BRAND NAME JUSTIFICATION

Requirement. NB675010-26-01753 Nokia Equipment and Support

This is a brand name requirement for Nokia Equipment and Support. This acquisition is for new Nokia products and services.

This purchase must be BRAND NAME Nokia products and services. NIST is tasked to modernize NIST's Nokia measurement and antenna calibration methodologies, to complete analyses within the United States, and to develop measurement techniques to appropriately evaluate the Nokia system. Original Equipment Manufacturer (OEM) radio access network (RAN) Nokia equipment and software is currently installed in the test environment. Warranted technical support must be compatible with existing Nokia hardware and software in the case of broken or defective units or software disruptions. Without access to this Nokia equipment, NIST will be unable to correlate real-world outdoor measurements to true broadcasts by Nokia devices or replicate real-world deployment dynamics. Results from testing would not be relevant, consistent with the compiled date, or valid if other devices were used.
