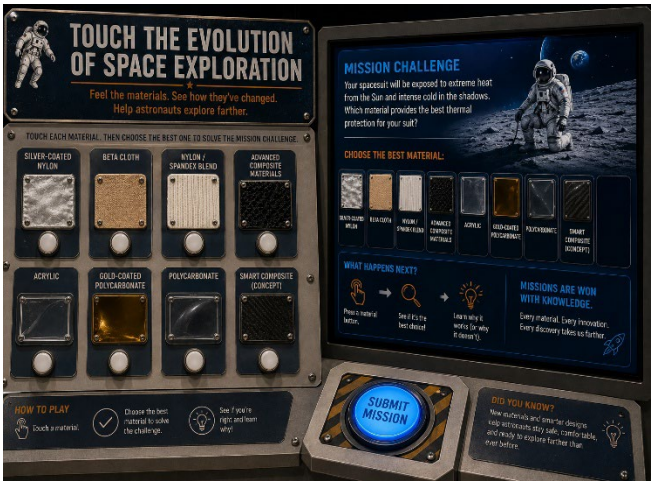
Attachment C – Additional Information

1) **Morse code interaction.** One experience the Court is interested in is to create a type of morse code interaction. It would take place in this long hallway so that kids could send messages from one end of the hallway to the other. It could not be connected to the internet due to Court's security protocols. Please see images of the space and a Chat mockup of what is envisioned.

Illustration of a mockup (the benches would remain, this provides an idea of the concept)

2)NASA Space: The Court's library has a lot of space-related displays such as an actual moon rock, spacesuits, etc. The idea is to have a tactile experience in here as well. Below are just some ideas mocked up in Chat. The Court is totally open to ideas and other directions. The pictures show the space, but the plan is for this to fit against the wall or in one of the window wells.

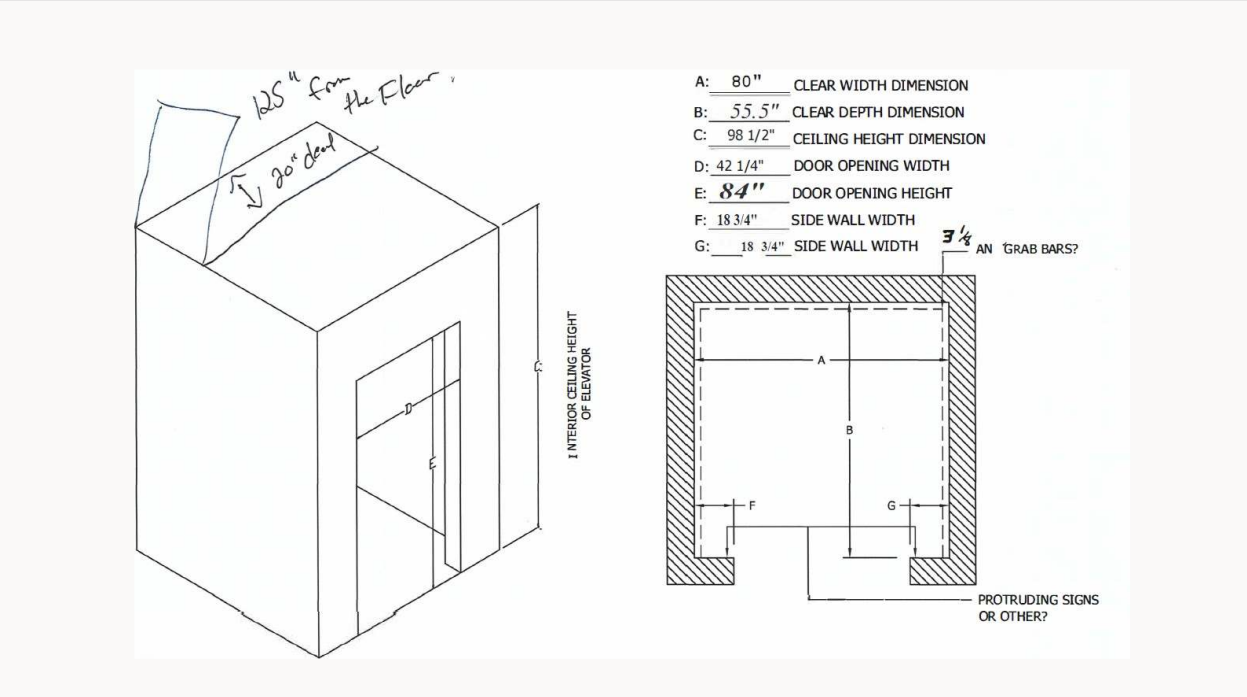
Kids get to touch samples of the different materials used in spacesuits and helmets over the years and learn why those changes were made. So, evolution of a spacesuit type of thing. There would be a screen to the right asking a question as to which material would be the best to solve the issue. Kids would select a button, hit submit, and then learn if they were right. This one is the most relevant to what is on display and the importance of innovation.



3)Voting Booth Idea

The Court has a touch interactive experience that has users choose issues they would like to vote on. The idea is to create an early 1900's looking voting booth that would hold the screen where kids could vote on different issues. This space is historic, so it should not look techy. The plan is to have some sort of tactile like a" Vote for Women" button dispenser or an "I Voted" sticker dispenser. Please see below the actual space and a Chat mockup of what is envisioned. The quote and women on the wall can be moved to make space for the booth.

1. **CAFC Main Building Service Elevator**



2. **CAFC Tayloe Building Elevator**

Tayloe Elevator info:
Door Width – 3 feet (36 inches)
Door Height - 7 feet (84 inches)
Cab Width - 5 ½ feet (67 inches)
Cab Depth – 3 feet (36 inches)
Cab Height – 7 ½ feet (90.5 inches)
