SCHEDULE NOTES

Note 1: These schedules are for pricing/payment purposes. **Refer to 52.212-1**, Instructions to Offerors for technical proposal requirements. Evaluation criteria used by the Forest Service for proposals is located in **52.212-2** of this solicitation.

Note 2: Price Quotes MUST be provided on ALL Items in Schedules: Mandatory Work Activities and Optional Work Activities and Timber or other products Removal Price Schedule. Unit prices prevail.

Mandatory Item 1b acres calculated using the 82-foot average cut tree height to create an 82-foot average cut distance off the road. In some areas the cutting will be closer to the road, in other areas it will be further, depending on cut tree height.

Wildlife surveys will be conducted annually and may result in modifications to units' boundaries and/or acres, as well as limited operating periods.

Note 3: **Optional Items 36a, 36b(i, ii, iii) and 37 - Marble Mountain**

Forest Service is responsible for completing sale preparation activities to determine quantities. Contractor shall provide a fixed price per Item based on the estimated quantity shown. Awarded Firm-Fixed unit prices prevail and WILL NOT be renegotiated or changed in future modifications to adjust quantities once known.

*Total quantities are unknown and are solicited as estimated gross quantities. Net needed quantities will be determined once the Forest Service has completed sale preparation activities.

- *Forest Service conducted timber cruise will determine complexity level for item 36b (i, ii, iii) as Cut Skid and Deck Biomass (Grn Bio / Cull Logs) ccf/acre is unknown prior. "Step Ladder" pricing is used to enable the Government to establish Firm-Fixed Pricing at time of award for items based on differing complexity. Once the biomass and cull log ccf/per acre is determined, sub-item complexity will be executed through bi-lateral modification.*

** Gross sawtimber volume is for evaluation purposes. Final commercial timber acres may be less than the estimated amount. The estimated gross tons of sawtimber for Item 36a was calculated assuming 5.0 MBF/acre. Once final timber cruise volumes are established, the Forest Service will conduct an independent timber appraisal using the R5 TEA appraisal system following the Forest Service Handbook direction, to determine Minimum Acceptable Offer timber rate. There shall be mutual agreement between both parties to modify gross tons of sawtimber and set the contract timber rate with a bi-lateral modification to execute Optional Work Items. If an agreement of the appraised Minimum Acceptable Offer timber rate cannot be made within 14 business days from the date the appraised timber rate is shared, Marble Mountain Cutting Units, optional service work, and road maintenance will not be executed, and a bi-lateral modification will not occur.

Timber Subject to Agreement (TSA) associated with Marble Mountain is not required and if contractor is interested in removing TSA product, describe the desire to remove in Technical Proposal. Removal will not be included as a work item and will be at the contractor's expense. Tons of removal can be negotiated at time of execution of Optional Item 36.

***Contractors shall provide a Total Value Bid Premium for sawtimber ≥ $0.00 (*enter in Timber/Product Removal Price Schedule (Marble Mountain) – Row 2*). The Total Value Bid Premium will be added to the final Contract Timber Value determined by the FS timber appraisal. To reduce risk to both parties due to over/under-run of volume, cruising standards will use a maximum allowed error of 20% for sawtimber; and
