Solicitation: W15QKN26QA112 - Devens RFTA Washer & Dryer Replacement

Contractor Submitted Questions and Government Answers #2- Posted 12AUG2026

Question 1: Dryer venting. Are the existing dryer positions already vented, and will the new units connect to the existing venting as-is, or should we allow for new ducting?

Answer 1: Existing ducting is in place, though the contractor shall supply new flexible ducting to attach from the dryer to the ventilation.

Question 2: Footprint. Are the units being removed of comparable footprint and connection type to standard commercial replacements, such that the new equipment seats in the existing positions without modification to the rooms?

Answer 2: The footprint of the current washers and dryers should be sufficient for standard sized commercial washers and dryers (not stacked). There are hot and cold taps, drains and 120v outlets for the washers, and 240v 3-prong outlets and ventilation ducts for the dryers. Contractor is expected to supply all hoses and power cords to fill, drain/ vent hoses and power cables for all units.

Question 3: Please provide detailed specifications for the top load washers and standalone electric dryers you require. To include size of unit needed (L x W x H). size of load required, size of electrical cord required for dryers (4 prong or three prong and length required).

Answer 3: The Government has provided all salient characteristics for the required equipment in the Statement of Work (SOW). There are no additional specifications for dimensions (L x W x H) or load size beyond what is standard for a commercial-grade machine of this type. All existing dryer outlets are 3-prong; offerors are responsible for providing the appropriate power cords.

Question 4: Please provide a pricing sheet so BBE can provide their bid. BBE can simply send contracting BBE's price per washer and per dryer to include delivery, and installation. a separate cost will be included for the removal of the old units.

Answer 4: Offerors shall submit their pricing directly on the Standard Form (SF) 1449, which is the official solicitation document. A separate pricing sheet is not required. Prices must be broken out according to the Contract Line Item Numbers (CLINs) as listed in Section B of the solicitation.
