Purchase Description.

Large format UV Flatbed Printer

Required: U.S. Army Combat Capabilities Command **(**DEVCOM) Chemical Biological Center (CBC) requires Quantity one (1) brand-name Roland VersaOBJECT CO-640i-F3 Flatbed UV Printer. This is a specialized industrial machine that can print text and graphics directly onto thick, three-dimensional objects—such as military equipment cases, metal breaker box doors, and foam inserts—up to 8 inches thick. Unlike standard office printers that require paper or sticky labels (which can peel off and fade), this machine marks the equipment permanently, ensuring safety instructions remain legible for soldiers in the field.

The required items are as follows:

Qty	Model	Item Description
1	ROL-CO-640I-F3	Roland 63"X98" VersaObject FB UV Printer
1	ROL-BOFAPRNTPRO	Roland BOFA PRINT PRO UNIV AJ - LEC
