Single Source Justification (Simplified Acquisition)

Section A: General Contract Information

Is this a Bridge Action as defined in the AF Bridge Action Reduction Plan? ☐ Yes ☒ No

Contracting Activity: AFLCMC/PZIBA

Project/Program Name: Urology Surgical Navigation System & Support

Purchase Request / Local ID Number: BPA

Estimated Contract Cost (including Options): $[redacted]

Section B: Description of the Supplies/Services Required

The Government requires a contractor to provide the necessary equipment and supplies to support Urology surgical procedures, including Prostate Biopsies and Partial Nephrectomies, at the 88th Medical Center. The specific equipment required includes the proprietary UroNav MRI Fusion System and compatible Ultrasound technology. Additionally, the contractor must bring the necessary UroNav probe sets to the facility, which are provided to the Operating Room (OR) staff for processing and sterilization prior to each scheduled surgery. Finally, the contractor shall provide all associated consumable soft supplies utilized during these procedures, specifically including ultrasound biopsy needle guides and probe covers.

Section C: Justification for Soliciting from a Single Source or Brand Name

This acquisition is being conducted under the authority of the Revolutionary Federal Acquisition Regulation Overhaul (RFO) 6.103-1, "Only one responsible source and no other supplies or services will satisfy agency requirements." The proposed sole-source contractor is Fortec Medical Inc. The 88th Medical Center at Wright-Patterson Air Force Base (WPAFB) requires the UroNav MRI Fusion System, compatible ultrasound technology, and associated consumable supplies to perform specialized urology surgical procedures.

These systems, software, and integrated components are highly specialized and proprietary to Fortec Medical Inc., which is the original equipment manufacturer. Fortec Medical Inc. retains all exclusive technical data rights necessary to provide and service the required equipment, meaning no other vendor possesses the legal or technical capability to meet the Government's minimum requirements.

Furthermore, the 88th Medical Center is currently equipped with and its medical staff is extensively trained on the proprietary UroNav infrastructure. Procuring an alternative system from a different manufacturer would require the Government to purchase entirely new capital medical equipment and mandate a complete overhaul of established surgical procedures and personnel training protocols. This would result in unacceptable operational delays to critical patient care, estimated to exceed one year, and would introduce a substantial duplication of costs that the Government does not expect to recover through competition. Therefore, Fortec Medical Inc. is the only responsible source capable of providing these highly specialized, fully compatible urology surgical supplies and services without causing unacceptable delays in fulfilling the agency's medical requirements.

Section D: Efforts to Obtain Competition

Efforts were made to obtain competition for this requirement through extensive market research. A Sources Sought notice was published on the System for Award Management (SAM.gov) website; however, no responses were received from any vendors demonstrating the capability to fulfill this requirement.

In addition to the public notice, market research also included a review of the GSA Advantage portal, Internet searches for alternative manufacturers or service providers, a review of similar procurements at WPAFB, and consultation with Subject Matter Experts (SMEs). All research efforts consistently concluded that Fortec Medical Inc. is the sole manufacturer and provider of the proprietary UroNav system and that they do not utilize any authorized distributors

Single Source Justification (Simplified Acquisition)

or third-party resellers. These efforts confirm that competition for this specific requirement is not available.

Section E: Steps to Preclude Future Single Source or Brand Name Awards

The Government continuously seeks to foster competition and reduce reliance on single-source acquisitions. To preclude the need for future sole-source awards for these urology surgical procedures, the 88th Medical Center and the contracting office will continually monitor the medical equipment market for emerging technologies, new manufacturers, and alternative FDA-approved fusion biopsy systems that may become capable of meeting the Government's technical requirements. Prior to any follow-on acquisition, Subject Matter Experts (SMEs) will re-evaluate the facility's existing infrastructure, procedural requirements, and training protocols to determine if transitioning to an alternative, commercially available system is technically and economically feasible. Additionally, future requirements will be synopsized and posted as Sources Sought notices on SAM.gov to actively solicit capabilities from the commercial marketplace and identify any new vendors or authorized distributors capable of competing for this requirement.

Section F: Contracting Officer's Determination

I have determined, in accordance with FAR 13.106-1(b)(1), that the circumstances of this contract action deem only a single source is reasonably available.

Date	Typed Name and Rank/Grade of Contracting Officer	Signature of Contracting Officer
