep and vacuum horizontal surfaces thoroughly.
3. Damp-mop horizontal surfaces to remove marks and soil.

C. Protect resilient products from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

D. Floor Polish: Remove soil, adhesive, and blemishes from resilient stair treads before applying liquid floor polish.

1. Apply **[one] [two] [three]** <**Insert requirement**> coat(s).

E. Cover resilient products subject to wear and foot traffic until Substantial Completion.

END OF SECTION 096513

SECTION 096536 - STATIC-CONTROL RESILIENT FLOOR COVERINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Static-dissipative, solid vinyl floor tile.
2. Static-dissipative, vinyl composition floor tile.
3. Static-dissipative, vinyl sheet floor covering.

B. Material Index / Material Codes Include:

1. RSF-[##] < STATIC-DISSIPATIVE RESILIENT FLOORING.>

C. Related Requirements:

1. Division 09 Section on "Resilient Base and Accessories" for resilient base, reducer strips, and other accessories installed with static-control resilient floor coverings.
2. Division 27 Section on “Grounding and Bonding for Communications Systems.”

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to static-control resilient flooring including, but not limited to, the following:

a. Examination and preparation of substrates to receive static-control resilient flooring.
b. Installation techniques required for specified products.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Sustainable Design Submittals:

1. Credit MR 4: For products having recycled content, documentation indicating percentages by weight of postconsumer and pre-consumer recycled content. Include statement indicating costs for each product having recycled content.
2. Credit MR 5: For products and materials required to comply with requirements for regional materials indicating location and distance from Project of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include statement indicating cost for each regional material and the fraction by weight that is considered regional.

3. Credit MR 6: For products and materials made from rapidly renewable resources, include statement from manufacturer indicating the percentage by weight that is considered rapidly renewable.
4. Credit EQ 4.1: For adhesives and sealants used inside the weatherproofing system, include printed statement of VOC content.
5. Credit EQ 4.3: For hard surface flooring systems, include documentation from an independent testing agency indicating compliance with the FloorScore Standard. For flooring system finishes, include printed statement of VOC content.

C. Shop Drawings: For each type of floor covering. Include floor covering layouts, edges, columns, doorways, enclosing partitions, built-in furniture, cabinets, and cutouts.

1. Show details of special patterns.
2. Show locations of inscribed maintenance floor tiles in conductive, solid vinyl floor tile installation areas.
3. Submit grounding diagram showing location of grounding strips and connections.

D. Samples for Verification: For each type of floor covering and in each color, pattern, and texture required, of size indicated below:

1. Floor Tile: **[Full-size] [150-by-230-mm (6-by-9-inch)] <Insert size>** units.
2. Sheet Floor Covering: **[150-by-230-mm (6-by-9-inch)] <Insert dimensions>** sections of floor covering.
3. Heat-Welding Bead: Include Samples of each color required, not less than **[230 mm (9 inches)] <Insert dimension>** long.
4. Seam Samples: For seamless-installation technique indicated and for each static-control resilient flooring product, color, pattern, and texture required; with seam running lengthwise and in center of **[152-by-230-mm (6-by-9-inch)] <Insert dimensions>** Sample applied to a rigid backing and prepared by Installer for this Project.

E. Product Schedule: For floor covering. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Test Reports: Based on evaluation of comprehensive tests performed by qualified testing agency, for floor coverings.

C. Field quality-control reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of floor covering to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Floor Tile: Furnish 1 box for every 50 boxes or fraction thereof, of each type, color, and pattern of floor tile installed.
2. Sheet Floor Covering: Furnish not less than 3 linear m (10 linear ft.) for every 150 linear m (500 linear ft.), or fraction thereof, in roll form and in full roll width for each color, pattern, and type of sheet floor covering installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who employs workers for this Project who are competent in installation techniques required by manufacturer for floor covering installation indicated.

1. Engage an installer who employs workers for this Project who are trained or certified by manufacturer for installation techniques required.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups for static-control resilient flooring including**[integral-flash-cove base and][resilient base and]** accessories.

a. Size: Minimum 9.3 sq. m (100 sq. ft.) for each type, color, and pattern **[in locations indicated] [in locations directed by Project Director/COR, based on input from the A/E of Record] <Insert requirements>**.

2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store floor coverings and installation materials in dry spaces protected from weather, with ambient temperatures maintained within range recommended by manufacturer but not less than 10 deg C (50 deg F) or more than 32 deg C (90 deg F).

1. Floor Tile: Store on flat surfaces.
2. Sheet Floor Covering: Store rolls upright.

1.9 PROJECT CONDITIONS

A. Maintain ambient temperatures within range recommended by manufacturer, but not less than 20 deg C (70 deg F) or more than 30 deg C (85 deg F), in spaces to receive floor coverings during the following time periods:

1. 48 hours before installation.
2. During installation.
3. 48 hours after installation.

B. Until Substantial Completion, maintain ambient temperatures in installation areas within range recommended by manufacturer, but not less than 13 deg C (55 deg F) or more than 35 deg C (95 deg F).

C. Close spaces to traffic during floor covering installation.

D. Close spaces to traffic for 48 hours after floor covering installation.

E. Install floor coverings after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.1 STATIC-DISSIPATIVE RESILIENT FLOORING, GENERAL

A. Source Limitations: Obtain floor tile from single source from single manufacturer.

B. Static-Control Properties: As determined by testing identical products in accordance with test method indicated by an independent testing and inspecting agency.

1. Electrical Resistance: Test in accordance with ASTM F 150 with 100-V applied voltage.

a. Material: Point-to-point and point-to-ground resistances between 1,000,000 ohms and 1,000,000,000 ohms when tested in accordance with **[ASTM F150] [ESD STM7.1] [UL 779] <Insert requirements>**.
b. Material in Combination with a Person: Average resistance of 1,000,000 ohms when tested in accordance with ESD STM97.1.

2. Static Generation:

a. ESD STM97.2: Less than 30 V when tested at 12 percent relative humidity with static-control footwear.
b. AATCC TM134: Less than 300 V when tested at 20 percent relative humidity with static-control footwear.

3. Static Decay: 5000 to 0 V in less than 0.25 seconds when tested in accordance with FED-STD-101C, Method 4046.1.

C. Critical Radiant Flux: **[0.45 W/sq. cm] [0.22 W/sq. cm]** or greater when tested in accordance with ASTM E648 or NFPA 253.

2.2 STATIC-CONTROL, SOLID VINYL FLOOR TILE: **RSF-[##]**

A. Construction: **[ASTM F1700, Class I (monolithic), Type A (smooth surface)] [Manufacturer's standard, high-density vinyl resin with smooth surface] [Manufacturer's standard, high-density vinyl resin with smooth surface and backing for free-lay installation] <Insert requirements>**.

B. Thickness: **[Manufacturer's standard, but not less than 0.08 inch (2.0 mm)] [0.08 inch (2.0 mm)] [0.13 inch (3.2 mm)] <Insert dimension>**.

C. Size: **[12 by 12 inches (305 by 305 mm)] [24 by 24 inches (610 by 610 mm)] [36 by 36 inches (914 by 914 mm)] <Insert dimensions>**.

D. Seaming Method: **[Heat welded] [Chemically bonded] [Manufacturer's standard] <Insert requirements>**.

E. Colors and Patterns: **[Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]<Insert requirements>**.

2.3 STATIC-CONTROL, VINYL COMPOSITION FLOOR TILE: **RSF-[##]**

A. Construction: ASTM F1066 Class 2, vinyl composition floor tile, through pattern.

B. Thickness: **[1/8 inch (3.2 mm)] <Insert dimension>**.

C. Size: **[12 by 12 inches (305 by 305 mm)] <Insert dimensions>**.

D. Colors and Patterns: **[Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]<Insert requirements>**.

2.4 STATIC-CONTROL, VINYL SHEET FLOOR COVERING: **RSF-[##]**

A. Construction: **[ASTM F1913, unbacked sheet vinyl flooring] [ASTM F1303 Type II, Grade I, Class B, sheet vinyl flooring with nonfoamed plastic backing] [Manufacturer's standard high-density vinyl resin with smooth surface] <Insert requirements>**.

B. Thickness: **[Manufacturer's standard, but not less than 0.08 inch (2.0 mm)] <Insert dimension>**.

C. Size: Manufacturer's standard roll width and length.

D. Seaming Method: **[Heat welded] [Manufacturer's standard] <Insert requirements>**.

E. Colors and Patterns: **[Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]<Insert requirements>**.

2.5 INSTALLATION MATERIALS

A. Trowelable Leveling and Patching Compounds: Latex-modified, portland cement or blended hydraulic-cement-based formulation provided or approved by manufacturer for applications indicated.

B. Static-Control Adhesive: Provided or approved by manufacturer; type that maintains electrical continuity of floor covering system to ground connection.

C. Grounding Strips: Provided or approved by manufacturer; type and size that maintains electrical continuity of floor covering system to ground connection.

D. Seamless-Installation Accessories:

1. Heat-Welding Bead: Solid-strand product of manufacturer for heat welding seams.

a. Color: **[As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] [Match floor covering] <Insert color>**.

2. Chemical-Bonding Compound: Product of manufacturer for chemically bonding seams.

E. Integral-Flash-Cove Base Accessories:

1. Cove Strip: 1-inch (25-mm) radius support strip provided or approved by manufacturer.
2. Cap Strip: **[Square metal, vinyl, or rubber cap] [Tapered vinyl cap] <Insert requirements>** provided or approved by manufacturer.
3. Corners: Metal inside and outside corners and end stops provided or approved by floor-covering manufacturer.

F. Floor Polish: If recommended in writing by manufacturer, provide protective, static-control liquid floor polish products.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. Verify that finishes of substrates comply with tolerances and other requirements specified in other Sections and that substrates are free of cracks, ridges, depressions, scale, and foreign deposits that might interfere with adhesion or static-control characteristics of floor coverings.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Prepare substrates according to manufacturer's written instructions to ensure adhesion of floor coverings and electrical continuity of floor covering systems.

B. Concrete Substrates: Prepare according to ASTM F 710.

1. Verify that substrates are dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with floor covering adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Alkalinity and Adhesion Testing: Perform tests recommended in writing by manufacturer. Proceed with installation only after substrates pass testing.
4. Moisture Testing: Perform tests recommended by manufacturer. Proceed with installation only after substrates pass testing.

C. Access Flooring Panels: Remove protective film of oil or other coating using method recommended by access flooring manufacturer.

D. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.

E. Do not install floor coverings until they are same temperature as space where they are to be installed.

1. Move floor coverings and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

F. Sweep and vacuum clean substrates to be covered by floor coverings immediately before installation.

3.3 INSTALLATION, GENERAL

A. Install static-control resilient floor covering according to manufacturer's written instructions.

B. Embed grounding strips in static-control adhesive. Extend grounding strips beyond perimeter of static-control resilient floor covering surfaces to ground connections. Refer to Division 27 Section on “Grounding and Bonding for Communications Systems” for final ground connection.

C. Scribe, cut, and fit floor coverings to butt neatly and tightly to vertical surfaces and permanent fixtures including built-in furniture, cabinets, pipes, outlets, and door frames.

D. Extend floor coverings into toe spaces, door reveals, closets, and similar openings. Extend floor covering to center of door openings.

E. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on floor coverings as marked on substrates. Use chalk or other nonpermanent, nonstaining marking device.

F. If applicable, install floor coverings on covers for telephone and electrical ducts, and similar items in installation areas. Maintain overall continuity of color and pattern with pieces of floor coverings installed on covers. Tightly adhere floor covering edges to substrates that abut covers and to cover perimeters.

G. Adhere floor coverings to substrates using a full spread of static-control adhesive applied to substrate, or other means as recommended by manufacturer, to produce a completed installation without open cracks, voids, raising and puckering at joints, telegraphing of adhesive spreader marks, and other surface imperfections.

H. Seamless Installation:

1. Heat-Welded Seams: Comply with ASTM F1516. Rout joints and heat weld with welding bead to permanently fuse sections into a seamless floor covering. Prepare, weld, and finish seams to produce surfaces flush with adjoining floor-covering surfaces.
2. Chemically Bonded Seams: Bond seams with chemical-bonding compound to permanently fuse sections into a seamless floor covering. Prepare seams and apply compound to produce tightly fitted seams without gaps, overlays, or excess bonding compound on floor-covering surfaces.

I. Integral-Flash-Cove Base: Cove static-control flooring **[4 inches (102 mm)] [6 inches (152 mm)] [to dimension indicated on Drawings] <Insert dimension>** up vertical surfaces. Support static-control resilient flooring at horizontal and vertical junction with cove strip. Butt at top against cap strip.

1. Install metal corners at inside and outside corners according to manufacturer's written instructions.

3.4 FLOOR TILE INSTALLATION

A. Comply with manufacturer's written instructions for installing floor tile.

B. Lay out floor tiles from center marks established with principal walls, discounting minor offsets, so floor tiles at opposite edges of room are of equal width. Adjust as necessary to avoid using cut widths that equal less than one-half floor tile at perimeter.

1. Lay floor tiles square with room axis.

C. Match floor tiles for color and pattern by selecting floor tiles from cartons in same sequence as manufactured and packaged, if so numbered. Discard broken, cracked, chipped, or deformed floor tiles.

3.5 FIELD QUALITY CONTROL

A. Testing: Engage a qualified testing agency to test electrical resistance of static-control resilient floor covering systems for compliance with requirements.

1. Arrange for testing after installation static-control adhesives have fully cured and floor covering systems have stabilized to ambient conditions and after ground connections are completed.
2. Arrange for testing of floor coverings after performing floor polish procedures (if polishing is recommended by manufacturer).

B. Static-control resilient floor coverings will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Comply with manufacturer's written instructions for cleaning and protection of floor coverings.

B. Perform the following operations immediately after completing floor covering installation:

1. Remove static-control adhesive and other blemishes from exposed surfaces.
2. Sweep and vacuum surfaces thoroughly.
3. Damp-mop surfaces to remove marks and soil.

C. Protect floor coverings from mars, marks, indentations, and other damage from construction operations and placement of equipment and fixtures during remainder of construction period.

1. Do not wax static-control resilient floor coverings.
2. If recommended in writing by manufacturer, apply protective static-control floor polish formulated to maintain or enhance floor covering's electrical properties. Before polishing, do the following:

a. Ensure that static-control resilient flooring surfaces are free from soil, static-control adhesive, and surface blemishes.
b. Verify that both floor polish and its application method are approved by manufacturer, and that floor polish will not leave insulating film that reduces floor coverings' effectiveness for static control.

D. Cover floor coverings and protect from rolling loads until Substantial Completion.

END OF SECTION 096536

SECTION 096623 - RESINOUS MATRIX TERRAZZO FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Thin-set, epoxy-resin terrazzo flooring.
2. Precast epoxy-resin terrazzo units.

B. Material Index / Material Codes Include:

1. TZF-[##] <RESINOUS MATRIX TERRAZZO.>

C. Related Requirements:

1. Division 07 Section on "Joint Sealants" for sealants installed with terrazzo.
2. Division 09 Section on "Resinous Flooring" for decorative resinous flooring systems applied as self-leveling slurries or as troweled or screeded mortars.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to terrazzo including, but not limited to, the following:

a. Inspect and discuss condition of substrate and other preparatory work performed by other trades.
b. Review and finalize construction schedule and verify availability of materials, Installer's personnel, equipment, and facilities needed to make progress and avoid delays.
c. Review special terrazzo designs and patterns.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

3. Laboratory Test Reports: For flooring products, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Include terrazzo installation requirements. Include plans, sections, component details, and relationship to other work. Show layout of the following:

1. Divider strips.
2. Control-joint strips.
3. Accessory strips.
4. Abrasive strips.
5. Stair treads, risers, and landings.
6. Precast terrazzo jointing and edge configurations.
7. Terrazzo patterns.

D. Samples for Verification: For each type, material, color, and pattern of terrazzo and accessory required showing the full range of color, texture, and pattern variations expected. Label each terrazzo Sample to identify manufacturer's matrix color and aggregate types, sizes, and proportions. Prepare Samples of same thickness and from same material to be used for the Work, in sizes indicated below:

1. Terrazzo: 300-mm- (12-inch) square Samples.
2. Precast Terrazzo: 300-mm- (12-inch) square Samples.
3. Accessories: 150-mm- (6-inch-) long Samples of each exposed strip item required.
4. Stair Treads and Risers: 300 mm length wide sample combination tread/riser with cast-in nosing.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Material Certificates: For each type of terrazzo material or product.

C. Installer Certificates: Signed by manufacturers certifying that installers comply with requirements.

D. Preinstallation moisture-testing reports.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For terrazzo to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. Installer Qualifications:

1. Engage an installer who is certified in writing by terrazzo manufacturer as qualified to install manufacturer's products.
2. Engage an installer who is a contract member of NTMA or equivalent trade association.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials and execution.

1. Build mockups for terrazzo including accessories.

a. Size: Minimum 9 sq. m (100 sq. ft.) of typical poured-in-place flooring**[and base]** condition for each color and pattern in locations indicated.
b. Include **[base] [first three stair treads] <Insert item>**.
c. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in supplier's original wrappings and containers, labeled with source's or manufacturer's name, material or product brand name, and lot number if any.

B. Store materials in their original, undamaged packages and containers, inside a well-ventilated area protected from weather, moisture, soiling, extreme temperatures, and humidity.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Comply with manufacturer's written instructions for substrate temperature, ambient temperature, moisture, ventilation, and other conditions affecting terrazzo installation.

B. Field Measurements: Verify actual dimensions of construction contiguous with precast terrazzo by field measurements before fabrication.

C. Provide permanent lighting or, if permanent lighting is not in place, simulate permanent lighting conditions during terrazzo installation.

D. Close spaces to traffic during terrazzo application and for not less than 24 hours after application unless manufacturer recommends a longer period.

E. Control and collect water and dust produced by grinding operations. Protect adjacent construction from detrimental effects of grinding operations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Source Limitations: Obtain primary terrazzo materials from single source from single manufacturer. Provide secondary materials including patching and fill material, joint sealant, and repair materials of type and from source recommended by manufacturer of primary materials.

B. Source Limitations for Aggregates: Obtain each color, grade, type, and variety of granular materials from single source with resources to provide materials of consistent quality in appearance and physical properties.

2.2 PERFORMANCE REQUIREMENTS

A. NTMA Standards: Comply with NTMA's written recommendations for terrazzo type indicated unless more stringent requirements are specified.

2.3 EPOXY-RESIN TERRAZZO

A. Epoxy-Resin Terrazzo **TZF-[##]**: Comply with manufacturer's written instructions for matrix and aggregate proportions and mixing.

B. Mix Color and Pattern: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range].**

C. Materials:

1. Moisture-Vapor-Emission-Control Membrane: Two-component, high-solids, high-density, low-odor, epoxy-based membrane-forming product produced by epoxy terrazzo manufacturer that reduces moisture emission from concrete substrate to not more than 1.36 kg of water/92.9 sq. m (3 lb of water/1000 sq. ft.) in 24 hours.
2. Substrate-Crack-Suppression Membrane: Product of terrazzo-resin manufacturer, having minimum 120 percent elongation potential according to ASTM D412.

   a. Reinforcement: Fiberglass scrim.

3. Primer: Manufacturer's product recommended for substrate and use indicated.
4. Epoxy-Resin Matrix: Manufacturer's standard recommended for use indicated and in color required for mix indicated.

   a. Physical Properties without Aggregates:

      1) Hardness: 60 to 85 per ASTM D2240, Shore D.

2) Minimum Tensile Strength: 20.7 MPa (3000 psi) per ASTM D638 for a 51-mm (2-inch) specimen made using a "C" die per ASTM D412.
3) Minimum Compressive Strength: 6.9 MPa (10,000 psi) per ASTM D695, Specimen B cylinder.
4) Chemical Resistance: No deleterious effects by contaminants listed below after seven-day immersion at room temperature per ASTM D1308.

a) Distilled water.
b) Mineral water.
c) Isopropanol.
d) Ethanol.
e) 0.025 percent detergent solution.
f) 1.0 percent soap solution.
g) 5 percent acetic acid.
h) 10 percent sodium hydroxide.
i) 10 percent hydrochloric acid.
j) 30 percent sulfuric acid.

b. Physical Properties with Aggregates: For terrazzo blended according to manufacturer's recommendations with one part epoxy resin with three parts marble aggregate consisting of 60 percent No. 1 chips and 40 percent No. 0 chips that is ground and grouted to a 6.35-mm (1/4-inch) nominal thickness, and cured for 7 days at 24 deg C (75 deg F) plus or minus 1 deg C (2 deg F) and at 50 percent plus or minus 2 percent relative humidity.

1) Flammability: Self-extinguishing, maximum extent of burning 6.35 mm (1/4 inch) according to ASTM D635.
2) Thermal Coefficient of Linear Expansion: 0.0025 mm/mm per 0.5556 deg C (0.0025 inch/inch per deg F) according to ASTM C531.

5. Aggregates: Comply with NTMA gradation standards for mix indicated and contain no deleterious or foreign matter.

a. Abrasion and Impact Resistance: Less than 40 percent loss per ASTM C131/C131M.
b. 24-Hour Absorption Rate: Less than 0.75 percent.
c. Dust Content: Less than 1.0 percent by weight.

6. Finishing Grout: Resin based.

2.4 PRECAST EPOXY-RESIN TERRAZZO**:**

A. Precast Terrazzo Base **TZF-[##]**: Minimum 10-mm- (3/8-inch-) thick, epoxy terrazzo units cast in maximum lengths possible, but not less than 900 mm (36 inches). Comply with manufacturer's written instructions for fabricating precast terrazzo base units in sizes and profiles indicated.

1. Type: [**As indicated**] [**Coved with minimum 19-mm (3/4-inch) radius**] [**Straight**] [**Splayed**] <**Insert requirements**>.

2. Top Edge: **[Straight, unfinished] [Beveled with polished top surface] [Radius edge with polished top surface] <Insert requirements>**.

3. Metal Toe Strip: **[Zinc] [Brass]**.
4. Outside Corner Units: With finished returned edges at outside corner.
5. Color, Pattern, and Finish: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range].**

B. Precast Terrazzo Units **TZF-[##]**: Minimum [**19-mm (3/4-inch)**] <**Insert dimension**> thick, epoxy terrazzo units. Comply with manufacturer's written instructions for fabricating precast units in sizes and profiles indicated. Reinforce units as required by unit sizes, profiles, and thicknesses and as recommended by manufacturer. Finish exposed-to-view edges and reveals to match face finish. Ease exposed edges to 3.2-mm (1/8-inch) radius.

1. Color, Pattern, and Finish: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range].**

2.5 STRIP MATERIALS

A. Thin-Set Divider Strips: L-type angle in depth required for topping thickness indicated.

1. Material: **[As indicated] [White-zinc alloy] [Brass] [Aluminum] [Plastic, in color selected from full range of industry colors] <Insert requirements>**.
2. Top Width: **[As indicated] [3.2 mm (1/8 inch)] [6.4 mm (1/4 inch)] <Insert dimension>**.

B. Heavy-Top Divider Strips: L-type angle in depth required for topping thickness indicated.

1. Bottom-Section Material: **[As indicated] [Galvanized steel] [Matching top-section material] <Insert requirements>**.
2. Top-Section Material: **[As indicated] [White-zinc alloy] [Brass] [Aluminum] [Plastic, in color selected from full range of industry colors] <Insert requirements>**.
3. Top-Section Width: **[As indicated] [3.2 mm (1/8 inch)] [6.4 mm (1/4 inch)] [9.5 mm (3/8 inch)] [12.7 mm (1/2 inch)] <Insert dimension>**.

C. Control-Joint Strips: Separate, double L-type angles, positioned back to back, that match material and color of divider strips and in depth required for topping thickness indicated.

D. Accessory Strips: Match divider-strip width, material, and color unless otherwise indicated. Use the following types of accessory strips as required to provide a complete installation:

1. Base-bead strips for exposed top edge of terrazzo base.
2. Edge-bead strips for exposed edges of terrazzo.
3. Nosings for terrazzo stair treads and landings.
4. **<Insert requirements>**.

E. Abrasive Strips: [**Three-line**] [**Two-line**] [**One-line**] [**Abrasive nosing strip and two-line**] <**Insert requirements**> abrasive inserts at nosings. Silicon carbide or aluminum oxide, or combination of both, in epoxy-resin binder and set in channel.

1. Width: **[12.7 mm (1/2 inch)] <Insert dimension>**.
2. Depth: As required by terrazzo thickness.
3. Length: **[100 mm (4 inches) less than stair width] [As indicated] <Insert dimension>**.
4. Color: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

2.6 MISCELLANEOUS ACCESSORIES

A. Strip Adhesive: Epoxy-resin adhesive recommended by adhesive manufacturer for this use.

B. Anchoring Devices:

1. Strips: Provide mechanical anchoring devices or adhesives for strip materials as recommended by manufacturer and as required for secure attachment to substrate.
2. Precast Terrazzo: Provide mechanical anchoring devices as recommended by fabricator for proper anchorage and support of units for conditions of installation and support.

C. Patching and Fill Material: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

D. Joint Compound: Terrazzo manufacturer's resinous product approved and recommended by manufacturer for application indicated.

E. Resinous Matrix Terrazzo Cleaner: Chemically neutral cleaner with pH factor between 7 and 10 that is biodegradable, phosphate free, and recommended by sealer manufacturer for use on terrazzo type indicated.

F. Sealer: Slip- and stain-resistant, penetrating-type sealer that is chemically neutral; does not affect terrazzo color or physical properties; and is recommended by sealer manufacturer.

1. Surface Friction: Not less than 0.6 according to ASTM D2047.
2. Acid-Base Properties: With pH factor between 7 and 10.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions, including levelness tolerances, have been corrected.

3.2 PREPARATION

A. Clean substrates of substances, including oil, grease, and curing compounds, that might impair terrazzo bond. Provide clean, dry, and neutral substrate for terrazzo application.

B. Concrete Slabs:

1. Provide sound concrete surfaces free of laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants incompatible with terrazzo.

a. Shot-blast surfaces with an apparatus that abrades the concrete surface, contains the dispensed shot within the apparatus, and recirculates the shot by vacuum pickup.
b. Repair damaged and deteriorated concrete according to terrazzo manufacturer's written instructions.
c. Use patching and fill material to fill holes and depressions in substrates according to terrazzo manufacturer's written instructions.

C. Verify that concrete substrates are dry and moisture-vapor emissions are within acceptable levels according to manufacturer's written instructions.

D. Preinstallation Moisture Testing:

1. Testing Agency: Engage a qualified testing agency to perform tests.
2. Moisture Testing: Perform tests so that each test area does not exceed 18.6 sq. m (200 sq. ft.), and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Moisture-Vapor-Emission Test: Maximum moisture-vapor-emission rate of 1.36 kg of water/92.9 sq. m (3 lb of water/1000 sq. ft.) in 24 hours when tested according to ASTM F1869 using anhydrous calcium chloride.
b. Relative Humidity Test: Maximum 75 percent relative humidity measurement when tested according to ASTM F2170 using in-situ probes.

3. Proceed with terrazzo installation only after concrete substrates pass moisture testing or after installation of moisture-vapor-emission-control membrane on substrate areas that fail testing.

E. Moisture-Vapor-Emission-Control Membrane: Install according to manufacturer's written instructions.

1. Install on concrete substrates that incorporate lightweight aggregates.
2. Install concrete substrates that fail preinstallation moisture testing.

F. Substrate-Crack-Suppression Membrane: Install to isolate and suppress substrate cracks according to manufacturer's written instructions.

1. Prepare and prefill substrate cracks with membrane material.
2. Install membrane **[at substrate cracks] [to produce full substrate coverage]** in areas to receive terrazzo.
3. Reinforce membrane with fiberglass scrim.

G. Protect other work from water and dust generated by grinding operations. Control water and dust to comply with environmental protection regulations.

1. Erect and maintain temporary enclosures and other suitable methods to limit water damage and dust migration and to ensure adequate ambient temperatures and ventilation conditions during installation.

3.3 EPOXY-RESIN TERRAZZO INSTALLATION

A. Comply with NTMA's written recommendations for terrazzo and accessory installation.

B. Strip Materials:

1. Divider and Control-Joint Strips:

a. Locate divider strips in locations indicated.
b. Install control-joint strips **[back to back and directly above concrete-slab control joints] [in locations indicated]**.
c. Install control-joint strips with 6.4-mm (1/4-inch) gap between strips, and install sealant in gap.
d. Install strips in adhesive setting bed without voids below strips, or mechanically anchor strips as required to attach strips to substrate, as recommended by strip manufacturer.

2. Accessory Strips: Install **[as required to provide a complete installation] [in locations indicated]**.
3. Abrasive Strips: Install with surface of abrasive strip positioned 1.6 mm (1/16 inch) higher than terrazzo surface.
4. Sealant joint to match color of divider strips and be applied smooth and flush with exposed edges of divider strips to avoid visible surface irregularity and voids in joint.

C. Apply primer to terrazzo substrates according to manufacturer's written instructions.

D. Place, rough grind, grout, cure grout, fine grind, and finish terrazzo according to manufacturer's written instructions.

1. Installed Thickness: [**6.4 mm (1/4 inch)**] [**9.5 mm (3/8 inch)**] [**As indicated on Drawings**] <**Insert dimension**> nominal.

2. Terrazzo Finishing: Ensure that matrix components and fluids from grinding operations do not stain terrazzo by reacting with divider and control-joint strips.

a. Rough Grinding: Grind with 24-grit or finer stones or with comparable diamond abrasives. Follow initial grind with 60/80-grit stones or with comparable diamond abrasives.
b. Grouting: Before grouting, clean terrazzo with water, rinse, and allow to dry. Apply and cure epoxy grout.
c. Fine Grinding/Polishing: Delay fine grinding until heavy trade work is complete and construction traffic through area is restricted. Grind with 80-grit stones or with comparable diamond abrasives until grout is removed from surface.

3. Installation Tolerance: Limit variation in terrazzo surface from level to 6.4 mm in 3 m (1/4 inch in 10 feet); noncumulative.

E. Install and finish poured-in-place terrazzo stairs at the same time the adjacent terrazzo flooring is installed.

F. Install and finish poured-in-place terrazzo base at the same time the adjacent terrazzo flooring is installed.

3.4 PRECAST TERRAZZO INSTALLATION

A. Install precast terrazzo units using method recommended in writing by NTMA and manufacturer unless otherwise indicated.

B. Do not install units that are chipped, cracked, discolored, or improperly finished.

C. Seal joints between units with [**joint compound matching precast terrazzo matrix**] [**joint sealant**].

3.5 REPAIR

A. Cut out and replace terrazzo areas that evidence lack of bond with substrate. Cut out terrazzo areas in panels defined by strips and replace to match adjacent terrazzo, or repair panels according to NTMA's written recommendations, as approved by **Project Director/COR**.

3.6 CLEANING AND PROTECTION

A. Cleaning:

1. Remove grinding dust from installation and adjacent areas.
2. Wash surfaces with cleaner according to NTMA's written recommendations and manufacturer's written instructions; rinse surfaces with water and allow them to dry thoroughly.

B. Sealing:

1. Seal surfaces according to NTMA's written recommendations.
2. Apply sealer according to sealer manufacturer's written instructions.

C. Protection: Provide final protection and maintain conditions, in a manner acceptable to Installer, that ensure that terrazzo is without damage or deterioration at time of Substantial Completion.

END OF SECTION 096623

SECTION 096800 - CARPETING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Broadloom carpet.
2. Carpet tile.
3. Static-Dissipative Carpet Tile
4. Carpet cushion.

B. Material Index / Material Codes Include:

1. CBF-[##] <BROADLOOM CARPET.>
2. CTF-[##] <CARPET TILE.>
3. CSF-[##] <STATIC DISSIPATIVE CARPET TILE.>

C. Related Requirements:

1. Division 09 Section on "Resilient Base and Accessories" for resilient wall base and accessories installed with carpet.
2. [Division 09 Section on “Access Flooring.”]
3. Division 09 Section on “Static-Control Resilient Floor Coverings” for static-dissipative rubber tile flooring.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Review methods and procedures related to carpet installation including, but not limited to, the following:

a. Review delivery, storage, and handling procedures.
b. Review ambient conditions and ventilation procedures.
c. Review subfloor preparation procedures.
d. Review installation pattern for carpet tile
e. Review methods and procedures related to static-dissipative carpet tile including, but not limited to, examination and preparation of substrates to receive static-dissipative carpet tile.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include manufacturer's written data on physical characteristics, durability, and fade resistance.
2. Include manufacturer's written installation recommendations for each type of substrate.
3. Include manufacturer’s written installation recommendations for carpet tile pattern installation methods.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
3. Laboratory Test Reports: For flooring products, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For carpet installation, showing the following:

1. Broadloom Carpet:

a. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet.
b. Carpet type, color, and dye lot.

c. **[Locations where dye lot changes occur.]**
d. Seam locations, types, and methods.
e. Type of subfloor.
f. Type of installation.
g. Pattern type, repeat size, location, direction, and starting point.
h. Pile direction.
i. Types, colors, and locations of insets and borders.
j. Types, colors, and locations of edge, transition, and other accessory strips.
k. Transition details to other flooring materials.

l. Type of carpet cushion.

2. Carpet Tile:

a. Columns, doorways, enclosing walls or partitions, built-in cabinets, and locations where cutouts are required in carpet tiles.

b. Carpet tile type, color, and dye lot.

c. **[Locations where dye lot changes occur.]**
d. Seam locations, types, and methods.
e. Type of subfloor.
f. Type of installation.
g. Pattern type, repeat size, location, direction, and starting point.
h. Pile direction.
i. Types, colors, and locations of insets and borders.
j. Types, colors, and locations of edge, transition, and other accessory strips.
k. Transition details to other flooring materials.

D. Samples: For each of the following products and for each color and texture required. Label each Sample with manufacturer's name, material description, color, pattern, and designation indicated on Drawings and in schedules.

1. Broadloom Carpet: 300-mm- (12-inch-) square Sample.
2. Carpet Tile: Full-size Sample.
3. Exposed Edge, Transition, and Other Accessory Stripping: 300-mm- (12-inch-) long Samples.
4. Carpet Cushion: 150-mm- (6-inch-) square Sample.
5. Carpet Seam: 150-mm (6-inch) Sample.
6. Mitered Carpet-Border Seam: 300-mm- (12-inch-) square Sample. Show carpet pattern alignment.

E. Product Schedule: For carpet**[and carpet cushion]**. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Product Test Reports: For carpet**[and carpet cushion]**, for tests performed by a qualified testing agency.

C. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For carpet to include in maintenance manuals. Include the following:

1. Methods for maintaining carpet, including cleaning and stain-removal products and procedures and manufacturer's recommended maintenance schedule.

2. Precautions for cleaning materials and methods that could be detrimental to carpet**[and carpet cushion]**.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Broadloom Carpet: Full-width rolls equal to 5 percent of amount installed for each type indicated, but not less than 8.3 sq. m (10 sq. yd.).
2. Carpet Tile: Full-size units equal to 5 percent of amount installed for each type indicated, but not less than 8.3 sq. m (10 sq. yd.).
3. Do not sell extra materials during sales of warehouse stock.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: An experienced installer who is certified by the International Certified Floorcovering Installers Association at the **[Commercial II] [Master II] <Insert description>** certification level.

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups at locations and in sizes shown on Drawings.
2. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Comply with CRI's "CRI Carpet Installation Standard."

B. Deliver carpet in original mill protective covering with mill register numbers and tags attached.

1.9 FIELD CONDITIONS

A. Comply with CRI's "CRI Carpet Installation Standard" for temperature, humidity, and ventilation limitations.

B. Environmental Limitations: Do not deliver or install carpet**[and carpet cushion]** until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at levels planned for building occupants during the remainder of the construction period.

C. **[Do not install carpet[and carpet cushion] over concrete slabs until slabs have cured, are sufficiently dry to bond with adhesive, and have pH range recommended by carpet manufacturer.]**

D. Where demountable partitions or other items are indicated for installation on top of carpet, install carpet before installing these items.

1.10 WARRANTY

A. Special Warranty for Broadloom Carpet: Manufacturer agrees to repair or replace components of carpet installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, the following:

a. More than 10 percent loss of face fiber, edge raveling, snags, and runs.
b. Loss of tuft bind strength.
c. Excess static discharge.
d. Delamination.

3. Warranty Period: Minimum 10 years from date of Substantial Completion.

B. Special Warranty for Carpet Tiles: Manufacturer agrees to repair or replace components of carpet tile installation that fail in materials or workmanship within specified warranty period.

1. Warranty does not include deterioration or failure of carpet tile due to unusual traffic, failure of substrate, vandalism, or abuse.
2. Failures include, but are not limited to, the following:

a. More than 10 percent edge raveling, snags, and runs.
b. Dimensional instability.
c. Excess static discharge.
d. Loss of tuft-bind strength.
e. Loss of face fiber.
f. Delamination.

3. Warranty Period: Minimum 10 years from date of Substantial Completion.

C. Special Warranty for Carpet Cushion: Manufacturer agrees to repair or replace components of carpet cushion installation that fail in materials or workmanship within specified warranty period.

1. Warranty includes removal and replacement of carpet and accessories required by replacement of carpet cushion.
2. Warranty does not include deterioration or failure of carpet cushion due to unusual traffic, failure of substrate, vandalism, or abuse.
3. Failure includes, but is not limited to, permanent indentation or compression.

4. Warranty Period: Minimum 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 BROADLOOM CARPET, TUFTED **[CBF-[##]]**:

A. Color: **[As indicated by manufacturer's designations][Match Project Director/COR's samples][As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

B. Pattern: **[Match Project Director/COR's samples] <Insert pattern>**.

C. Fiber Content: **[100 percent nylon 6, 6] [100 percent nylon 6] [100 percent polypropylene] <Insert fiber and content by percentage>**.

D. Fiber Type: **<Insert proprietary fiber type>**.

E. Pile Characteristic: **[Level-loop][Cut][Cut-and-loop][Multilevel-loop][Level tip shear] [Random shear][Frieze][Sculptured] <Insert characteristic>** pile.

F. Yarn Twist: **<Insert twist in TPCM (TPI)>**.

G. Yarn Count: **<Insert yarn count>**.

H. Density: **<Insert g/cu. cm (oz./cu. yd.)>**.

I. Pile Thickness: **<Insert mm (inches)>** for finished carpet**[according to ASTM D 6859]**.

J. Stitches: **<Insert stitches per mm (inch)>**.

K. Gage: **<Insert gage in ends per mm (inch)>**.

L. Face Weight: **<Insert g/sq. m (oz./sq. yd.)>**.

M. Total Weight: **<Insert g/sq. m (oz./sq. yd.)>** for finished carpet.

N. Primary Backing: **[Manufacturer's standard material][Woven polypropylene][Nonwoven, polypropylene or polyester] <Insert specific primary backing material>**.

O. Secondary Backing: **[Manufacturer's standard material][Woven polypropylene] [Nonwoven, polypropylene or polyester][Woven jute][Fiberglass] <Insert specific secondary backing material>**.

P. Backcoating: **[Manufacturer's standard material][SBR latex][PVC][Thermoplastic copolymer] <Insert backcoating; consult manufacturers>**.

Q. Roll Width: **[3.7 m (12 feet)][1.8 m (6 feet)][4.1 m (13.5 feet)][4.6 m (15 feet)] <Insert dimension>**.

R. Applied Treatments:

1. Applied Soil-Resistance Treatment: Manufacturer's standard material.

2. Antimicrobial Treatment: Manufacturer's standard material.

   a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

S. Sustainable Design Requirements:

1. Sustainable Product Certification: **[Silver] [Gold] [Platinum]** level certification according to ANSI/NSF 140.
2. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

T. Performance Characteristics:

1. Appearance Retention Rating: [**Moderate traffic, 2.5**] **[Heavy traffic, 3.0] [Severe traffic, 3.5]** minimum according to ASTM D 7330.
2. Critical Radiant Flux Classification: Not less than **[0.45 W/sq. cm] [0.22 W/sq. cm]** according to NFPA 253.
3. Dry Breaking Strength: Not less than 445 N (100 lbf) according to ASTM D 2646.

4. Tuft Bind: Not less **than [22 N (5 lbf)] [28 N (6.2 lbf)] [36 N (8 lbf)] [45 N (10 lbf)] <Insert value>** according to ASTM D 1335.

5. Delamination: Not less than **[0.4 N/mm (2.5 lbf/in.)] [0.6 N/mm (3.5 lbf/in.)] [.07 N/mm (4 lbf/in.)] <Insert value>** according to ASTM D 3936.
6. Noise Reduction Coefficient (NRC): **<Insert NRC>** according to ASTM C 423.
7. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.

8. Colorfastness to Light: Not less than 4 after **[40][60]**<**Insert number**> AFU (AATCC fading units) according to AATCC 16, Option E.

9. Electrostatic Propensity: Less than **[3.5][2]<Insert number>** kV according to AATCC 134.

2.2 CARPET TILE **[CTF-[##] OR CSF-[##]]**:

A. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's samples][As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

B. Pattern: **[Match Project Director/COR's samples] <Insert pattern>**.

C. Fiber Content: **[100 percent nylon 6, 6] [100 percent nylon 6] [100 percent polypropylene] [100 percent wool] [80 percent wool; 20 percent nylon 6, 6] [80 percent wool; 20 percent nylon 6] <Insert percentage>**.

D. Fiber Type: **<Insert proprietary fiber type>**.

E. Pile Characteristic: **[Level-loop] [Cut] [Cut-and-loop] <Insert construction>** pile.

F. Yarn Twist: **<Insert TPCM (TPI)>**.

G. Yarn Count: **<Insert count>**.

H. Density: **<Insert g/cu. cm (oz./cu. yd.)>**.

I. Pile Thickness: **<Insert mm (inches)>** for finished carpet tile**[according to ASTM D 6859]**.

J. Stitches: **<Insert stitches per mm (inch)>**.

K. Gage: **<Insert ends per mm (inch)>**.

L. Surface Pile Weight: **<Insert g/sq. m (oz./sq. yd.)>**.

M. Total Weight: **<Insert g/sq. m (oz./sq. yd.)>** for finished carpet tile.

N. Primary Backing/Backcoating: **[Manufacturer's standard composite materials][PVC][Fiberglass-reinforced PVC][Fiberglass-reinforced amorphous resin][Reinforced polyurethane composite cushion][Reinforced polyurethane composite][Reinforced thermoplastic copolymer] <Insert specific primary backing materials; consult manufacturers>**.

O. Secondary Backing: **[Manufacturer's standard material] <Insert specific secondary backing material>**.

P. Backing System: **<Insert proprietary name>**.

Q. Size: **[457 by 457 mm (18 by 18 inches)] [610 by 610 mm (24 by 24 inches)] [457 by 914 mm (18 by 36 inches)] [914 by 914 mm (36 by 36 inches)] <Insert dimensions>**.

R. Applied Treatments:

1. Soil-Resistance Treatment: Manufacturer's standard treatment.

2. Antimicrobial Treatment: Manufacturer's standard treatment that protects carpet tiles as follows:

   a. Antimicrobial Activity: Not less than 2-mm halo of inhibition for gram-positive bacteria, not less than 1-mm halo of inhibition for gram-negative bacteria, and no fungal growth, according to AATCC 174.

S. Sustainable Design Requirements:

1. Sustainable Product Certification: **[Silver] [Gold] [Platinum]** level certification according to ANSI/NSF 140.
2. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

T. Performance Characteristics:

1. Appearance Retention Rating: [**Moderate traffic, 2.5**] **[Heavy traffic, 3.0] [Severe traffic, 3.5]** minimum according to ASTM D 7330.
2. Critical Radiant Flux Classification: Not less than **[0.45 W/sq. cm] [0.22 W/sq. cm]** according to NFPA 253.
3. Dry Breaking Strength: Not less than 445 N (100 lbf) according to ASTM D 2646.
4. Tuft Bind: Not less than **[22 N (5 lbf)] [28 N (6.2 lbf)] [36 N (8 lbf)] [45 N (10 lbf)] <Insert value>** according to ASTM D 1335.
5. Delamination: Not less than **[0.6 N/mm (3.5 lbf/in.)] [0.7 N/mm (4 lbf/in.)] <Insert value>** according to ASTM D 3936.
6. Dimensional Tolerance: Within 0.8 mm (1/32 inch) of specified size dimensions, as determined by physical measurement.
7. Dimensional Stability: 0.2 percent or less according to ISO 2551 (Aachen Test).
8. Noise Reduction Coefficient (NRC): **<Insert NRC>** according to ASTM C 423.
9. Colorfastness to Crocking: Not less than 4, wet and dry, according to AATCC 165.
10. Colorfastness to Light: Not less than 4 after **[40] [60]** <**Insert number**> AFU (AATCC fading units) according to AATCC 16, Option E.
11. Electrostatic Propensity: Less than **[3.5] [2]** <**Insert number**> kV according to AATCC 134.

2.3 CARPET CUSHION **<INSERT DESIGNATION>**

A. Traffic Classification: CCC **[Class II, heavy] [Class III, extra-heavy]** traffic.

B. Fiber Cushion: **[Rubberized hair, mothproofed and sterilized] [Rubberized jute, mothproofed and sterilized] [Synthetic] [Resinated, recycled textile].**

1. Weight: **<Insert g/sq. m (oz./sq. yd.)>**.

2. Thickness: **<Insert mm (inches)>** plus 5 percent maximum.
3. Density: **<Insert kg/cu. m (lb/cu. ft.)>**.

C. Rubber Cushion: **[Flat] [Rippled waffle] [Textured flat] [Reinforced]**.

1. Weight: **<Insert g/sq. m (oz./sq. yd.)>**.
2. Thickness: **<Insert mm (inches)>** plus 5 percent maximum.
3. Compression Resistance: **<Insert kg/sq. mm (lb/sq. in.)>** at **[25] [65]** percent according to ASTM D 3676.
4. Density: **<Insert kg/cu. m (lb/cu. ft.)>**.

D. Polyurethane-Foam Cushion: **[Grafted prime] [Densified] [Bonded] [Mechanically frothed]**.

1. Compression Force Deflection at 65 Percent: **<Insert kg/sq. mm (lb/sq. in.) of polymer density>** according to ASTM D 3574.
2. Thickness: **<Insert mm (inches)>**.
3. Density: **<Insert kg/cu. m (lb/cu. ft.)>**.

E. Performance Characteristics:

1. Critical Radiant Flux Classification: Not less than **[0.45 W/sq. cm] [0.22 W/sq. cm]** according to NFPA 253.
2. Noise Reduction Coefficient (NRC): **<Insert NRC>** according to ASTM C 423.

3. Flooring products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.4 INSTALLATION ACCESSORIES

A. Trowelable Leveling and Patching Compounds: Latex-modified, hydraulic-cement-based formulation provided or recommended by **[carpet] [carpet cushion]** manufacturer.

B. Adhesives: Water-resistant, mildew-resistant, nonstaining type to suit products and subfloor conditions indicated, that complies with flammability requirements for installed carpet and is recommended or provided by **[carpet manufacturer][carpet and carpet cushion manufacturers]**.

1. Adhesive for static-dissipative carpet tile: Conductive releasable adhesive for carpet tile, provided or approved by carpet tile manufacturer, that maintains electrical continuity of floor covering system to ground connection; compliant to 1.0 x 106 ohms RTT.

2. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.

3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Seam Adhesive: Hot-melt adhesive tape or similar product recommended by carpet manufacturer for sealing and taping seams and butting cut edges at backing to form secure seams and to prevent pile loss at seams.

D. Grounding Strips for Static-Dissipative Carpet Tile: Provided or approved by static-dissipative carpet tile manufacturer; type and size that maintains electrical continuity of floor covering system to ground connection.

E. Metal Edge/Transition Strips: Extruded aluminum with mill finish of profile and width shown, of height required to protect exposed edge of carpet, and of maximum lengths to minimize running joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for maximum moisture content, alkalinity range, installation tolerances, and other conditions affecting carpet performance.

B. Examine carpet for type, color, pattern, and potential defects.

C. Concrete Slabs: Verify that finishes comply with requirements specified in Division 03 "Cast-in-Place Concrete" and that surfaces are free of cracks, ridges, depressions, scale, and foreign deposits.

1. Moisture Testing: Perform tests so that each test area does not exceed **[18.6 sq. m (200 sq. ft.)] [304.8 sq. m (1000 sq. ft.)] <Insert area>**, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test: ASTM F 1869. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of **[1.36 kg of water/92.9 sq. m (3 lb of water/1000 sq. ft.)] <Insert emission>** in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum **[75] <Insert number>** percent relative humidity level measurement.
c. Perform additional moisture tests recommended in writing by **[adhesive and carpet][adhesive, carpet cushion, and carpet]** manufacturers. Proceed with installation only after substrates pass testing.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. General: Comply with CRI's "CRI Carpet Installation Standard" and with carpet manufacturer's written installation instructions for preparing substrates.

B. Use trowelable leveling and patching compounds, according to manufacturer's written instructions, to fill cracks, holes, depressions, and protrusions in substrates. Fill or level cracks, holes and depressions 3 mm (1/8 inch) wide or wider, and protrusions more than 0.8 mm (1/32 inch), unless more stringent requirements are required by manufacturer's written instructions.

C. Concrete Substrates: Remove coatings, including curing compounds, and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, without using solvents. Use mechanical methods recommended in writing by **[adhesive and carpet] [adhesive, carpet, and carpet cushion]** manufacturers.

D. Broom and vacuum clean substrates to be covered immediately before installing carpet.

3.3 BROADLOOM CARPET INSTALLATION

A. Comply with CRI's "CRI Carpet Installation Standard" and **[carpet manufacturer's] [carpet and carpet cushion manufacturers']** written installation instructions for the following:

1. Direct-glue-down installation.
2. Carpet with attached-cushion installation.

B. Comply with carpet manufacturer's written instructions and Shop Drawings for seam locations and direction of carpet; maintain uniformity of carpet direction and lay of pile. At doorways, center seams under the door in closed position.

C. Install **[pattern parallel to walls and borders][as indicated on Drawings] <Insert requirements>**.

D. Install borders with mitered corner seams.

E. Do not bridge building expansion joints with carpet.

F. Cut and fit carpet to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet manufacturer.

G. Extend carpet into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

H. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet as marked on subfloor. Use nonpermanent, nonstaining marking device.

3.4 CARPET TILE INSTALLATION

A. General: Comply with CRI's "CRI Carpet Installation Standard," Section 18, "Modular Carpet" and with carpet tile manufacturer's written installation instructions.

B. Installation Methods:

1. Static-Dissipative Carpet Tile:

   a. Coordinate locations of grounding strips with Project Director/COR before beginning installation.
   b. Embed grounding strips in conductive adhesive. Extend grounding strips beyond perimeter of static-dissipative carpet tile surfaces to ground connections.
   c. Ground at frequency of not less than 1 per 100 square meters.
   d. Install every tile with full-spread, conductive adhesive.

2. Other Carpet Tile Types: **[As recommended in writing by carpet tile manufacturer] [Glue down; install every tile with full-spread, releasable, pressure-sensitive adhesive] [Partial glue down; install periodic tiles with releasable, pressure-sensitive adhesive] [Free lay; install carpet tiles without adhesive]**.

C. Maintain dye-lot integrity. Do not mix dye lots in same area.

D. Maintain pile-direction patterns **[indicated on Drawings] [recommended in writing by carpet tile manufacturer]**.

E. Cut and fit carpet tile to butt tightly to vertical surfaces, permanent fixtures, and built-in furniture including cabinets, pipes, outlets, edgings, thresholds, and nosings. Bind or seal cut edges as recommended by carpet tile manufacturer.

F. Extend carpet tile into toe spaces, door reveals, closets, open-bottomed obstructions, removable flanges, alcoves, and similar openings.

G. Maintain reference markers, holes, and openings that are in place or marked for future cutting by repeating on carpet tile as marked on subfloor. Use nonpermanent, nonstaining marking device.

H. Install pattern parallel to walls and borders.

I. Lay out tile work to minimize the use of pieces that are less than half of a tile.

J. [Access Flooring: Stagger joints of carpet tiles so carpet tile grid is offset from access flooring panel grid. Do not fill seams of access flooring panels with carpet adhesive; keep seams free of adhesive.]

3.5 FIELD QUALITY CONTROL

A. Testing:

1. Engage a qualified testing agency to test electrical resistance of static-dissipative carpet tile for compliance with requirements.
2. Arrange for testing after installation static-control adhesives have fully cured and carpet tile has stabilized to ambient conditions and after ground connections are completed.

B. Static-dissipative carpet tile will be considered defective if they do not pass tests and inspections.

C. Prepare test and inspection reports.

3.6 CLEANING AND PROTECTION

A. Perform the following operations immediately after installing carpet:

1. Remove excess adhesive, seam sealer, and other surface blemishes using cleaner recommended by carpet manufacturer.
2. Remove yarns that protrude from carpet surface.
3. Vacuum carpet using commercial machine with face-beater element.

B. Protect installed carpet to comply with CRI's "CRI Carpet Installation Standard."

C. Protect carpet against damage from construction operations and placement of equipment and fixtures during the remainder of construction period. Use protection methods recommended in writing by carpet manufacturer **[and carpet cushion manufacturer][and carpet adhesive manufacturer][and carpet cushion and adhesive manufacturers]**.

END OF SECTION 096800

SECTION 097200 - WALL COVERINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Vinyl wall covering.
2. Textile wall covering.
3. Wallpaper.

B. Material Index / Material Codes Include:

1. WCW-[##] <(VINYL) WALL COVERING.>
2. WCW-[##] <(TEXTILE) WALL COVERING.>
3. **WCW-[##] <(WALLPAPER) WALL COVERING.>**

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include data on physical characteristics, durability, fade resistance, and fire-test-response characteristics.

B. Sustainable Design Submittals:

1. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
2. Chain-of-Custody Qualification Data: For manufacturer and vendor.
3. Product Data: For adhesives, indicating VOC content.
4. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
5. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Show location and extent of each wall-covering type. Indicate **[pattern placement,]** seams and termination points.

D. Samples: For each type of wall covering and for each color, pattern, texture, and finish specified, full width by **[914-mm- (36-inch-)]** <**Insert dimension**> long in size.

1. Wall-Covering Sample: From same production run to be used for the Work, with specified **[treatments] [paint]** applied.**[Show complete pattern repeat.][Mark top and face of fabric.]**

E. Product Schedule: For wall coverings.**[Use same designations indicated on Drawings.]**

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For testing agency.

B. Product Test Reports: For each wall covering, for tests performed by a qualified testing agency.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For wall coverings to include in maintenance manuals.

1.6 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Wall-Covering Materials: For each type, color, texture, and finish, full width by length to equal to 5 percent of amount installed.

1.7 QUALITY ASSURANCE

A. Installer Qualifications: Not less than 5 years documented successful experience with work comparable to Work of this Project.

B. Mockups: Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and to set quality standards for installation.

1. Build mockups for each type of wall covering on each substrate required. Comply with requirements in ASTM F 1141 for appearance shading characteristics.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

C. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

D. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

1.8 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install wall coverings until spaces are enclosed and weathertight, wet work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at levels intended for occupants after Project completion during the remainder of the construction period.

B. Lighting: Do not install wall covering until lighting that matches conditions intended for occupants after Project completion is provided on the surfaces to receive wall covering.

C. Ventilation: Provide continuous ventilation during installation and for not less than the time recommended by wall-covering manufacturer for full drying or curing.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Fire-Test-Response Characteristics: As determined by testing identical wall coverings applied with identical adhesives to substrates according to test method indicated below by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: **[50] [450]** <**Insert value**> or less.

2.2 VINYL WALL COVERING **[WCW-[##]]**

A. Description: Provide**[mildew-resistant]** products in rolls from same production run and complying with the following:

1. ASTM F 793 for **[peelable] [strippable]** wall coverings.

a. Category: **[I, Decorative Only] [II, Decorative with Medium Serviceability] [III, Decorative with High Serviceability] [IV, Type I, Commercial Serviceability] [V, Type II, Commercial Serviceability] [VI, Type III, Commercial Serviceability]**.

B. Total Weight: <**Insert weight**>, excluding coatings.

C. Width: [**686 mm (27 inches)**] [**1372 mm (54 inches)**] <**Insert dimension**>.

D. Backing: **[Scrim] [Osnaburg] [Drill] [Nonwoven]** fabric.

1. Fiber Content: **[Cotton] [Polyester] [Polycotton] [Polyester cellulose]** <**Insert fiber content**>.

E. Repeat: **[Random]** <**Insert horizontal and vertical dimensions of repeat**>.

F. Stain-Resistant Coating: <**Insert coating manufacturer's name; product name or designation**>.

G. Colors, Textures, and Patterns: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

2.3 TEXTILE WALL COVERING **[WCW-[##]]**

A. Description: Provide **[mildew-resistant,] [peelable] [strippable]** wall coverings in rolls from same production run and that comply with ASTM F 793.

1. Category: **[I, Decorative Only] [II, Decorative with Medium Serviceability] [III, Decorative with High Serviceability] [IV, Type I, Commercial Serviceability] [V, Type II, Commercial Serviceability] [VI, Type III, Commercial Serviceability]**.

B. Test Responses:

1. Colorfastness to Wet and Dry Crocking: Passes AATCC 8, Grade 3, minimum.

2. Colorfastness to Light: Passes AATCC 16, Test Option 1 or 3, Grade 4, minimum, at 40 hours.

C. Total Weight: <**Insert weight**>, excluding coatings.

D. Width: <**Insert width**>.

E. Repeat: **[Random]** <**Insert horizontal and vertical dimensions of repeat**>.

F. Applied Backing Material: **[Acrylic] [Paper]**.

G. Stain-Resistant Coating: <**Insert coating manufacturer's name; product name or designation**>.

H. Colors, Textures, and Patterns: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

2.4 WALLPAPER **[WCW-[##]]**

A. Description: Provide **[mildew-resistant] [peelable] [strippable]** wallpaper in rolls from same production run and that complies with ASTM F 793.

1. Category: **[I, Decorative Only] [II, Decorative with Medium Serviceability] [III, Decorative with High Serviceability]**.

B. Total Weight: <**Insert weight**>.

C. Width: [**520.7 mm (20-1/2 inches)**] [**711.2 mm (28 inches)**] <**Insert dimension**>.

D. Repeat: **[Random]** <**Insert horizontal and vertical dimensions of repeat**>.

E. Colors, Textures, and Patterns: **[Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

2.5 ACCESSORIES

A. Adhesive: Mildew-resistant, nonstaining**[, strippable]** adhesive, for use with specific wall covering and substrate application indicated and as recommended in writing by wall-covering manufacturer.

1. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

B. Primer/Sealer: Mildew resistant, complying with requirements in **[Division 09 Section on "Interior Painting"]** and recommended in writing by primer/sealer and wall-covering manufacturers for intended substrate.

C. Metal Primer: Interior ferrous metal primer complying with **[Division 09 Section on "Interior Painting"]** and recommended in writing by primer and wall-covering manufacturers for intended substrate.

D. Wall Liner: Nonwoven, synthetic underlayment and adhesive as recommended in writing by wall-covering manufacturer.

1. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

E. Seam Tape: As recommended in writing by wall-covering manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for levelness, wall plumbness, maximum moisture content, and other conditions affecting performance of the Work.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances that could impair bond of wall covering, including dirt, oil, grease, mold, mildew, and incompatible primers.

C. Prepare substrates to achieve a smooth, dry, clean, structurally sound surface free of flaking, unsound coatings, cracks, and defects.

1. Moisture Content: Maximum of 5 percent on new plaster, concrete, and concrete masonry units when tested with an electronic moisture meter.
2. Plaster: Allow new plaster to cure. Neutralize areas of high alkalinity. Prime with primer recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
3. Metals: If not factory primed, clean and apply primer recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
4. Gypsum Board: Prime with primer as recommended in writing by primer/sealer manufacturer and wall-covering manufacturer.
5. Painted Surfaces: Treat areas susceptible to pigment bleeding.

D. Check painted surfaces for pigment bleeding. Sand gloss, semigloss, and eggshell finish with fine sandpaper.

E. Remove hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

F. Acclimatize wall-covering materials by removing them from packaging in the installation areas not less than 24 hours before installation.

3.3 WALL-COVERING INSTALLATION

A. Comply with wall-covering manufacturers' written installation instructions applicable to products and applications indicated.

B. Cut wall-covering strips in roll number sequence. Change the roll numbers at partition breaks and corners.

C. Install strips in same order as cut from roll.

1. For solid-color, even-texture, or random-match wall coverings, reverse every other strip.

D. Install wall covering without lifted or curling edges and without visible shrinkage.

E. Match pattern **[1830 mm (72 inches)]** <**Insert dimension**> above the finish floor.

F. Install seams vertical and plumb at least 150 mm (6 inches) from outside corners and **[75 mm (3 inches)] [150 mm (6 inches)]** from inside corners unless a change of pattern or color exists at corner. Horizontal seams are not permitted.

G. Trim edges and seams for color uniformity, pattern match, and tight closure. Butt seams without overlaps or gaps between strips.

H. Fully bond wall covering to substrate. Remove air bubbles, wrinkles, blisters, and other defects.

3.4 CLEANING

A. Remove excess adhesive at seams, perimeter edges, and adjacent surfaces.

B. Use cleaning methods recommended in writing by wall-covering manufacturer.

C. Replace strips that cannot be cleaned.

D. Reinstall hardware and hardware accessories, electrical plates and covers, light fixture trims, and similar items.

END OF SECTION 097200

SECTION 097513 - STONE WALL FACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes dimension stone paneling on interior **[walls] [and] [columns] [, including units with carving or inscriptions]**.

B. Material Index / Material Codes Include:

1. STW-[##] <STONE WALL OR COLUMN.>

C. Related Requirements:

1. Division 03 Section on "Cast-in-Place Concrete" for installing concrete inserts for anchoring stone paneling.
2. **[Division 04 Section on "Unit Masonry" for installing masonry inserts for anchoring stone paneling.]**
3. Division 04 Section on “Exterior Stone Cladding” for exterior stone.
4. Division 09 Section on “Stone Flooring”. Division 07 Section on "Joint Sealants" for sealing joints in stone paneling system with elastomeric sealants.
5. **[Division 09 Section on "Stone Tiling" for stone wall tile.]**

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each**[variety of stone,]** stone accessory, and manufactured product.

B. Sustainable Design Submittals:

1. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
2. Laboratory Test Reports: For sealers, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: Show fabrication and installation details for stone paneling system, including dimensions and profiles of stone units.

1. Show locations and details of joints both within stone paneling system and between stone paneling system and other finish materials.
2. Show locations and details of anchors, including locations of supporting construction.
3. Show direction of veining, grain, or other directional pattern.
4. Include large-scale shaded drawings of [**decorative surfaces**] [**and**] [**inscriptions**].

D. Samples for Verification:

1. For each stone type indicated, in sets of Samples not less than 300 mm (12 inches) square. Include **[two] [three] [four] [five]** <**Insert number**> or more Samples in each set and show the full range of variations in appearance characteristics in completed Work.
2. For each color of **[grout] [pointing mortar] [and] [sealant]** required.
3. For [**carving**] [**and**] [**inscriptions**].

E. Delegated-Design Submittal: For stone paneling assembly.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer**,** fabricator, and professional engineer.

B. Material Test Reports:

1. Stone Test Reports: For**[each]** stone variety proposed for use on Project, by a qualified testing agency, indicating compliance with required physical properties, other than abrasion resistance, according to referenced ASTM standards. Base reports on testing done within previous **[three] [five]** <**Insert number**> years.
2. Sealant Compatibility and Adhesion Test Report: From sealant manufacturer indicating that sealants will not stain or damage stone. Include interpretation of test results and recommendations for primers and substrate preparation needed for adhesion.
3. Sample Warranties: For special warranties.

1.5 CLOSEOUT SUBMITTALS

A. Maintenance Data: For stone paneling to include in maintenance manuals. Include product data for stone-care products used or recommended by Installer and names, addresses, and telephone numbers of local sources for products.

1.6 QUALITY ASSURANCE

A. Fabricator Qualifications: Shop that employs skilled workers who custom fabricate stone paneling similar to that required for this Project, and whose products have a record of successful in-service performance.

B. Installer Qualifications: Fabricator of stone paneling. Installer Qualifications: Not less than 5 years documented successful experience with work comparable to Work of this Project.

C. Mockups: Build mockups to demonstrate aesthetic effects and to set quality standards for fabrication and installation.

1. Build mockups of typical wall area as shown on Drawings.
2. Build mockups for the following kinds of stone paneling:

a. Typical stone wall paneling, not less than 1800 mm (72 inches) long by 2400 mm (96 inches) high.
b. Typical stone wainscot paneling, not less than 1800 mm (72 inches) long by full wainscot height.
c. Grouting or pointing of joints.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in sample installations unless Project Director/COR specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 PRECONSTRUCTION TESTING

A. Preconstruction Sealant Adhesion and Compatibility Testing: Submit to joint-sealant manufacturers, for compatibility and adhesion testing according to sealant manufacturer's standard testing methods and Division 07 Section on "Joint Sealants," Samples of materials that will contact or affect joint sealants.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Store and handle stone and related materials to prevent deterioration or damage due to moisture, temperature changes, contaminants, corrosion, breaking, chipping, and other causes.

1. Lift stone with wide-belt slings; do not use wire rope or ropes that might cause staining. Move stone, if required, using dollies with cushioned wood supports.
2. Store stone on wood A-frames or pallets with nonstaining, waterproof covers. Arrange to distribute weight evenly and to prevent damage to stone. Ventilate under covers to prevent condensation.

B. Mark stone units, on surface that will be concealed after installation, with designations used on Shop Drawings to identify individual stone units. Orient markings on vertical panels so that they are right side up when units are installed.

C. Deliver sealants to Project site in original unopened containers labeled with manufacturer's name, product name and designation, color, expiration period, pot life, curing time, and mixing instructions for multicomponent materials.

D. Store cementitious materials on elevated platforms, under cover, and in a dry location. Do not use cementitious materials that have become damp.

1.9 FIELD CONDITIONS

A. Maintain air and material temperatures to comply with requirements of installation material manufacturers, but not less than 10 deg C (50 deg F) during installation and for seven days after completion.

B. Field Measurements: Verify dimensions of construction to receive stone paneling by field measurements before fabrication and indicate measurements on Shop Drawings.

1.10 COORDINATION

A. Coordinate installation of inserts that are to be embedded in concrete or masonry and similar items to be used by stone paneling Installer for anchoring and supporting stone paneling. Furnish setting drawings, templates, and directions for installing such items and deliver to Project site in time for installation.

B. Time delivery and installation of stone paneling to avoid extended on-site storage and to coordinate with work adjacent to stone paneling.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design stone paneling system.

B. General: Design stone anchors and anchoring systems according to ASTM C 1242.

C. Seismic Performance: Stone paneling system shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

1. Component Importance Factor: 1.0.

2.2 MANUFACTURERS

A. Source Limitations for Stone: Obtain**[each variety of]** stone, **[regardless of finish,]**from single quarry**[, whether specified in this Section or in another Section of the Specifications,]** with resources to provide materials of consistent quality in appearance and physical properties.

1. For stone types that include same list of varieties and sources, provide same variety from same source for each.

2. Make stone slabs available for examination by Project Director/COR.

a. Project Director/COR, based on input from the A/E of Record, will select aesthetically acceptable slabs**[and will indicate aesthetically unacceptable portions of slabs]**.
b. Segregate slabs selected for use on Project and mark backs indicating approval.

c. Mark and photograph aesthetically unacceptable portions of slabs as directed by Project Director/COR.

B. **[Varieties and Sources: Subject to compliance with requirements, provide stone of varieties and from sources complying with Division 04 Section on "Exterior Stone Cladding."]**

C. Stone Fabricators: Subject to compliance with requirements, **[provide products by the following] [provide products by one of the following] [available fabricators whose products may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names and possibly contact information for preapproved stone fabrication firms**>.

2.3 GRANITE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 615/C 615M.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: Uniform, **[fine] [medium]-grained, [white] [pink] [gray] [black] <Insert color> stone[without veining]**.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Cut: **[Vein] [Fleuri]**.

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

G. Finish: **[Polished] [Honed] [Thermal] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.4 LIMESTONE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 568/C 568M.

1. Classification: **[II Medium] [III High]** Density.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: **[Dolomitic] [Oolitic] [Shell]** limestone.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

E. Cut: [Vein] [Fleuri].

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

G. Finish: **[Smooth] [Sand rubbed] [Machine tooled, four bats per 25 mm (1 inch)] [Machine tooled, six bats per 25 mm (1 inch)] [Machine tooled, eight bats per 25 mm (1 inch)] [As indicated] [Match Project Director/COR's sample] <Insert finish> [, matching standard ILI finish]**.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.5 MARBLE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 503/C 503M**[, Classification I Calcite] [, Classification II Dolomite] [, Group A] [, Group B] [, Group C] [, Group D]**.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: Uniform, fine- to medium-grained, **[white] <Insert color>** stone with only slight veining.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.

E. Cut: **[Vein] [Fleuri]**.

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

F. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

G. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample]** <In**sert finish**>.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.6 QUARTZ-BASED STONE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 616/C 616M **[Classification II Quartzitic Sandstone] [Classification III Quartzite] [, except for minimum free silica content]**.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Finish: **[Natural cleft] [Thermal] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

E. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.7 SERPENTINE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 1526, **[Classification I Exterior] [Classification II Interior]**.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

E. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample] <Insert finish>**.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.8 SLATE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 629/C 629M, **[Classification I Exterior] [Classification II Interior]**.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Description: **[Black] [Blue-black] [Gray] [Blue-gray] [Green] [Purple] [Mottled purple and green] [Red]** slate with a fine, even grain[and unfading color,] from clear, sound stock.

D. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. **<Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers>**.

E. Finish: **[Honed] [Sand rubbed] [Natural cleft] [As indicated] [Match Project Director/COR's sample] <Insert finish>**.

F. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.9 TRAVERTINE **[STW-[##]]**

A. Material Standard: Comply with ASTM C 1527/C 1527M, **[Classification I Exterior] [Classification II Interior]**.

B. **[Regional Materials: Stone shall be fabricated within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered within 100 miles (160 km) of Project site.]**

C. Varieties and Sources: Subject to compliance with requirements, **[provide the following] [provide one of the following] [available stone varieties that may be incorporated into the Work include, but are not limited to, the following]**:

1. <**Insert, in separate subparagraphs, names of varieties and producers, distributors, or importers**>.

D. Cut: **[Vein] [Fleuri]**.

1. Orientation of Veining: **[Horizontal] [Vertical] [As indicated]**.

E. Cut stone from one block or contiguous, matched blocks in which natural markings occur.

F. Filling: Fill pores on faces of stone with cementitious filler of color **[selected by Project Director/COR, based on input from the A/E of Record] [matching Project Director/COR's sample]**.

G. Finish: **[Polished] [Honed] [As indicated] [Match Project Director/COR's sample]** <**Insert finish**>.

H. Match Project Director/COR's samples for color, finish, and other stone characteristics relating to aesthetic effects.

2.10 SETTING MATERIALS

A. Molding Plaster: ASTM C 59/C 59M.

B. Portland Cement: ASTM C 150/C 150M, Type I or Type II.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.

C. Hydrated Lime: ASTM C 207, Type S.

D. Aggregate: ASTM C 144.

E. Water: Potable.

2.11 GROUT

A. Grout Colors: **[Match stone] [As indicated by manufacturer's designations] [Match Project Director/COR's samples] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range]**.

B. Sand-Portland Cement Grout: ANSI A108.10, composed of white or gray cement and white or colored aggregate to produce required color.

C. Standard Cement Grout: ANSI A118.6, packaged.

1. Grout Type: **[Sanded] [Unsanded]**.

D. High-Performance Tile Grout: ANSI A118.7, packaged.

1. Polymer Type: **[Acrylic resin] [or] [ethylene vinyl acetate]**, in dry, redispersible form, packaged with other dry ingredients.
2. Polymer Type: **[Acrylic resin] [or] [styrene-butadiene rubber]** in liquid-latex form for addition to packaged dry-grout mix.
3. Grout Type: **[Sanded] [Unsanded]**.

E. Water-Cleanable Epoxy Grout: ANSI A118.3, packaged, chemical-resistant, water-cleanable, tile-setting and -grouting epoxy.

2.12 POINTING MORTAR MATERIALS

A. Portland Cement: ASTM C 150/C 150M, Type I or Type II. Provide natural color or white cement as required to produce mortar color indicated.

1. Low-Alkali Cement: Not more than 0.60 percent total alkali when tested according to ASTM C 114.

B. Hydrated Lime: ASTM C 207, Type S.

C. Mortar Pigments: Natural and synthetic iron oxides and chromium oxides, compounded for use in mortar mixes and complying with ASTM C 979/C 979M. Pigments shall have a record of satisfactory performance in mortar.

D. Portland Cement-Lime Mix: Packaged blend of portland cement and hydrated lime.

E. Colored Portland Cement-Lime Mix: Packaged blend of portland cement, hydrated lime, and mortar pigments. Use a mix of formulation required to produce color indicated or, if not indicated, as selected from manufacturer's standard formulations. Pigments shall not exceed 10 percent of portland cement by weight.

F. Aggregate: ASTM C 144, except with 100 percent passing 1.18-mm (No. 16) sieve.

1. White Aggregates: Natural white sand or ground white stone.
2. Colored Aggregates: Natural-colored sand or ground marble, granite, or other durable stone; of color necessary to produce required mortar color.

G. Water: Potable.

2.13 SEALANTS

A. Joint Sealants: Manufacturer's standard sealants that comply with applicable requirements in Division 07 Section on "Joint Sealants" and will not stain the stone they are applied to.

1. Use mildew-resistant joint sealant at plumbing fixtures and for control and expansion joints in toilet rooms**[and other wet locations]**.
2. Colors: Provide colors of exposed sealants to match other joints in stone adjoining sealed joints unless otherwise indicated.

B. Sealant for Filling Kerfs: **[Same sealant used for joints in stone cladding.] [Manufacturer's standard chemically curing, elastomeric sealants of base polymer and characteristics indicated below that comply with applicable requirements in Division 07 Section on "Joint Sealants" and that do not stain stone:]**

1. Silicone, Nonstaining, S, NS, 50, NT: Nonstaining, single-component, nonsag, plus 50 percent and minus 50 percent movement capability, nontraffic-use, neutral-curing silicone joint sealant; ASTM C 920, Type S, Grade NS, Class 50, Use NT.
2. Urethane, M, NS, 25, T, NT: Single-component, nonsag, nontraffic-use, plus 25 percent and minus 25 percent movement capability, urethane joint sealant; ASTM C 920, Type S, Grade NS, Class 25, Use NT.

2.14 STONE ANCHORS AND ATTACHMENTS

A. Fabricate anchors from stainless steel, ASTM A 240/A 240M or ASTM A 666, Type 304.

1. Fasteners for Stainless-Steel Anchors: Annealed stainless-steel bolts, nuts, and washers; ASTM F 738M (ASTM F 593) for bolts and ASTM F 836M (ASTM F 594) for nuts, Alloy Group A1 (1).

B. Fabricate dowels from stainless steel, ASTM A 276, Type 304.

C. Fabricate anchors from extruded aluminum, ASTM B 221M (ASTM B 221), Alloy 6063-T6.

1. Fasteners for Extruded-Aluminum Anchors: Annealed stainless-steel bolts, nuts, and washers; ASTM F 738M (ASTM F 593) for bolts and ASTM F 836M (ASTM F 594) for nuts, Alloy Group A1 (1).

D. Anchor Support Grids: Roll-formed steel channels, of size and shape required for application indicated, formed from galvanized-steel sheet not less than 2.8 mm (0.108 inch) thick and complying with ASTM A 653/A 653M, Z275 (G90).

1. Fittings and Fasteners: System manufacturer's standard components of design, size, and material required to securely attach grids to building structure and stone anchors to grids. Fabricate components in contact with stone from same material specified for anchors.

E. Wire Tiebacks: **[No. 9 AWG copper or copper-alloy] [or] [3.0-mm- (0.120-inch-) diameter, stainless-steel]** wire.

F. Dovetail Slots: Furnish dovetail slots with filler strips of slot size required to receive anchors provided, fabricated from 0.86-mm- (0.034-inch-) thick, galvanized-steel sheet complying with ASTM A 653/A 653M, Z275 (G90).

G. Direct-Mount Anchoring Systems: Stainless-steel**[or aluminum]** stone anchors designed to be applied directly to wall surfaces**[or to metal grids]**. System is secured to wall framing, furring, or sheet-metal reinforcing strips built into wall with**[stainless-steel]** self-drilling screws. Anchors fit into kerfs or holes in edges of stone panels**[and do not need setting spots]**.

2.15 STONE ACCESSORIES

A. Temporary Setting Shims: Rigid plastic shims, nonstaining to stone, sized to suit joint thickness.

B. Setting Shims for Direct-Mount Anchoring Systems: Strips of resilient plastic or neoprene, nonstaining to stone, of thickness needed to prevent point loading of stone on anchors and of depths to suit anchors without intruding into required depths of pointing materials.

C. Cleaner: Stone cleaner specifically formulated for stone types, finishes, and applications indicated, as recommended by stone producer. Do not use cleaning compounds containing acids, caustics, harsh fillers, or abrasives.

D. Stone Sealer: Colorless, stain-resistant sealer that does not affect color or physical properties of stone surfaces, as recommended by stone producer for application indicated.

1. Products shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

2.16 STONE FABRICATION, GENERAL

A. Select stone for intended use to prevent fabricated units from containing cracks, seams, and starts that could impair structural integrity or function.

1. Repairs that are characteristic of the varieties specified are acceptable provided they do not impair structural integrity or function and are not aesthetically unpleasing, as judged by Project Director/COR.

B. Fabricate stone paneling in sizes and shapes required to comply with requirements indicated.

1. For granite, comply with recommendations in NBGQA's "Specifications for Architectural Granite."
2. For marble, comply with recommendations in MIA's "Dimension Stone - Design Manual VII."
3. For limestone, comply with recommendations in ILI's "Indiana Limestone Handbook."

C. Cut stone to produce pieces of thickness, size, and shape indicated and to comply with fabrication and construction tolerances recommended by applicable stone association.

1. Where items are installed with adhesive or where stone edges are visible in the finished work, make items uniform in thickness and of identical thickness for each type of item; gage back of stone if necessary.
2. Clean sawed backs of stones to remove rust stains and iron particles.
3. Dress joints straight and at right angle to face unless otherwise indicated.
4. Cut and drill sinkages and holes in stone for anchors, supports, and lifting devices as indicated or needed to set stone securely in place; shape beds to fit supports.
5. Provide openings, reveals, and similar features as needed to accommodate adjacent work.

D. Finish exposed faces and edges of stone to comply with requirements indicated for finish of each stone type required and to match approved Samples and sample installations.

E. Carefully inspect finished stone units at fabrication plant for compliance with requirements for appearance, material, and fabrication. Replace defective units.

1. Grade and mark stone for overall uniform appearance when assembled in place. Natural variations in appearance are acceptable if installed stone units match range of colors and other appearance characteristics represented in approved Samples**[and sample installations]**.

2.17 STONE PANELING ON WALLS

A. Arrange panels in shop or other suitable space in proposed orientation and sequence for examination by Project Director/COR. Mark units with temporary sequence numbers to indicate position in proposed layout.

1. Lay out one elevation at a time if approved by Project Director/COR, based on input from the A/E of Record.
2. Notify Project Director/COR seven days in advance of date and time when layout will be available for viewing.
3. Provide lighting of similar type and level as that of final installation for viewing layout unless otherwise approved by Project Director/COR, based on input from the A/E of Record.
4. Rearrange panels as directed by Project Director/COR until layout is approved.
5. Do not trim nonmodular-size units to less than modular size until after Project Director/COR's approval of layout, unless otherwise approved by Project Director/COR, based on input from the A/E of Record.
6. Mark backs of units and Shop Drawings with sequence numbers based on approved layout. Mark backs of units to indicate orientation of units in completed Work.

B. Nominal Thickness: [**20 mm (3/4 inch)**] [**22 mm (7/8 inch)**] [**25 mm (1 inch)**] [**32 mm (1-1/4 inches)**] [**50 mm (2 inches)**] unless otherwise indicated.

C. Control depth of stone to maintain minimum clearances of **[20 mm (3/4 inch)] [25 mm (1 inch)]** between backs of panels and structural members, fireproofing if any, backup walls, and other work behind stone. Do not back check stone less than 25 mm (1 inch) thick.

D. Cut stone to produce uniform joints [**1.5 mm (1/16 inch)**] [**3 mm (1/8 inch)**] [**6 mm (1/4 inch)**] [**10 mm (3/8 inch)**] <**Insert dimension**> wide and in locations indicated.

E. Quirk-miter corners unless otherwise indicated. Fabricate for anchorage in top and bottom bed joints of corner units.

F. Pattern Arrangement: Fabricate and arrange panels with veining and other natural markings to comply with the following requirements:

1. Arrange panels with veining horizontal.
2. Arrange panels with veining vertical.
3. Arrange panels with veining as indicated on Drawings.
4. Arrange panels in blend pattern.

5. Book match units, single-course height.

6. Book match units, both vertically and horizontally.

7. Book match units in each course. No matching is required between successive courses.
8. Slip match units, single-course height.

9. Slip match units, both vertically and horizontally.

10. Slip match units in each course. No matching is required between successive courses.

2.18 CARVING AND INSCRIPTIONS

A. Carve and cut **[inscriptions] [and] [decorative surfaces]**. Use skilled stone carvers experienced in the successful performance of work similar to that indicated.

B. Abrasively etch **[inscriptions] [and] [decorative surfaces]**.

C. Laser etch **[inscriptions] [and] [decorative surfaces]**.

2.19 MIXES

A. Spotting Plaster: Stiff mix of molding plaster and water.

B. Mortar, General: Comply with referenced standards and with manufacturers' written instructions for mix proportions, mixing equipment, mixer speeds, mixing containers, mixing time, and other procedures needed to produce mortar of uniform quality and with optimum performance characteristics.

1. Do not use admixtures, including pigments, air-entraining agents, accelerators, retarders, water-repellent agents, antifreeze compounds, or other admixtures unless otherwise indicated. Do not use calcium chloride.

2. Combine and thoroughly mix cementitious materials, water, and aggregates in a mechanical batch mixer unless otherwise indicated. Discard mortar when it has reached initial set.

C. Setting Mortar: Comply with ASTM C 270, Proportion Specification.

1. Type: **[Type N] [Type O]**.
2. Mix Proportions: 1 part portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.

D. Pointing Mortar: Comply with ASTM C 270, Proportion Specification, for mortar types indicated. Provide pointing mortar mixed to match Project Director/COR's sample and complying with the following:

1. Pigmented Pointing Mortar: Select and proportion pigments with other ingredients to produce color required. Do not exceed pigment-to-cement ratio of 1:10, by weight.
2. Packaged Portland Cement-Lime Mix Mortar: Use portland cement-lime mix of selected color.
3. Colored-Aggregate Pointing Mortar: Produce color required by combining colored aggregates with portland cement of selected color.
4. Type: **[Type N] [Type O]**.
5. Mix Proportions: 1 part portland cement and 2-1/2 to 4 parts lime with aggregate ratio of 2-1/4 to 3 times the volume of cement and lime.

E. Grout: Comply with mixing requirements of referenced ANSI standards and with manufacturer's written instructions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to receive stone paneling and conditions under which stone paneling will be installed, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of stone paneling.

B. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of stone paneling.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 SETTING STONE, GENERAL

A. Before setting stone, clean surfaces that are dirty or stained by removing soil, stains, and foreign materials. Clean stone by thoroughly scrubbing with fiber brushes and then drenching with clear water. Use only mild cleaning compounds that contain no caustic or harsh materials or abrasives.

B. Do necessary field cutting as stone is set. Use power saws with diamond blades to cut stone. Cut lines straight and true, with edges eased slightly to prevent snipping.

C. Contiguous Work: Provide reveals and openings as required to accommodate contiguous work.

D. Set stone to comply with requirements indicated. Install anchors, supports, fasteners, and other attachments indicated or necessary to secure stone in place. Shim and adjust anchors, supports, and accessories to set stone accurately in locations indicated, with edges and faces aligned according to established relationships and indicated tolerances.

E. Erect stone units level, plumb, and true with uniform joint widths. Use temporary shims to maintain joint width.

F. Provide expansion, control, and pressure-relieving joints of widths and at locations indicated.

1. Sealing of expansion and other joints is specified in Division 07 Section on "Joint Sealants."
2. Keep expansion joints free of plaster, mortar, grout, and other rigid materials.

3.3 CONSTRUCTION TOLERANCES

A. Variation from Plumb: For vertical lines and surfaces, do not exceed 3 mm in 2400 mm (1/8 inch in 96 inches), 6 mm (1/4 inch) maximum.

B. Variation from Level: For lintels, sills, chair rails, horizontal bands, horizontal grooves, and other conspicuous lines, do not exceed 3 mm in 3 m (1/8 inch in 10 feet), 6 mm in 6 m (1/4 inch in 20 feet), 10 mm (3/8 inch) maximum.

C. Variation of Linear Building Line: For position shown in plan and related portion of walls and partitions, do not exceed 3 mm in 3 m (1/8 inch in 10 feet), 6 mm in 6 m (1/4 inch in 20 feet), 10 mm (3/8 inch) maximum.

D. Variation in Cross-Sectional Dimensions: For thickness of walls from dimensions indicated, do not exceed plus or minus 3 mm (1/8 inch).

E. Variation in Joint Width: Do not vary from average joint width more than plus or minus 1.5 mm (1/16 inch) or one-fourth of nominal joint width, whichever is less.

F. Variation in Plane between Adjacent Stone Units (Lipping): Do not exceed 0.8-mm (1/32-inch) difference between planes of adjacent units.

3.4 INSTALLATION OF STONE FACING

A. Set units firmly against setting spots. Locate setting spots at anchors and spaced not more than 450 mm (18 inches) apart across back of unit, but provide no fewer than one setting spot per 0.18 sq. m (2 sq. ft.) unless otherwise indicated.

1. Moisture Exposure: Use portland cement mortar for setting spots where stone is applied to inside face of exterior walls and where indicated.

B. Set units with anchors securely attached to stone and to backup surfaces. Comply with anchoring recommendations in ASTM C 1242.

1. Provide compressible filler in ends of dowel holes and bottoms of kerfs to prevent end bearing of dowels and anchor tabs on stone. Fill remainder of anchor holes and kerfs with sealant for filling kerfs.
2. Set stone supported on clips or continuous angles on resilient setting shims. Use material of thickness required to maintain uniform joint widths and to prevent point loading of stone on anchors. Hold shims back from face of stone a distance at least equal to width of joint.

C. **[Minimum Anchors: Provide anchors at a maximum of 600 mm (24 inches) o.c. around perimeter of stone panels with a minimum of four anchors per panel.]**

D. **[Minimum Anchors: Provide a minimum of four anchors per panel up to 1.1 sq. m (12 sq. ft.) in face area, plus a minimum of two additional anchors for each additional 0.7 sq. m (8 sq. ft.).]**

E. **[Grout] [Point]** joints after setting stone.

F. Fill**[indicated]** joints with sealant after setting **[and grouting] [and pointing]** stone.

3.5 GROUTING JOINTS

A. Grout stone to comply with ANSI A108.10.

1. Use sanded grout mixture for joints wider than 3 mm (1/8 inch).
2. Use unsanded grout mixture for joints 3 mm (1/8 inch) and narrower.

B. Remove temporary shims before grouting.

C. Tool joints uniformly and smoothly with plastic tool.

3.6 POINTING JOINTS WITH MORTAR

A. Prepare stone-joint surfaces for pointing with mortar by removing temporary shims, dust, and mortar particles. Where setting spots occur at joints, rake out excess setting mortar or plaster to a depth of not less than 13 mm (1/2 inch).

B. Point stone joints by placing pointing mortar in layers of not more than 10 mm (3/8 inch). Compact each layer thoroughly and allow it to become thumbprint hard before applying next layer. Apply mortar first to areas where depths are greater than surrounding areas until a uniform depth is formed.

C. Tool joints when pointing mortar is thumbprint hard. Use a round jointer having a diameter 3 mm (1/8 inch) larger than width of joint.

3.7 JOINT-SEALANT INSTALLATION

A. Prepare joints and apply sealants of type and at locations indicated to comply with applicable requirements in Division 07 Section on "Joint Sealants." Remove temporary shims before applying sealants.

3.8 ADJUSTING AND CLEANING

A. In-Progress Cleaning: Clean stone paneling as work progresses. Remove adhesive, grout, mortar, and sealant smears immediately.

B. Remove and replace stone paneling of the following description:

1. Broken, chipped, stained, or otherwise damaged stone. Stone may be repaired if methods and results are approved by Project Director/COR.
2. Defective stone paneling.
3. Defective joints, including misaligned joints.
4. Stone paneling and joints not matching approved Samples and sample installations.
5. Stone paneling not complying with other requirements indicated.

C. Replace in a manner that results in stone paneling that matches approved Samples and sample installations, complies with other requirements, and shows no evidence of replacement.

D. Clean stone paneling no fewer than six days after completion of grouting and pointing, using clean water and soft rags or stiff-bristle fiber brushes. Do not use wire brushes, acid-type cleaning agents, cleaning compounds with caustic or harsh fillers, or other materials or methods that could damage stone.

E. Sealer Application: Apply stone sealer to comply with stone producer's and sealer manufacturer's written instructions and recommendations.

3.9 PROTECTION

A. Protect stone surfaces, edges, and corners from construction damage. Use securely fastened untreated wood, plywood, or heavy cardboard to prevent damage.

B. Before inspection for Substantial Completion, remove protective coverings and clean surfaces.

END OF SECTION 097513

SECTION 098433 - SOUND-ABSORBING WALL UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes shop-fabricated, acoustical panel units tested for acoustical performance, including the following:

1. Sound-absorbing wall panels.

B. Material Index / Material Codes Include:

1. APW-[##] <(SOUND-ABSORBING) ACOUSTICAL PANEL WALL UNITS.>
2. FBG-[##] <*FABRIC*.>

C. Related Requirements:

1. Division 09 Section on "Wall Coverings" for adhesively applied textile wall coverings**[and for coordinated requirements for fabric]**.

1.2 DEFINITIONS

A. NRC: Noise Reduction Coefficient.

B. SAA: Sound Absorption Average.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.
2. Product Certificates: For materials manufactured within 100 miles (160 km) of Project, indicating location of material manufacturer and point of extraction, harvest, or recovery for each raw material. Include distance to Project and cost for each raw material.
3. Chain-of-Custody Certificates: For certified wood products. Include statement of costs.
4. Chain-of-Custody Qualification Data: For manufacturer and vendor.

5. Product Data: For adhesives, indicating VOC content.
6. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.
7. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.
8. Laboratory Test Reports: For wall materials, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For unit assembly and installation.

1. Include plans, elevations, sections, and mounting devices and details.
2. Include details at panel head, base, joints, and corners; and details at ceiling, floor base, and wall intersections. Indicate panel edge profile and core materials.
3. Include details at cutouts and penetrations for other work.
4. Include direction of fabric weave and pattern matching.

D. Samples for Verification: For the following products:

1. Fabric: Full-width by approximately 900-mm- long Sample, but not smaller than required to show complete pattern repeat, from dye lot to be used for the Work, and with specified treatments applied. Mark top and face of fabric.
2. Panel Edge: 300-mm- long Sample(s) showing each edge profile, corner, and finish.
3. Core Material: 300-mm- square Sample at corner.
4. Mounting Devices: Full-size Samples.
5. Assembled Panels: Approximately 900 by 900 mm, including joints and mounting methods.

1.5 INFORMATIONAL SUBMITTALS

A. Coordination Drawings: Elevations and other details, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Electrical outlets, switches, and thermostats.
2. Items penetrating or covered by units including the following:

a. Lighting fixtures.
b. Air outlets and inlets.
c. Speakers.
d. Alarms.
e. Sprinklers.
f. Access panels.

3. Show operation of hinged and sliding components covered by or adjacent to units.

B. Product Certificates: For each type of unit.

C. Sample Warranty: For manufacturer's standard warranty.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For each type of unit to include in maintenance manuals. Include fabric manufacturers' written cleaning and stain-removal instructions.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials from same production run that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Fabric: For each fabric, color, and pattern installed, provide length equal to 10 percent of amount installed, but no fewer than 9 sq. m, full width of bolt.
2. Mounting Devices: Full-size units equal to 5 percent of amount installed, but no fewer than five devices, including unopened adhesives.

1.8 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Vendor Qualifications: A vendor that is certified for chain of custody by an FSC-accredited certification body.

C. Mockups: Build mockup to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for materials, fabrication, and installation.

1. Build mockup of typical wall area **[as shown on Drawings] [1200 mm wide by full height] <Insert dimensions>.[Include intersection of wall and ceiling, corners, and perimeters.]**
2. Approval of mockup does not constitute approval of deviations from the Contract Documents contained in mockup unless Project Director/COR, based on input from the A/E of Record, specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

1.9 DELIVERY, STORAGE, AND HANDLING

A. Comply with fabric and unit manufacturers' written instructions for minimum and maximum temperature and humidity requirements for shipment, storage, and handling.

B. Deliver materials and units in unopened bundles and store in a temperature-controlled dry place with adequate air circulation.

1.10 FIELD CONDITIONS

A. Environmental Limitations: Do not install units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work at and above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Lighting: Do not install units until **[a permanent level of lighting] [a lighting level of not less than 538 lx]** <**Insert requirement**> is provided on surfaces to receive the units.

C. Air-Quality Limitations: Protect units from exposure to airborne odors, such as tobacco smoke, and install units under conditions free from odor contamination of ambient air.

D. Field Measurements: Verify unit locations and actual dimensions of openings and penetrations by field measurements before fabrication, and indicate them on Shop Drawings.

1.11 WARRANTY

A. Provide Manufacturer’s standard warranty.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Source Limitations: Obtain wall units specified in this Section from single source from single manufacturer.

B. Wall materials shall comply with the requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

C. Fire-Test-Response Characteristics: Units shall comply with "Surface-Burning Characteristics" or "Fire Growth Contribution" Subparagraph below, or both, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction:

1. Surface-Burning Characteristics: Comply with ASTM E 84 or UL 723; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

a. Flame-Spread Index: 25 or less.
b. Smoke-Developed Index: 450 or less.

2. Fire Growth Contribution: Comply with acceptance criteria of local code and authorities having jurisdiction when tested according to NFPA 265 Method B Protocol or NFPA 286.

2.2 SOUND-ABSORBING WALL UNITS

A. Sound-Absorbing Wall Panel **[APW-[##]]**: Manufacturer's standard panel construction consisting of facing material **[laminated to front face, edges, and back edge border of core] [stretched over front face of edge-framed core and bonded or attached to edges and back of frame]**.

1. Panel Shape: **[Flat] [As indicated on Drawings] <Insert shape>**.

2. Mounting: Edge mounted with splines secured to substrate.

a. Finish Color at Exposed Edges: **[White] [Black] [Match color of facing material] [Match Project Director/COR's sample] [As selected by Project Director/COR based on input from the A/E of Record from manufacturer's full range] <Insert requirement>**.

3. Mounting: Back mounted with manufacturer's standard **[adhesive] [adhesive tape strips] [hook-and-loop strips] [impaling clips] [magnetic devices] [metal clips or bar hangers]**, secured to substrate.

4. Core: **[Manufacturer's standard] [Glass-fiber board] [Mineral-fiber board] [Cementitious-fiber board] <Insert requirement>.[Provide wood or plywood nailing strips in core where indicated.]**

a. Core-Face Layer: Manufacturer's standard **[tackable, impact-resistant, high-density board] [impact-resistant, acoustically transparent, copolymer sheet] <Insert requirement>**.

5. Edge Construction: Manufacturer's standard **[chemically hardened core with no frame] [extruded-aluminum or zinc-coated, rolled-steel frame] [extruded PVC frame] [wood**

frame, rabbeted, and splined with glued joints and machined corners] <Insert requirement>.

6. Edge Profile: **[Long edges kerfed and rabbeted to receive splines] [Chamfered (beveled)] [Eased (small radius)] [Mitered (beveled to a point)] [Radiused (bullnosed)] [Square] [Custom profile as indicated on Drawings] <Insert profile>**.
7. Corner Detail in Elevation: **[Square] [Round, radius as indicated on Drawings] [Custom as indicated on Drawings] <Insert description>** with continuous edge profile indicated.
8. Reveals between Panels: **[Recessed] [Flush] [Projecting] reveals [as selected by Project Director/COR from manufacturer's full range] [as indicated on Drawings] <Insert requirement>**.
9. Facing Material: **[Project Director/COR-furnished material] [As indicated on Drawings] <Insert drawing designation>**.

10. Acoustical Performance: Sound absorption **[NRC] [or] [SAA] of [0.50 to 0.90] [0.60 to 0.70] [0.65 to 0.75] [not less than 0.65] <Insert range or single value>** according to ASTM C 423 for **[Type A] <Insert type>** mounting according to ASTM E 795.
11. Nominal Thickness: **[19mm] [As indicated on Drawings] <Insert dimension>**.
12. Panel Width: **[610 mm] [762 mm] [1220 mm] [As indicated on Drawings] <Insert dimension>**.
13. Panel Height: **[1829 mm] [2438 mm] [2743 mm] [3048 mm] [As indicated on Drawings] <Insert dimension>**.

2.3 MATERIALS

A. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

B. Recycled Content: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **<Insert value>** percent.

C. Regional Materials: Products shall be manufactured within 100 miles (160 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 100 miles (160 km) of Project site.

D. Certified Wood: Wood products shall be certified as "FSC Pure"**[or "FSC Mixed Credit"]** according to FSC STD-01-001 and FSC STD-40-004.

E. Core Materials:**[Manufacturer's standard.]**

1. Glass-Fiber Board: ASTM C 612; of type standard with manufacturer; nominal density of **[96 to 112 kg/cu. m]** <**Insert value**>, unfaced, and dimensionally stable, molded rigid board; and with maximum flame-spread and smoke-developed indexes of 25 and 50, respectively.
2. Mineral-Fiber Board: Maximum flame-spread and smoke-developed indexes of 25 and 10, respectively; minimum density of **[208 kg/cu. m] [320 kg/cu. m]**, and with perforated surface.

3. Tackable, Impact-Resistant, High-Density Board for Face Layer: 3.2-mm- thick layer of compressed molded glass-fiber board with a nominal density of 256 to 288 kg/cu. m laminated to face of core.

4. Impact-Resistant, Acoustically Transparent, Copolymer Sheet for Face Layer: 1.6- to 3.2-mm- thick layer of perforated, noncombustible, copolymer sheet laminated to face of core.

5. Wood and Plywood: Manufacturer's standard plywood or clear, vertical grain, straight, kiln-dried hardwood.

   a. Fire-retardant treated by pressure process with a flame-spread index of 25 or less when tested according to ASTM E 84 or UL 723, and with no evidence of significant progressive combustion when the test is extended an additional 20 minutes, and with the flame front not extending more than 3.2 m beyond the centerline of the burners at any time during the test.

      1) Treated material shall have a moisture content of 28 percent or less when tested according to ASTM D 3201/D 3201M at 92 percent relative humidity.
      2) Kiln-dry material after treatment to 19 percent or less for lumber and 15 percent or less for plywood.

F. Facing Material **[FBG-[##]]**: Fabric from same dye lot; color and pattern **[as indicated by manufacturer's designations] [matching Project Director/COR's samples] [as selected by Project Director/COR based on input from the A/E of Record from manufacturer's full range] [as indicated on Drawings]** <**Insert requirement**>.

1. Manufacturer: <**Insert manufacturer's name**>.
2. Product Line/Pattern: <**Insert product name or designation**>.
3. Pattern Repeat: <**Insert requirement**>.
4. Style Number: <**Insert number**>.
5. Color: <**Insert name or number, or both**>.
6. Fiber Content: **[100]** <**Insert number**> percent **[woven polyester] [nonwoven polyester] [polyolefin] [acoustically transparent vinyl]** <**Insert fiber requirement**>.
7. Width: **[1371 mm] [1676 mm]** <**Insert dimension**>.
8. Source: <**Insert fabric-vendor's name**>.

9. Applied Treatments: **[Stain resistance] [and] [flame retardant]** <**Insert treatment**>.

G. Mounting Devices: Concealed on back of unit, recommended by manufacturer to support weight of unit, and as follows:

1. Splines: Manufacturer's standard concealed metal or plastic splines that engage the kerfed edges of the unit, with other moldings and trim for interior corners, exterior corners, and exposed edges, with factory-applied finish on exposed items.

2. Adhesives shall have a VOC content of **[70]** <**Insert value**> g/L or less.

3. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."
4. Adhesive Tape Strips: **[Manufacturer's standard 1.6-mm- thick, double-sided foam tape]** <**Insert requirement**>.
5. Hook-and-Loop Strips: **[Manufacturer's standard]** <Insert requirement>.
6. Impaling Clips: **[Manufacturer's standard]** <Insert requirement>.
7. Magnetic Strip or Devices: **[Manufacturer's standard]** <Insert requirement>.
8. Metal Clips or Bar Hangers: Manufacturer's standard two-part metal "Z" clips, with one part of each clip mechanically attached to back of unit and the other part to substrate, designed to permit unit removal.

2.4 FABRICATION

A. Standard Construction: Use manufacturer's standard construction unless otherwise indicated; with facing material applied to face, edges, and back border of dimensionally stable core; and with rigid edges to reinforce panel perimeter against warpage and damage.

B. Edge Hardening: For **[glass-fiber board] [and] [mineral-fiber board]** cores, chemically harden core edges and areas of core where mounting devices are attached.

C. Core-Face Layer: Evenly stretched over core face and edges and securely attached to core; free from puckers, ripples, wrinkles, or sags.

D. Facing Material: Apply fabric facing fully covering visible surfaces of unit; with material stretched straight, on the grain, tight, square, and free from puckers, ripples, wrinkles, sags, blisters, seams, adhesive, or other visible distortions or foreign matter.

1. Square Corners: Tailor corners.**[Heat-seal vinyl fabric seams at corners.]**
2. Radius and Other Nonsquare Corners: Attach facing material so there are no seams or gathering of material.
3. Fabrics with Directional or Repeating Patterns or Directional Weave: Mark fabric top and attach fabric in same direction so pattern or weave matches in adjacent units.

E. Dimensional Tolerances of Finished Units: Plus or minus 1.6 mm for the following:

1. Thickness.
2. Edge straightness.
3. Overall length and width.
4. Squareness from corner to corner.
5. Chords, radii, and diameters.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine fabric, fabricated units, substrates, areas, and conditions for compliance with requirements, installation tolerances, and other conditions affecting unit performance.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install units in locations indicated. Unless otherwise indicated, install units with vertical surfaces and edges plumb, top edges level and in alignment with other units, faces flush, and scribed to fit adjoining work accurately at borders and at penetrations.

B. Comply with manufacturer's written instructions for installation of units using type of mounting devices indicated. Mount units securely to supporting substrate.

C. Align fabric pattern and grain **[with adjacent units] [as indicated on Drawings]**.

3.3 INSTALLATION TOLERANCES

A. Variation from Plumb and Level: Plus or minus **[1.6 mm]** <**Insert dimension**> in 1200 mm, noncumulative.

B. Variation of Joint Width: Not more than **[1.6-mm] [0.79-mm]** <**Insert dimension**> variation from **[hairline] [reveal line]** in 1200 mm, noncumulative.

3.4 CLEANING

A. Clip loose threads; remove pills and extraneous materials.

B. Clean panels on completion of installation to remove dust and other foreign materials according to manufacturer's written instructions.

END OF SECTION 098433

SECTION 099601 - HIGH-PERFORMANCE COATINGS FOR GENERAL USAGE

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes surface preparation and field application of high-performance coating systems to items and surfaces scheduled.

B. Related Requirements:

1. Other Division 09 Section(s) for general interior and exterior field painting.
2. Division 09 Section on “High-Performance FE/BR Coatings.”

1.2 DEFINITIONS

A. MPI Gloss Level according to ASTM D523

1. Level 5: 35 to 70 units at 60 degree meter; “semigloss.”
2. Level 6: 70 to 85 units at 60 degree meter; “gloss.”
3. Level 7: More than 85 units at 60 degree meter; “high-gloss.”

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product indicated Include preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
2. Indicate VOC content.

B. Samples for Initial Selection: For each type of topcoat product indicated.

C. Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated.

1. Submit Samples on rigid backing, 200 mm square.
2. Step coats on Samples to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.

D. Product List: For each product indicated. Cross-reference products to coating system and locations of application areas. Use same designations indicated on Drawings and in schedules.

E. LEED Submittals: For Credit EQ 4.2, manufacturers' product data for coatings, including printed statement of VOC content and chemical components.

1.4 QUALITY ASSURANCE

A. Applicator Qualifications: Engage an experienced applicator who has completed high-performance coating system applications similar in material and extent to those indicated for Project and whose work has a record of successful in-service performance.

B. Source Limitations: Obtain primers and undercoat materials for each coating system from the same manufacturer as the finish coats.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label with the following information:

1. Name or title of material.
2. Product description (generic classification or binder type).
3. Manufacturer's stock number and date of manufacture.
4. Contents by volume, for pigment and vehicle constituents.
5. Thinning instructions.
6. Application instructions.
7. Color name and number.
8. Handling instructions and precautions.

B. Storage:

1. Store materials not in use in tightly covered containers.
2. Store materials in a well-ventilated area at a minimum ambient temperature of 7 deg C. {max temp & humidity?}
3. Keep storage area neat and orderly. Take necessary measures to ensure that workers and storage areas are protected from fire and health hazards resulting from handling and mixing coatings.
4. Maintain unused and used containers in clean condition, free of foreign materials and residue.
5. Remove rags and waste from storage areas daily.

C. Handling:

1. Store materials when not in use and return them to storage areas when project conditions are outside of the permissible temperature range for application.
2. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling and applying coatings.

1.6 FIELD CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between temperatures recommended by coating manufacturers, but in no case lower than 10 deg C or higher than 35 deg C.

B. Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 3 deg C above the dew point; or to damp or wet surfaces.

1. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before proceeding with or continuing coating operation.
2. Work may continue during inclement weather only if areas and surfaces to be coated are enclosed and temperature within the area can be maintained within limits specified by manufacturer during application and drying periods, and only if work in those conditions is in accordance with manufacturer’s recommendations.

1.7 MAINTENANCE MATERIALS

A. Furnish extra materials, from the same product run, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Coatings: 5 percent, but not less than 4 L (1 gal.) of each material and color applied.

PART 2 - PRODUCTS

2.1 HIGH-PERFORMANCE COATINGS, GENERAL

A. MPI Standards: Products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

B. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
3. Products shall be of same manufacturer for each coat in a coating system.

C. <Insert sustainable design text for coatings.> < VOC Classification: Provide high-performance coating materials, including primers, undercoats, and finish-coat materials, that have a VOC classification of 450 g/L or less.>

D. Colors: **[As selected by Architect from manufacturer's full range] [Match Architect's samples] [As indicated in color schedule] <Insert requirements>**.

2.2 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: Government reserves the right to invoke the following procedure:

1. Government may engage services of qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency testing will be to verify compliance with product requirements

PART 3 - EXECUTION

3.1 EXAMINATION

A. With Applicator present, examine substrates and conditions under which high-performance coatings will be applied, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work.

B. [Maximum Moisture Content of Substrates: When measured with an electronic moisture meter as follows:

1. Concrete: 12 percent.
2. Fiber-Cement Board: 12 percent.
3. Masonry (Clay and CMUs): 12 percent.
4. Wood: 15 percent.
5. Gypsum Board: 12 percent.
6. Plaster: 12 percent.

C. Gypsum Board Substrates: Verify that finishing compound is sanded smooth.

D. Plaster Substrates: Verify that plaster is fully cured.]

E. [Verify suitability of substrates (including surface conditions and compatibility) with existing finishes.]

F. Coordination of Work: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of specified finish materials to ensure compatible primers.

1. If a potential incompatibility of primers applied by others exists, obtain the following from the primer Applicator before proceeding:

a. Confirmation of primer's suitability for expected service conditions.
b. Confirmation of primer's ability to be top coated with materials specified.

2. Notify Project Director/COR about anticipated problems before using the coatings specified over substrates primed by others.

G. Proceed with coating application only after unsatisfactory conditions have been corrected.

1. Application of coating indicates acceptance of surfaces and conditions.

3.2 PREPARATION

A. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
3. Use only the type of thinners approved by manufacturer and only within recommended limits.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. Comply with manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual" applicable to substrates and coating systems indicated.

D. Remove hardware, covers, plates, and similar items already in place that are removable and are not to be painted. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations, use workers skilled in the trades involved to reinstall items that were removed. Remove surface-applied protection if any.

E. Clean substrates of substances that could impair bond of coatings, including dust, dirt, oil, grease, and incompatible paints and encapsulants.

1. Remove incompatible primers and reprime substrate with compatible primers, or apply tie coat as required to produce coating systems indicated.

F. Schedule cleaning and coating application so dust and other contaminates from cleaning process will not fall on wet, newly coated surfaces.

G. Concrete Substrates: Remove release agents, curing compounds, efflorescence, and chalk. Do not coat surfaces if moisture content or alkalinity of surfaces to be coated exceeds that permitted in manufacturer's written instructions.

1. Clean surfaces with pressurized water. Use pressure range of 10,000 to 25,000 kPa (1500 to 4000 psi) at 150 to 300 mm (.
2. Abrasive blast clean surfaces to comply with SSPC-SP 7/NACE No. 4.

H. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer**.** but not less than the following:

1. [SSPC-SP 11.]

2. [SSPC-SP 6/NACE No. 3.]

3. [SSPC-SP 10/NACE No. 2.]

4. [SSPC-SP 5/NACE No. 1.]

I. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.

J. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings.

K. Aluminum Substrates: Remove loose surface oxidation.

L. [Masonry Substrates: Remove efflorescence and chalk. Do not coat surfaces if moisture content, alkalinity of surfaces, or alkalinity of mortar joints exceeds that permitted in manufacturer's written instructions.

1. Clean surfaces with pressurized water. Use pressure range of (700 to 4000 kPa) (100 to 600 psi) at 150 to 300 mm (6 to 12 inches).]

M. [Wood Substrates:

1. Scrape and clean knots. Before applying primer, apply coat of knot sealer that is recommended in writing by topcoat manufacturer for coating system indicated.
2. Sand surfaces that will be exposed to view and dust off.
3. Prime edges, ends, faces, undersides, and backsides of wood.
4. After priming, fill holes and imperfections in the finish surfaces with filler that is recommended in writing by topcoat manufacturer for coating system indicated. Sand smooth when dried.]

3.3 APPLICATION

A. Apply high-performance coatings according to manufacturer's written instructions and recommendations in "MPI Architectural Painting Specification Manual."

1. Use applicators and techniques best suited for the material being applied.
2. Coat surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.

3. Coat back sides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
5. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.

B. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance. Give special attention to edges, corners, crevices, welds, exposed fasteners, and similar surfaces to ensure that they receive a dry film thickness equivalent to that of flat surfaces.

C. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

D. Scheduling Coating: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for coating as soon as practicable after preparation and before subsequent surface deterioration.

1. The number of coats and film thickness required is the same regardless of application method.

a. Omit primer on metal surfaces that have been shop primed and touchup painted.
b. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer.
c. Where manufacturer's written instructions require sanding, sand between applications to produce a smooth, even surface.
d. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until coating has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and application of another coat does not cause undercoat to lift or lose adhesion.

E. Application Procedures: Apply coatings by brush, roller, spray, or other applicators according to manufacturer's written instructions.

1. Brush Application: Use brushes best suited for material applied and of appropriate size for the surface or item being coated.

a. Apply primers and first coats by brush unless manufacturer's written instructions permit using roller or mechanical applicators.
b. Brush out and work brush coats into surfaces in an even film.
c. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw glass lines and color breaks.

2. Rollers: Use rollers of carpet, velvet back, or high-pile sheep's wool as recommended by manufacturer for the material and texture required.

3. Spray Equipment: Use mechanical methods to apply coating if permitted by manufacturer's written instructions and governing regulations, to include application in occupied buildings.

   a. Use spray equipment with orifice size recommended by manufacturer for material and texture required.
   b. Apply each coat to provide the equivalent hiding of brush-applied coats.
   c. Do not double back with spray equipment building-up film thickness of two coats in one pass, unless recommended by manufacturer.

F. Minimum Coating Thickness: Apply each material no thinner than manufacturer's recommended spreading rate. Provide total dry film thickness of the entire system as recommended by manufacturer.

G. Block Fillers: Apply block fillers to concrete masonry block at a rate to ensure complete coverage with pores filled.

H. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by manufacturer, to material required to be coated or finished that has not been prime coated by others.

   1. Recoat primed and sealed substrates if there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects caused by insufficient sealing.

I. Completed Work: Match approved Samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

3.4 FIELD QUALITY CONTROL

A. Material Testing: Government reserves the right to engage the services of a qualified testing agency to sample coating material being used. When this right is invokes, samples of material delivered to Project site shall be taken, identified, sealed, and certified in presence of Project Director/COR.

   1. Testing agency will perform appropriate tests for the following characteristics as required by Government:

      a. Quantitative materials analysis.
      b. Absorption.
      c. Accelerated weathering.
      d. Accelerated yellowness.
      e. Color retention.
      f. Alkali and mildew resistance.
      g. Abrasion resistance.
      h. Apparent reflectivity.
      i. Washability.
      j. Dry opacity.

k. Recoating.
l. Skinning.

B. Dry Film Thickness Testing: Government reserves the right to engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.

1. Contractor shall touch up and restore coated surfaces damaged by testing.

C. Corrective Actions:

1. Failure of Materials Compliance:

a. Government may direct Contractor to stop applying coatings if test results show materials being used do not comply with specified requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. If necessary, Contractor may be required to remove rejected materials from previously coated surfaces if, on recoating with specified materials, the two coatings are not compatible.

2. Failure of Dry Film Thickness Compliance:

a. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

3.5 CLEANING AND PROTECTION

A. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

B. After completing coating application, clean spattered surfaces. Remove spattered coatings by washing, scraping, or other methods. Do not scratch or damage adjacent finished surfaces.

C. Protect work of other trades, whether being coated or not, against damage from coating operation. Correct damage by cleaning, repairing, replacing, and recoating, as approved by Project Director/COR, and leave in an undamaged condition.

1. Provide "Wet Paint" signs to protect newly coated finishes. After completing coating operations, remove temporary protective wrappings provided by others to protect their work.

D. Dispose of used containers in accordance with requirements of local jurisdiction.

E. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces.

3.6 EXTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System **[MPI EXT 3.1D]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy-Modified Latex System **[MPI EXT 3.1E]**:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

3. Pigmented Polyurethane over Epoxy System [**MPI EXT 3.1M**]:

a. Prime Coat: Epoxy, matching intermediate coat.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

B. Concrete Substrates, Horizontal Surfaces:

1. Epoxy Non-Slip Deck Coating System **[MPI EXT 3.2C]**:

a. Prime Coat: As recommended in writing by topcoat manufacturer.
b. Intermediate Coat: As recommended in writing by topcoat manufacturer.
c. Topcoat: Epoxy deck coating (slip resistant)**[, MPI #82]**.

C. Cement Board Substrates:

1. Epoxy System **[MPI EXT 3.3E]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy-Modified Latex System **[MPI EXT 3.3D]**

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

3. Pigmented Polyurethane over Epoxy System **[MPI EXT 3.3F]**:

   a. Prime Coat: Epoxy, gloss**[, MPI #77]**.
   b. Intermediate Coat: Epoxy, matching prime coat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

D. Clay Masonry Substrates:

1. Epoxy System **[MPI EXT 4.1D]**:

   a. Prime Coat: Epoxy, matching topcoat.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane over Epoxy System **[MPI EXT 4.1J]**:

   a. Prime Coat: Epoxy, matching intermediate coat.
   b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

E. CMU Substrates:

1. Epoxy System **[MPI EXT 4.2E]**:

   a. Block Filler: Block filler, epoxy**[, MPI #116]**.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane over High-Build Epoxy System [**MPI EXT 4.2G**]:

   a. Block Filler: Block filler, epoxy**[, MPI #116]**.
   b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

F. Steel Substrates:

1. Epoxy System **[MPI EXT 5.1F]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy over Self-Priming Epoxy System **[MPI EXT 5.1S]**:

   a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
   b. Intermediate Coat: Epoxy, matching topcoat.

c. Topcoat: Epoxy, gloss**[, MPI #77]**.

3. Epoxy Deck Coating over Epoxy Primer and High-Build Epoxy System **[MPI EXT 5.1V]**:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
c. Topcoat: Epoxy deck coating**[, MPI #82]**.

4. Epoxy Deck Coating over Self-Priming Epoxy System **[MPI EXT 5.1X]**:

a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
b. Topcoat: Epoxy deck coating**[, MPI #82]**.

5. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.1H]**:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

6. Pigmented Polyurethane over High-Build Epoxy System **[MPI EXT 5.1J]**:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

7. Pigmented Polyurethane over Self-Priming Epoxy System **[MPI EXT 5.1T]**:

a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

8. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System **[MPI EXT 5.1P]**:

a. Prime Coat: Primer, zinc rich, epoxy**[, MPI #20]**.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

9. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and High-Build Epoxy System **[MPI EXT 5.1G]**:

a. Prime Coat: Primer, zinc rich, epoxy**[, MPI #20]**.
b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

10. Pigmented Polyurethane over Inorganic Zinc-Rich Primer and High-Build Epoxy System **[MPI EXT 5.1L]**:

    a. Prime Coat: Primer, zinc rich, inorganic**[, MPI #19]**.
    b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
    c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

G. Galvanized-Metal Substrates:

1. Epoxy System **[MPI EXT 5.3C]**:

    a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
    b. Intermediate Coat: Epoxy, matching topcoat.
    c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane over Epoxy Primer System **[MPI EXT 5.3L]**:

    a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
    b. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
    c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

H. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Epoxy System **[MPI EXT 5.4E]**:

    a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
    b. Intermediate Coat: Epoxy, matching topcoat.
    c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.4B]**:

    a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
    b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
    c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

I. Copper Substrates:

1. Epoxy System **[MPI EXT 5.5E]**:

    a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
    b. Intermediate Coat: Epoxy, matching topcoat.
    c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.5B]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

J. Stainless-Steel Substrates:

1. Epoxy System **[MPI EXT 5.6D]**:

a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

K. Wood Substrates: Glued-laminated construction.

1. Pigmented Polyurethane System **[MPI EXT 6.1J]**:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

L. Wood Substrates: Exposed framing.

1. Pigmented Polyurethane System **[MPI EXT 6.2J]**:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

M. Wood Substrates: **[Wood trim] [Architectural woodwork] [Doors] [Windows] [Wood board siding] [and] [wood fences]**

1. Pigmented Polyurethane System **[MPI EXT 6.3H]**:

a. Prime Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

N. Fiberglass Substrates:

1. Epoxy System **[MPI EXT 6.7F]**:

a. Prime Coat: Epoxy, matching topcoat.

b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**

2. Epoxy-Modified Latex System **[MPI EXT 6.7E]**

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

3. Pigmented Polyurethane over Epoxy System **[MPI EXT 6.7D]**:

a. Prime Coat: Epoxy, matching intermediate coat.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

O. Portland Cement Plaster Substrates:

1. Epoxy System **[MPI EXT 9.1D]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

3.7 INTERIOR HIGH-PERFORMANCE COATING SCHEDULE

A. Concrete Substrates, Vertical Surfaces:

1. Epoxy System **[MPI INT 3.1F]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy, High-Build System **[MPI INT 3.1P]**:

a. Prime Coat: High-build epoxy, matching topcoat (reduced).
b. Intermediate Coat: High-build epoxy, matching topcoat.

c. [Topcoat: High-build epoxy, low gloss[, MPI #108].]
d. [Topcoat: High-build epoxy, gloss[, MPI #98].]

3. Epoxy-Modified Latex System **[MPI INT 3.1G]**:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

B. Concrete Substrates, Horizontal Surfaces.

1. Epoxy System **[MPI INT 3.2C]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.
d. Additive: Non-skid (Facility Management Shop locations only).

2. Epoxy, High-Build System **[MPI INT 3.2L]**:

a. Prime Coat: High-build epoxy, matching topcoat (reduced).
b. Intermediate Coat: High-build epoxy, matching topcoat.

c. [Topcoat: High-build epoxy, low gloss[, MPI #108].]
d. [Topcoat: High-build epoxy, gloss[, MPI #98].]

3. Pigmented Polyurethane System **[MPI INT 3.2D]**:

a. Prime Coat: Epoxy, gloss**[, MPI #77]**.
b. Intermediate Coat: Polyurethane, two component, pigmented, gloss, matching topcoat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

4. Clear (Two-Component) Polyurethane System **[MPI INT 3.2K]**:

a. Prime Coat: Two-component polyurethane matching topcoat.
b. Intermediate Coat: Two-component polyurethane, matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7)**[, MPI #78]**.

C. Cement Board Substrates:

1. Epoxy System **[MPI INT 3.3E]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy-Modified Latex System **[MPI INT 3.3D]**:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]

d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

D. Clay Masonry Substrates:

1. Epoxy System **[MPI INT 4.1F]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy-Modified Latex System **[MPI INT 4.1G]**:

a. Prime Coat: Epoxy-modified latex, matching topcoat.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

3. Clear (Two-Component) Polyurethane System [**MPI INT 4.1K**]:

a. Prime Coat: Two-component polyurethane, matching topcoat.
b. Intermediate Coat: Two-component polyurethane, matching topcoat.
c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7)**[, MPI #78]**.

E. CMU Substrates:

1. Epoxy System **[MPI INT 4.2F] [MPI INT 4.2G]**:

a. [Block Filler: Block filler, latex, interior/exterior[, MPI #4].]
b. [Block Filler: Block filler, epoxy[, MPI #116].]
c. Intermediate Coat: Epoxy, matching topcoat.
d. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy, High-Build System **[MPI INT 4.2R]**:

a. Prime Coat: Epoxy block filler**[, MPI #116]**.
b. Intermediate Coat: High-build epoxy, matching topcoat.

c. [Topcoat: High-build epoxy, low gloss[, MPI #108].]
d. [Topcoat: High-build epoxy, gloss[, MPI #98].]

3. Epoxy-Modified Latex System **[MPI INT 4.2J]**:

a. Block Filler: Block filler, latex, interior/exterior**[, MPI #4]**.
b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

4. Clear (Two-Component) Polyurethane System **[MPI INT 4.2Q]**:

   a. Prime Coat: Two-component polyurethane, matching topcoat.
   b. Intermediate Coat: Two-component polyurethane, matching topcoat.
   c. Topcoat: Varnish, aliphatic polyurethane, two component (MPI Gloss Level 6 or MPI Gloss Level 7)**[, MPI #78]**.

F. Steel Substrates:

1. Epoxy System **[MPI INT 5.1L]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. High-Build Epoxy over Epoxy Zinc-Rich Primer System **[MPI INT 5.1P]**:

   a. Prime Coat: Primer, zinc-rich, epoxy**[, MPI #20]**.
   b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.

   c. [Topcoat: Epoxy, gloss[, MPI #77].]
   d. [Topcoat: Epoxy, high-build, low gloss[, MPI #108].]

3. Epoxy over Self-Priming Epoxy System **[MPI INT 5.1V]**:

   a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

4. Epoxy, High-Build System **[MPI INT 5.1Y]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: High-build epoxy, matching topcoat.

   c. [Topcoat: High-build epoxy, low gloss[, MPI #108].]
   d. [Topcoat: High-build epoxy, gloss[, MPI #98].]

5. Epoxy Deck Coating System **[MPI INT 5.1LL]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
   c. Topcoat: Epoxy deck coating (slip resistant)**[, MPI #82]**.

6. Epoxy-Modified Latex System **[MPI INT 5.1K]**:

   a. Prime Coat: Primer, rust inhibitive, water based**[, MPI #107]**.
   b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.

   c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]

d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

7. Pigmented Polyurethane over Epoxy Primer System **[MPI INT 5.1F]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

8. Pigmented Polyurethane over High-Build Epoxy System **[MPI INT 5.1G]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Epoxy, high build**[, MPI #108]**.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

9. Pigmented Polyurethane over Self-Priming Epoxy System **[MPI INT 5.1U]**:

   a. Prime Coat: Epoxy, high build, self-priming **[, MPI #120]**.
   b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

10. Pigmented Polyurethane over Inorganic Zinc and Epoxy System **[MPI INT 5.1H]**:

    a. Prime Coat: Primer, zinc rich, inorganic**[, MPI #19]**.
    b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
    c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

11. Pigmented Polyurethane over Epoxy Zinc-Rich and Epoxy System **[MPI INT 5.1J]**:

    a. Prime Coat: Primer, zinc rich, epoxy**[, MPI #20]**.
    b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
    c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

G. Galvanized-Metal Substrates:

1. Epoxy over Epoxy Primer System **[MPI INT 5.3D]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

H. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Epoxy System **[MPI INT 5.4B]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane System **[MPI INT 5.4C]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two-component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

I. Copper Substrates:

1. Epoxy System **[MPI INT 5.5B]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane System **[MPI INT 5.5C]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

J. Stainless-Steel Substrates:

1. Epoxy System **[MPI INT 5.6C]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane System **[MPI INT 5.6D]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

K. Wood Substrates: Glued-laminated construction.

1. Epoxy System **[MPI INT 6.1L]**:

a. Prime Coat: Epoxy, matching topcoat.
b. Intermediate Coat: Epoxy, matching topcoat.
c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane System **[MPI INT 6.1E]**:

   a. Prime Coat: Polyurethane, two component, pigmented, matching topcoat.
   b. Intermediate Coat: Polyurethane, two component, pigmented, matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

L. Wood Substrates: **[Wood trim] [Architectural woodwork] [Doors] [Windows] [and] [wood board paneling]**.

1. Epoxy System **[MPI INT 6.3L]**:

   a. Prime Coat: Epoxy, matching topcoat.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

M. Fiberglass Substrates:

1. Epoxy System **[MPI INT 6.7D]**:

   a. Prime Coat: Epoxy, matching topcoat.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Pigmented Polyurethane System **[MPI INT 6.7E]**:

   a. Prime Coat: Epoxy, gloss**[, MPI #77]**.
   b. Intermediate Coat: Epoxy, matching prime coat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

3. Epoxy-Modified Latex System **[MPI INT 6.7F]**:

   a. Block Filler: Block filler, latex, interior/exterior**[, MPI #4]**.
   b. Intermediate Coat: Epoxy-modified latex, interior, matching topcoat.

   c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
   d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

N. **[Gypsum Board] [Plaster]** Substrates:

1. Epoxy System **[MPI INT 9.2E]**:

   a. Prime Coat: Primer sealer, latex, interior**[, MPI #50]**.
   b. Intermediate Coat: Epoxy, matching topcoat.
   c. Topcoat: Epoxy, gloss**[, MPI #77]**.

2. Epoxy, High-Build System **[MPI INT 9.2N]**:

a. Prime Coat: Primer sealer, latex, interior**[, MPI #50]**.
b. Intermediate Coat: High-build epoxy, matching topcoat.

c. [Topcoat: High-build epoxy, low gloss[, MPI #108].]
d. [Topcoat: High-build epoxy, gloss[, MPI #98].]

3. Epoxy-Modified Latex System **[MPI INT 9.2F]**:

a. Prime Coat: Primer sealer, latex, interior**[, MPI #50]**.
b. Intermediate Coat: Epoxy-modified latex, matching topcoat.

c. [Topcoat: Epoxy-modified latex, semi-gloss (MPI Gloss Level 5)[, MPI #215].]
d. [Topcoat: Epoxy-modified latex, gloss (MPI Gloss Level 6)[, MPI #115].]

END OF SECTION 099601

SECTION 099602 – HIGH-PERFORMANCE FE/BR COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes surface preparation and the application of high-performance coating systems on assemblies identified below under "Related Requirements."

1. Unless otherwise noted for specific coating applications, coatings shall be applied in an Applicator's shop apart from field touch-up.

B. Related Requirements:

1. Section 077234, "Forced Entry (FE) / Ballistic Resistant (BR) Roof Hatches."
2. **[Various Division 08 Sections address the requirements for anodized coatings.]**
3. Section 083454, "Forced Entry (FE) / Ballistic Resistant (BR) Door Assemblies."
4. Section 083322, "Overhead Forced-Entry (FE) Coiling Doors."
5. **[Section 084414, "Structurally-Framed Security Curtain Wall System."]**
6. Section 085651, "Aluminum Security Windows."
7. Section 085652, "Aluminum Security Teller Windows."
8. Section 089117, "Security Louvers."
9. Section 099601, "High-Performance Coatings for General Usage" for coatings not associated with FE/BR assemblies.

1.2 DEFINITIONS

A. High-Performance Coating: In this Section the general use of "high-performance" is only intended to distinguish from standard painting systems. Some coatings in this Section may be identified by industry standards as having "Superior Performance."

B. MPI Gloss Level according to ASTM D523 as applicable; see Part 2 Article on EXTERIOR FE/BR COATING SCHEDULE.

1. Gloss Level 1 (Flat): Not more than 5 units at 60 degrees and 10 units at 85 degrees, in accordance with ASTM D523.
2. Gloss Level 2 (Low Sheen): Not more than 10 units at 60 degrees and 10 to 35 units at 85 degrees, in accordance with ASTM D523.
3. Gloss Level 3 (Eggshell): 10 to 25 units at 60 degrees and 10 to 35 units at 85 degrees, in accordance with ASTM D523.
4. Gloss Level 4 (Satin): 20 to 35 units at 60 degrees and not less than 35 units at 85 degrees, in accordance with ASTM D523.
5. Gloss Level 5 (Semi-Gloss): 35 to 70 units at 60 degrees, in accordance with ASTM D523.
6. Gloss Level 6 (Gloss): 70 to 85 units at 60 degrees, in accordance with ASTM D523.
7. Gloss Level 7 (High-Gloss): More than 85 units at 60 degrees, in accordance with ASTM D523.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product indicated preparation requirements and application instructions.

1. Include printout of current "MPI Approved Products List" for each product category specified, with the proposed product highlighted.
2. Indicate VOC content.
3. Material List: An inclusive list of required coating materials. Indicate each material and cross reference specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.

4. Preparation instructions and recommendations.
5. Manufacturer's Information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each coating material.

B. Samples for Initial Selection: For each type of topcoat product indicated. For each finish product specified, two complete sets of color chips representing manufacturer's full range of available colors and patterns.

C. [Samples for Verification: For each type of coating system and each color and gloss of topcoat indicated. For each finish product specified, two samples, minimum size 200 mm square, representing actual product, color, and patterns.

1. Submit Samples on rigid backing, 200 mm square.
2. Step coats on Samples to show each coat required for system.
3. Label each coat of each Sample.
4. Label each Sample for location and application area.]

D. Product test reports.

E. Qualifications: For coatings Applicator.

F. Maintenance data.

G. Warranty: Sample of special warranty.

1.5 QUALITY ASSURANCE

A. Applicator Qualifications:

1. Fluoropolymer Coatings: Coating manufacturer’s approved certified applicator, equipped, trained and approved for application of coatings required for this Project, and is approved to provide warranty specified in this Section.
2. Other Coatings of this Section: Engage an experienced applicator who has completed high performance coating system applications similar in material and extent to those indicated for Project and whose work has a record of successful in-service performance.

B. Source Limitations: Obtain primers and undercoat materials for each coating system from the same manufacturer as the finish coats.

C. Paint exposed surfaces. If an item or a surface is not specifically mentioned, paint the item or surface the same as similar adjacent materials or surfaces. If a color of finish is not indicated, Architect will select from standard colors and finishes available.

D. Do not paint prefinished items, concealed surfaces, finished metal surfaces, operating parts, and labels.

E. [Mockups: Apply mockups of each coating system indicated to verify preliminary selections made under sample submittals and to demonstrate aesthetic effects and set quality standards for materials and execution.

1. Project Director/COR will select one surface to represent surfaces and conditions for application of each scheduled coating system.

a. Wall and Ceiling Surfaces: Provide samples of at least 100 sq. ft. (9 sq. m).
b. Other Items: Project Director/COR will designate items or areas required.

2. Final approval of color selections will be based on mockups.

a. If preliminary color selections are not approved, apply additional mockups of additional colors selected by Project Director with input from the Architect of Record at no added cost to the Government.

3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR, with input from the Architect of Record, specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.]

1.6 DELIVERY, STORAGE, AND HANDLING

A. For on-site work, deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label with the following information:

1. Name or title of material.
2. Product description (generic classification or binder type).
3. Manufacturer's stock number, date of manufacture and batch date.
4. Contents by volume, for pigment and vehicle constituents.
5. Thinning instructions.
6. Application instructions.
7. Color name and number.
8. Handling instructions and precautions.
9. VOC content.
10. Environmental handling requirements.
11. Surface preparation requirements.

B. On-Site Storage as applicable:

1. Store materials not in use in tightly covered containers.
2. Store materials in a well-ventilated area within the minimum and maximum ambient temperature and humidity recommended by the coating manufacturer.
3. Keep storage area neat and orderly. Take necessary measures to ensure that workers and storage areas are protected from fire and health hazards resulting from handling and mixing coatings.

4. Maintain unused and used containers in clean condition, free of foreign materials and residue.
5. Remove rags and waste from storage areas daily.

C. On-Site Handling as applicable:

1. Store materials when not in use and return them to storage areas when project conditions are outside of the permissible temperature range for application.
2. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling and applying coatings.

1.7 FIELD CONDITIONS

A. Conditions for work at an Applicator’s shop shall be in accordance with manufacturer’s recommendations.

B. Conditions for application in the field (as applicable) shall be in accordance with manufacturer’s recommendations; where those do not identify specific constraints conform to the following:

1. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.
2. Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between temperatures recommended by coating manufacturers, but in no case lower than 10 deg C or higher than 32 deg C.
3. Apply solvent-thinned paints only when temperatures of surfaces to be painted and surrounding air are between 7 and 35 deg C (45 and 95 deg F).
4. Do not apply coatings in snow, rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 3 deg C above the dew point; or to damp or wet surfaces.

   a. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before proceeding with or continuing coating operation.
   b. Work may continue during inclement weather only if areas and surfaces to be coated are enclosed and temperature within the area can be maintained within limits specified by manufacturer during application and drying periods, and only if work in those conditions is in accordance with manufacturer’s recommendations.

1.8 MAINTENANCE MATERIALS

A. Furnish manufacturer recommended touch-up materials, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Coatings: 5 percent, but not less than 4 L (1 gal.) of each material and color applied.

1.9 WARRANTY

A. Special Warranty: Coating Applicator's warranty in which Applicator agrees to repair finish or replace coated items that demonstrate deterioration of shop-applied finishes within warranty period indicated.

1. Failures include, but are not limited to, the following:

a. Exposed Coating: Deterioration includes but is not limited to:
b. Color fading in excess of 5 Delta E Hunter units per ASTM D 2244.
c. Peeling, checking or cracking of coating adhesion to metal.
d. Chalking in excess of a No. 8 per ASTM D 4214, when tested per Method D 659.
e. Corrosion of substrate in excess of a No. 6 on cut edges and a No. 8 on field surfaces, when measured per ASTM D 1654.

2. Warranty Period: 10 years from date of substantial completion.

PART 2 - PRODUCTS

2.1 PAINT MATERIALS, GENERAL

A. Material Compatibility: Provide block fillers, primers, and finish-coat materials that are compatible with one another and with the substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.

B. MPI Standards: As applicable, products shall comply with MPI standards indicated and shall be listed in its "MPI Approved Products Lists."

C. Material Compatibility:

1. Materials for use within each paint system shall be compatible with one another and substrates indicated, under conditions of service and application as demonstrated by manufacturer, based on testing and field experience.
2. For each coat in a paint system, products shall be recommended in writing by topcoat manufacturers for use in paint system and on substrate indicated.
3. Products shall be of same manufacturer for each coat in a coating system.

D. Color: Refer to Finish Schedule and Paint Legend for paint colors.

E. See Table, *HIGH-PERFORMANCE FE/BR COATING APPLICATIONS*, located after the end of this specification for specific application requirements for the different types of FE/BR products.

2.2 FLUOROPOLYMER COATINGS

A. Manufacturers:

1. Subject to compliance with requirements, provide products from one of the following manufacturers:

a. AkzoNobel.
b. PPG.
c. Sherwin -Williams.

2. Requests for products of other manufacturers conforming to the requirements of this Sections will be considered as substitutions in accordance with Division 01.

B. Fluoropolymer System for Aluminum Substrate: Where indicated, provide manufacturer's standard thermocured system with minimum of three coats, containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight, complying with AAMA 2605.

C. Fluoropolymer System for Steel Substrate: Where indicated, provide manufacturers' standard thermocured system, containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight, complying with AAMA 621.

D. Locations with Extreme Atmospheric Corrosivity Levels (ACL): Provide the manufacturer's recommended pretreatment and primer normally associated with severe environments.

1. Pretreatment: Chromium chromate or chromium phosphate coating weight range is required to be greater than 40 mg/ft2as measured by x-ray fluorescence (XRF) per ASTM D5723.
2. Primer: Liquid chromate primer under liquid and powder topcoats, or powder primer under powder topcoats.

E. [Clear Coat:

[DESIGNER-OF-RECORD SHALL EVALUATE INCLUSION OF THIS COAT. THE FIRST TWO FACTORS ARE STRAIGHTFORWARD; THE THIRD FACTOR INVOLVES JUDGMENT.]

1. Required over metallic flake coating, if that is used.
2. Required for locations with Extreme ACL.
3. [Use to improve chalk and fade resistance.]]

2.3 SOURCE QUALITY CONTROL

A. Testing of Coating Materials: The Government reserves the right to invoke the following procedure:

1. The Government may engage services of qualified testing agency to sample coating materials. Contractor will be notified in advance and may be present when samples are taken. If coating materials have already been delivered to Project site, samples may be taken at Project site. Samples will be identified, sealed, and certified by testing agency.
2. Testing agency testing will verify compliance with product requirements

2.4 SHOP APPLICATION

A. Coating in Applicator's Shop: The substrates to receive these coatings shall be prepared and treated, and the assemblies coated all in accordance with the manufacturer's recommendations and applicable industry standards.

B. On-site shops are not acceptable.

1. [Exceptions: The following exceptions require the approval of the Project Director/COR with consultation from OBO subject matter experts.]

a. [On-site shops may be permitted for limited scale renovation work and for recoating work.]

2.5 EXTERIOR FE/BR COATING SCHEDULE

A. Steel Substrates (Ferrous Metal):

1. Pigmented Polyurethane System required for shop-fabricated exterior steel items:

   a. Prime Coat: Alkyd anti-corrosive, quick dry:
      S-W Pro-Cryl Universal Primer, B66-310 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.
   b. Intermediate Coat: Polyurethane, two-component, pigmented, matching topcoat.
   c. Topcoat: Polyurethane, two-component, pigmented, gloss:
      S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

2. Pigmented Polyurethane over Epoxy System if commercial blast cleaning of steel substrate is not practical **[MPI EXT 5.1H]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
      S-W Macropoxy 646-100, B58-600 Series, at 5.0 to 10 mils (0.127 to 0.254 mm) dry, per coat.
   b. Intermediate Coat: Epoxy, gloss**[, MPI #77]**.
      Polyurethane, two-component, pigmented, matching topcoat.
   c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.
      S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

3. Pigmented Polyurethane over Epoxy Zinc-Rich Primer System is useful for application to non-galvanized steel items that will be in wet or corrosive environments – typically applied in fabrication shop over properly-prepared steel**. [MPI EXT 5.1P]**:

   a. Prime Coat: Primer, zinc rich, epoxy**[, MPI #20]**.
      S-W Zinc Clad III HS 100, at 3.0 to 5.0 mils (0.076 to 0.127 mm) dry, per coat.

b. Intermediate Coat: Epoxy, low gloss**[, MPI #77]**.
S-W Macropoxy 646-100, B58-600 Series, at 5.0 to 10 mils (0.127 to 0.254 mm) dry, per coat.
c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.
S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

4. Pigmented Polyurethane over Epoxy Zinc-Rich Primer and Epoxy System **[MPI EXT 5.1G]**:

a. Prime Coat: Primer, zinc rich, epoxy**[, MPI #20]**.
b. Intermediate Coat: Epoxy, high build, low gloss**[, MPI #108]**.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.

5. Urethane System solvent base, Semi-Gloss Finish:

a. 1st Coat: S-W Macropoxy 646-100 Fast Cure Epoxy, B58 Series (7.0-13.5 mils wet, 5.0-10.0 mils dry per coat).
b. 2nd Coat: S-W Hi-Solids Polyurethane Semi-Gloss, B65-350 Series.
c. 3rd Coat: S-W Hi-Solids Polyurethane Semi-Gloss, B65-350 Series. (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).

6. Fluoropolymer System: See the Part 2 Article on FLUOROPOLYMER COATINGS.

B. Aluminum (Not Anodized or Otherwise Coated) Substrates:

1. Pigmented Polyurethane over Epoxy System **[MPI EXT 5.4B]**:

a. Prime Coat: Primer, vinyl wash**[, MPI #80]**.
S-W DTM Wash Primer, at 0.2 to 0.4 mils (0.005 to 0.010 mm) dry, per coat.
b. Intermediate Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
c. First and Second Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72]**.
S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

2. Urethane Systems, solvent base, Gloss Finish:

a. 1st Coat: S-W DTM Wash Primer, B71Y1 (3.4-6.4 mils wet, 0.7-1.3 mils dry).
b. 2nd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series.
c. 3rd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).

3. Fluoropolymer System: See the Part 2 Article on FLUOROPOLYMER COATINGS.

C. Galvanized-Metal Substrates: If galvanized metal is chromate passivated, consult manufacturers for appropriate surface preparation and primers.

1. Pigmented Polyurethane over Epoxy Primer System **[MPI EXT 5.3L]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72].**

2. Pigmented Polyurethane over Vinyl Wash Primer System:

   a. Prime Coat: Primer, vinyl wash at 0.7 to 1.3 mils (0.018 to 0.033 mm) dry, per coat.
   b. First and Second Topcoat: Polyurethane, two-component, pigmented, gloss: S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

3. Urethane Systems, solvent base, Gloss Finish:

   a. 1st Coat: S-W DTM Wash Primer, B71Y1 (3.4-6.4 mils wet, 0.7-1.3 mils dry).
   b. 2nd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series.
   c. 3rd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).

4. Fluoropolymer System: See the Part 2 Article on FLUOROPOLYMER COATINGS.

D. Stainless Steel Substrates:

1. Pigmented Polyurethane over Epoxy Primer System **[MPI EXT 5.3L]**:

   a. Prime Coat: Primer, epoxy, anti-corrosive, for metal**[, MPI #101]**.
   b. Intermediate Coat: Polyurethane, two component, pigmented, gloss matching topcoat.
   c. Topcoat: Polyurethane, two component, pigmented, gloss (MPI Gloss Level 6)**[, MPI #72].**

2. Pigmented Polyurethane over Vinyl Wash Primer System:

   a. Prime Coat: Primer, vinyl wash at 0.7 to 1.3 mils (0.018 to 0.033 mm) dry, per coat.
   b. First and Second Topcoat: Polyurethane, two-component, pigmented, gloss: S-W Pro Industrial Waterbased Acrolon 100 Polyurethane, B65-720 Series, at 2.0 to 4.0 mils (0.051 to 0.102 mm) dry, per coat.

3. Urethane Systems, solvent base, Gloss Finish:

   a. 1st Coat: S-W DTM Wash Primer, B71Y1 (3.4-6.4 mils wet, 0.7-1.3 mils dry).
   b. 2nd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series.
   c. 3rd Coat: S-W Hi-Solids Polyurethane Gloss, B65/B60-30 Series (4.5-8.0 mils wet, 3.0-5.0 mils dry per coat).

4. Fluoropolymer System: See the Part 2 Article on FLUOROPOLYMER COATINGS.

PART 3 - EXECUTION

3.1 FIELD EXAMINATION

A. As applicable for substrates using field application, and with Applicator present, examine substrates and conditions under FEBR coatings will be applied, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Examine substrates and conditions, with Applicator present, for compliance with requirements for maximum moisture content and other conditions affecting performance of the Work. Verify suitability of substrates, including surface conditions and compatibility with existing finishes and primers. Where acceptability of substrate conditions is in question, apply samples and perform in-situ testing to verify compatibility, adhesion, and film integrity of new paint application.

1. Verify suitability of substrates (including surface conditions and compatibility) with existing finishes.
2. Do not begin installation until substrates have been properly prepared.
3. Coordination of Work: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. On request, furnish information on characteristics of specified finish materials to ensure compatible primers.

    a. If a potential incompatibility of primers applied by others exists, obtain the following from the primer Applicator before proceeding:

        1) Confirmation of primer's suitability for expected service conditions.
        2) Confirmation of primer's ability to be top coated with materials specified.

    b. Notify Project Director/COR about anticipated problems before using the coatings specified over substrates primed by others.
    c. Report in writing conditions that may affect application, appearance, or performance of paint.

4. Proceed with coating application only after unsatisfactory conditions have been corrected.

    a. Application of coating indicates acceptance of surfaces and conditions.

3.2 FIELD PREPARATION

A. General:

1. Preparation for coatings in an Applicator’s shop shall be in accordance with the Applicator’s recommendations and applicable industry standards.
2. The following provisions in this Article relate to preparation for field applied coatings.

B. Remove hardware and hardware accessories, plates, machined surfaces, lighting fixtures, and similar items already installed that are not to be painted. If removal is impractical or impossible because of size or weight of the item, provide surface-applied protection before surface preparation and painting.

1. After completing painting operations in each space or area, reinstall items removed using workers skilled in the trades involved.

C. Cleaning: Before applying paint or other surface treatments, clean substrates of substances that could impair bond of the various coatings. Remove oil and grease before cleaning.

1. Schedule cleaning and painting so dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

D. Surface Preparation: Clean and prepare surfaces to be painted according to manufacturer's written instructions for each particular substrate condition and as specified.

1. Provide barrier coats over incompatible primers or remove and reprime.
2. Ferrous Metal Substrates: Clean ungalvanized ferrous-metal surfaces that have not been shop coated: remove oil, grease, dirt, loose mill scale, and other foreign substances. Use solvent or mechanical cleaning methods that comply with SSPC recommendations.

a. Treat bare and sandblasted or pickled clean metal with a metal treatment wash coat before priming.
b. Touch up bare areas and shop-applied prime coats that have been damaged. Wire brush, solvent clean, and touch up with same primer as the shop coat.

3. Nonferrous-Metal Substrates: Clean nonferrous and galvanized surfaces according to manufacturer's written instructions for the type of service, metal substrate, and application required.

a. Remove pretreatment from galvanized sheet metal fabricated from coil stock by mechanical methods.

E. Material Preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
3. Use only the type of thinners approved by manufacturer and only within recommended limits.

F. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

G. Comply with manufacturer's written instructions and recommendations, and as applicable in "MPI Architectural Painting Specification Manual" for substrates and coating systems indicated.

1. Steel Substrates: Remove rust, loose mill scale, and shop primer if any. Clean using methods recommended in writing by paint manufacturer. but not less than the following:

    a. SSPC-SP 7/NACE No. 4, "Brush-Off Blast Cleaning."
    b. SSPC-SP 10/NACE No. 2, requires that 95 percent of surface area be free of visible residue, "Near-White Blast Cleaning."
    c. SSPC-SP 5/NACE No. 1, removes visible rust, mill scale, paint, and foreign matter, "White Metal Blast Cleaning."

2. Shop-Primed Steel Substrates: Clean field welds, bolted connections, and areas where shop paint is abraded. Paint exposed areas with the same material as used for shop priming to comply with SSPC-PA 1 for touching up shop-primed surfaces.
3. Galvanized-Metal Substrates: Remove grease and oil residue from galvanized sheet metal by mechanical methods to produce clean, lightly etched surfaces that promote adhesion of subsequently applied coatings. Galvanized-metal substrates should not be chromate passivated. If galvanized metal is chromate passivated, consult manufacturers for appropriate surface preparation and primers.
4. Aluminum Substrates: Remove loose surface oxidation.

3.3 FIELD APPLICATION

A. Apply high-performance coatings according to manufacturer's written instructions. This Article identifies requirements associated with field application; those applications shall also conform to the recommendations in "MPI Architectural Painting Specification Manual."

    1. Use applicators spray or touch-up applicator and techniques.
    2. Coat surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
    3. Coat back sides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.
    4. Do not apply coatings over labels of independent testing agencies or equipment name, identification, performance rating, or nomenclature plates.
    5. Do not apply high-performance coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.

B. Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

C. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance. Give special attention to edges, corners, crevices, welds, exposed fasteners, and similar surfaces to ensure that they receive a dry film thickness equivalent to that of flat surfaces.

D. Apply coatings to produce surface films without cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Produce sharp glass lines and color breaks.

E. Application Procedures:

1. Apply coatings by spray; brush application for touchup shall be according to manufacturer's written instructions.
2. The number of coats and film thickness required is the same regardless of application method.
3. Completed Work: Match approved Samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.
4. Spray Equipment Application: Use mechanical methods to apply coating if permitted by manufacturer's written instructions and governing regulations.

    a. Use spray equipment with orifice size recommended by manufacturer for material and texture required.
    b. Apply each coat to provide the equivalent hiding of brush-applied coats.
    c. Do not double back with spray equipment building-up film thickness of two coats in one pass, unless recommended by manufacturer.

5. Brush Application: Use brushes best suited for material applied and of appropriate size for the surface or item being coated.

    a. Apply primers and first coats by brush unless manufacturer's written instructions permit using roller or mechanical applicators.
    b. Brush out and work brush coats into surfaces in an even film.
    c. Eliminate cloudiness, spotting, holidays, laps, brush marks, runs, sags, ropiness, or other surface imperfections. Neatly draw glass lines and color breaks.

F. Minimum Coating Thickness: Apply each material no thinner than manufacturer's recommended spreading rate. Provide total dry film thickness of the entire system as recommended by manufacturer.

G. Prime Coats: Before applying finish coats, apply a prime coat of material, as recommended by manufacturer, to material required to be coated or finished that has not been prime coated by others.

1. Recoat primed and sealed substrates if there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects caused by insufficient sealing.

H. Completed Work: Match approved Samples for color, texture, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.

3.4 FIELD QUALITY CONTROL

A. The provisions of this Article relate to field applications of coatings.

B. Material Testing: Government reserves the right to engage the services of a qualified testing agency to sample coating material being used. When this right is invokes, samples of material

delivered to Project site shall be taken, identified, sealed, and certified in presence of Project Director/COR.

1. Testing agency will perform appropriate tests for the following characteristics as required by Government:

    a. Quantitative materials analysis.
    b. Absorption.
    c. Accelerated weathering.
    d. Accelerated yellowness.
    e. Color retention.
    f. Alkali and mildew resistance.
    g. Abrasion resistance.
    h. Apparent reflectivity.
    i. Washability.
    j. Dry opacity.
    k. Recoating.
    l. Skinning.

C. Dry Film Thickness Testing: Government reserves the right to engage the services of a qualified testing and inspecting agency to inspect and test coatings for dry film thickness.

1. Contractor shall touch up and restore coated surfaces damaged by testing.
2. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

D. Corrective Actions:

1. Failure of Materials Compliance:

    a. The Government may direct Contractor to stop applying coatings if test results show materials being used do not comply with specified requirements. Contractor shall remove noncomplying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials. If necessary, Contractor may be required to remove rejected materials from previously coated surfaces if, on recoating with specified materials, the two coatings are not compatible.

2. Failure of Dry Film Thickness Compliance:

    a. If test results show that dry film thickness of applied coating does not comply with coating manufacturer's written recommendations, Contractor shall pay for testing and apply additional coats as needed to provide dry film thickness that complies with coating manufacturer's written recommendations.

E. The Project Director/COR may direct Contractor to stop painting if test results show material being used does not comply with specified requirements. Contractor shall remove noncomplying paint from Project site, pay for testing, and repaint surfaces previously coated with the

noncomplying paint. If necessary, Contractor may be required to remove noncomplying paint from previously painted surfaces if, on repainting with specified paint, the two coatings are incompatible.

3.5 CLEANING AND PROTECTION

A. The provisions of this Article apply to:

1. Cleaning and protection associated with field application work.
2. Cleaning and protection during touch-up of any FE/BR assembly.
3. Cleaning and protection of FE/BR assemblies after their coating work has been completed.

B. At end of each workday, remove rubbish, empty cans, rags, and other discarded materials from Project site.

C. After completing coating application, clean spattered surfaces.

1. Remove spattered coatings by washing, scraping, or other methods.
2. Do not scratch or damage adjacent finished surfaces.
3. After completing painting, clean glass and paint spattered surfaces. Remove spattered paint by washing and scraping without scratching or damaging adjacent finished surfaces.

D. Protect work of other trades, whether being coated or not, against damage from coating operation. Correct damage by cleaning, repairing, replacing, and recoating, as approved by Project Director/COR, and leave in an undamaged condition.

1. Provide “Wet Paint” signs to protect newly coated finishes. After completing coating operations, remove temporary protective wrappings provided by others to protect their work.
2. After work of other trades is complete, touch up and restore damaged or defaced painted surfaces.

E. Dispose of used containers in accordance with requirements of local jurisdiction.

F. Maintain general protection and cleaning of coatings until project is completed. Refer to associated requirements identified within each Specification Section of assemblies that are receiving the high-performance coatings.

3.6 FIELD TOUCH-UP

A. At completion of construction activities of other trades, touch up and restore damaged or defaced coated surfaces of any assembly receiving the coatings of this Section.

B. Surface Preparation:

1. Existing caulk, sealant, and residue/contamination to be completely removed from substrate to be coated by means deemed appropriate by contractor. Do not coat over

caulking. If caulking is not removed, and is painted up to caulking, coating subject to delamination along caulk edge.

2. Solvent clean, per SSPC SP-1, substrate to remove any contamination that may be present, including silicone and chlorides.
3. Abrade substrate to remove gloss and to obtain a minimum surface profile of 1.0 mil for adhesion. This can be accomplished by hand sanding with 120 - 220 grit sandpaper or equal. Care should be taken not to abrade the surface too aggressively as surface defects may be visible when coated, but surface should be sanded and dull.
4. Prior to coating, Solvent wipe substrate to remove dust and residual contamination.

C. Primer and Coating Application:

1. Apply one coat of Epoxy Bonding Primer to achieve 2.0 – 3.0 mils DFT. Allow primer to cure 6 hours minimum before applying topcoat. May require multiple passes, or stripe coats to edges.
2. Apply one coat of topcoat per instructions on the respective products technical data bulletin. May require multiple passes, or stripe coats to edges to achieve 1.8 to 2.2 mils.
3. For Metallic coatings require a clear finish coat. The clear coat protects the aluminum pigmentation from ultra-violet degradation. Allow metallic topcoat to dry 4 hours minimum before topcoating. Light Mica colors may require a barrier coat to achieve a1.5 to 2.2 mils DFT. Locations with Extreme atmospheric corrosivity levels may require a Clear Coat.
4. Full cure will be achieved in three to seven days.

END OF SECTION 099602

SECTION 101100 - VISUAL DISPLAY UNITS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Markerboards, Dry Erase Magnetic.
2. Markerboards, Glass Magnetic.
3. Tackboards.
4. Sliding Visual Display Assembly.

1.2 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.3 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, finishes, and accessories for visual display units.

B. Sustainable Design Submittals:

1. Product Data: For installation adhesives, indicating VOC content.
2. Laboratory Test Reports: For installation adhesives, indicating compliance with requirements for low-emitting materials.
3. Laboratory Test Reports: For composite wood products, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For visual display units.

1. Include plans, elevations, sections, details, and attachment to other work.
2. Show locations of panel joints.
3. Show locations and layout of special-purpose graphics.
4. Include sections of typical trim members.

D. Samples: For each type of visual display unit indicated.

1. Visual Display Panel: Not less than 215 by 280 mm (8-1/2 by 11 inches), with facing, core, and backing indicated for final Work. Include one panel for each type, color, and texture required.
2. Trim: 150-mm- (6-inch-) long sections of each trim profile.

3. Display Rail: 150-mm- (6-inch-) long section of each type.
4. Rail Support System: 150-mm- (6-inch-) long sections.
5. Accessories: Full-size Sample of each type of accessory.

E. Product Schedule: For visual display units. Use same designations indicated on Drawings.

1.4 INFORMATIONAL SUBMITTALS

A. Qualification Data: For qualified Installer.

B. Product Test Reports: For each visual display unit, for tests performed by a qualified testing agency.

1.5 CLOSEOUT SUBMITTALS

A. **[Operation and]**Maintenance Data: For visual display units to include in maintenance manuals.

1.6 QUALITY ASSURANCE

A. [Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.]

B. Mockups: Build mockups to verify selections made under Sample submittals, to demonstrate aesthetic effects, and to set quality standards for fabrication and installation.

1. Build mockups of typical visual display unit as shown on Drawings. Include accessories.
2. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Project Director/COR, based on input from the A/E of Record, specifically approves such deviations in writing.
3. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 DELIVERY, STORAGE, AND HANDLING

A. Deliver factory-fabricated visual display units completely assembled in one piece. If dimensions exceed maximum manufactured unit size, or if unit size is impracticable to ship in one piece, provide two or more pieces with joints in locations indicated on approved Shop Drawings.

1.8 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install visual display units until spaces are enclosed and weathertight, wet-work in spaces is complete and dry, work above ceilings is complete, and temporary HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

B. Field Measurements: Verify actual dimensions of construction contiguous with visual display units by field measurements before fabrication.

1. Allow for trimming and fitting where taking field measurements before fabrication might delay the Work.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Surface-Burning Characteristics: Comply with ASTM E 84; testing by a qualified testing agency. Identify products with appropriate markings of applicable testing agency.

1. Flame-Spread Index: 25 or less.
2. Smoke-Developed Index: **[50] [450] <Insert value>** or less.

2.2 MARKERBOARDS, DRY ERASE, MAGNETIC (OBO COMPONENT CODE SQ008)

A. Assembly: Markerboard, **[Field] [or] [factory]** fabricated.

1. Corners: **[Square] [Rounded]**.
2. Width: **[As indicated on Drawings] <Insert dimension>**.
3. Height: **[As indicated on Drawings] <Insert dimension>**.

4. Mounting Method: **[Direct to wall] [Rail support system] [Modular support system]**.

B. Markerboard Panel: **[Porcelain-enamel-faced] [High-pressure laminate-faced] [Melamine-faced]** markerboard panel on core indicated.

1. Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors] <Insert color>**.

a. Porcelain-Enamel Markerboard Panels: Balanced, high-pressure, factory-laminated markerboard assembly of three-ply construction, consisting of moisture-barrier backing, core material, and porcelain-enamel face sheet with **[high-gloss] [low-gloss]** finish. Laminate panels under heat and pressure with manufacturer's standard, flexible waterproof adhesive.

1) Face Sheet Thickness: **[0.53 mm 90.021 inch)] [0.33 mm (0.013 inch)]** uncoated base metal thickness.

2) Manufacturer's Standard Core: Minimum 6 mm (1/4 inch) thick, with manufacturer's standard moisture-barrier backing.

3) Hardboard Core: 6 mm (1/4 inch) thick; with **[0.127-mm- (0.005-inch-) thick, aluminum foil] [0.38- (0.015-inch-) mm- thick, aluminum sheet] [0.33-mm- (0.013-inch-) thick, galvanized-steel sheet]** backing.
4) Particleboard Core: **[9.5 mm (3/8 inch)] [13 mm (1/2 inch)] thick; with [0.127- (0.005-inch-) mm- thick, aluminum foil] [0.38-mm- (0.015-inch-) thick, aluminum sheet] [0.33-mm- (0.013-inch-) thick, galvanized-steel sheet]** backing.
5) Fiberboard Core: **[9.5 mm (3/8 inch)] [13 mm (1/2 inch)] thick; with [0.025- (0.001-inch-) mm- thick, aluminum foil] [0.38-mm- (0.015-inch-) thick, aluminum sheet] [0.33-mm- (0.013-inch-) thick, galvanized-steel sheet]** backing.
6) Medium-Density Fiberboard Core: 11 mm (7/16 inch) thick; with manufacturer's standard moisture-barrier backing.
7) Laminating Adhesive: Manufacturer's standard moisture-resistant thermoplastic type.

b. High-Pressure-Laminate Markerboard Panels: Factory-laminated markerboard panel of three-ply construction, consisting of backing, fiberboard core material, and high-pressure-laminate writing surface.
c. Melamine Markerboard Panels: Fabricated from 6-mm- (1/4-inch-) thick, sealed and primed hardboard panels permanently bonded with thermally fused, melamine-impregnated decorative paper writing surface.

C. Aluminum Frames**[and Trim]: Fabricated from not less than 1.57-mm- (0.062-inch-) thick, extruded aluminum; [standard size and shape] [slim size and standard shape] [of size and shape indicated on Drawings] <Insert size and shape>**.

1. Field-Applied Trim: Manufacturer's standard, **[snap-on trim with no visible screws or exposed joints] [slip-on trim] [screw-on trim with Phillips flat-head screws]**.
2. Aluminum Finish: **[Clear anodic] [Color anodic] [Manufacturer's standard baked-enamel or powder-coat]** finish.

a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors and color densities] <Insert color>**.

D. Factory-Applied Wood Trim: **[Red oak] [Walnut] [Manufacturer's standard species] <Insert species>, not less than 13 mm (1/2 inch) thick; [standard size and shape] [of size and shape indicated on Drawings] <Insert size and shape>** with **[opaque] [transparent]** finish.

E. Field-Applied Wood Trim: Comply with requirements specified in Division 06 Section on "Interior Architectural Woodwork."

F. Vinyl Trim: **[Dark brown] [Black] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors]**.

G. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to Project Director/COR, based on input from the A/E of Record.] [as indicated on approved Shop Drawings]**.

H. Accessory tray: Manufacturer's standard; continuous.

1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.

2.3 MARKERBOARDS, GLASS MAGNETIC (OBO COMPONENT CODE SQ067)

A. Assembly: Glass Magnetic Markerboard, **[Field] [or] [factory]** fabricated.

1. Corners: **[Square] [Rounded]**.
2. Width: **[As indicated on Drawings] <Insert dimension>**.
3. Height: **[As indicated on Drawings] <Insert dimension>**.

B. Glass Markerboards: Fabricated of **[6-mm (1/4 inch) tempered] [or] [6-mm (1/4 inch) tempered-laminated] [low-iron] [ultra-thin]** glass**[with steel backing for use with magnets]**.

1. Edge Treatment: Smooth polished edge with **[rounded] [eased]** corners.
2. Frame: Aluminum trim in profile indicated.
3. Surface: **[Glossy] [Matte]**.
4. Color: **[White] [Gray] [Translucent] [Clear] [Black] [Red] [Blue] <Insert color>**.

C. Mounting: Round, stainless steel standoffs, holding glass approximately **[25 mm (1 inch)] <Insert dimension>** from wall surface; mounted **[through holes in] [in notches in standoffs at top and bottom edges of]** markerboard.

D. Mounting: Concealed, Z-shaped brackets.

E. Mounting: Manufacturer's standard adhesive or adhesive-foam tape mounting.

F. Marker Tray: **[Glass] [Aluminum]**, attached with **[stainless steel clips] [magnet]**.

G. Glass Magnetic Markerboard Accessories: Provide glass magnetic markerboard manufacturer’s neodymium rare-earth magnets packet of **[twenty] <Insert number>** for each glass magnetic markerboard panel.

2.4 TACKBOARDS (OBO COMPONENT CODE SQ003)

A. Assembly: Markerboard, **[Field] [or] [factory]** fabricated.

1. Corners: **[Square] [Rounded]**.

2. Width: **[As indicated on Drawings] <Insert dimension>**.
3. Height: **[As indicated on Drawings] <Insert dimension>**.

4. Mounting Method: **[Direct to wall] [Rail support system] [Modular support system]**.

B. Tackboard Panel: **[Natural-cork] [Plastic-impregnated-cork] [Vinyl-fabric-faced] [Polyester-fabric-faced]** tackboard panel on core indicated.

1. Fabric Wrapped Edge: Wrap edge of tackboard panel with fabric facing.
2. Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors]**.

C. Aluminum Frames**[and Trim]: Fabricated from not less than 1.57-mm- (0.062-inch-) thick, extruded aluminum; [standard size and shape] [slim size and standard shape] [of size and shape indicated on Drawings] <Insert size and shape>**.

1. Field-Applied Trim: Manufacturer's standard, **[snap-on trim with no visible screws or exposed joints] [slip-on trim] [screw-on trim with Phillips flat-head screws]**.
2. Aluminum Finish: **[Clear anodic] [Color anodic] [Manufacturer's standard baked-enamel or powder-coat]** finish.

a. Color: **[Light bronze] [Medium bronze] [Dark bronze] [Black] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors and color densities] <Insert color>**.

D. Factory-Applied Wood Trim: **[Red oak] [Walnut] [Manufacturer's standard species] <Insert species>**, not less than 13 mm (1/2 inch) thick; **[standard size and shape] [of size and shape indicated on Drawings] <Insert size and shape>** with **[opaque] [transparent]** finish.

E. Field-Applied Wood Trim: Comply with requirements specified in Division 06 Section on "Interior Architectural Woodwork."

F. Vinyl Trim: **[Dark brown] [Black] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors]**.

G. Joints: Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to Project Director/COR, based on input from the A/E of Record.] [as indicated on approved Shop Drawings]**.

H. Accessory tray: Manufacturer's standard; continuous.

1. Box Type: Extruded aluminum with slanted front, grooved tray, and cast-aluminum end closures.
2. Solid Type: Extruded aluminum with ribbed section and smoothly curved exposed ends.

2.5 SLIDING VISUAL DISPLAY ASSEMBLY

A. Markerboard (OBO Component Code SQ068)

B. Tackboard (OBO Component Code SQ069)

C. Dual Track (OBO Component Code SQ176)

1. Horizontal-Sliding Visual Display Units: Factory-fabricated units consisting of extruded-aluminum tubular frame, fixed rear visual display panel, aluminum-framed horizontal-sliding visual display panels, and extruded-aluminum fascia that conceals overhead sliding track; designed for recessed mounting. Provide panels that operate smoothly without vibration or chatter.

   a. Two-Track Units: Fabricate unit with fixed rear panel covering entire rear surface. Provide two sliding panels, each equal to not less than one-half of overall length of unit.
   b. Hardware: Manufacturer's standard, extruded-aluminum overhead track and channel-shaped bottom guides; with two nylon ball-bearing carriers and two nylon rollers for each sliding panel.
   c. Overall Width: **[As indicated on Drawings] <Insert dimension>**.
   d. Overall Height: **[As indicated on Drawings] <Insert dimension>**.

2. Panels and Accessories:

   a. Sliding Markerboard Panel: **[Porcelain-enamel-faced] [High-pressure laminate-faced]** markerboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than **[9.5 mm thick (3/8 inch)] <Insert dimension>**.

      1) Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors] <Insert color>**.

   b. Sliding Tackboard Panel: **[Natural-cork] [Plastic-impregnated-cork] [Vinyl-fabric-faced] [Polyester-fabric-faced]** tackboard panel on kraft-paper honeycomb core designed to be rigid and to resist warpage, not less than **[9.5 mm thick (3/8 inch)] <Insert dimension>**.

      1) Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors]**.

   c. Fixed Rear Markerboard Panel: **[Porcelain-enamel-faced] [High-pressure laminate-faced]** markerboard panel on core indicated.

      1) Color: **[White] [Beige] [Tan] [As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by**

Project Director/COR, based on input from the A/E of Record, from full range of industry colors] <Insert color>.

d. Fixed Rear Tackboard Panel: **[Natural-cork] [Plastic-impregnated-cork] [Vinyl-fabric-faced] [Polyester-fabric-faced]** tackboard panel on core indicated.

1) Color and Pattern: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from full range of industry colors]**.

e. Accessories: **[Accessory tray] [locks] [and] [easel pad clamps]**.

f. Aluminum Trim: **[Factory applied] [Field applied]; in [manufacturer's standard] <Insert description> size and profile; with [clear anodic] <Insert description>** finish.

2.6 MATERIALS

A. Porcelain-Enamel Face Sheet: PEI-1002, with face sheet manufacturer's standard two- or three-coat process.

B. High-Pressure Plastic Laminate: NEMA LD 3.

C. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering

D. Natural-Cork Sheet: Seamless, single-layer, compressed fine-grain cork sheet; bulletin board quality; face sanded for natural finish**[with surface-burning characteristics indicated]**.

E. Plastic-Impregnated-Cork Sheet: Seamless, homogeneous, self-sealing sheet consisting of granulated cork, linseed oil, resin binders, and dry pigments that are mixed and calendared onto fabric backing; with washable vinyl finish and integral color throughout[with surface-burning characteristics indicated].

F. Vinyl Fabric: Mildew resistant, washable, complying with FS CCC-W-408D, Type II, **[burlap weave] <Insert texture or pattern>**; weighing not less than 440 g/sq. m (13 oz./sq. yd.); with surface-burning characteristics indicated.

G. Polyester Fabric: Nondirectional weave, 100 percent polyester; weighing not less than 508 g/sq. m (15 oz./sq. yd.); with surface-burning characteristics indicated.

H. Composite Wood Products: Products shall be made using ultra-low-emitting formaldehyde resins as defined in the California Air Resources Board's "Airborne Toxic Control Measure to Reduce Formaldehyde Emissions from Composite Wood Products" or shall be made with no added formaldehyde.

I. Hardboard: ANSI A135.4, tempered.

J. Particleboard: ANSI A208.1, Grade M-1, made with binder containing no urea formaldehyde.

K. Medium-Density Fiberboard: ANSI A208.2, Grade 130.

L. Fiberboard: ASTM C 208 cellulosic fiber insulating board.

M. Clear Tempered Glass: ASTM C 1048, Kind FT, Condition A, Type I, Class 1, Quality Q3, with exposed edges seamed before tempering.

N. Extruded Aluminum: ASTM B 221M, Alloy 6063.

O. Adhesives for Field Application: Mildew-resistant, nonstaining adhesive for use with specific type of panels, sheets, or assemblies; and for substrate application; as recommended in writing by visual display unit manufacturer.

1. Adhesives shall have a VOC content of **[50]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers."

P. Primer/Sealer: Mildew-resistant primer/sealer complying with requirements in Division 09 interior painting section and recommended in writing by visual display unit manufacturer for intended substrate.

2.7 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are unacceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.8 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, AA-M12C22A31, Class II, 0.010 mm or thicker.

B. Color Anodic Finish: AAMA 611, AA-M12C22A32/A34, Class II, 0.010 mm or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603, except with a minimum dry film thickness of 0.04 mm. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions, with Installer present, for compliance with requirements for installation tolerances, surface conditions of wall, and other conditions affecting performance of the Work.

B. Examine walls and partitions for proper preparation and backing for visual display units.

C. Examine walls and partitions for suitable framing depth where sliding visual display units will be installed.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Comply with manufacturer's written instructions for surface preparation.

B. Clean substrates of substances, such as dirt, mold, and mildew, that could impair the performance of and affect the smooth, finished surfaces of visual display boards.

C. Prepare surfaces to achieve a smooth, dry, clean surface free of flaking, unsound coatings, cracks, defects, projections, depressions, and substances that will impair bond between visual display units and wall surfaces.

D. Prime wall surfaces indicated to receive **[visual display units] [direct-applied floor-to-ceiling visual display assemblies]** and as recommended in writing by primer/sealer manufacturer and visual display unit manufacturer.

E. Prepare recesses for sliding visual display units as required by type and size of unit.

3.3 INSTALLATION

A. General: Install visual display surfaces in locations and at mounting heights indicated on Drawings, or if not indicated, at heights indicated below. Keep perimeter lines straight, level, and plumb. Provide grounds, clips, backing materials, adhesives, brackets, anchors, trim, and accessories necessary for complete installation.

B. Field-Assembled Visual Display Board Assemblies: Coordinate field-assembled units with grounds, trim, and accessories indicated. Join parts with a neat, precision fit.

1. Make joints only where total length exceeds maximum manufactured length. Fabricate with minimum number of joints, **[balanced around center of board, as acceptable to Project Director/COR] [as indicated on approved Shop Drawings]**.

2. Where size of visual display board assemblies or other conditions require support in addition to normal trim, provide structural supports or modify trim as indicated or as selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's standard structural support accessories to suit conditions indicated.

C. Factory-Fabricated Visual Display Board Assemblies: Adhere to wall surfaces with **[egg-size] <Insert coverage>** adhesive gobs at 400 mm (16 inches) o.c. horizontally and vertically.

D. Factory-Fabricated Visual Display Board Assemblies: Attach concealed clips, hangers, and grounds to wall surfaces and to visual display board assemblies with fasteners at not more than 400 mm o.c. (16 inches) Secure tops and bottoms of boards to walls.

E. Visual Display Board Assembly Mounting Heights: Install visual display units at mounting heights indicated on Drawings.

F. Display Rails: Install rails at mounting heights indicated on Drawings. Attach to wall surface with fasteners at not more than 400 mm o.c.

G. Sliding Visual Display Units: Install units at mounting heights indicated. Attach to wall framing with fasteners at not more than 400 mm (16 inches) o.c.

1. Adjust panels to operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.4 CLEANING AND PROTECTION

A. Clean visual display units according to manufacturer's written instructions. Attach one removable cleaning instructions label to visual display unit in each room.

B. Touch up factory-applied finishes to restore damaged or soiled areas.

C. Cover and protect visual display units after installation and cleaning.

3.5 DEMONSTRATION

A. **[Engage a factory-authorized service representative to train] [Train]** Project Director/COR's maintenance personnel to adjust, operate, and maintain sliding visual display units.

END OF SECTION 101100

SECTION 101415 - POST AND PANEL/PYLON EXTERIOR SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Nonilluminated post-and-panel signs.
2. Nonilluminated pylon signs.

B. Related Requirements:

1. Section 033000 "Cast-in-Place Concrete" for concrete foundations, concrete fill in postholes, and setting anchor bolts in concrete foundations for signs.

1.2 DEFINITIONS

A. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.3 COORDINATION

A. Furnish templates and tolerance information for placement of sign-anchorage devices embedded in permanent construction by other installers.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Shop Drawings: For signage.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.
3. Show message list, typestyles, graphic elements, and layout for each sign at least **[half size]** <**Insert scale**>.

C. Samples for Verification: For each type of sign assembly, showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:

1. Typestyles and Graphic Symbols: Include representative samples.
2. Post-and-Panel Signs: **[Full-size Sample] [Not less than 300 mm square, including corner and post]** <Insert size>.

3. Pylon Signs: **[Full-size Sample] [Not less than 300 mm square, including corner]** <Insert size>.
4. Variable Component Materials: **[Full-size Sample] [200-mm Sample] <Insert size>** of each base material, character or graphic element, in each exposed color and finish not included in other Samples.
5. Exposed Accessories: **[Full-size Sample] [Half-size Sample] <Insert size>** of each accessory type.

6. Full-size Samples, if approved, will be returned to Contractor for use in Project.

D. Product Schedule: For post-and-panel and pylon signs. Use same designations indicated on Drawings or specified.

E. Delegated-Design Submittal: For signs types indicated in "Performance Requirements" Article.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[Installer] [and] [manufacturer]**.

B. Evaluation Reports: For **[post-installed anchors] [and] [power-actuated fasteners]**, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials**[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Variable Component Materials: **[12] <Insert number>** replaceable text inserts and interchangeable characters (letters, numbers, and graphic elements) of each type.
2. Tools: **[One] <Insert number>** set(s) of specialty tools for assembling signs and replacing variable sign components.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: **[Manufacturer of products] [An entity that employs installers and supervisors who are trained and approved by manufacturer]**.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify locations of **[anchorage devices]** embedded in permanent construction by other installers by field measurements before fabrication, and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Delegated Design: Engage a qualified professional engineer to design sign structure and anchorage of post-and-panel and pylon sign type(s) <**Insert drawing designation of sign(s)**> according to structural performance requirements.

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated and specified.

1. Uniform and concentrated loads need not be assumed to act concurrently.

C. Thermal Movements: For exterior signs, allow for thermal movements from ambient and surface temperature changes.

D. Accessibility Standard: Comply with applicable provisions in Chapter 11 of the OBO Building Code.

2.2 POST-AND-PANEL SIGNS

A. Post-and-Panel Sign <**Insert drawing designation**>: Sign of single-panel configuration; with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Solid-Sheet Sign Panels: Aluminum sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph and as follows:

a. Thickness: 6 mm.

2. Sign-Frame Mounting: Mounting bracket welded to panel and mounted to post with countersunk tamperproof mechanical fasteners, as required. **[Over posts] [As indicated on Drawings]** <**Insert description**>.
3. Posts: Extruded metal.

a. Shape: Square.
b. Size: **[50 by 50 mm][38 by 38 (1 ½ by 1 ½ inches)][25 by 25 mm (1 by 1 inches)]**in accordance with OBO signage and Wayfinding Design Guide.
c. Installation Method: Install in accordance with OBO signage and Wayfinding Design Guide.

d. Finish and Color: Dark blue exterior-grade painted posts and mounting brackets with dark blue plastic cap; match Project Director/COR Project Director/COR's sample.

4. Sign-Panel-Face Finish and Applied Graphics:

a. Integral Metal Finish: : **[White exterior-grade painted metal panel with dark blue silkscreened text] [Match Project Director/COR's sample]**.
b. Integral Aluminum Finish: **[White painted aluminum panel with dark blue frisket painted text and symbols] [Match Project Director/COR's sample]**.

2.3 PYLON SIGNS

A. Pylon Sign <**Insert drawing designation**>: Sign with smooth, uniform surfaces and support assembly; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Solid-Sheet Sign Panels**[and Returns][, Returns, and Back]**: Aluminum sheet with finish specified in "Sign-Panel-Face Finish and Applied Graphics" Subparagraph and as follows:

a. Thickness: **[As indicated on Drawings] [25 mm (1.00 inch)][178 mm (7.00 inches)]**.
b. Surface-Applied Graphics: Comply with OBO Signage and Wayfinding Design Guide. **[Water-jet cut aluminum letters mounted flush to pylon with fully concealed mechanical fasteners]**.

2. Sign-Frame Mounting: **[Between pylon supports] [Over pylon supports] [As indicated on Drawings]**.

3. Pylon Structure:

a. Pylon Shape: **[Rectangular] [Square] [As indicated on Drawings]**.
b. Pylon Construction: As indicated on Drawings and in compliance with OBO Signage and Wayfinding Guidelines.
c. Pylon Base: **[Stone fabricated base][Concrete footing platform][as indicated on Drawings]** and in accordance with OBO Signage and Wayfinding Guidelines.

4. Sign-Panel-Face Finish and Applied Graphics:

a. Integral Metal Finish: **[As indicated on Drawings] [Frisket painted text and symbols] [Match Project Director/COR Project Director/COR's sample]**.
b. Integral Aluminum Finish: **[As indicated on Drawings] [Frisket painted text and symbols] [Match Project Director/COR's sample]**.
c. Painted Finish and Graphics: **[Painted water-jet cut aluminum letter mounted flush with fully concealed mechanical fasteners][As indicated on Drawings] [matching Project Director/COR's sample]**.

2.4 MATERIALS

A. Aluminum Sheet and Plate: ASTM B 209M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

B. Aluminum Extrusions: ASTM B 221M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Steel Materials:

1. Hot-Rolled, Structural-Steel Shapes: ASTM A 36/A 36M or ASTM A 529/A 529M.
2. Steel Members Fabricated from Plate or Bar Stock: ASTM A 529/A 529M or ASTM A 572/A 572M, 290-MPa minimum yield strength.
3. Steel Tubing or Pipe: ASTM A 500/A 500M, Grade B.
4. Bolts for Steel Framing: ASTM A 307 or ASTM A 325M as necessary for design loads and connection details.
5. For steel exposed to view on completion, provide materials having flat, smooth surfaces without blemishes. Do not use materials whose surfaces exhibit pitting, seam marks, roller marks, rolled trade names, or roughness.

D. Stainless Steel Sheet: ASTM A240/A240M or ASTM A666, [**Type 304,**] [**Type 316,**] stretcher-leveled standard of flatness.

E. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.5 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. For exterior exposure, furnish **[nonferrous-metal] [stainless-steel] [or] [hot-dip galvanized] <Insert requirement>** devices unless otherwise indicated.
3. Exposed Metal-Fastener Components, General:

a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.

b. Fastener Heads: For nonstructural connections, use **[flathead] [or] [oval countersunk]** <Insert shape> screws and bolts with tamper-resistant, **[Allen-head] [spanner-head] [or] [one-way-head]** <Insert slot design> slots unless otherwise indicated.

4. Inserts: Furnish inserts to be set by other installers into concrete or masonry work.

B. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC01] [ICC-ES AC193] [ICC-ES AC58] [or] [ICC-ES AC308]** as appropriate for the substrate.

1. Uses: Securing signs with imposed loads to structure.

2. Type: **[Torque-controlled, expansion anchor] [torque-controlled, adhesive anchor] [or] [adhesive anchor]**.
3. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941M, Class Fe/Zn 5, unless otherwise indicated.
4. Material for Exterior or Interior Locations and Where Stainless Steel Is Indicated: Alloy **[Group A1] [Group A4]** stainless-steel bolts, ASTM F 738M, and nuts, ASTM F 836M.

C. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

E. Anchoring Materials:

1. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout complying with ASTM C 1107/C 1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.
2. Anchoring Cement: Factory-packaged, non-shrink, non-staining, hydraulic-controlled expansion cement formulation for mixing with water at Project site to create pourable anchoring, patching, and grouting compound.

a. Water-Resistant Product: At exterior locations, provide formulation that is resistant to erosion from water exposure without needing protection by a sealer or waterproof coating and that is recommended by manufacturer for exterior use.

2.6 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Preassemble signs in the shop to greatest extent possible. Disassemble signs only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation, in locations concealed from view after final assembly.
2. Mill joints to tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed joints of flux, and dress exposed and contact surfaces.

4. Conceal fasteners and anchors unless indicated to be exposed; locate exposed fasteners where they will be inconspicuous.
5. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.

B. Sign Message Panels: Construct sign-panel surfaces to be smooth and to remain flat under installed conditions within a tolerance of plus or minus 1.5 mm measured diagonally from corner to corner.

1. Coordinate dimensions and attachment methods to produce message panels with closely fitting joints. Align edges and surfaces with one another in the relationship indicated.
2. Increase panel thickness or reinforce with concealed stiffeners or backing materials as needed to produce surfaces without distortion, buckles, warp, or other surface deformations.
3. Continuously weld joints and seams unless other methods are indicated; grind, fill, and dress welds to produce smooth, flush, exposed surfaces with welds invisible after final finishing.

C. Post Fabrication: Fabricate posts designed for structural performance indicated and of lengths required for installation method indicated for each sign.

1. Steel Posts: Fabricate from minimum **[3.05-mm-]** <**Insert dimension**> thick, steel tubing unless otherwise indicated. Include post caps, fillers, spacers, junction boxes, access panels, reinforcement where required for loading conditions, and related accessories required for complete installation.

   a. Hot-dip galvanize post assemblies after fabrication according to ASTM A 123/A 123M.

2. Direct Burial: Fabricate posts 910 mm longer than height of sign to permit direct burial or embedment in concrete foundations or concrete-filled postholes.

3. Baseplates: Fabricate posts with baseplates welded to bottom of posts. Drill holes in baseplate for anchor-bolt connection.

   a. Provide **[preset] [drilled-in-place]** anchor bolts of size required for connecting posts to concrete foundations.

4. Sleeves: Fabricate posts 300 mm longer than height of sign to permit embedment in sleeves cast in concrete foundations or concrete-filled postholes. Provide sleeves by manufacturer, sized to receive outside diameter of posts. Size sleeves for direct embedment in concrete foundations or concrete-filled postholes and to prevent sign movement, but not less than **[610 mm] [910 mm]** <**Insert dimension**> for embedment.

5. Reverse Sleeves: Provide inserts by sign manufacturer, sized for close fit inside posts. Size inserts for direct embedment in concrete foundations and to attach sign posts securely and prevent sign movement, but of a height not less than one-third of post height plus 910 mm for embedment.

a. Provide through bolts to fasten posts to inserts.

D. Pylon Fabrication: Fabricate pylon signs with integral base consisting of channels, angles, plates, or other fittings. Design and fabricate pylon and anchorage for structural performance indicated. Detail anchorage so that water can drain out of assembly without obstruction. Drill holes in members for anchor-bolt connection. Provide anchor bolts of size required for connecting base to concrete foundations.

1. Internal Frames: Manufacturer's standard internal steel framing system and anchorage, modified as required for Project requirements. Provide welded construction. Cut, drill, and tap units to receive hardware, bolts, and similar items.

a. Hot-dip galvanize steel framing system after fabrication according to ASTM A 123/A 123M.

2. External Frames: Manufacturer's standard external aluminum framing system and anchorage for direct attachment of sign message panels, modified as required for Project requirements. Provide welded construction using mitered joints. Cut, drill, and tap units to receive hardware, bolts, and similar items.

a. Hot-dip galvanize steel framing system after fabrication according to ASTM A 123/A 123M.

2.7 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.8 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.

B. Color Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 0.04 mm. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify that sign-support surfaces are within tolerances to accommodate signs.

C. Verify that anchorage devices embedded in permanent construction are correctly sized and located to accommodate signs.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using installation methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that sign components are clean and free of materials or debris that would impair installation.
4. Corrosion Protection: Coat concealed surfaces of exterior aluminum in contact with grout, concrete, masonry, wood, or dissimilar metals, with a heavy coat of bituminous paint.

3.3 INSTALLING POSTS

A. Vertical Tolerance: Set posts plumb within a tolerance of 2 mm in 1 m.

B. Direct-Burial Method:

1. Excavation: Excavate posthole to dimensions indicated. Reconstruct subgrade that is not firm, undisturbed, or compacted soil, or that is damaged by freezing temperatures, frost, rain, accumulated water, or construction activities by excavating an additional 300 mm, backfilling with satisfactory soil or well-graded aggregate, and compacting to original subgrade elevation.
2. Setting in Earth: Set post in position, support to prevent movement, and backfill with satisfactory soil or well-graded aggregate as recommended in writing by manufacturer. Place and compact backfill in 150-mm lifts, compacting each lift.
3. Setting in Cast-in-Place Concrete: Set post in position, support to prevent movement, and place concrete **[in posthole] [or] [for concrete foundation]** as indicated on Drawings.

4. Setting in Preformed Hole in Concrete Foundation: Form or core drill holes in concrete foundation not less than 20 mm larger than outside dimension of post for installing posts in concrete. Set post in position, shim to prevent movement, and fill annular space between post and hole with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with manufacturer's written instructions.

    a. Cover anchorage joint in concrete foundations with flange of same metal and finish as post, **[welded to post after placing anchoring material] [attached to post with set screws]**.
    b. Leave anchorage joint exposed with **[3-mm anchoring material sloped away from post] [anchoring material flush with adjacent surface]**.

C. Baseplate Method:

1. Preset Anchor Bolts: Set post baseplate in position over anchor bolts projecting from concrete foundation, shim and support post to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.
2. Drilled-in-Place Anchor Bolts: Set post baseplate in position over concrete foundation, locate and drill anchor holes, shim and support post to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

D. Sleeve Method: Set post in position in sleeve and support post to prevent movement, fill annular space between post and sleeve with **[nonshrink, nonmetallic grout] [or] [anchoring cement]**, mixed and placed to comply with manufacturer's written instructions.

1. Cover anchorage joint with flange of same metal and finish as post, **[welded to post after placing anchoring material] [attached to post with set screws]**.
2. Leave anchorage joint exposed with **[3-mm anchoring material sloped away from post] [anchoring material flush with adjacent surface]**.

E. Reverse-Sleeve Method: Set post in position over the projecting insert and support post to prevent movement, drill posts and inserts for through bolts, and install and tighten through bolts.

3.4 INSTALLING PYLONS

A. Vertical Tolerance: Install pylons plumb within a tolerance of 2 mm in 1 m.

B. Attachment with Preset Anchor Bolts: Set pylon base in position over anchor bolts projecting from concrete foundation, shim and support pylon to prevent movement, place washers and nuts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

C. Attachment with Drilled-in-Place Anchor Bolts: Set pylon base in position over concrete foundation, locate and drill anchor holes, shim and support pylon to prevent movement, place washers and anchor bolts, and tighten. Fill shim space with nonshrink, nonmetallic grout, mixed and placed to comply with manufacturer's written instructions.

3.5 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Project Director/COR.

END OF SECTION 101415

SECTION 101425 – INTERIOR PANEL SIGNAGE

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Panel signs.
2. Illuminated panel signs.

B. Related Requirements:

1. Section 101415 "Post and Panel/Pylon Signage" for freestanding signs.

1.2 DEFINITIONS

A. Accessible: In accordance with the accessibility standard.

B. Illuminated: Illuminated by lighting source integrally constructed as part of the sign unit.

1.3 COORDINATION

A. Furnish templates for placement of sign-anchorage devices embedded in permanent construction by other installers.

B. Furnish templates for placement of electrical service embedded in permanent construction by other installers.

1.4 ACTION SUBMITTALS

A. Product Data: For each type of product.

B. Sustainable Design Submittals:

1. Product Data: For adhesives, indicating VOC content.
2. Laboratory Test Reports: For adhesives, indicating compliance with requirements for low-emitting materials.

C. Shop Drawings: For panel signs.

1. Include fabrication and installation details and attachments to other work.
2. Show sign mounting heights, locations of supplementary supports to be provided by other installers, and accessories.

3. Show message list, typestyles, graphic elements**[, including raised characters and Braille]**, and layout for each sign at least **[half size]** <**Insert scale**>.

4. Show locations of electrical service connections.
5. Include diagrams for power, signal, and control wiring.

D. Samples for Verification: For each type of sign assembly showing all components and with the required finish(es), in manufacturer's standard size unless otherwise indicated and as follows:

1. Panel Signs: **[Full-size Sample] [Not less than 300 mm square, including corner]** <Insert size>.
2. Field-Applied, Vinyl-Character Signs: **[Full-size Sample of characters on glass]** <Insert requirement>.
3. Variable Component Materials: **[Full-size Sample] [200-mm Sample]** <**Insert size**> of each base material, character (letter, number, and graphic element) in each exposed color and finish not included in Samples above.
4. Exposed Accessories: **[Full-size Sample] [Half-size Sample]** <**Insert size**> of each accessory type.
5. Full-size Samples, if approved, will be returned to Contractor for use in Project.

E. Product Schedule: For panel signs. Use same designations indicated on Drawings or specified.

F. **[Delegated-Design Submittal: For [signs indicated in "Performance Requirements" Article] <Insert sign designations>**.

1. Include structural analysis calculations for signs indicated to comply with design loads; signed and sealed by the qualified professional engineer responsible for their preparation.]

1.5 INFORMATIONAL SUBMITTALS

A. Qualification Data: For **[Installer] [and] [manufacturer]**.

B. Evaluation Reports: For **[post-installed anchors] [and] [power-actuated fasteners]**, from ICC-ES or other qualified testing agency acceptable to authorities having jurisdiction.

1.6 CLOSEOUT SUBMITTALS

A. Maintenance Data: For signs to include in maintenance manuals.

1.7 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials**[, from the same product run,]** that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Variable Component Materials: **[12]** <**Insert number**> replaceable text inserts and interchangeable characters (letters, numbers, and graphic elements) of each type.
2. Tools: **[One]** <**Insert number**> set(s) of specialty tools for assembling signs and replacing variable sign components.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An entity that employs installers and supervisors who are trained and approved by manufacturer.

B. Comply with requirements of the OBO Electrical Code (NFPA 70, "National Electrical Code" as amended by OBO).

1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with Chapter 1 of the OBO Electrical Code by a testing agency acceptable to Project Director/COR based upon input from OBO/PDCS/DE/EE, and marked for intended use.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify locations of **[anchorage devices] [and] [electrical service]** embedded in permanent construction by other installers by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. [Delegated Design: Engage a qualified professional engineer to design sign structure and anchorage of [illuminated panel] <Insert description> sign type(s) <Insert drawing designation of sign(s)> according to structural performance requirements.]

B. Structural Performance: Signs and supporting elements shall withstand the effects of gravity and other loads within limits and under conditions indicated.

C. Accessibility Standard: Comply with applicable provisions in the USDOJ's "2010 ADA Standards for Accessible Design".

2.2 PANEL SIGNS

A. Panel Sign <**Insert drawing designation**>: Sign with smooth, uniform surfaces; with message and characters having uniform faces, sharp corners, and precisely formed lines and profiles; and as follows:

1. Illuminated Panel Sign: **[Backlighted] [Edgelighted]** construction with **[fluorescent tube] [fiber-optic] [LED] [neon tube]** <**Insert requirement**> lighting including transformers, insulators, and other accessories for operability, with provision for servicing and concealing connections to building electrical system. Use tight or sealed joint construction to prevent unintentional light leakage. Space lamps apart from each other and away from sign surfaces as needed to illuminate evenly.

   a. Power: As indicated on electrical Drawings.

2. Solid-Sheet Sign**[and Returns][, Returns, and Back]**: Aluminum sheet with finish specified in "Surface Finish and Applied Graphics" Subparagraph and as follows:

   a. Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [1.52 mm] [2.03 mm] [3.18 mm] [6.35 mm]** <Insert dimension>.

   b. Surface-Applied, Flat Graphics: Applied **[vinyl film] [baked enamel or powder coat] [paint] [photo image]** <Insert requirement>.
   c. Surface-Applied, Raised Graphics: Applied **[polymer characters] [and] [Braille]** <Insert requirement>.
   d. Etched and Filled Graphics: Sign face etched or routed to receive enamel-paint infill.
   e. Inset, Cutout Characters: Sign face routed to receive push-through acrylic graphics **[flush with] [slightly projecting from]** the sign panel.

3. Laminated Aluminum-Sheet Sign: Aluminum sheet laminated to both sides of **[acrylic] [phenolic]** <**Insert material**> core sheet**[with painted edges]**.

   a. Composite-Sheet Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [3.18 mm] [6.35 mm]** <Insert dimension>.

   b. Surface-Applied, Flat Graphics: Applied **[vinyl film] [paint] [photo image]** <Insert requirement>.
   c. Surface-Applied, Raised Graphics: Applied **[polymer characters] [and] [Braille]** <Insert requirement>.

4. Laminated-Sheet Sign: **[Photopolymer] [Sandblasted polymer]** <**Insert material**> face sheet with raised graphics laminated**[over subsurface graphics]** to **[acrylic] [phenolic]** <**Insert material**> backing sheet to produce composite sheet.

   a. Composite-Sheet Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [3.18 mm] [6.35 mm]** <Insert dimension>.

   b. Surface-Applied, Flat Graphics: Applied **[vinyl film] [paint] [photo image]** <Insert requirement>.
   c. Surface-Applied, Raised Graphics: Applied **[polymer characters] [and] [Braille]** <Insert requirement>.
   d. Subsurface Graphics: **[Reverse halftone or dot-screen image] [Reverse etch image] [Snap-in changeable insert beneath removable face sheet] [Slide-in changeable insert]** <Insert requirement>.

5. Composite Phenolic-Core Sign: Solid phenolic panel core with integral subsurface graphic image covered with integral, polymeric face layer.

    a. Composite-Sheet Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [12.7 mm] [25.4 mm]** <Insert dimension>.

6. Laminated Polycarbonate-Sheet Sign: Polycarbonate face sheet laminated to each side of **[phenolic]** <**Insert material**> base sheet to produce composite sheet.

    a. Composite-Sheet Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [3.18 mm] [6.35 mm]** <Insert dimension>.

    b. Surface-Applied, Flat Graphics: Applied **[vinyl film] [paint] [photo image]** <Insert requirement>.
    c. Surface-Applied, Raised Graphics: Applied **[polymer characters] [and] [Braille]** <Insert requirement>.
    d. Subsurface Graphics: **[Reverse halftone or dot-screen image] [Reverse etch image]** <Insert requirement>.

7. Engraved Plastic-Laminate Sign: Plastic-laminate face laminated to contrasting phenolic core to produce composite sheet.

    a. Composite-Sheet Thickness: **[As indicated on Drawings] [Manufacturer's standard for size of sign] [3.18 mm] [6.35 mm]** <Insert dimension>.
    b. Engraved Graphics: Characters engraved through plastic-laminate face sheet to expose contrasting phenolic core.
    c. Plastic-Laminate Color and Pattern: **[As indicated by manufacturer's designation] [As selected by Project Director/COR from OBO Signage and Wayfinding Design Guide's 's standard range]** <Insert color and pattern>.
    d. Core Color: OBO Signage and Wayfinding Design Guide's standard **[dark color]** <Insert color>.

8. Sign-Panel Perimeter: Finish edges smooth.

    a. Edge Condition**[at Vertical Edges][at Horizontal Edges]**: **[As indicated on Drawings] [Square cut] [Beveled] [Bullnosed]** <Insert requirement>.
    b. Corner Condition in Elevation: **[As indicated on Drawings] [Square] [Rounded to radius indicated]** <Insert requirement>.

9. Mounting: **[As indicated on Drawings] [Manufacturer's standard method for substrates indicated] [Surface mounted to wall] [Projecting from wall] [Suspended] [Aluminum bracket] [Stainless-steel bracket]** <Insert requirement> with **[concealed anchors] [countersunk flathead through fasteners] [adhesive] [two-face tape] [hook-and-loop tape] [or] [magnetic tape]**.
10. Surface Finish and Applied Graphics:

    a. Integral Metal Finish: **[Mill] [Antique oxidized] [As indicated by manufacturer's designation] [Match Project Director/COR's sample] [As selected by Project Director/COR from full range of industry finishes]** <Insert finish>.

b. Integral Aluminum Finish: **[Clear anodized] [Light bronze anodized] [Medium bronze anodized] [Match Project Director/COR's sample] [Anodized color as selected by Project Director/COR from full range of industry colors and color densities]** <Insert finish>.
c. Integral Stainless-Steel Finish: **[No. 4] [No. 8] [Match Project Director/COR's sample] [As selected by Project Director/COR from full range of industry finishes]** <Insert description>.
d. Integral **[Acrylic] [Fiberglass] [PVC]** Sheet Color: **[As indicated by manufacturer's designation] [Match Project Director/COR's sample] [As selected by Project Director/COR from full range of industry colors]** <Insert color>.
e. Baked-Enamel or Powder-Coat Finish and Graphics: Manufacturer's standard, in color **[as indicated by manufacturer's designation] [matching Project Director/COR's sample] [as selected by Project Director/COR from manufacturer's full range]** <Insert color>.
f. Painted Finish and Graphics: Manufacturer's standard, factory-applied **[acrylic polyurethane]** <Insert requirement>, in color **[as indicated by manufacturer's designation] [matching Project Director/COR's sample] [as selected by Project Director/COR from manufacturer's full range]** <Insert color>.
g. Photo-Image Graphics: Manufacturer's standard **[black-and-white] [multicolor]**, **[600-dpi]** <Insert value> halftone or dot-screen image.
h. Overcoat: **[Manufacturer's standard baked-on clear coating]** <Insert requirement>.

11. Flatness Tolerance: Sign shall remain flat or uniformly curved under installed conditions as indicated on Drawings and within a tolerance of plus or minus 1.5 mm measured diagonally from corner to corner.

2.3 PANEL-SIGN MATERIALS

A. Aluminum Sheet and Plate: ASTM B 209M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

B. Aluminum Extrusions: ASTM B 221M, alloy and temper recommended by aluminum producer and finisher for type of use and finish indicated.

C. Acrylic Sheet: ASTM D 4802, category as standard with manufacturer for each sign, Type UVF (UV filtering).

D. Fiberglass Sheet: Multiple laminations of glass-fiber-reinforced polyester resin with UV-light stable, colorfast, nonfading, weather- and stain-resistant, colored polyester gel coat, and with manufacturer's standard finish.

E. Polycarbonate Sheet: ASTM C 1349, Appendix X1, Type II (coated, mar-resistant, UV-stabilized polycarbonate), with coating on both sides.

F. PVC Sheet: Manufacturer's standard, UV-light stable, PVC plastic.

G. Plastic-Laminate Sheet: NEMA LD 3, general-purpose HGS grade, 1.2-mm nominal thickness.

H. Vinyl Film: UV-resistant vinyl film of nominal thickness indicated, with pressure-sensitive, permanent adhesive on back; die cut to form characters or images as indicated on Drawings.

I. Paints and Coatings for Sheet Materials: Inks, dyes, and paints that are recommended by manufacturer for optimum adherence to surface and are UV and water resistant for colors and exposure indicated.

2.4 ACCESSORIES

A. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following unless otherwise indicated:

1. Use concealed fasteners and anchors unless indicated to be exposed.
2. Exposed Metal-Fastener Components, General:

   a. Fabricated from same basic metal and finish of fastened metal unless otherwise indicated.
   b. Fastener Heads: For nonstructural connections, use **[flathead] [or] [oval countersunk]** <Insert shape> screws and bolts with tamper-resistant **[Allen-head] [spanner-head] [or] [one-way-head]** <Insert slot design> slots unless otherwise indicated.

3. Sign Mounting Fasteners:

   a. Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material or screwed into back of sign assembly unless otherwise indicated.
   b. Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material or screwed into back of sign assembly, unless otherwise indicated.
   c. Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, and installed in predrilled holes.

4. Inserts: Furnish inserts to be set by other installers into concrete or masonry work.

B. Post-Installed Anchors: Fastener systems with bolts of same basic metal as fastened metal, if visible, unless otherwise indicated; with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on **[ICC-ES AC01] [ICC-ES AC193] [ICC-ES AC58] [or] [ICC-ES AC308]** as appropriate for the substrate.

1. Uses: Securing signs with imposed loads to structure.
2. Type: **[Torque-controlled, expansion anchor] [torque-controlled, adhesive anchor] [or] [adhesive anchor]**.
3. Material for Interior Locations: Carbon-steel components zinc-plated to comply with ASTM B 633 or ASTM F 1941M, Class Fe/Zn 5, unless otherwise indicated.

C. Power-Actuated Anchors: Fastener systems with working capacity greater than or equal to the design load, according to an evaluation report acceptable to authorities having jurisdiction, based on ICC-ES AC70.

D. Adhesive: As recommended by sign manufacturer.

1. Adhesives shall have a VOC content of **[70]** <**Insert value**> g/L or less.

2. Adhesive shall comply with the testing and product requirements of the California Department of Public Health's "Standard Method for the Testing and Evaluation of Volatile Organic Chemical Emissions from Indoor Sources Using Environmental Chambers.

E. Two-Face Tape: Manufacturer's standard high-bond, foam-core tape, 1.14 mm thick, with adhesive on both sides.

F. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187/D 1187M.

2.5 FABRICATION

A. General: Provide manufacturer's standard sign assemblies according to requirements indicated.

1. Preassemble signs in the shop to greatest extent possible. Disassemble signs and assemblies only as necessary for shipping and handling limitations. Clearly mark units for reassembly and installation; apply markings in locations concealed from view after final assembly.
2. Mill joints to a tight, hairline fit. Form assemblies and joints exposed to weather to resist water penetration and retention.
3. Comply with AWS for recommended practices in welding and brazing. Provide welds and brazes behind finished surfaces without distorting or discoloring exposed side. Clean exposed welded and brazed connections of flux, and dress exposed and contact surfaces.
4. Conceal connections if possible; otherwise, locate connections where they are inconspicuous.
5. Internally brace signs for stability, to meet structural performance loading without oil-canning or other surface deformation, and for securing fasteners.
6. Provide rabbets, lugs, and tabs necessary to assemble components and to attach to existing work. Drill and tap for required fasteners. Use concealed fasteners where possible; use exposed fasteners that match sign finish.

B. Surface-Engraved Graphics: Machine engrave characters and other graphic devices into indicated sign surface to produce precisely formed copy, incised to uniform depth.

1. Engraved Metal: Fill engraved graphics with manufacturer's standard baked enamel.
2. Engraved Opaque Acrylic Sheet: Fill engraved graphics with manufacturer's standard enamel.
3. Face-Engraved Clear Acrylic Sheet: Fill engraved copy with manufacturer's standard enamel. Apply manufacturer's standard opaque background color coating to back face of acrylic sheet.
4. Engraved Plastic Laminate: Engrave through exposed face ply of plastic-laminate sheet to expose contrasting core ply.

C. Subsurface-Applied Graphics: Apply graphics to back face of clear face-sheet material to produce precisely formed image. Image shall be free of rough edges.

D. Subsurface-Engraved Graphics: Reverse engrave back face of clear face-sheet material. Fill resulting copy with manufacturer's standard enamel. Apply opaque manufacturer's standard background color coating over enamel-filled copy.

E. Shop- and Subsurface-Applied Vinyl: Align vinyl film in final position and apply to surface. Firmly press film from the middle outward to obtain good bond without blisters or fishmouths.

F. Signs with Changeable Message Capability: Fabricate signs to allow insertion of changeable messages as follows:

1. For snap-in changeable inserts beneath removable face sheet, furnish one suction or other device to assist in removing face sheet. Furnish initial changeable insert. **[Subsequent changeable inserts are by Project Director/COR] [Furnish two blank inserts for each sign for Project Director/COR's use] <Insert requirement>**.
2. For slide-in changeable inserts, fabricate slot without burrs or constrictions that inhibit function. Furnish initial changeable insert. **[Subsequent changeable inserts are by Project Director/COR] [Furnish two blank inserts for each sign for Project Director/COR's use] <Insert requirement>**.
3. For frame to hold changeable sign panel, fabricate frame without burrs or constrictions that inhibit function. Furnish initial sign panel. **[Subsequent changeable sign panels are by Project Director/COR] <Insert requirement>**.

G. Brackets: Fabricate brackets, fittings, and hardware for bracket-mounted signs to suit sign construction and mounting conditions indicated. Modify manufacturer's standard brackets as required.

1. Aluminum Brackets: Factory finish brackets with baked-enamel or powder-coat finish **[to match sign-background color] [to match Project Director/COR's sample] <Insert requirement>** color unless otherwise indicated.

2.6 GENERAL FINISH REQUIREMENTS

A. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

C. Directional Finishes: Run grain with long dimension of each piece and perpendicular to long dimension of finished trim or border surface unless otherwise indicated.

D. Organic, Anodic, and Chemically Produced Finishes: Apply to formed metal after fabrication but before applying contrasting polished finishes on raised features unless otherwise indicated.

2.7 ALUMINUM FINISHES

A. Clear Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.

B. Color Anodic Finish: AAMA 611, **[Class I, 0.018 mm] [Class II, 0.010 mm]** or thicker.

C. Baked-Enamel or Powder-Coat Finish: AAMA 2603 except with a minimum dry film thickness of 0.04 mm. Comply with coating manufacturer's written instructions for cleaning, conversion coating, and applying and baking finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. Verify that sign-support surfaces are within tolerances to accommodate signs without gaps or irregularities between backs of signs and support surfaces unless otherwise indicated.

C. Verify that anchorage devices embedded in permanent construction are correctly sized and located to accommodate signs.

D. Verify that electrical service is correctly sized and located to accommodate signs.

E. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Install signs using mounting methods indicated and according to manufacturer's written instructions.

1. Install signs level, plumb, true to line, and at locations and heights indicated, with sign surfaces free of distortion and other defects in appearance.
2. Install signs so they do not protrude or obstruct according to the accessibility standard.
3. Before installation, verify that sign surfaces are clean and free of materials or debris that would impair installation.

B. Accessible Signage: Install in locations on walls **[as indicated on Drawings] [and] [according to the accessibility standard]** <Insert requirement>.

C. Mounting Methods:

1. Concealed Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place sign in position and push until flush to surface, embedding studs in holes. Temporarily support sign in position until adhesive fully sets.
b. Thin or Hollow Surfaces: Place sign in position and flush to surface, install washers and nuts on studs projecting through opposite side of surface, and tighten.

2. Projecting Studs: Using a template, drill holes in substrate aligning with studs on back of sign. Remove loose debris from hole and substrate surface.

a. Masonry Substrates: Fill holes with adhesive. Leave recess space in hole for displaced adhesive. Place spacers on studs, place sign in position, and push until spacers are pinched between sign and substrate, embedding the stud ends in holes. Temporarily support sign in position until adhesive fully sets.
b. Thin or Hollow Surfaces: Place spacers on studs, place sign in position with spacers pinched between sign and substrate, and install washers and nuts on stud ends projecting through opposite side of surface, and tighten.

3. Through Fasteners: Drill holes in substrate using predrilled holes in sign as template. Countersink holes in sign if required. Place sign in position and flush to surface. Install through fasteners and tighten.
4. Brackets: Remove loose debris from substrate surface and install backbar or bracket supports in position so that signage is correctly located and aligned.
5. Adhesive: Clean bond-breaking materials from substrate surface and remove loose debris. Apply linear beads or spots of adhesive symmetrically to back of sign and of suitable quantity to support weight of sign after cure without slippage. Keep adhesive away from edges to prevent adhesive extrusion as sign is applied and to prevent visibility of cured adhesive at sign edges. Place sign in position, and push to engage adhesive. Temporarily support sign in position until adhesive fully sets.
6. Two-Face Tape: Clean bond-breaking materials from substrate surface and remove loose debris. Apply tape strips symmetrically to back of sign and of suitable quantity to support weight of sign without slippage. Keep strips away from edges to prevent visibility at sign edges. Place sign in position, and push to engage tape adhesive.
7. Shim-Plate Mounting: Provide 3-mm- thick, concealed aluminum shim plates with predrilled and countersunk holes, at locations indicated, and where other direct mounting methods are impractical. Attach plate with fasteners and anchors suitable for secure attachment to substrate. Attach signs to plate using <**Insert mounting method**> method specified above.

D. Signs Mounted on Glass: Provide opaque sheet matching sign material and finish onto opposite side of glass to conceal back of sign.

3.3 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.

B. Remove temporary protective coverings and strippable films as signs are installed.

C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions, and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by Project Director/COR.

END OF SECTION 101425

SECTION 102113 - TOILET COMPARTMENTS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes toilet compartments configured as toilet enclosures and urinal screens.

B. Material Index / Material Codes Include:

1. TOG-[##] <TOILET COMPARTMENTS.>

C. Related Requirements:

1. Division 05 Section on “Metal Fabrications” for metal support framing.
2. Division 06 Section on “Rough Carpentry” for blocking.
3. Division 10 section on "Toilet, Bath, and Laundry Accessories" for toilet tissue dispensers, grab bars, purse shelves, and similar accessories mounted on toilet compartments.

1.2 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for toilet compartments.

B. Sustainable Design Submittals:

1. Product Data: For recycled content, indicating postconsumer and preconsumer recycled content and cost.

C. Shop Drawings: For toilet compartments.

1. Include plans, elevations, sections, details, and attachment details.
2. Show locations of cutouts for compartment-mounted toilet accessories.
3. Show locations of reinforcements for compartment-mounted grab bars and locations of blocking for surface-mounted toilet accessories.
4. Show locations of centerlines of toilet fixtures.
5. Show locations of floor drains.
6. Show **[ceiling grid, ceiling-mounted items, and]** overhead support or bracing locations.

D. Product Schedule: For toilet compartments, prepared by or under the supervision of supplier, detailing location and selected colors for toilet compartment material.

1.3 INFORMATIONAL SUBMITTALS

A. Product Certificates: For each type of toilet compartment.

1.4 CLOSEOUT SUBMITTALS

A. Maintenance Data: For toilet compartments to include in maintenance manuals.

1.5 MAINTENANCE MATERIAL SUBMITTALS

A. Furnish extra materials that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Door Hinges: **[One]** <**Insert number**> hinge(s) with associated fasteners.
2. Latch and Keeper: **[One]** <**Insert number**> latch(es) and keeper(s) with associated fasteners.
3. Door Bumper: **[One]** <**Insert number**> door bumper(s) with associated fasteners.
4. Door Pull: **[One]** <**Insert number**> door pull(s) with associated fasteners.
5. Fasteners: **[Ten]** <**Insert number**> fasteners of each size and type.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of toilet fixtures, walls, columns, ceilings, and other construction contiguous with toilet compartments by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Recycled Content of Steel Products: Postconsumer recycled content plus one-half of preconsumer recycled content not less than **[25]** <**Insert value**> percent.

B. Regulatory Requirements: Comply with applicable provisions in OBO-ICS Chapter 11 for toilet compartments designated as accessible.

C. Provide no-sightline system for all toilet compartments unless otherwise noted.

2.2 STAINLESS-STEEL TOILET COMPARTMENTS **[TOG-[##]]**

A. Toilet-Enclosure Style: Floor anchored.

B. Urinal-Screen Style: Floor anchored.

C. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. Provide with no-sightline system. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 25 mm for doors and panels and 32 mm for pilasters.
2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 1112 N, when tested according to ASTM F 446, without deformation of panel.
3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.

D. Urinal-Screen Construction:

1. Flat-Panel Urinal Screen: Matching panel construction.

E. Facing Sheets and Closures: Stainless-steel sheet of nominal thicknesses as follows:

1. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than 1.27 mm.
2. Panels: Manufacturer's standard thickness, but not less than 0.79 mm.
3. Doors: Manufacturer's standard thickness, but not less than 0.79 mm.
4. Flat-Panel Urinal Screens: Thickness matching the panels.

F. Pilaster **[Shoes] [and] [Sleeves (Caps)]**: Stainless-steel sheet, not less than 0.79-mm nominal thickness and 76 mm high, finished to match hardware.

G. Urinal-Screen Post: Manufacturer's standard post design of **[material matching the thickness and construction of pilasters] [or] [44-mm- square, aluminum tube with satin finish]** <In**sert requirement**>; with shoe**[and sleeve (cap)]** matching that on the pilaster.

H. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets; **[chrome-plated zamac] [clear-anodized aluminum] [stainless steel] [chrome-plated brass]**.
2. Full-Height (Continuous) Type: Manufacturer's standard design; **[stainless steel] [aluminum]**.

I. Stainless-Steel Finish: No. 4 bright, directional polish on exposed faces. Protect exposed surfaces from damage by application of strippable, temporary protective covering before shipment.

2.3 PAINTED STEEL TOILET COMPARTMENTS **[TOG-[##]]**

A. Toilet-Enclosure Style: Floor anchored.

B. Urinal-Screen Style: Floor anchored.

C. Door, Panel, and Pilaster Construction: Seamless, metal facing sheets pressure laminated to core material; with continuous, interlocking molding strip or lapped-and-formed edge closures; corners secured by welding or clips and exposed welds ground smooth. Provide with no-sightline system. Exposed surfaces shall be free of pitting, seam marks, roller marks, stains, discolorations, telegraphing of core material, or other imperfections.

1. Core Material: Manufacturer's standard sound-deadening honeycomb of resin-impregnated kraft paper in thickness required to provide finished thickness of 1 inch (25 mm) for doors and panels and 1-1/4 inches (32 mm) for pilasters.
2. Grab-Bar Reinforcement: Provide concealed internal reinforcement for grab bars mounted on units of size and material adequate for panel to withstand applied downward load on grab bar of at least 250 lbf (1112 N), when tested according to ASTM F 446, without deformation of panel.
3. Tapping Reinforcement: Provide concealed reinforcement for tapping (threading) at locations where machine screws are used for attaching items to units.

D. Urinal-Screen Construction:

1. Flat-Panel Urinal Screen: Matching panel construction.
2. Integral-Flange, Wall-Hung Urinal Screen: Similar to panel construction, with integral full-height flanges for wall attachment, and maximum 1-1/4 inches (32 mm) thick.
3. Wedge-Shaped, Wall-Hung Urinal Screen: Similar to panels, V-shaped, fabricated for concealed wall attachment, and maximum 6 inches (152 mm) wide at wall and minimum 1 inch (25 mm) wide at protruding end.

E. Facing Sheets and Closures: **[Electrolytically coated steel] [or] [hot-dip galvanized-steel]** sheet with nominal base-metal (uncoated) thicknesses as follows:

1. Pilasters, Braced at Both Ends: Manufacturer's standard thickness, but not less than 0.036 inch (0.91 mm).
2. Pilasters, Unbraced at One End: Manufacturer's standard thickness, but not less than 0.048 inch (1.21 mm).
3. Panels: **[Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm)] [0.036 inch (0.91 mm)]**.
4. Doors: Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm).

5. Flat-Panel Urinal Screens: Thickness matching the panels.
6. Integral-Flange, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.030 inch (0.76 mm).
7. Wedge-Shaped, Wall-Hung Urinal Screens: Manufacturer's standard thickness, but not less than 0.036 inch (0.91 mm).

F. Pilaster **[Shoes] [and] [Sleeves (Caps)]**: Stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

G. Urinal-Screen Post: Manufacturer's standard post design of **[material matching the thickness and construction of pilasters] [or] [1-3/4-inch- (44-mm-) square, aluminum tube with satin finish] <Insert requirement>**; with shoe**[and sleeve (cap)]** matching that on the pilaster.

H. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets; **[chrome-plated zamac] [clear-anodized aluminum] [stainless steel] [chrome-plated brass]**.
2. Full-Height (Continuous) Type: Manufacturer's standard design; **[stainless steel] [aluminum]**.

I. Steel Sheet Finish: Immediately after cleaning and pretreating, apply manufacturer's standard baked-on finish, including thermosetting, electrostatically applied, and powder coatings. Comply with coating manufacturer's written instructions for applying and baking.

1. Color: **[As indicated by manufacturer's designations] [Match Project Director/COR's sample] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color>**.

a. Allow for application of **[one color] [two colors]** in each room.

2.4 PHENOLIC-CORE TOILET COMPARMENTS **[TOG-[##]]**

A. Toilet-Enclosure Style: Floor anchored.

B. Urinal-Screen Style: Floor anchored.

C. Door, Panel**[, Screen]**, and Pilaster Construction: Solid phenolic-core panel material with melamine facing on both sides fused to substrate during panel manufacture (not separately laminated), and with eased and polished edges and no-sightline system. Provide minimum 3/4-inch- (19-mm-) thick doors and pilasters and minimum 1/2-inch- (13-mm-) thick panels.

D. Pilaster **[Shoes] [and] [Sleeves (Caps)]**: Formed from stainless-steel sheet, not less than 0.031-inch (0.79-mm) nominal thickness and 3 inches (76 mm) high, finished to match hardware.

E. Urinal-Screen Post: Manufacturer's standard post design of **[monolithic phenolic urinal screen cutout at bottom to form a post] [material matching the thickness and construction of pilasters] [or] [1-3/4-inch- (44-mm-) square, aluminum tube with satin finish] <Insert requirement>**; with shoe**[and sleeve (cap)]** matching that on the pilaster.

F. Brackets (Fittings):

1. Stirrup Type: Ear or U-brackets, **[chrome-plated zamac] [clear-anodized aluminum] [stainless steel] [chrome-plated brass]**.
2. Full-Height (Continuous) Type: Manufacturer's standard design; **[stainless steel] [aluminum]**.

G. Phenolic-Panel Finish:

1. Facing Sheet Finish: **[One color and pattern] [Two colors and patterns]** in each room.
2. Color and Pattern: **[As indicated by manufacturer's designations] [As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range] <Insert color and pattern>**, with manufacturer's standard **[dark color core] [through-color core matching face sheet]**.

3. Edge Color: **[Manufacturer's standard] [Through-color matching facing sheet color]**.

2.5 HARDWARE AND ACCESSORIES

A. Hardware and Accessories: Manufacturer's heavy-duty operating hardware and accessories.

1. Hinges: Manufacturer's minimum 1.59-mm- thick stainless steel **[paired, self-closing type that can be adjusted to hold doors open at any angle up to 90 degrees] [continuous, cam type that swings to a closed or partially open position] [continuous, spring-loaded type] <Insert requirement>**, allowing emergency access by lifting door. Mount with through-bolts.
2. Latch and Keeper: Manufacturer's heavy-duty surface-mounted cast-stainless-steel latch unit designed to resist damage due to slamming, with combination rubber-faced door strike and keeper, and with provision for emergency access. Provide units that comply with regulatory requirements for accessibility at compartments designated as accessible. Mount with through-bolts.
3. Coat Hook: Manufacturer's heavy-duty combination cast-stainless-steel hook and rubber-tipped bumper, sized to prevent in-swinging door from hitting compartment-mounted accessories. Mount with through-bolts.
4. Door Bumper: Manufacturer's heavy-duty rubber-tipped cast-stainless-steel bumper at out-swinging doors**[and entrance-screen doors]**. Mount with through-bolts.
5. Door Pull: Manufacturer's heavy-duty cast-stainless-steel pull at out-swinging doors that complies with regulatory requirements for accessibility. Provide units on both sides of doors at compartments designated as accessible. Mount with through-bolts.

B. Overhead Bracing: Manufacturer's standard continuous, extruded-aluminum head rail with antigrip profile and in manufacturer's standard finish.

C. Anchorages and Fasteners: Manufacturer's standard exposed fasteners of stainless steel, finished to match the items they are securing, with theft-resistant-type heads. Provide sex-type bolts for through-bolt applications. For concealed anchors, use stainless-steel, hot-dip galvanized-steel, or other rust-resistant, protective-coated steel anchors compatible with related materials.

2.6 MATERIALS

A. Aluminum Castings: ASTM B 26/B 26M.

B. Stainless-Steel Sheet: ASTM A 666, Type 304, stretcher-leveled standard of flatness.

C. Stainless-Steel Castings: ASTM A 743/A 743M.

2.7 FABRICATION

A. Fabrication, General: Fabricate toilet compartment components to sizes indicated. Coordinate requirements and provide cutouts for through-partition toilet accessories and solid blocking within panel where required for attachment of toilet accessories.

B. Overhead-Braced Units: Provide manufacturer's standard corrosion-resistant supports, leveling mechanism, and anchors at pilasters to suit floor conditions. Provide shoes at pilasters to conceal supports and leveling mechanism.

C. Floor-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at pilasters for structural connection to floor. Provide shoes at pilasters to conceal anchorage.

D. Floor-and-Ceiling-Anchored Units: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment at tops and bottoms of pilasters. Provide shoes and sleeves (caps) at pilasters to conceal anchorage.

E. Urinal-Screen Posts: Provide manufacturer's standard corrosion-resistant anchoring assemblies with leveling adjustment nuts at**[tops and]** bottoms of posts. Provide shoes**[and sleeves (caps)]** at posts to conceal anchorage.

F. Door Size and Swings: Unless otherwise indicated, provide 610-mm- wide in-swinging doors for standard toilet compartments and 914-mm- wide out-swinging doors with a minimum 813-mm-wide clear opening for compartments designated as accessible.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas and conditions, with Installer present, for compliance with requirements for fastening, support, alignment, operating clearances, and other conditions affecting performance of the Work.

1. Confirm location and adequacy of blocking and supports required for installation.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. General: Comply with manufacturer's written installation instructions. Install units rigid, straight, level, and plumb. Secure units in position with manufacturer's recommended anchoring devices.

1. Maximum Clearances:

a. Pilasters and Panels: 1/2" (13 mm).

b. Panels and Walls: 1” (25 mm).

2. Full-Height (Continuous) Brackets: Secure panels to walls and to pilasters with full-height brackets.

a. Locate bracket fasteners so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

3. Stirrup Brackets; where no-sightline systems are not required: Secure panels to walls and to pilasters with no fewer than **[two brackets attached] [three brackets attached at midpoint and]** near top and bottom of panel.

a. Locate wall brackets so holes for wall anchors occur in masonry or tile joints.
b. Align brackets at pilasters with brackets at walls.

B. Overhead-Braced Units: Secure pilasters to floor and level, plumb, and tighten. Set pilasters with anchors penetrating not less than 1-3/4 inches (44 mm) into structural floor unless otherwise indicated in manufacturer's written instructions. Secure continuous head rail to each pilaster with no fewer than two fasteners. Hang doors to align tops of doors with tops of panels, and adjust so tops of doors are parallel with overhead brace when doors are in closed position.

C. Floor-Anchored Units: Set pilasters with anchors penetrating not less than 51 mm into structural floor unless otherwise indicated in manufacturer's written instructions. Level, plumb, and tighten pilasters. Hang doors and adjust so tops of doors are level with tops of pilasters when doors are in closed position.

D. Floor-and-Ceiling-Anchored Units: Secure pilasters to supporting construction and level, plumb, and tighten. Hang doors and adjust so doors are level and aligned with panels when doors are in closed position.

E. Urinal Screens: Attach with anchoring devices to suit supporting structure. Set units level and plumb, rigid, and secured to resist lateral impact.

3.3 ADJUSTING

A. Hardware Adjustment: Adjust and lubricate hardware according to hardware manufacturer's written instructions for proper operation. Set hinges on in-swinging doors to hold doors open approximately 30 degrees from closed position when unlatched. Set hinges on out-swinging doors**[and doors in entrance screens]** to return doors to fully closed position.

END OF SECTION 102113

SECTION 104415 - FIRE-PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Portable fire extinguishers.
2. Fire-protection brackets and cabinets for extinguishers.

B. Application of Fire Extinguishers:

1. Provide fire extinguisher types, size, and placement in accordance with the OBO Building Code Chapter 9.
2. More specific indication of location and recessing may be identified in Drawings.

C. Related Sections:

1. Division 21 Sections on fire suppression system.
2. Section 284626 “Addressable Fire Alarm Systems.”

1.2 SUBMITTALS

A. Product data:

1. Fire Extinguishers: Include rating and classification.
2. Fire-Protection Cabinets: Product Data for each type of product. Show door hardware, cabinet type, trim style, and panel style. Include roughing-in dimensions and details showing recessed-, semirecessed-, or surface-mounting method and relationships of box and trim to surrounding construction.

B. Samples for Verification: For each type of exposed finish required, prepared on samples 150 by 150 mm square (6 by 6 inches) for review by the Project Director/COR.

C. Installation instructions.

D. Product Schedule: For fire-protection cabinets, indicate whether recessed, semi-recessed, or surface mounted. Coordinate final fire-protection cabinet schedule with fire-extinguisher schedule to ensure proper fit and function. Fire-extinguisher schedule shall include the following: Serial/NEPA/Extinguisher Number, Manufacturer, Size, Type, Date of Manufacture or Hydrostatic Test, Property ID, Physical Location, Remarks, Inspection Date, and Inspector Name. **[Use same designations indicated on Drawings.]**

E. Operating and maintenance instructions.

1.3 QUALITY ASSURANCE

A. NFPA Compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

B. Fire Extinguishers: Listed and labeled for type, rating, and classification by an independent testing agency acceptable to authorities having jurisdiction.

C. Fire-Rated Fire-Protection Cabinets: Listed and labeled to comply with requirements of ASTM E 814 for fire-resistance rating of walls where they are installed.

1.4 COORDINATION

A. Coordinate size of fire-protection cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.

B. Coordinate sizes and locations of fire-protection cabinets with wall depths.

C. Apply decals and vinyl lettering on field-painted fire-protection cabinets after painting is complete.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Operational Readiness: Delivery fully charged with all necessary components to be fully operational with breakaway seals in place.

B. Packaging: Each extinguisher shall be individually packaged in sturdy packaging designed to withstand normal shipping and handling without damage.

C. Storage: Store extinguishers in environmental conditions as recommended by manufacturer and in clean condition.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

B. Aluminum: Alloy and temper recommended by aluminum producer and manufacturer for type of use and finish indicated, and as follows:

1. Sheet: ASTM B 209M.
2. Extruded Shapes: ASTM B 221M.

C. Stainless-Steel Sheet: ASTM A 666, Type 304.

D. Tempered Float Glass: ASTM C 1048, Kind FT, Condition A, Type I, Quality q3, 3 mm thick, Class 2 (tinted, heat absorbing, and light reducing), tint as indicated, or otherwise as selected by Project Director/COR.

2.2 PORTABLE FIRE EXTINGUISHERS

A. General: Provide fire extinguishers of type, size, and capacity for each fire-protection cabinet and mounting bracket indicated.

1. Instruction Labels: Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.

B. Manufacturer and Model: Ansul “Red Line” model.

1. For 4-A:40-B:C Rating, use RL-A-10-G cartridge with “Foray” powder.

C. Multipurpose Dry-Chemical Type: Industrial grade external cartridge operated multipurpose A-B-C portable dry chemical fire extinguishers. Extinguishers shall meet or exceed associated U.L. ratings identified.

1. 4-A:40-B:C Rating: 4.5 kg (10 lb.) nominal capacity.

a. Approximate Dimensions: 460 mm (18-1/8 in.) high; 210 mm (8-1/4 in.) wide; 130 mm (5-1/4 in.) deep.

D. Operation: Extinguisher activation and operation actions limited to:

1. Removal of safety ring pin.
2. Puncture of pressure cartridge to pressurize main canister.
3. Operation of discharge nozzle.

E. Approvals: Extinguishers shall meet or exceed approvals of Underwriters Laboratories (U.L.) or Underwriters Laboratories Canada (U.L.C), and the United States Coast Guard.

F. Inspection Capability: With the exception of internal inspection of pressure cartridges, extinguishers shall be designed and constructed to allow complete visual inspection of all internal and external components by disassembly without need for special knowledge or tools.

G. Maintainability: Extinguishers shall be designed to allow field recharging without the requirement for special tools or servicing equipment.

H. Inspection Tag: Provide with each unit.

I. Fabrication:

1. Main Canister Shell: Corrosion and impact resistant steel and painted with red paint resistant to cracking, chipping, and corrosion in harsh climates. Shell shall have fill port at top with opening of not less than 7 mm (2-3/4 inch) in diameter internally threaded to accommodate fill cap. Shell exterior shall incorporate device to secure discharge nozzle.
2. Pressure Cartridge: Cartridge shall contain noncombustible gas under pressure in amount appropriate for proper discharge of contents of main canister. Cartridge shall have clearly visible (when disassembled from unit) puncture seal to facilitate visual determination of cartridge condition (i.e., charged versus discharged). Cartridge shall be designed for installation and removal by hand only, without need for tools. Cartridge shall be provided with "left-hand" threads to prevent inadvertent installation of incorrect cartridges. Each cartridge shall have appropriate size designation clearly marked on body of cartridge. Enclose pressure cartridge with protective cover attached to side of main canister designed for easy removal.
3. Discharge Nozzle: Metal construction with access to internal discharge valve without use of special tools. Nozzle shall be designed to provide "On/Off'" operation with little effort on part of operator and designed and fabricated to operate in all environments.
4. Discharge Hose: Fabricate of long-lasting rubber resistant to climatic conditions and retain flexibility to –40 deg. F (-40 deg. C). All couplings shall be of corrosion resistant metal.
5. Carrying Handle: Configuration of handle shall be such that angle of unit while carried is appropriate for proper operation of unit.
6. Actuating Mechanism: Actuating lever shall be designed to require only single downward pushing action to activate pressure cartridge. All internal working parts of cartridge puncture mechanism shall be of stainless steel.
7. Fill Cap: Corrosive resistant metal and externally threaded to adapt to main canister. Threads shall include machined grooves perpendicular to threads to provide for release of internal pressure from main canister during removal while at least two full threads are still fully engaged. Fill cap shall be designed to be installed and removed by hand only without need for tools.

2.3 FIRE-PROTECTION CABINET

A. Cabinet Type: Where scheduled or indicated, provide for 4-A:40-B:C extinguisher, suitable for fire extinguisher.

B. Cabinet Construction: Fire-resistive rating in accordance with rating of associated wall. Where wall is fire-rated, fire-rated cabinets are only available as semi-recessed or recessed types.

C. Cabinet Material: Stainless-steel sheet.

D. Recessed Cabinet: Cabinet box recessed in walls of sufficient depth to suit style of trim indicated.

1. Trimless with Plaster Stop: Surface of surrounding wall finishes flush with exterior finished surface of cabinet frame and door, without overlapping trim attached to cabinet. Provide recessed flange, of same material as box, attached to box to act as plaster stop.
2. Trimless with Hidden Flange: Flange of same metal and finish as box overlaps surrounding wall finish and is concealed from view by an overlapping door.

3. Exposed Flat Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface with exposed trim face and wall return at outer edge (backbend) of 6 to 8 mm.

E. Semi-Recessed Cabinet: Cabinet box recessed in walls of depth to suit style of trim indicated.

1. One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend).
2. Trim Type: As indicated on Drawings or as otherwise selected, and as follows:

a. Square-Edge Trim: 32- to 38 mm (1-1/4- to 1-1/2-inch) backbend depth.
b. Rolled-Edge Trim: 64-mm (2-1/2-inch) backbend depth.

F. Door Material: Steel sheet.

G. Door Style: Center glass panel with frame.

H. Door Glazing: Tempered float glass; see Article on MATERIALS.

I. Door Hardware: Manufacturer's standard door-operating hardware of proper type for cabinet type, trim style, and door material and style indicated.

1. Provide continuous hinge, of same material and finish as trim**,** permitting door to open 180 degrees.

J. Accessories:

1. Internal Cabinet Mounting Bracket: Manufacturer's standard steel, designed to secure fire extinguisher to fire-protection cabinet, with plated or baked-enamel finish.
2. Lettered Door Handle: One-piece, cast-iron door handle.
3. Provide cabinets without locks.
4. Identification: Lettering complying with “OBO Design and Wayfinding Design Guide” for style. Locate as indicated by Project Director/COR.

a. Identify fire extinguisher in fire-protection cabinet with the words "FIRE EXTINGUISHER."

5. Alarm: Manufacturer's standard alarm that actuates when fire-protection cabinet door is opened and that is powered by batteries or low voltage, complete with transformer.

K. Finishes:

1. Manufacturer's standard baked-enamel paint for the following:

a. Exterior of cabinet door, and trim, except for those surfaces indicated to receive another finish.
b. Interior of cabinet and door.

2. Stainless Steel: Satin, reflective, directional polish, No. 7.

2.4 MOUNTING BRACKETS

A. For extinguishers not specified to be placed in cabinets, provide brackets for mounting.

B. Brackets: Capable of supporting 16 kg (35 lb.) charged weight. Manufacturer's standard galvanized steel, designed to secure fire extinguisher to wall or structure, for size, type, and capacities of fire extinguishers indicated, with plated or baked-enamel finish.

C. Identification: Lettering complying with “OBO Design and Wayfinding Design Guide” for style. Locate as indicated by Project Director/COR.

1. Identify bracket-mounted fire extinguishers with the words "FIRE EXTINGUISHER" in red letter decals applied to mounting surface.

2.5 FABRICATION

A. Fire-Protection Cabinets: Provide manufacturer's standard box (tub), with trim, frame, door, and hardware to suit cabinet type, trim style, and door style indicated. Weld joints and grind smooth.

1. Construct fire-rated cabinets with double walls fabricated from 1.1-mm- thick, cold-rolled steel sheet lined with minimum 16-mm- thick, fire-barrier material. Provide factory-drilled mounting holes.

B. Cabinet Doors: Fabricate doors according to manufacturer's standards, from materials indicated and coordinated with cabinet types and trim styles selected.

1. Fabricate door frames with tubular stiles and rails and hollow-metal design, minimum 13 mm thick.
2. Miter and weld perimeter door frames.

C. Cabinet Trim: Fabricate cabinet trim in one piece with corners mitered, welded, and ground smooth.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Examine roughing-in for cabinets to verify actual locations before cabinet installation.

B. Examine walls and partitions for suitable framing depth and blocking where recessed cabinets will be installed.

C. Examine fire extinguishers for proper charging and tagging. Remove and replace damaged, defective, or undercharged units.

D. Prepare recesses for recessed or semi-recessed fire-protection cabinets as required by type and size of cabinet and trim style.

E. Install fire-protection specialties in locations and at mounting heights indicated or, if not indicated, at heights acceptable to authorities having jurisdiction.

F. Mounting Height:

1. Minimum: 100 mm (4 inches) above finished floor.
2. Maximum: 1.5 m (5 feet) above finished floor.
3. Where applicable, mounting height shall conform to accessibility requirements for this Section.

G. Accessibility: Where applicable, conform to accessibility requirements in Chapter 11 of the OBO Building Code.

H. Fire-Protection Cabinets: Fasten fire-protection cabinets to structure, square and plumb.

1. Unless otherwise indicated, provide recessed fire-protection cabinets. If wall thickness or design does not allow for fully recessed cabinets, provide semi-recessed cabinets.
2. Provide inside latch and lock for break-glass panels.
3. Fasten mounting brackets to inside surface of fire-protection cabinets, square and plumb.
4. Adjust fire-protection cabinet doors to operate easily without binding. Verify that integral locking devices operate properly.
5. Replace fire-protection cabinets that have been damaged or have deteriorated beyond successful repair.

I. Extinguishers Mounted without Cabinets: For extinguisher types not specified to be placed in cabinet, install mounting brackets to surfaces, square and plumb, at locations indicated.

J. Identification: Apply decals and vinyl lettering at locations indicated.

END OF SECTION 104415

SECTION 105110 – CELL PHONE AND LAPTOP LOCKER

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes the following:

1. Lockers for cell phone, tablet, and laptop storage.

B. Related Requirements:

1. Section 262725 “Wiring Devices.”

1.3 ACTION SUBMITTALS

A. Product Data: Submit manufacturer’s printed data including materials, accessories, construction, finishes, assembly and installation instructions for lockers.

B. LEED Submittals:

1. For products having recycled content, documentation indicating percentages by weight of postconsumer and pre-consumer recycled content. Include statement indicating cost for each product having recycled content.

C. Shop Drawings: Submit layout and dimensions of metal lockers. Indicate relationship to adjoining surfaces. Show locker elevations and details, fillers, trim, base, sloping tops, lock location, and accessories. Include locker numbering sequence. Indicate installation and anchorage requirements.

D. Samples: Submit 150-mm (6-inch) square metal samples of color and finish required for metal lockers finish.

E. Operating Instructions: Furnish government with one complete set of installation instructions, including special adjusting tools and maintenance instructions listing routine maintenance procedures, possible breakdowns and repairs, and troubleshooting guides. Furnish one complete catalog for each manufacturer listed.

1.4 CLOSEOUT SUBMITTALS

A. Warranty: Submit specified warranty in accordance with Division 01 requirements.

B. Maintenance Data: For lockers specialties and finishes to be included in maintenance manuals in accordance with Division 01 requirements.

1.5 QUALITY ASSURANCE

A. Single-Source Responsibility: Obtain locker units and accessories from one manufacturer.

B. Regulatory Requirements:

1. Comply with requirements of Chapter 11 of the OBO Building Code as applicable to accommodate barrier free design.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Do not deliver lockers until spaces to receive them are clean, dry, and ready for locker installation. Protect lockers from damage during delivery,

1.7 FIELD CONDITIONS

A. Field Measurements: Verify the following by field measurements before fabrication and indicate measurements on Shop Drawings:

1. Concealed framing, blocking, and reinforcements that support metal lockers before they are enclosed.
2. Recessed openings.
3. Established Dimensions: Where field measurements cannot be made without delaying the work, establish recessed opening dimensions and proceed with fabricating metal lockers without field measurements. Coordinate wall and floor construction to ensure that actual recessed opening dimensions correspond to established dimensions.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below, ordered during initial procurement of materials to be installed, that match products installed and that are packaged with protective covering for storage and identified with labels describing content.

1. Metal locker hardware units equal to 10 percent of amount installed for each type and finish installed, but no fewer than five units:

a. Resettable combination lock.
b. Key paired to original product, if applicable.

c. Door and hinge assembly.
d. Identification plate.

1.9 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of locker specialties that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures.
b. Faulty operation of hardware.
c. Deterioration of metals, metal finishes, and other materials beyond normal surface wearing.

2. Warranty Period: Five years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 CAA AREA CELL PHONE, TABLET, AND LAPTOP LOCKERS

A. Location: Provide outside entrances to controlled corridors serving the Controlled Access Area (CAA) where indicated in the drawings.

B. Quantity: Provide one locker per desk in the CAA served, plus 10 percent, rounding up to full unit.

C. Size: Each locker compartment must be sized with the following minimum dimensions (width x depth x height)

1. Cell Phone: 150 mm (6 inches) x 200 mm (8 inches) x 127 mm (5 inches)
2. Tablet/Laptop: 343 mm (13-1/2 inches) x 432 mm (17 inches) x 127 mm (5 inches)

D. Construction: Theft deterrent heavy gage steel construction.

E. Power:

1. Cell Phone (GWA): Each compartment must be equipped with a USB Type-C, 24-pin connector.
2. Cell Phone (Tenant): Where required by specific tenant agencies, each compartment must be equipped with a duplex receptacle.
3. Tablet/Laptop: Each compartment must be equipped with a duplex receptacle.

F. Finish: Baked enamel finish. Color: **<Insert color>**.

G. Labeling: Manufacturer's standard number plates.

H. Keying: Resettable combination lock

1. Keyless 3-digit combination lock with manual dial and master key.
2. Quantity of keys: Provide three master keys.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions for compliance with requirements for installation tolerances, wall and floor construction, and other conditions affecting performance.

B. Examine roughing-in for electrical power systems to verify actual locations of wiring connections before electrified locker installation.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install lockers complete with accessories according to manufacturer's recommendations. Install plumb, level, rigid, and flush.

B. Anchor lockers at intervals recommended by manufacturer. Install anchors through back-up reinforcing plates where necessary to avoid metal distortion, using concealed fasteners.

C. Install recess trim to recessed lockers using concealed fasteners. Provide hairline joints and concealed splice plates.

3.3 ADJUSTING, CLEANING, AND PROTECTION

A. Adjust doors and latches to operate easily without binding. Verify that integral locking devices are operating properly.

B. Clean interior and exposed exterior surfaces and polish stainless-steel and nonferrous metal surfaces.

C. Protect lockers from damage, abuse, dust, dirt, stain, or paint. Do not permit locker use during construction.

D. Touch up marred finishes or replace locker units that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by locker manufacturer.

3.4 DEMONSTRATION

A. Instruct Government's O&M personnel in proper adjustment and maintenance of the combination locks and hardware assemblies. Additionally, the field demonstrate repair and replacement of combination locks. Demonstration and Training must be provided in accordance with Division 01 specification requirements.

B. The following demonstration and training durations must be meet, at minimum:

1. Classroom: 30 minutes.
2. Field Demonstration: 30 minutes.

END OF SECTION 105110

SECTION 105613 - METAL STORAGE SHELVING

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Four-post metal storage shelving (FPMS) and accessories.
2. Cantilever racks and accessories.
3. Pallet Racks.
4. Storage cabinets.
5. Plan file stands.
6. Vertical Sheet Racks.

B. Related Sections include the following:

1. Division 10 Section on mobile storage shelving.
2. Division 10 Section on safety storage cabinets.
3. Division 12 Section on work benches.
4. **[Division 13 Section on modular mezzanines.]**
5. Section 271116 “Communications Cabinets and Frames” for racks used with telecommunications equipment.
6. Section 280508 “Common Work Results for Technical Security Systems (TSS)” for racks used with TSS.

1.2 PERFORMANCE REQUIREMENTS

A. [Delegated Design: For shelving units higher than 4500 mm (15 feet), design metal storage shelving, including comprehensive engineering analysis by a qualified professional engineer, using performance requirements and design criteria indicated.]

B. [Seismic Performance: Metal storage shelving shall withstand the effects of earthquake motions determined according to [ASCE/SEI 7] <Insert requirement>, and conform to seismic design requirements of the OBO Building Code (International Building Code as amended by OBO).

1. Seismic Component Importance Factor: 1.0.]

C. Structural Performance for Post-and-Shelf Metal Storage Shelving: Provide metal storage shelving capable of withstanding the loads indicated when tested according to MH 28.1, "Specification for the Design, Testing, Utilization and Application of Industrial Grade Steel Shelving."

D. Structural Performance for Post-and-Beam Metal Storage Shelving: Capable of withstanding the loads indicated according to MH 28.2.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include rated capacities, construction details, material descriptions, dimensions of individual components and profiles, and finishes for metal storage shelving.

B. Shop Drawings: For racks and other customized metal storage shelving. Include plans, aisle widths, elevations, sections, details, and attachments to other work. Include installation details of connectors, lateral bracing, and special bracing.

C. Samples for Verification: For the following components, of size indicated below.

1. Posts: 300 mm long.
2. Shelves: Full size, but not more than 600 mm wide by 300 mm deep.
3. Connectors: Full size.
4. Shelf Labels: Full size.

D. [Delegated-Design Submittal: For metal storage shelving indicated to comply with performance requirements, including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1. Design Calculations: Calculate requirements for seismic restraints.]

E. Qualification Data:

1. Installer.
2. **[Professional engineer in accordance with ASCE/SEI 7].**
3. **[Seismic Qualification Certificates: For metal storage shelving, accessories, and components, from manufacturer.]**

F. Product Schedule: For metal storage shelving. Use same designations indicated on Drawings.

G. Product Certificates: For each type of metal storage shelving from manufacturer.

H. Maintenance Data: For metal storage shelving to include in maintenance manuals.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain metal storage shelving through one source from a single vendor.

B. Installer Qualifications: Manufacturer's authorized representative who is trained and approved for installation of units required for this Project.

C. Vendor’s Qualifications for Rack Design: Minimum five years experience with similar warehouse applications. Vendors shall review rack layout and accessories to confirm and maximize rack design and storage capacity.

D. [Engineer Responsibility: A professional engineer shall design the seismic restraints for shelves, cabinets and files. Engineer shall have experience in design of seismic restraints for similar projects using similar products, equipment and installation design. Manufacturer may submit evidence that seismic restraints systems and installation requirements have been written and reviewed by an engineer on staff.]

E. [Product Options: Drawings indicate size, profiles, and dimensional requirements of metal storage shelving and are based on the specific system indicated.

1. Do not modify structural and operational performance.]

F. Preinstallation Conference: Conduct conference at Project site.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver metal storage shelving palleted, wrapped, or crated to provide protection during transit and Project-site storage.

1.6 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install metal storage shelving until spaces are enclosed and weatherproof, wet work in spaces is completed and dry, and ambient temperature is being maintained at the levels indicated for Project when occupied for its intended use.

1.7 COORDINATION

A. Coordinate sizes and locations of blocking and backing required for installation of metal storage shelving attached to partition assemblies.

B. Coordinate locations and installation of metal storage shelving that may interfere with ceiling systems including lighting, HVAC, and sprinklers.

1.8 EXTRA MATERIALS

A. Furnish extra materials described below, before installation begins, that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

1. Shelves: Full-size units equal to 15 percent of amount installed for each type indicated, but no fewer than 10 shelves.
2. Shelf-to-Post Connectors: Full-size units equal to 15 percent of amount installed for each type indicated, but no fewer than 10 connectors.
3. Shelf Labels: Equal to 25 percent of amount installed for each type indicated.
4. Plan Racks: Provide additional 24 plan rack clamps for drawings.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Hot-Rolled Steel Sheet: ASTM A 1011/A 1011M, Commercial Steel (CS), Type B; free of scale, pitting, or surface defects; pickled and oiled.

B. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B.

C. Steel Tubing: ASTM A 513, Type 2.

D. Stainless-Steel Wire: ASTM A 580/A 580M, Type 304.

E. Floor Anchors: Galvanized-steel, power-actuated fasteners. Provide number per unit recommended by manufacturer unless additional anchors are indicated in calculations.

F. Wall Anchors: Manufacturer's standard, galvanized-steel anchors designed to secure metal storage shelving to adjacent wall. Provide [**one**] <**Insert number**> per shelving unit for each shelving unit adjacent to a wall unless additional anchors are indicated in calculations.

2.2 FOUR-POST METAL STORAGE SHELVING (FPMS)

A. Four-Post Metal Storage Shelving: This shelving type may be identified in some instances as simply “Steel Shelves” or “Storage Shelving” (e.g., at Shop spaces). Factory-formed, field-assembled, freestanding, post-and-shelf metal storage shelving system; designed for shelves to span between and be supported by corner posts, with shelves adjustable over the entire height of shelving unit. Fabricate initial shelving unit with a post at each corner. Fabricate additional shelving units similarly, so each unit is independent. Provide fixed top and bottom shelves, adjustable intermediate shelves, and accessories indicated. Provide open shelving except where indicated otherwise.

1. Available Manufacturers: Manufacturers providing four-post metal storage shelving include, but are not limited to:

a. Adjustable Shelving Products; a division of Karp Associates, Inc.
b. Borroughs Corporation.
c. Edsal.
d. Equipto.
e. Excalibur Shelving Systems.
f. Hallowell; Division of List Industries, Inc.
g. Hodge; a division of Durham Mfg. Co., Inc.
h. Jeter Systems Corporation.
i. Lyon Workspace Products, LLC.
j. Montel Aetnastak Inc.
k. Penco Products, Inc.
l. Richards-Wilcox, Inc.
m. Rousseau Metal Inc.

n. Safco Products; a division of LDI.
o. Schaefer Systems International, Inc.
p. Shelf Esteem Inc.
q. Spacesaver Corporation.
r. Tennsco.
s. Unicor; Federal Prison Industries, Inc.
t. Western Pacific Storage Systems.

B. Structural Performance for Four-Post Metal Storage Shelving: Provide metal storage shelving capable of withstanding the loads indicated when tested according to MH 28.1, "Specification for the Design, Testing, Utilization and Application of Industrial Grade Steel Shelving."

1. Load-Carrying Capacity per Shelf: 680 kg (1500 lb) for typically loaded shelves.

C. Construction

1. Posts: Fabricated from hot rolled steel in manufacturer's standard shape; with perforations at 40 mm o.c. (1-1/2 inches o.c.) to receive shelf-to-post connectors.

a. Add-On Shelf Posts: Fabricated from hot-rolled steel, T-shaped; perforated to match main posts and same thickness.
b. Post Base: Adjustable steel foot plate, drilled for mechanical attachment to floor.

2. Bracing: Manufacturer's standard double diagonal cross bracing at back and ends, as required for stability and load-carrying capacity.
3. Solid-Type Shelves: Fabricated from steel sheet.

a. Steel-Sheet Thickness, Nominal: Of thickness required for load-carrying capacity per shelf.

4. Framed-Type Wire Shelves: Steel in locations with low-level corrosion or pollution risk, or stainless steel in locations with moderate or extreme corrosion or pollution risk.
5. Shelf-to-Post Connectors: Manufacturer's standard connectors.
6. Base: Open, with exposed post legs.
7. Steel Finish: Baked enamel or powder coat.

a. Color and Gloss: As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range.

D. Accessories:

a. Label Holders: Clear plastic, designed to clip onto front edge of shelf.
b. Drawers: Where indicated or scheduled.
c. Doors: Where indicated or scheduled.
d. Storage Basket: Where indicated, Edge-of-shelf-mounted wire basket, <**Insert dimensions**>; fabricated from same material and with same finish as shelves.
e. [Rolling Ladders: For FPMS with 3600 mm (144 inches) height.]

2.3 CANTILEVER RACKS

A. Cantilever Rack, I-Beam - Metal Storage Shelving (OBO Component Code FS082): Factory-formed, field-assembled, cantilever rack metal storage shelving system shall be double sided upright. Single sided sections shall have similar design requirements.

1. Available Manufacturers: Manufacturers providing cantilever rack metal storage shelving include, but are not limited to:

   a. Lyon Metal Products, Inc.
   b. Redirack Storage Systems
   c. Steel King Industries, Inc.

2. Load-Carrying Capacity of Upright: **[XX kg (XX lbs)].**
3. Uprights:

   a. Provide three uprights per 2400 mm length of initial floor run of shelving units, two additional uprights per each additional 2400 mm length of floor run.

4. Columns: Factory-welded to base.
5. Arms:

   a. Cantilever arms shall be 1200 mm (48 inches) in length, unless indicated otherwise in specific locations.
   b. Adjustable vertically in 75 mm (3 inch) increments.
   c. Arm Configuration: Straight arms, except where indicated or scheduled as sloped (angled) arms. Arms shall be steel I beam construction with fastening points for grate decking.
   d. Capacity: 700 kg (1,540 pounds) minimum.

6. Bracing: Manufacturer's standard between uprights.
7. Decking: Steel grating, self-supporting, of minimum of 1400kg (3080 pounds) weight capacity. Secure grating to cantilevered arms using bolts or other manufacturer recommended fasteners. Openings in grating shall not exceed 25mm by 100 mm (1 inch by 4 inches), with smaller opening pattern preferred if available.
8. Nominal Height of System:

   a. Expendable Storage: Where cantilevered racks are scheduled for expendable storage, provide 1800 mm (6 ft) high units.
   b. [Low-Bay: [3650 mm (12 ft).]
   c. [High-Bay: [5500 mm (18 ft).] [6700 mm (22 ft)] to top of deck.]

9. Colors: Selected by Project Director/COR, based on input from the A/E of Record, from manufacturers standard colors.
10. Accessories:

    a. Label Holders: Clear plastic, designed to clip onto front edge of shelf.

B. Cantilever Rack, Horizontal - Metal Storage Shelving (OBO Component Code SQ021): Factory-formed, field-assembled, light-duty cantilever rack metal storage shelving system.

1. Load-Carrying Capacity per Arm: 227 kg (500 lbs.).
2. Material: 2.75 mm (12-gauge) steel with electrostatically-coated powder paint finish.
3. Arm Length: 610 mm (24 inches).
4. Arm Type: Single with lip; adjustable on 38 mm (1-1/2 inch) increments.
5. Lip: 63 mm (2-1/2 inches).
6. Colors: Selected by Project Director/COR, based on input from the A/E of Record, from manufacturers standard colors.

C. Cantilever Rack, Heavy Duty - Metal Storage Shelving (OBO Component Code SQ090): Factory-formed, field-assembled, cantilever rack heavy duty metal storage shelving system shall include increased gauge of hardware to meet prescribed weight limits of storage needs.

2.4 PALLET RACKS (OBO COMPONENT CODE FS083):

A. Pallet Rack Metal Storage Shelving: Factory-formed, field-assembled, metal rack storage shelving system consisting of two each, two-post cross-braced vertical units, connected by horizontal load-carrying beams front and rear.

1. Available Manufacturers: Manufacturers providing pallet rack metal storage shelving include, but are not limited to:

   a. Lyon Metal Products, Inc.
   b. Redirack Storage Systems
   c. Steel King Industries, Inc.

2. Load-Carrying Capacity of Vertical Uprights: **[12,700 kg (28,000 lb.)]**.
3. Uprights: Bolt to floor front and rear.

   a. Provide two uprights for first section, one upright for each additional section, per row of racking.
   b. Tear drop fastening system adjustable at 50 mm (2 inches) o.c.

4. Beams: Rolled form steel with integrated step for decking, and three or four attaching stud pins with safety lock mechanism.

5. Beam Length: **[2400 mm (8 ft)] [2700 mm (9 ft)] [3000 mm (10 ft)] [3600 mm (12 ft)]**.
6. Beam Capacity: **[1400 kg (3000 lbs)] [2000 kg (4500 lbs)]**.
7. Anti-Ram Guards: Provide at rack end posts.
8. Decking: Waterfall type, hooking over front and rear of horizontal support beams. Provide "U" or inverted "U" channels in lieu of flared-end channels for support of decking. One "U" channel support per linear foot of decking.
9. Nominal Height of System:

   a. [Low Bay: [3650 mm (12 ft)] [4500 mm (15 ft)] to top of deck.]
   b. [High Bay: [5500 mm (18 ft)] [6700 mm (22 ft)] to top of deck.]

10. Stack Depth: 1220 mm (48 inches), unless indicated otherwise in specific locations.
11. Colors: Selected by Project Director/COR, based on input from the A/E of Record, from manufacturers standard colors.
12. Accessories:

    a. Label Holders: Clear plastic, designed to clip onto front edge of shelf.

2.5 STORAGE CABINETS

A. Storage Cabinets: This cabinet type may be identified in some instances as simply "Cabinet Storage, Cabinet Safety Equipment Storage, Metal Cabinet Storage or Lockable Cabinet Storage." Steel with baked enamel finish and shall include a recessed handle with build-in lock and two keys; three hinges per door and three point latching. Shelves shall be adjustable at 50 mm (2-inch) intervals and shall be capable to support a minimum 180 kg (400 pounds) per shelf. Doors shall open a full 180 degrees.

1. Available Manufacturers: Manufacturers providing cabinets include, but are not limited to:

    a. Lyon Metal Products Inc.
    b. Penco Products Inc.
    c. Richards-Wilcox, Inc.

B. General: Provide cabinets where indicated or scheduled.

1. Max. Unit Width: 900 mm (36 inches).

C. Colors: Selected by Project Director/COR, based on input from the A/E of Record, from manufacturers standard colors.

2.6 MOBILE PLAN RACK (OBO COMPONENT CODE FN114):

A. General: Self-contained stand that can hold up to 1200 prints.

1. Basis of Design: Safco Products Company, Model 5026.

B. Stand: Adjustable from 1075 mm (43 inches) to 1525 mm (61 inches) for sheets up to 1375 (54 inches) long.

C. Base: Extends 675 mm (27 inches) to 925 mm (37 inches) wide to accommodate various size drawings.

D. Steel construction with four ball-bearing swivel casters, with 2 casters that lock; minimum of 12 pivot brackets per rack.

1. Color: Tropical Sand, or as selected by Project Director/COR, based on input from the A/E of Record, from manufacturers standard colors.

E. Hanging Clamps: Extruded aluminum clamps with polished chrome-plated cast alloy wing knobs. Provide 12 clamps to fit on the pivot brackets in lengths to accommodate prints up to 900 mm (36 inches) wide.

2.7 SHEET RACK – VERTICAL (OBO COMPONENT CODE SQ038):

A. Sheet Storage Rack: Factory-formed, field-assembled, metal rack storage shelving system consisting of four storage bays at 180 mm (7 inches) width each. Upright dividers shall be adjustable at 50 mm (2-inch) intervals and shall be capable to support a minimum 2,720 kg (6,000 pounds) total capacity. Minimum upright divider height shall be 685 mm (27 inches) and maximum shall be 1060 mm (42 inches).

1. Available Manufacturers: Manufacturers providing sheet storage racks include, but are not limited to:

a. Lyon Metal Products Inc.
b. Little Giant Inc.
c. GAV, Inc.

B. General: Provide racks where indicated or scheduled.

1. Overall Unit Width: 1220 mm (48 inches).
2. Overall Unit Depth: 900 mm (36 inches).
3. Overall Unit Height: 1120 mm (44 inches).

C. Colors: Selected by Project Director/COR based on input from the A/E of Record from manufacturers standard colors.

2.8 FABRICATION

A. Shop Assembly: Preassemble items in shop to greatest extent possible to minimize field splicing and assembly. Use connections that maintain structural value of joined pieces. Clearly mark units for reassembly and coordinated installation.

B. Fabricate metal storage shelving square and rigid with posts plumb and true, and shelves flat and free of dents or distortion. Fabricate connections to form a rigid structure, free of buckling and warping.

C. Shear and punch metals cleanly and accurately. Remove burrs.

D. Form edges and corners free of sharp edges or rough areas. Fold back and crimp exposed edges of unsupported sheet metal to form a 13-mm- wide hem on the concealed side; ease edges of metal plate to radius of approximately 1.0 mm.

E. Form metal in maximum lengths to minimize joints. Form bent-metal corners to smallest radius possible without causing grain separation or otherwise impairing work.

F. Weld corners and seams continuously to comply with referenced AWS standard and the following:

1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
2. Obtain fusion without undercut or overlap.
3. Remove welding flux immediately.
4. At exposed connections, finish exposed welds and surfaces smooth and blended so no roughness shows after finishing and contour of welded surface matches that of adjacent surface.
5. Weld before finishing components to greatest extent possible. Remove weld spatter and welding oxides from exposed surfaces by descaling or grinding.

G. Build in straps, plates, brackets, and other reinforcements as needed to support shelf loading.

H. Cut, reinforce, drill, and tap metal fabrications to receive hardware, fasteners, and similar items.

I. Form exposed work true to line and level with accurate angles and surfaces and straight sharp edges.

J. Form exposed connections with hairline joints, flush and smooth, using concealed fasteners where possible. Locate joints where least conspicuous.

2.9 GENERAL FINISHES REQUIREMENTS

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast.

2.10 STEEL FINISHES

A. Surface Preparation: Remove mill scale and rust, if present, from uncoated steel, complying with SSPC-SP 5/NACE No. 1, "White Metal Blast Cleaning," or SSPC-SP 8, "Pickling."

B. Baked-Enamel or Powder-Coat Finish: Manufacturer's standard baked-on finish consisting of prime coat and thermosetting topcoat. Comply with coating manufacturer's written instructions for cleaning, pretreatment, application, and minimum dry thickness.

1. Color and Gloss: As selected by Project Director/COR, based on input from the A/E of Record, from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Examine floors for suitable conditions where metal storage shelving will be installed.

C. Examine walls to which metal storage shelving will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Vacuum finished floor over which metal storage shelving is to be installed.

3.3 INSTALLATION

A. Install metal storage shelving level, plumb, square, rigid, and true, and within erection tolerances specified.

1. Anchor shelving units to floor with suitable fasteners through foot plate. Shim foot plate as required to achieve level and plumb installation.
2. Connect side-to-side and back-to-back shelving units together at corner posts with support ties.
3. Install shelves in each shelving unit at spacing indicated on Drawings or, if not indicated, at equal spacing.

a. Four-Post Metal Storage Shelving: Install four clips, one at each post, for support of each shelf; with clips fully engaged in post perforations.

4. [Brace shelving units as required for seismic forces.]

B. Pallet Racks:

1. Place 150 mm (6 inches) from wall or 300 mm (12 inches) apart if back-to-back, using Manufacturer's standard bracing between rack and walls, and between back-to-back units.

C. Accessories:

1. Shelf Labels: Install one shelf label at each shelf, centered within each shelving unit.
2. Back Ledges: Install one back ledge per shelf.
3. Side Ledges: Install side ledges at each side of each shelf.

3.4 ADJUSTING AND CLEANING

A. Verify that shelves and shelf-to-post connectors adjust easily and properly.

B. On completion of installation, clean exposed surfaces as recommended by manufacturer.

C. Touch up marred finishes or replace metal storage shelving that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by metal storage shelving manufacturer.

D. Replace metal storage shelving that has been damaged or has deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 105613

SECTION 105640 – SAFETY STORAGE CABINETS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following:

1. Flammable storage cabinets.

1.2 SUBMITTALS

A. Product Data: Include capacity and dimensions, construction details, required features, material descriptions, and finishes for cabinets.

1.3 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of safety storage cabinet through one source from a single manufacturer.

B. NFPA, OSHA, and Code Compliance: Comply with NFPA 30 and OSHA 29 CFR 1910.106. Comply with the OBO Fire Code.

1.4 DELIVERY, STORAGE, AND HANDLING

A. Deliver cabinets palleted, wrapped, or crated to provide protection during transit and Project-site storage.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install cabinets until spaces are enclosed and weatherproof, wet work in spaces is completed and dry, and ambient temperature is being maintained at the levels indicated for Project when occupied for its intended use.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Available Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Eagle Manufacturing Company
2. Justrite Mfg. Co., LLC
3. Securall/A&A Sheet Metal Products

2.2 FABRICATION

A. Approximate Capacity and Size:

1. Standard: Storage, Cabinet Safety Equipment (OBO Component Code FN078):

   a. 170 liters (45 gallons).
   b. Provide two intermediate adjustable shelves supported by four brackets.

2. Small: Cabinet, Flammable Safety (OBO Component Code FN030): Provide in MED Suite where indicated on Construction Drawings.

   a. 15 liters (4 gallons).
   b. Provide one intermediate shelf supported by four brackets.

B. 1.3 mm (18 gauge) min. thick steel interior and exterior walls separated by 40 mm (1-1/2 inch) insulated air space.

C. Fully welded construction. Riveting is not permitted.

D. Vents: Provide two vents with flash arresters. Locate on opposite sides of cabinet.

E. Catch Pan: Provide 50 mm (2 inch) catch pan at bottom of cabinet to hold spills.

F. Feet: Provide adjustable feet to facilitate leveling. Cabinet sides may either cover feet, or feet may be exposed under cabinet.

G. Grounding: Built-in grounding connector for easy grounding.

H. Self-Closing Door. Manual closing is not permitted.

I. Locks: Three-point latch. Provide two sets of keys serving standard cabinets**[and two sets serving small cabinets]**.

J. Warning Label: Provide large warning label with words “FLAMMABLE – KEEP FIRE AWAY” in English, and Host Country language.

2.3 FINISHES, GENERAL

A. Finish all steel surfaces, inside and out, with powder coat or 2-coat high gloss powder paint finish.

1. Color: Safety yellow.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine areas for compliance with requirements for installation tolerances and other conditions affecting performance of work.

B. Examine floors for suitable conditions where cabinets will be installed.

C. **[Examine walls to which cabinets will be attached for properly located blocking, grounds, or other solid backing for attachment of support fasteners.]**

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 PREPARATION

A. Vacuum finished floor over which cabinets are to be installed.

3.3 INSTALLATION

A. Install cabinets level and plumb.

3.4 CLEANING

A. Shortly before Substantial Completion, clean exposed surfaces as recommended by manufacturer.

END OF SECTION 105640

SECTION 111126 – VEHICLE WASHING EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. This section includes vehicle washing equipment.

1.2 SUBMITTALS.

A. Product Data: Submit manufacturer's product information and specifications and installation instructions for each item of equipment furnished.

B. Roughing-In Drawings: Provide roughing-in drawings for mechanical and electrical services.

C. Shop Drawings: Provide drawings showing, in large scale, methods of construction, joining, dimensions, materials, thicknesses, finishes of materials, installation, relation to adjoining work, and all other details to fully illustrate the work.

D. Connection Drawings: Submit complete electrical, plumbing, and mechanical connection information and coordinate with Divisions 22, 23, and 26.

E. Maintenance and Operation Manuals: Provide manufacturer's maintenance and operation manuals.

1.3 QUALITY ASSURANCE

A. Single Subcontract Responsibility: Materials and equipment shall be standard products of a manufacturer regularly engaged in the manufacture of products that are of a similar material, design, and workmanship.

B. Nameplates: Each major item of equipment shall have the manufacturer's name, address, and catalog or serial number permanently affixed to a plate securely attached to the equipment.

C. Verification of Dimensions: Contractor shall become familiar with all details of the work, verify all dimensions in the field.

1.4 DELIVERY AND STORAGE

A. Equipment delivered and placed in storage shall be stored with protection from the weather, humidity and temperature variation, dirt and dust, or other contaminants.

1.5 WARRANTY

A. Wash Water Recycle System Warranty: Provide warranty for materials and installation;

1. Warranty Period: Two years from Substantial Completion.
2. Installer's Warranty: Two years from Substantial Completion.

B. Vehicle Wash Pressure System Warranty: Provide warranty for materials and installation;

1. Warranty Period: Seven years from Substantial Completion.
2. Installer's Warranty: Two years from Substantial Completion.

1.6 EXTRA MATERIALS

A. The following spare parts shall be supplied by manufacturer of treatment system as spare parts for operation of system:

1. Two AQAM Media: AQM-4.
2. Two Filter Bag Cases: BAG-20-C25.
3. Two EnBio-5 Pails: 19 L (5 gallon) each.
4. Two EBD Soap Pails: 19 L (5 gallon) each.

PART 2 - PRODUCTS

2.1 VEHICLE WASH WATER RECYCLE SYSTEM

A. Description: Provide a complete operational 0.63 L/s (10 gpm) wash water recycle system comprised of collection tanks, pumps, water treatment and controls as described herein. System to be installed in accordance with manufacturers written instructions.

B. Electrical: Manufacturer to provide electrical systems to operate on electrical system at the facility. System to be installed in accordance with manufacturer's written instructions.

C. Basis of Design: Pan American Environments. Equal systems by other manufacturers are acceptable **[Provide in host country voltage].**

1. Automated Wash Water Treatment System; model VEW-4-A; pump = 1/2HP, control NEMA 4..
2. FRP Triple Basin Collection Sump; model TB-3084; (requires water connections DN100 (4 inch) fittings, DN50 (2 inch) vent); sludge filter SF-D; level switches LS-EFF and LS-HH.
3. Automated Influent Feed System with progressive cavity pump and motor drive; model IFS-05-AO.
4. Automated Pressurixation Supply Module; model PSM-8.10-300.
5. Aeration Injection and Bacteria Removal System; model SuperAerator XL.

2.2 VEHICLE WASH PRESSURE WASHER

A. Description: Provide a complete operational 0.25 L/s (4 gpm), 2000 psi wall mounted pressure washer system comprised of pressure generator with stainless steel cabinet, 15 meters (50 feet) of DN10 (3/8 inch) high strength high pressure delivery hose and multi directional hose wand as described herein. Supply water to the unit shall be provided by the vehicle wash water recycle system. Manufacturer to provide electrical components compatible with the electrical system at the facility. System to be installed in accordance with manufacturers written instructions.

B. Basis of design shall be model Model SEA 4-200 24 with wall mount bracket by Landa Cleaning Systems. Equal systems by other manufacturers are acceptable. **[Provide in host country voltage]**.

2.3 OVERHEAD HOSE SUPPORT BOOM

A. Description: Provide an overhead high pressure hose support boom. Unit shall be constructed of stainless steel and provide a 360 degree overhead support for high pressure hose and wand.

B. Basis of design shall be model 204 by Zierco Waterboy, or equal. Coordinate assembly and mounting parts with site specific support structure

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine the substrates, adjoining construction and conditions under which the Work is to be installed. Do not proceed with the Work until unsatisfactory conditions detrimental to the proper and timely completion of the work have been corrected.

3.2 PREPARATION

A. Verify dimensions of supporting structure by field measurements so that equipment work will be accurately designed, fabricated and fitted to the structure. Examine roughed-in mechanical and electrical services, installation of floors, walls, columns, and ceilings, and other conditions under which medical equipment work is to be installed. Notify Contractor in writing, of any dimensions found to be different than shown. Use Contractor's benchmarks as basis of measurements.

3.3 INSTALLATION, GENERAL

A. Coordinate equipment work with the work of other Sections and provide items to be placed during the installation of other work at the proper time to avoid delays in the work. Furnish installation templates, diagrams, and other data to fabricators and installers of related work as necessary for coordination of the installation. Place such items, including pipes, conduit, inserts and anchors, accurately in relation to the final location of equipment components.

B. Install all components of the equipment in accordance with the manufacturer's written instructions and recommendations.

C. Verify plumbing, ventilation and electrical connection requirements for all equipment with manufacturer and coordinate connections with Division 22, 23, and 26 work.

3.4 CLEANING

A. After completion of installation and other major construction work in equipment areas, remove protective coverings, if any, and clean equipment, internally and externally. Restore exposed and semi-exposed finishes to remove abrasions and other damages; and touch-up painted surfaces. Replace work that cannot be successfully restored.

B. Final Cleaning: After testing and start-up, and before time of Substantial Completion, clean and sanitize medical equipment, and leave in condition ready for use in medical service.

3.5 DEMONSTRATION AND TRAINING

A. Engage technician, factory-trained on equipment being installed, to demonstrate and train Government's maintenance personnel to adjust, operate, and maintain the vehicle washing equipment. Provide minimum of two 4-hour training sessions, with each session held at a distinctly different time period to accommodate personnel identified by Project Director/COR based on input from Post's Facility Manager.

B. Training sessions shall include classroom review of operations and maintenance manuals, shop drawings, and operational testing procedures.

C. Training sessions shall also include field or "hands-on" operating, testing, and maintenance procedures in the as-built system environment.

END OF SECTION 111126

SECTION 111305 - LOADING DOCK EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Loading dock bumpers.
2. Recessed loading dock levelers.
3. Stationary loading dock lifts (scissor lifts).

B. Related Requirements:

1. Section 055005 "Metal Fabrications" for **[curb angles at edges of recessed pits] [and] [loading dock platform edge channels]**.

1.2 DEFINITIONS

A. Operating Range: Maximum amount of travel above and below the loading dock level.

B. Working Range: Recommended amount of travel above and below the loading dock level for which loading and unloading operations can take place.

1.3 COORDINATION

A. Coordinate size and location of loading dock equipment indicated to be attached to or recessed into concrete or masonry, and furnish anchoring devices with templates, diagrams, and instructions for their installation

B. Coordinate installation of cast-in-place items. Furnish setting drawings and templates.

C. Electrical System Roughing-in: Coordinate layout and installation of loading dock equipment with connections to power supplies**[and interlocked equipment]**.

1.4 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1. Inspect and discuss electrical roughing-in, equipment bases, and other preparatory work specified elsewhere.
2. Review sequence of operation for each type of loading dock equipment.
3. Review coordination of interlocked equipment specified in this Section and elsewhere.
4. Review required testing, inspecting, and certifying procedures.

1.5 ACTION SUBMITTALS

A. Product Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes for stationary loading dock equipment.
2. Include rated capacities, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Shop Drawings: For stationary loading dock equipment.

1. Include plans, elevations, sections, and attachment details.
2. Include details of equipment assemblies. Indicate dimensions, weights, loads, required clearances, method of field assembly, components, and location and size of anchors and each field connection.

3. Include diagrams for power, signal, and control wiring.

1.6 INFORMATIONAL SUBMITTALS

A. Qualification Data: For Installer.

B. Welding certificates.

C. Product Test Reports: For each dock leveler, for tests performed by manufacturer and witnessed by a qualified testing agency.

1. Indicate compliance of dock levelers with requirements in MH 30.1 for determining rated capacity based on comprehensive testing within last two years of current products.
2. Submittal Form: According to MH 30.1.

D. Sample Warranty: For manufacturer's special warranty.

1.7 CLOSEOUT SUBMITTALS

A. Operation and Maintenance Data: For stationary loading dock equipment to include in operation and maintenance manuals.

1.8 QUALITY ASSURANCE

A. Installer Qualifications: An authorized representative who is trained and approved by manufacturer.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D1.1/D1.1M, "Structural Welding Code - Steel."

2. AWS D1.3/D1.3M, "Structural Welding Code - Sheet Steel."

C. Comply with requirements of the OBO Electrical Code (NFPA 70, “National Electrical Code” as amended by OBO).

1. Electrical Components, Devices, and Accessories: Listed and labeled in accordance with Chapter 1 of the OBO Electrical Code by a testing agency acceptable to Project Director/COR based upon input from OBO/PDCS/DE/EE and marked for intended use.

1.9 FIELD CONDITIONS

A. Field Measurements: Verify actual dimensions of construction contiguous with stationary loading dock equipment, including **[recessed pit dimensions] [slopes of driveways] [and] [heights of loading docks]**, by field measurements before fabrication.

1.10 WARRANTY

A. Manufacturer's Special Warranty: Manufacturer agrees to repair or replace dock levelers that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures including cracked or broken structural support members, load-bearing welds, and front and rear hinges.
b. Faulty operation of operators, control system, or hardware.
c. Deck plate failures including cracked plate or permanent deformation in excess of 6 mm between deck supports.
d. Hydraulic system failures including failure of hydraulic seals and cylinders.

2. Warranty Period for Structural Assembly: 10 years from date of Substantial Completion.
3. Warranty Period for Hydraulic System: Five years from date of Substantial Completion.
4. Warranty shall be for unlimited usage of leveler for the specified rated capacity over the term of the warranty.

PART 2 - PRODUCTS

2.1 LOADING DOCK BUMPERS

A. General: Surface-mounted bumpers; of type, size, and construction indicated; designed to absorb kinetic energy and minimize damage to loading dock structure.

B. Laminated-Tread Loading Dock Bumper <**Insert drawing designation**>: Fabricated from multiple, uniformly thick plies cut from fabric-reinforced rubber tires. Laminate plies under pressure on not less than two 19-mm- diameter, steel supporting rods that are welded at one end to 6-mm- thick, structural-steel end angle and secured with a nut and angle at the other end. Fabricate angles with predrilled anchor holes and sized to provide not less than 25 mm of tread plies extending beyond the face of closure angles.

1. Thickness: **[112 mm] [150 mm] [As indicated on Drawings] <Insert dimension>**.
2. Horizontal Style: **[150 mm] [250 mm] [300 mm] high by [length indicated on Drawings] <Insert dimension>**.
3. Vertical Style: 200 mm wide by **[500 mm high] [500 mm high] [900 mm high] [height indicated on Drawings] <Insert dimension>**.

C. Molded-Rubber Loading Dock Bumpers <**Insert drawing designation**>: Fabricated from molded-rubber compound reinforced with nylon, rayon, or polyester cord; with Shore A durometer hardness of 80, plus or minus 5, when tested according to ASTM D 2240; of size and configuration indicated. Fabricate units with not less than two predrilled anchor holes.

1. Configuration: **[T shape] [Inverted-L shape] [Square] [Rectangular] [As indicated on Drawings] <Insert configuration>**.
2. Thickness: **[50 mm] [75 mm] [100 mm] [150 mm] [As indicated on Drawings] <Insert dimension>**.

D. Anchorage Devices: Galvanized-steel anchor bolts, nuts, washers, bolts, sleeves, cast-in-place plates, and other anchorage devices as required to fasten bumpers securely in place and to suit installation type indicated. Hot-dip galvanized according to ASTM A 153/A 153M or ASTM F 2329/F 2329M.

E. Materials: ASTM 36/A 36M for steel plates, shapes, and bars. Hot-dip galvanize according to ASTM A 123/A 123M.

2.2 RECESSED LOADING DOCK LEVELERS <INSERT DRAWING DESIGNATION>

A. Standard: Comply with MH 30.1**[, except for structural testing to establish rated capacity]**.

B. Rated Capacity: Capable of supporting total gross load of **[9000] [11 000] [13 000] [20 000]** <**Insert load**> kg without permanent deflection or distortion.

C. Platform: Not less than **[5-] [6-] [9.5-]** <**Insert dimension**> mm- thick, nonskid steel plate.

1. Platform Width: **[1800 mm] [1950 mm] [2100 mm] [As indicated on Drawings] <Insert dimension>**.
2. Platform Length:**[1800 mm] [2400 mm] [3000 mm] [As indicated on Drawings] <Insert dimension>**.

3. Frame: **[Manufacturer's standard] [Clean-pit type, designed to support leveler at sides of pit, with no supports at front of pit floor]**.
4. Toe Guards: Equip open sides of dock leveler over range indicated with steel toe guards.

a. Toe-Guard Range: Entire upper **[operating] [working]** range.

D. Hinged Lip: Not less than **[13-] [16-] [19-] [25-]** <**Insert dimension**> mm- thick, nonskid steel plate.

1. Hinge: Full-width, piano-type hinge with heavy-wall hinge tube**[and grease fittings]**, with gussets on lip and ramp for support.

2. Safety Barrier Lip: Designed to protect material-handling equipment from an accidental fall from loading platform edge of the dock leveler when the leveler is not in use.

E. Function: Dock levelers shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel: Operating range above platform level of sufficient height to enable lip to extend and clear truck bed before contact with the following minimum working range:

a. Above Adjoining Platform: **[300 mm] [450 mm] [As indicated on Drawings] <Insert dimension>**.
b. Below Adjoining Platform: **[300 mm] [350 mm] [As indicated on Drawings] <Insert dimension>**.

2. Automatic Vertical Compensation: Floating travel of ramp with lip extended and resting on truck bed shall compensate automatically for upward or downward movement of truck bed during loading and unloading.
3. Automatic Lateral Compensation: Tilting of ramp with lip extended and resting on truck bed shall compensate automatically for canted truck beds of up to 102 mm over width of ramp.

4. Lip Operation: Manufacturer's standard mechanism, which automatically extends and supports hinged lip on ramp edge with lip resting on truck bed over dock leveler's working range, allows lip to yield under impact of incoming truck and automatically retracts lip when truck departs.

a. Length of Lip Extension: Not less than 300 mm from face of dock bumpers and not less than[400 mm] [450 mm] [500 mm] [dimension indicated on Drawings] <Insert dimension> measured from ramp edge.

5. Automatic Ramp Return: Automatic return of unloaded ramp, from raised or lowered positions to stored position, level with platform, as truck departs.

6. Interlock: Leveler does not operate while **[overhead door is in closed position] [leveler night lock is engaged] [truck restraint is not engaged] [inflatable dock seal is not inflated] [and] [inflatable dock shelter is not inflated] <Insert equipment and condition>**.

F. Mechanical Operating System: Manual control; counterbalance and spring operation. Spring-operated raising and walk-down lowering of unloaded ramp. Equip leveler with an upward-biased-spring counterbalancing mechanism controlled by a hold-down device. Ramp raises to top limit of operating range by operating recessed control handle in ramp to disengage hold-down device. Ramp lowers below platform level with lip retracted by operating auxiliary, recessed control handle to release support legs.

1. Free-Fall Protection: Manufacturer's standard protection system to limit free fall of loaded ramps with front edge supported by truck bed.

G. Hydraulic Operating System: Electric control from a remote-control station; fully hydraulic operation. Electric-powered hydraulic raising and hydraulic lowering of ramp. Equip leveler with a packaged unit including a unitized, totally enclosed, nonventilated electric motor, pump, manifold reservoir, and valve assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers. Provide a hydraulic velocity fuse connected to main hydraulic cylinder to limit loaded ramp's free fall to not more than 75 mm.

1. Remote-Control Station: **[Weatherproof single] [Single]**-button station of the constant-pressure type, enclosed in NEMA ICS 6, **[Type 4] [Type 12]** <**Insert type**> box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.
2. Remote-Control Station with Emergency Stop: **[Weatherproof multibutton] [Multibutton]** control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, **[Type 4] [Type 12]** <**Insert type**> box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. Ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.

   a. Dual-Panel Control Station: Remote-control station for operating side-by-side dock levelers.

   b. Master Panel: Control panel with integral fused disconnecting means for operating dock leveler, dock door, and truck restraints.

3. Independent Lip Operation: Electric-powered hydraulic raising and hydraulic lowering of lip, controlled independent of raising and lowering of ramp.

H. Electric Operating System: Electric control from a remote-control station; motorized operation. Electric activation for raising of ramp and automatic extending of lip. Equip leveler with a packaged unit including a unitized electric motor and shaft assembly of proper size, type, and operation for capacity of leveler indicated. Include means for lowering ramp below platform level with lip retracted behind dock bumpers.

1. Remote-Control Station: **[Weatherproof single] [Single]**-button station of the constant-pressure type, enclosed in NEMA ICS 6, **[Type 4] [Type 12]** <**Insert type**> box. Ramp

raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.

2. Remote-Control Station with Emergency Stop: **[Weatherproof multibutton] [Multibutton]** control station with an UP button of the constant-pressure type and an emergency STOP button of the momentary-contact type, enclosed in NEMA ICS 6, **[Type 4] [Type 12]** <**Insert type**> box. Ramp raises by depressing and holding UP button; ramp lowers at a controlled rate by releasing UP button. Ramp movement stops, regardless of position of ramp or lip, by depressing STOP button. Normal operation resumes by engaging a manual reset button or by pulling out STOP button.

I. Air-Bag Operating System: Electric control from a remote-control station; pneumatic operation. High-volume, low-pressure lifting of ramp. Equip leveler with a packaged unit including a PVC-coated, reinforced polyester lifting bag and two-stage, single-speed electric fan of proper size, type, and operation for capacity of leveler indicated. Include dock-leveler supports controlled by release chain for lowering ramp below platform level without extending lip.

1. Remote-Control Station: **[Weatherproof single] [Single]**-button station of the constant-pressure type, enclosed in NEMA ICS 6, **[Type 4]** <**Insert type**> box. Ramp raises by depressing and holding button; ramp lowers at a controlled rate by releasing button.

J. Construction: Fabricate dock-leveler frame, platform supports, and lip supports from structural- or formed-steel shapes. Weld platform and hinged lip to supports. Fabricate entire assembly to withstand deformation during both operating and stored phases of service. Chamfer lip edge to minimize obstructing wheels of material-handling vehicles.

1. Cross-Traffic Support: Manufacturer's standard method of supporting ramp at platform level in stored position with lip retracted. Provide a means to release supports to allow ramp to descend below platform level.
2. Maintenance Strut: Integral strut to positively support ramp in up position during maintenance of dock leveler.

K. Materials:

1. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 380.
3. Steel Tubing: ASTM A 500/A 500M, cold formed.
4. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

L. Dock-Leveler Finish: **[Manufacturer's standard prime-paint or baked-on factory finish] [Hot-dip galvanized] [Spray zinc metallized] <Insert requirements>**.

1. Toe Guards: Baked-on factory finish.

M. Accessories:

1. Curb Angles: 75-by-75-by-6-mm galvanized-steel curb angles for edge of recessed leveler pit, with 13-mm- diameter by 150-mm- long concrete anchors welded to angle at 150 mm o.c.

2. Self-Forming Pan: Manufacturer's standard prefabricated, self-forming**[spray zinc metallized]** steel form system for poured-in-place construction of concrete pit.
3. Night Locks: Manufacturer's standard means to prevent extending lip and lowering ramp when overhead doors are locked.
4. Side and rear weatherseals.
5. Foam insulation under dock-leveler platform.
6. **[Abrasive skid-resistant] [Smooth]** surface.

2.3 STATIONARY LOADING DOCK LIFTS <INSERT DRAWING DESIGNATION>

A. General: Stationary, scissors-type, single-leg, hydraulic dock lift of capacity, size, and construction indicated; complete with controls, safety devices, and accessories required.

B. Standard: MH 29.1.

C. Rated Capacity: Lifting capacity of not less than **[3500 kg)] [load indicated on Drawings]** <Insert requirements> with axle loads of **[3000 kg at ends and 2250 kg at sides] [magnitudes indicated on Drawings] <Insert requirements>**.

D. Platform: **[Nonskid, safety-tread] [Smooth-surface]** heavy**[hot-dip galvanized-]** steel deck plate.

1. Platform Size: **[1800 mm long by 1800 mm wide] [2400 mm long by 1800 mm wide] [3000 mm long by 1800 mm wide] [As indicated on Drawings] <Insert size>**.

2. Platform Guarding: **[Bevel toe guards] [Toe sensor] [Indicator bar] [Skirts] [Enclosure]** to comply with requirements in MH 29.1

3. **[Removable] [Fixed]** Guard Rails: Provide **[steel] [hot-dip galvanized-steel] [aluminum]** guard rails on two sides of platform with a single, removable chain across each end. Provide guard rails not less than 975 mm (39 inches) high with midrail and 100-mm- high, kick plate at bottom.**[Mount rail sockets flush with platform surface.]**

E. Bridge: **[Nonskid, safety-tread steel] [Nonskid, safety-tread, hot-dip galvanized-steel] [High-tensile aluminum]** plate.

1. Hinged Bridge: Hinged, throw-over bridge bolted to full-length, heavy-duty, piano-type hinge welded to toe guard at end of platform. Provide bridge complete with heavy-duty lifting chains. Chamfer edge of bridge to minimize obstructing wheels of material-handling vehicles.

2. Size: **[450 mm long by 1500 mm wide] [450 mm long by 1800 mm wide] [As indicated on Drawings] <Insert size>**.
3. Locations: **[Ends] [Sides] [As indicated on Drawings]**.

F. Function: Dock lifts shall compensate for differences in height between truck bed and loading platform.

1. Vertical Travel and Travel Speed: As indicated on Drawings.

2. Vertical Travel: Maximum of **[1500]** <**Insert dimension**> mm from a lowered height of **[300]** <**Insert dimension**> mm for a total raised height of **[1800]** <**Insert dimension**>mm.

3. Travel Speed: Nominal raising speed of **[0.04 (8)] [0.05 (10)] [0.06 (12)]** <**Insert speed**>m/s (fpm).

4. Hinged Throw-over Bridge Operation: **[Manual] [Spring assist] [Manual-assist bridge winch] [Automatic powered]**.

G. Hydraulic Operating System: Self-contained, electric, hydraulic power unit for raising and lowering lift; of size, type, and operation needed for capacity of lift indicated; controlled from a remotely located push-button station.

1. Power Unit: Consisting of continuous-duty motor, high-pressure gear pump, valve manifold, oil-line filters, and oil reservoir.

a. Equip manifold with relief valve, check valve, pressure-compensated flow-control valve, and solenoid valve and with provisions for lowering lift manually if power fails.
b. Equip reservoir, valve manifold, and pressure line with oil-line filters.

2. Cylinders: Equip lift with not less than two heavy-duty, high-pressure, hydraulic, ram-type cylinders. Rams shall be manufacturer's standard, either direct-displacement-plunger or rod-and-piston type with positive internal stops. Cylinder rods shall be chrome plated and polished.

a. Rate of Descent Protection: Pressure-compensated flow control or hydraulic velocity fuse to limit down speed for each cylinder.

3. Remote-Control Station: Multibutton control station of the constant-pressure type with UP and DOWN push buttons. Controller shall consist of magnetic motor starter with three-pole adjustable overloads and 24-V control transformer with 4-A, fused secondary prewired to terminal strips and enclosed in NEMA ICS 6, **[Type 12]** <**Insert type**> box.

a. Upper-Travel-Limit Switch: Equip unit with manufacturer's standard, adjustable, upper-travel-limit switch.

H. Construction: Fabricate lift from structural-steel shapes rigidly welded and reinforced for maximum strength, safety, and stability. Design assembly to withstand deformation during both operating and stored phases of service. Provide mounting brackets and removable lifting eyes for ease of installation.

1. Scissors Mechanism: Fabricate leg members from heavy, hot-dip galvanized- steel-formed tube or plate members to provide maximum strength and rigidity.

2. Scissors Configuration: **[Single leg] [Multiple width] [Multiple length]**.
3. Bearings: Pivot points with permanently lubricated antifriction bushings or sealed ball-bearings for minimum maintenance.
4. Maintenance Leg: Removable, safety maintenance leg or hinged, safety maintenance bars.
5. Mounting: **[Surface] [Pit]**.

I. Materials:

1. Steel Plates, Shapes, and Bars: ASTM 36/A 36M.
2. Rolled-Steel Floor Plate: ASTM A 786/A 786M, rolled from steel plate complying with ASTM A 572/A 572M, Grade 380.
3. Steel Tubing: ASTM A 500/A 500M, cold formed.

J. Dock Lift Finish: Manufacturer's standard baked-on factory finish unless otherwise indicated.

2.4 FINISH REQUIREMENTS

A. Finish loading dock equipment after assembly and testing.

B. Hot-Dip Galvanizing: Comply with the following:

1. ASTM A 123/A 123M for iron and steel loading dock equipment.
2. ASTM A 153/A 153M or ASTM F 2329/F 2329M for iron and steel hardware for loading dock equipment.

C. Spray Zinc Metallizing: ASTM B 833.

D. Electrodeposited Zinc Coatings: ASTM B 633.
