| Question | Government Response |
|---|---|
| How many different timing source are you envisioning being used in the lab demonstration? | The specific low-level laboratory demonstration details will be finalized with the awardee during the post-award kick-off phase. White papers should demonstrate a scalable methodology. |
| How many different platforms are envisioned receiving the generated time through the chosen dissemination architecture in the lab demonstration? | The exact quantity of receiving platforms for the laboratory demonstration will be finalized with the awardee during the post-award kick-off phase. White papers should demonstrate the scalability of the proposed dissemination architecture. |
| Link-182 is listed as a candidate link, but can be only run at secret level, and Section 6.2 of the SOO states that the effort will be unclassified. Can you comment? | The card, networking method, and ensemble will remain entirely unclassified. While Link-182 operates on secure networks, the unclassified scope of this effort is limited to processing timing data that has transitioned from the classified (Red) side of the encryption boundary to the unclassified (Black) side. All development and testing under this contract will remain unclassified. |
