Solicitation N6471026Q0009 AMD 0001 Questions and Answers

1. Good evening, my name is [redacted] and I am interested in submitting a bid for the WOC A/V System Upgrade. I did not see any information regarding a pre-bid site visit. It is recommended for a system of this size and complexity to host a pre bid site visit so that any interested parties can gather all of the necessary information and be able to comfortably submit a fair bid.

Could you let me know if there will be one?

Answer: There will be a site visit on August 11, 2026. Please see the "Site Visit Information" attachment for further details.

2. We are [redacted] site survey for the WOC Upgrade AV system work at SWFPAC. The project documents state that the SWFPAC Project Manager is to be contacted to coordinate access for job walks, site visits, and scheduling of the work.

Could you please confirm whether a site survey/job walk can be coordinated for [redacted] ideally early next week if available, and advise:

* the appropriate SWFPAC Project Manager or site-access POC,
* any required attendee information or forms,
* any citizenship/clearance/access requirements for attendees, and
* whether there are any restrictions on what the vendor may bring onsite for survey purposes.

Answer: There will be a site visit on August 11, 2026. Please see the "Site Visit Information" attachment for further details.

3. Given the requirement for the contractor to physically verify existing rack capacity, cabling, wall space, power, cooling, pathways, and integration conditions for the classified and unclassified AV systems, will the Government conduct a pre-award site visit or job walk?

If so, please provide the anticipated date, attendance process, clearance/access requirements, visitor and vehicle-pass procedures, and any restrictions on devices or documentation.

If a pre-award visit will not be available, please advise whether the Government can provide additional field information, including current room dimensions, rack elevations, power availability, cable-path information, existing-equipment details, and authorized site photographs or annotated drawings.

Answer: There will be a site visit on August 11, 2026. Please see the "Site Visit Information" attachment for further details.
