**Questions and Answers Wire EDM**

1. It states “3-Year Comprehensive Consumable and feedstock Package”. I’m not sure what “feedstock” is in reference to. The primary consumables on the wire EDM are going to be spools of wire, filters, power contacts, and DI resin bottles. If this line item is requesting to ship three year’s worth of consumables at one time my concern would be for the aging product. Especially when it comes to spools of wire, they have a shelf life of approximately one year. It would be best to set you up with a credit voucher so you can simply call in and get the consumables you need, when you need them. This way you’ll always have fresh product for the best performance.

   Response: Please provide a 3-year package typically set up as a credit voucher for spools of wire, filters, and power contacts that CCAD can pull from as needed.

2. It was previously discussed and recommended that you locally source the DI resin bottles with a company such as Culligan or Mueller. These companies are local to CCAD and offer a much more cost-effective solution for resin bottle exchanges. Please confirm you will be using a local company for this.

   Response: CCAD will be going with a locally sourced option for DI resin bottle exchange.
