Summary of Changes

Questions & Answers

Question 1: We would like to request clarification regarding the current coating of the fuel tanks, relative to Work Item 2 Tanks & Voids paragraph 2.2.2b, which states "Fuel tanks currently coated with oil (versus an epoxy coating) must be recoated with oil after cleaning." We are hoping that the preservation schedule we are requesting answers this question, but in the event it does not, we would like to know what the current coatings of the Fuel tanks are so we can determine the preparation and preservation required for these (oil versus epoxy).

Answer: The tanks are coated were coated in Oil during the last availability.

Question 2: 2.2.2 B Given the ambiguity in the paragraph, can the government provide an anticipated amount of piping repairs, IE: ineal feet of pipe repair and or amount of fittings to be replaced?

Answer: Right now, the only discrepancies requiring repair we are aware of are listed in 2.3.1, this may change between now and arrival, we are requesting that you inspect with the PE to ID any new required repairs ....2.2.2b Unless circumstances prevent, failed 90-10 CuNi piping and components must be renewed using 70-30 CuNi piping and components. - The intended meaning of this paragraph is "if, post arrival inspection, via CFR and subsequent KO release of a CR, some repairs are requested to components that are currently made from 90-10CuNi, if possible/practicable, please quote on renewing those components with equivalent components made from 70-30CuNi (i.e. upgrade the repair materials to 70-30 from 90-10, quote on that, when quoting growth work).
