The network shall factor varying levels of collaboration, information sharing, and scientific research with mission assurance, cybersecurity, and resilience in mind. The network shall support the full spectrum of research, from basic research, applied research, prototypes, investigations, experimentation and tests. The new architecture and design shall accelerate adoption of zero trust principles, become data centric, apply foundational technology and research area protection, and include dynamic flexibility to rapidly connect isolated labs, conditions based or specific need in a deliberate condition-based non-persistent fashion.
