See below for bug counts and defect rates.

Table 4. Defect Distribution and Reported Escape Rates by Program (June 2025 to April 2026)

Program	Sev-1	Sev-2	Sev-3	Sev-4	Sev-5	Unadjudicated[1]	Unassigned	Sev 1+2[3]	Total	Rate[2]
JOMIS	85	185	94	315	4	393	—	270	1,076	84%
DHMSM	17	176	142	265	8	950	6	193	1,564	34%
EIDS[4]	—	—	2	—	—	—	—	—	2	N/A

[1] Unadjudicated bugs are logged in the system with an initial severity. Upon adjudication through the end-user community defect review process, severity will be updated to its final state.

[2] Prime mission vendor escape rate is tracked based on detection source (vendor to DT&E), not by release cycle. Scope for escape rate is severity 1 and 2 issues.

[3] Sev 1+2 is the count of severity 1 and severity 2 issues detected at DT&E, which is the scope of the escape rate calculation (see footnote 2).

[4] EIDS defect data reflects partial coverage, as EIDS does not use DT&E systems for over-the-shoulder testing.
