1. Specialty Machine Shop and Cutting Tool Sourcing
Section 6.0 and Attachment 01 of the solicitation include specialty machine shop and cutting tool line items (e.g., carbide endmills, indexable inserts manufactured to Kennametal, Tungaloy, and Mitsubishi specifications). Can the Government confirm that these line items are open to competitive sourcing by any awardee under this multi-award BPA, and are not subject to any existing sole-source arrangement, incumbent distributor agreement, or other limitation on which BPA holders may fulfill BPA Calls for this category?

The Government does not have any Sole Sourcing agreements for these requirements.

2. Pricing Schedule Quantity Basis
Attachment 01 lists specific quantities and units of measure for each line item. Can the Government clarify whether these quantities represent the Government's total estimated ordering volume over the five-year period of performance, or whether they are illustrative of a single representative BPA Call, for purposes of unit pricing?

Please see the updated Pricing Schedule.

3. Geographic Capability Statement — Required Level of Detail
Per Section M, the Geographic Capability Statement (Volume I, Section 3) requires an affirmative written commitment to deliver to all nine identified ERDC locations, including Fox and Fairbanks, Alaska. Can the Government clarify whether offerors are required to identify specific named carriers or freight forwarders for these locations, or whether a described logistics strategy demonstrating delivery capability is sufficient to satisfy this requirement?

Please provide the detail you determine appropriate

4. Past Performance Relevance — Scope Alignment
Section L's definition of "Relevant Contracts" for Volume II references structural steel, special alloys, and specialty hardware/plumbing items including titanium and carbide endmills. Will past performance references demonstrating strong delivery and logistics performance under prior ERDC Hardware, Electrical, and Clothing/Safety/PPE Master BPAs — which did not include machine shop or specialty alloy line items — be considered relevant for evaluation under Factor 2, given the demonstrated multi-site BPA Call fulfillment history those references provide?

Please provide the detail you determine appropriate.
